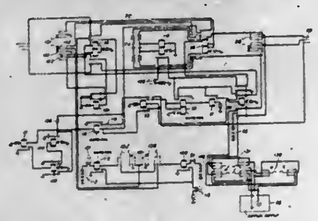
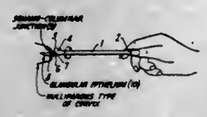
1. In the fluid catalyst process for the conversion of hydrocarbons wherein a gaseous medium is passed upwardly in contact with a dense phase, fluidized body of catalyst in a contact chamber, the steps of maintaining in the contact chamber a plurality of dense phase, fluidized bodies of the catalyst interposed between alternate vertically spaced zones of lower catalyst density in which the catalyst in relatively low concentration is entrained in an upwardly rising gaseous medium, passing the suspension upwardly through relatively small, restricted passageways extending from below the lower end



to substantially above the lower end of the respective dense phase bodies of catalyst, causing catalyst from the respective dense phase bodies to flow downwardly into the next lower zone in fine streams uniformly spaced over the transverse area of the contact chamber and withdrawing the gaseous medium from an upper portion of the chamber.

2,471,086
CHILD'S GARMENT
Charles Ackerman, Mechanicsburg, Ohio
Application May 3, 1947, Serial No. 745,746
1 Claim. (Cl. 2—80)



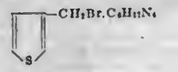
A child's garment of the type described comprising a waist portion and a trouser portion, a zipper adapted to support said trouser portion on said waist portion, said zipper being located just above the crotch of the trouser portion, said zipper starting at one side of the garment and extending almost completely around the garment to a point at such side but spaced from the starting point to prevent the zipper from completely detaching the trousers from the waist portion, and a flap member secured on the waist portion immediately above the zipper and overlying said zipper so as to hide the said zipper.

2,471,087
TOLL OPERATOR CONTROL FOR TELEPHONE COIN COLLECTORS
Gustave Adolph Anderson, Albany, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application April 9, 1946, Serial No. 660,614
6 Claims. (Cl. 179—6.3)

1. In a manual telephone system, a toll office, a local office, a line terminating at said local office, a pay station on said line including a coin receptacle having coin disposal means associated therewith, a toll switching trunk connecting said line with said toll office by way of said local office, sources of coin control current at said local office, similar sources of coin control current at said toll office, means at said toll office for connecting one of the said sources thereat to the tip conductor of said trunk, space discharge means responsive to the connection of the said one of said sources to the tip conductor of said trunk for projecting current from said source to said local office over the tip and ring conductors of said trunk, and space discharge means at the local office responsive to the projected current from the said one of said sources at said toll office for connecting a corresponding one of the sources at said local office to said line to effect a corresponding operation of the coin disposal means at said pay station.

2,471,088
CERVICAL SCRAPER
James Ernest Ayre, Mount Royal, Quebec, Canada, assignor to Clay-Adams Company, Inc., a corporation of New York
Application October 1, 1947, Serial No. 777,218
1 Claim. (Cl. 128—304)

A cervical scraper consisting of an elongated strip, one end of the strip being generally triangular and having a pair of unsymmetrical convex end sections connected by a section of concave configuration, one of said convex sections being substantially longer than the other, and said longer section being adapted to enter the cervical opening and function as a pivot, the shorter section functioning as a rotatable wing relative to said pivot, said concave section being adapted to scrape cells from the squamo-columnar junction in response to rotation of the scraper about the pivot afforded by said longer section.

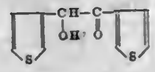


2,471,089
DOOR HOOK
John A. Bierwirth and Fritz Klaeden, Austin, Tex.
Application December 26, 1947, Serial No. 793,976
2 Claims. (Cl. 292—114)

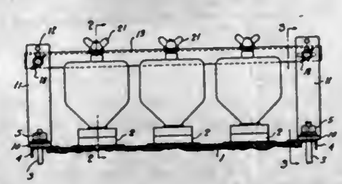
1. A closure hook assembly comprising a coiled tension spring, a screw eye pivotally secured to one end of said spring, a hook pivotally secured to the opposite end of said spring, and a flexible strand extending through said spring and secured at its opposite ends to said screw eye and said hook, said hook being partly circular in form with an angular extent of more than a semi-circle and having a spring-receiving eye on one end thereof, and said strand having a length when stretched greater than the unstretched length of said spring by an amount substantially equal to the inside diameter of said hook.

2,471,090
3-THENYL BROMIDE SALTS
Ernest E. Campaigne and William M. Le Suer, Bloomington, Ind., assignors to Indiana University Foundation, Monroe County, Ind., a corporation of Indiana
No Drawing. Application November 28, 1947, Serial No. 788,662
4 Claims. (Cl. 260—329)

4. The hexamethylenetetramine salt of 3-thenyl bromide, having the formula:

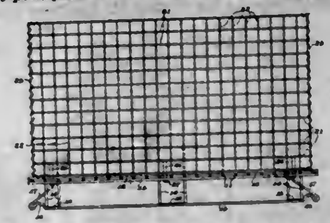


2,471,091
3-THENYL BROMIDE
Ernest E. Campaigne and William M. Le Suer, Bloomington, Ind., assignors to Indiana University Foundation, Monroe County, Ind., a corporation of Indiana
No Drawing. Application November 28, 1947, Serial No. 788,664
6 Claims. (Cl. 260—329)
6. 3-thenyl bromide, having the formula:



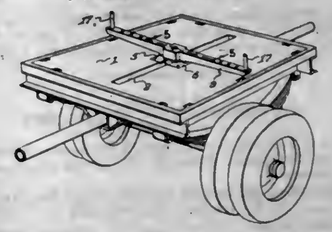
2,471,092
PREPARATION OF 3-THENALDEHYDE
Ernest E. Campaigne and William M. Le Suer, Bloomington, Ind., assignors to Indiana University Foundation, Monroe County, Ind., a corporation of Indiana
No Drawing. Application November 28, 1947, Serial No. 788,665
4 Claims. (Cl. 260—329)
1. The process which includes: steam-distilling a water solution of a quaternary methyleneamine salt of 3-thenyl bromide.

2,471,093
3,3'-THENOIN
Ernest E. Campaigne and William M. Le Suer, Bloomington, Ind., assignors to Indiana University Foundation, Monroe County, Ind., a corporation of Indiana
No Drawing. Application November 28, 1947, Serial No. 788,666
1 Claim. (Cl. 260—329)
As a new compound, 3,3'-thenoin, having the formula



2,471,094
STORAGE BATTERY FILLING DEVICE SUPPORT
Victor H. Christen, Sierra Madre, Calif.
Application April 10, 1946, Serial No. 660,881
5 Claims. (Cl. 136—162)

1. An apparatus for holding inverted containers of liquid in position relative to the filler openings of the cells of an electric storage battery for the maintenance of the level of the electrolyte therein, wherein there are bolts for holding the battery in place, comprising brackets substantially of L shape having substantially horizontal arms with apertures therein for receiving said bolts so that said brackets are secured thereby, said brackets having upwardly extending arms, a support carried by the arms in a position above and laterally removed from the filler openings, a spring arm for each cell, means for attaching one end of each arm to the support so that the arms project from the support and overlie the containers for the cells, a clip constructed to be slidably mounted on each arm for adjustable movement lengthwise thereof, and a button-like member of rubber material mounted on each clip for engaging the upper part of an inverted container under the action of the spring arm to hold the container in position.

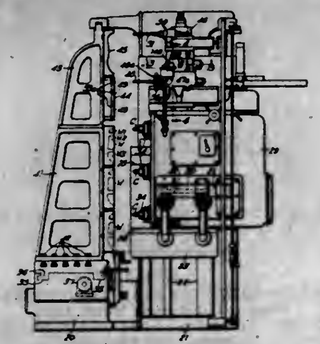


2,471,095
COMBINED PALLET AND CRATE STRUCTURE
Burton C. Colt, Jr., Washington, Pa., assignor to Tri-State Engineering Company, Washington, Pa., a corporation of Maryland
Application February 5, 1947, Serial No. 726,687
5 Claims. (Cl. 248—120)

1. A combined pallet and crate structure comprising a pallet having a deck, vertical crate walls adapted to rest upon the deck, means for detachably connecting the lower edges of the walls to the deck, the walls being hingedly connected together at the corners of the crate, whereby they may be folded upon one another when removed from the pallet deck, legs for the deck, and floorbars connecting the lower ends of the legs and having vertically offset portions near their ends, that partly embrace the upper edges of the crate

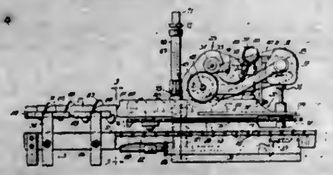
walls, to prevent horizontal shifting of a pallet on a crate upon which it is stacked.

2,471,096
DISAPPEARING BOLSTER FOR VEHICLES
Vincent L. Colorigh, Tulsa, Okla.
Application November 10, 1947, Serial No. 785,083
3 Claims. (Cl. 280—143)



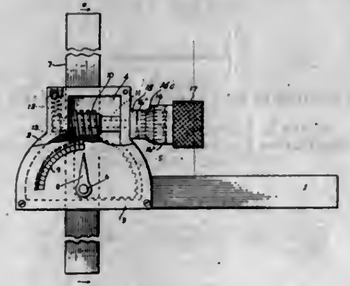
1. In combination with a vehicle floor, of a bolster carried thereby and adapted to be housed in said floor with its upper side flush with the upper side of the floor, a longitudinally extending bolster receiving chamber in the floor, a supporting bracket within the bolster chamber and spaced from its ends, a vertically removable bolster carrying block in said bracket and forming means whereby the bolster can be raised from the floor chamber and transversely positioned in relation to the chamber, said bolster being pivotally connected to the vertically movable block within the bracket.

2,471,097
PATTERN CONTROLLED MACHINE TOOL
Albert H. Dall and Herman Horlacher, Cincinnati, Ohio, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio, a corporation of Ohio
Application July 29, 1944, Serial No. 547,200
34 Claims. (Cl. 90—13.5)



1. In a pattern controlled milling machine having a pair of relatively movable slides, fluid pressure actuating means for said slides, a work piece and pattern mounted on one of said slides and a cutter and tracer mounted on the other of said slides, and directional control means in connection with said tracer for effecting the simultaneous operation of said slides by said fluid pressure actuating means to determine the resultant direction of movement of the work and cutter, the combination of fluid pressure control means to effect orientation of said directional control means to a predetermined position to effect a relative longitudinal feeding movement between

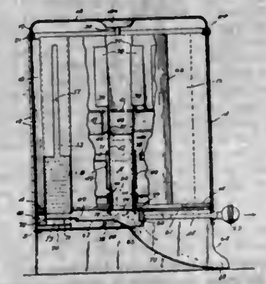
said cutter and work piece, and further fluid pressure control means rendered operative by the engagement of said tracer with said pattern during



said longitudinal feeding movement to effect a relative cross indexing movement of cutter and work piece normal to said longitudinal feeding movement.

2,471,098
ROTARY MARKING MEANS FOR CONTAINERS
Lynn E. Davies, Park Ridge, Ill., assignor to White Cap Company, Chicago, Ill., a corporation of Delaware
Application September 1, 1945, Serial No. 614,014
3 Claims. (Cl. 101—35)

1. A machine for automatically applying identifying marks to substantially flat container covers positioned on the tops of flat bottomed containers in a canning or other line, comprising an endless conveyor having a flat horizontal upper stretch on which the bottoms of the containers are adapted to rest with the containers in upright positions, means for moving the conveyor to cause the containers to advance from the infeeding end of said upper stretch toward the outfeeding end, a marking device above the upper stretch of the conveyor provided with a wheel having one or more impression units on its periphery which are adapted to contact with and mark the covers on the containers as the latter pass beneath the same, said wheel being rotatable on a horizontal axis arranged at right angles to the direction of movement of the upper stretch of the conveyor, means for positioning and positively moving the containers in uniformly spaced single file order in longitudinal alignment with the plane of rotation of the wheel during the marking operation, means on the wheel separate from the impression units for frictionally engaging the covers to prevent relative movement between the impression units and the covers, and means operating in timed relation to said positioning and moving means for rotating the wheel to move the impression units in the same direction and at the same linear speed as the covers on the containers.

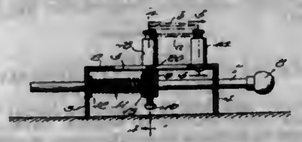


2,471,099
MICROPROTRACTOR
Walter M. Dethlefs, Santa Monica, and Fred Minder, Los Angeles, Calif.
Application August 24, 1945, Serial No. 612,472
1 Claim. (Cl. 33—75)

A micro-protractor consisting of a frame provided with a housing and a removable cover, a protractor with suitable arcuate scale to record degrees of an angle mounted on said cover with its base aligned on a straight-edge of the frame, an index-pointer mounted concentrically with said arcuate scale, a straight-edge mounted beneath said frame concentrically with said arcuate scale and adapted to rotate in conjunction with the index-pointer which is aligned therewith, a rotatable vertical shaft mounted in said housing to which is secured said straight edge and index pointer, a gear toothed sector carried by said shaft, a horizontally disposed shaft mounted for limited lateral play, a worm on said last named shaft in meshing engagement with said gear sector, a coiled spring adapted to bear on said last named shaft laterally to maintain the worm in mesh with said sector, a thimble attached to the end of the last named shaft exteriorly of said housing and having a scale disposed about its periphery divided into one-quarter degrees or fifteen minutes, a sleeve fixedly mounted on said frame in cooperative association with said thimble and having a scale disposed about its periphery, each division of which is equal to one-fifteenth of the circumference of the sleeve.

2,471,100
DISPENSING APPARATUS
Ralph E. Dodge, Clermont, Fla.
Application September 25, 1945, Serial No. 619,434
5 Claims. (Cl. 31—6)

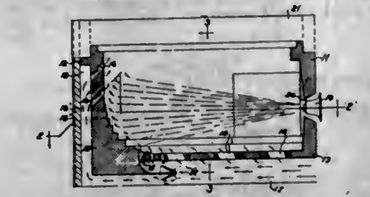
2. In a cutter and dispenser, the combination, which comprises a magazine having a plurality of vertically disposed radially positioned compartments in the periphery thereof, means rotatably mounting the magazine with the axis thereof vertically disposed, horizontally positioned doors carried by the magazine hinged in the lower ends of the compartments, a cylindrical casing surrounding said magazine, said casing having an inwardly extending bead supporting the outer ends of the doors, a vertically disposed holder positioned to register with the lower ends of the compartments of the magazine alternately below the doors, a surrounding housing enclosing the magazine and casing, said housing having a throat extending from the exterior thereof through the cylindrical casing positioned to register with the compartments of the magazine respectively through which the compartments may be filled, the door-supporting bead of the casing extending from the far side of the throat to the near side of the vertically disposed holder, a slider positioned to travel below the



lower end of the holder having a handle extending from the exterior of the housing, a cutter on the slider adapted to sever products from the holder, a plate-holding tube disposed in the path of said slider, means depositing a plate upon the slider from the plate-holding tube as the slider is actuated, means actuating the magazine to position the next compartment over the holder by the slider as a product in the holder is exhausted, and a discharge chute positioned to receive products cut by the cutter of the slider extending to the exterior of the housing.

2,471,102
TREATMENT OF MICROCRYSTALLINE RESIDUES AND PRODUCTS RESULTING THEREFROM
John J. Fish, New York, N. Y., assignor to Sun Chemical Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 4, 1945, Serial No. 632,785
15 Claims. (Cl. 196—78)

1. A process of improving petroleum microcrystalline residues which comprises treating them with aluminum chloride in the presence of hydrogen chloride and then blowing with air in the presence of a chlorinated hydrocarbon.

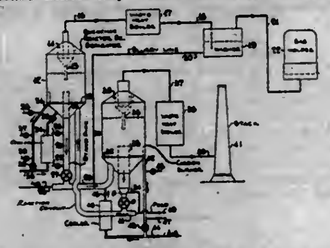


14. As a new material, wax products resulting from the treatment, with oxygen, at a temperature of 100–175° C. of mixtures of a petroleum microcrystalline residue and non-volatile chlorinated hydrocarbon.

2,471,103
WATCH MOVEMENT HOLDER
David Franks and Morris Shapiro, Washington, D. C.
Application July 26, 1945, Serial No. 607,169
2 Claims. (Cl. 81—6)

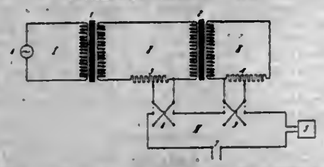
1. A watch movement holder comprising a base plate, leg portions depending from the end portions thereof, said base plate having longitudinal slots formed therein, a pair of stationary pins extending upwardly from the base plate adjacent one end of the respective slots, a pair of coacting movable pins operable through the respective slots in the base plate, means on the upper ends of the pins for engaging and supporting a watch movement, a slidable rod extending through said leg portions, a block secured on said rod, said movable pins being mounted on the block, and spring means associated with the rod and holder for normally urging the movable pins toward the stationary pins.

2,471,101
SECONDARY COMBUSTION AIR DISTRIBUTION CONTROL FOR BRIDGE WALL FURNACES
Charles E. Feinberg, Detroit, Mich.
Application March 31, 1945, Serial No. 585,974
11 Claims. (Cl. 110—75)



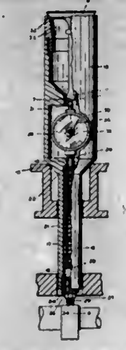
3. In a furnace having a deck and a bridge-wall defining a fire chamber, and having communicating air ducts beneath said deck and on the outside of said bridge-wall with a plurality of air inlets in said deck adjacent said bridge-wall and in said bridge-wall near the top of said chamber, a pivotal upper air gate in said deck duct controlling communication to said deck inlets, a pivotal lower air gate in said deck duct controlling communication to said bridge-wall duct, and operating means interconnecting said gates to progressively open the upper gate and then the lower gate.

2,471,104
PRODUCTION OF UNSATURATED HYDROCARBONS AND HYDROGEN
Edwin J. Gohr, Summit, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application November 10, 1944, Serial No. 562,856
7 Claims. (Cl. 260—679)



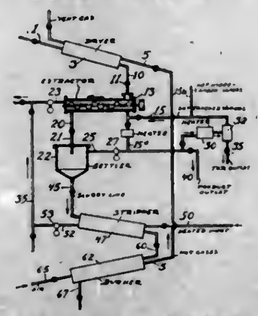
1. A process for effecting hydrocarbon reactions in gaseous phase at high temperatures which comprises commingling hydrocarbon gases to be reacted with highly heated refractory powder while said powder is substantially above the reaction temperature, the amount of said powder being sufficient to heat said gas to reaction temperature and supply the heat of reaction, maintaining said hydrocarbon gas in admixture with said powder for a period sufficient to obtain the desired reaction, thereafter passing the total effluent of gaseous reaction products and powder into the bottom portion of an enlarged zone, reducing the velocity of the gases passing upwardly through said enlarged zone sufficiently to cause said powder to separate into a rela-

tively dense, fluid layer in the bottom portion of said zone, removing gaseous reaction products from the top of said zone, separately withdrawing a stream of powder from the bottom portion of said zone below the level of said layer, cooling a portion of the powder so withdrawn to a temperature materially below the desired reaction



temperature, returning the powder so cooled to said layer, heating another portion of the powder removed from said enlarged zone to a temperature materially above the desired reaction temperature and commingling said highly heated powder with additional hydrocarbon gas to be reacted.

2,471,105
ALTERNATING CURRENT COMPENSATOR CIRCUIT FOR MEASURING
Gotthard Viktor Arneid Gustafsson, Akeshov, and Johan David Malmqvist, Boliden, Sweden, assignors to Boldens Gruvaktiebolag, Stockholm, Sweden, a limited joint-stock company of Sweden
Application December 12, 1944, Serial No. 567,882
In Sweden July 7, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 7, 1963
5 Claims. (Cl. 171—95)

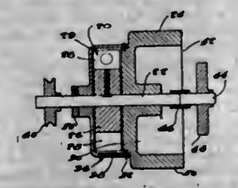


3. A compensating circuit for alternating voltage measurements that comprises a primary circuit, a secondary circuit, a tertiary circuit, and a measuring circuit including input connections for the voltage to be measured, the primary circuit including an alternating current power source and being coupled to the secondary circuit by a transformer, the secondary circuit including the resistance element of a potentiometer and being coupled to the tertiary circuit by a transformer, the tertiary circuit including the resistance element of a second potentiometer, and the measuring circuit including variable portions of each of the potentiometers as controlled by the sliding contact thereof, and also a detector of alternating current connected into the measuring circuit so as to measure alternating current therein, the transformer coupling between the primary, secondary and tertiary circuits being such that the secondary circuit is caused to be substantially 180° out of phase with the primary circuit and the tertiary circuit is caused to be substantially 90° out of phase with the primary circuit.

2,471,106
VALVE CLEARANCE GAUGE
Clarence E. Hall, Portland, Oreg.
Application June 28, 1945, Serial No. 602,945
4 Claims. (Cl. 33—181)

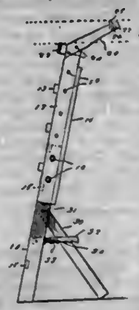
1. A gauge for indicating the length of a valve lifter to be used to gauge a valve for an engine, comprising a hollow body having upper and lower ends, a stem movable in the lower end of the hollow body and protruding therefrom to cooperate with the lifting cam of the valve assembly, an indicator mounted in the hollow body and carried by and movable with the stem, said hollow body having a valve seat at its upper end to receive the valve being gauged, said indicator having an actuating member beneath said valve seat, said valve when in said seat in the hollow body engaging and operating the actuating member to indicate the length of the valve lifter to be used with that valve when in position in the engine.

2,471,107
RECOVERY OF HYDROCARBON OIL
Charles E. Hemminger, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 28, 1945, Serial No. 637,613
1 Claim. (Cl. 196—14)



A continuous method for recovering hydrocarbon oil from bituminous solids which comprises subjecting said bituminous solids to the influence of heated gases in a drying zone, withdrawing the thus dried bituminous solids from the drying zone, discharging them into an extraction zone, contacting said bituminous solids in the last-named zone at an elevated temperature with vaporized normally liquid hydrocarbons preheated at least to extraction temperature while agitating the said bituminous solids whereby hydrocarbon material contained in said bituminous solids is extracted therefrom, recovering for product from said extraction zone a gasiform hydrocarbon material containing hydrocarbons and withdrawing from said extraction zone spent bituminous solids in the form of an oil slurry, discharging the said slurry into a settling zone, permitting the slurry to remain resident in the settling zone for a sufficient period of time to permit stratification to form a lower spent bituminous solids phase and an upper liquid phase, withdrawing the liquid phase from the said separating zone, reheating at least a portion of said liquid partially to vaporize the same, employing said heated vapors to contact the dried bituminous solids in the said extraction zone, withdrawing the said spent bituminous solids from the settling zone, discharging them into the stripping zone where they are treated with a hot inert gas to recover a further portion of hydrocarbon vapors, withdrawing the stripped solids from the stripping zone, discharging them into a burning zone, causing combustion of fixed carbon contained in said solids in said burning zone, withdrawing the gaseous combustion products from said burning zone and discharging them into said drying zone where they contact the fresh bituminous solids.

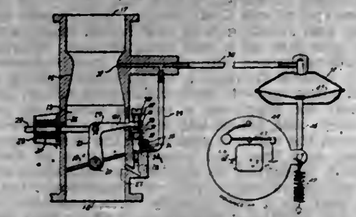
2,471,108
TREATMENT OF SULFUR CONTAINING HYDROCARBONS
Boyd N. Hill, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
No Drawing. Application June 6, 1947, Serial No. 753,038
11 Claims. (Cl. 196—32)



1. A method for treating a hydrocarbon distillate containing sulfur and acidic constituents which includes the steps of forming a bed of clay, alkali sulfide and an alkali hydroxide, having a water content in the range between 30% and 50% of the bed and a clay content in the range between 5% and 30% of the bed, contacting a contaminated hydrocarbon distillate containing sulfur and acidic constituents with said bed, and recovering a treated distillate from the bed.

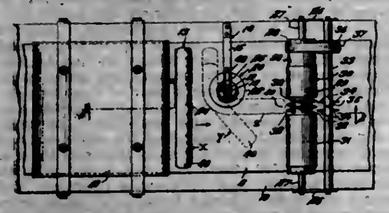
2,471,109
PNEUMATICALLY DRIVEN POWER UNIT
Hiland G. Hunt, Natick, Mass.
Application October 2, 1945, Serial No. 619,737
1 Claim. (Cl. 253—40)

A pneumatic power unit, comprising: a hollow base member having a closed end and an open end, said closed end providing an outwardly disposed flat, planar surface and the boundaries of said open end defining a plane substantially parallel to said outwardly disposed flat planar surface, said base member having at least one additional flat planar surface between said closed end and said open end and being arranged substantially perpendicular to said plane defined by said boundaries of said open end of said base member; a hollow casing secured to said flat planar surface, said hollow casing having a tangential inlet and an outlet; a power take-off shaft journaled in said base member and in said casing and disposed substantially perpendicular to said flat, planar surface, with one end of said shaft extending outwardly beyond said casing and the other end of said shaft terminating between the open and closed ends of said hollow base member with said other end being exposed, whereby additional power take-off means may be removably secured thereto; a vaned rotor secured to said power take-off shaft within said casing; and means for supplying a moving stream of gas through said tangential inlet so as to impinge against the vanes of said rotor, the arrangement being such that said power unit may be operatively supported, as desired, on said open end of said hollow base member with said power take-off shaft in a substantially vertical position or on said additional flat planar surface with said power take-off shaft in a substantially horizontal position.



2,471,110
LADDER FOR HANGING PAPER
John Jenkins, La Grande, Oreg.
Application August 19, 1947, Serial No. 769,461
1 Claim. (Cl. 228—26)

A device for use in hanging paper and the like comprising a pair of telescopically arranged ladder sections including a top section and a lower section, means for securing said ladder sections together in any one of a plurality of aligned positions to provide a ladder of predetermined length, paper supporting means carried by the upper end of said top section, said paper supporting means including a pair of brackets attached to the upper end of said upper section and projecting rearwardly and upwardly, a horizontally extending rod connecting the outer ends of said brackets, means pivotally secured to said lower section for supporting said sections in an upright position and adjustable to move said paper supporting means toward or away from a ceiling to be papered, said last mentioned means comprising a pair of legs pivotally secured to said lower section in parallel spaced relation, said legs each being provided with an outwardly projecting pin adjacent the middle thereof, a pair



of notched arms pivotally secured to said lower section at points spaced from and beneath said legs, said notched arms being operatively engageable with said pins.

2,471,111
MECHANISM FOR UTILIZING THE MANIFOLD SUCTION OF INTERNAL-COMBUSTION ENGINES
Marion Mallery, Detroit, Mich.
Application January 31, 1947, Serial No. 726,686
15 Claims. (Cl. 123—117)

1. In an internal combustion engine having an intake passageway and a throttle valve controlling the flow of motive fluid into the engine, the combination comprising a servo-motor, a conduit connecting said servo-motor into the intake passageway on the engine side of said throttle valve at all positions of the throttle valve, valve means for controlling communication between the said intake passageway and said servo-motor through said conduit, and adjustable means interconnecting said throttle valve and said valve means whereby said throttle valve and valve means open and close in unison, said interconnecting means closing said valve means whenever the throttle valve is in idle position, said interconnecting means and valve means cooperating when said valve means is closed to positively limit the closing movement of said throttle valve, said interconnecting means being constructed and arranged so that it can be adjusted to vary the idle position of the throttle valve without affecting the opening and closing of the said valve means.

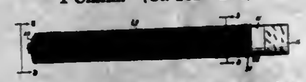
2,471,112
DOUGH HANDLING MACHINE
Harry W. Maull, Maplewood, and Joseph H. Sauter, Rutherford, N. J., assignors to General Baking Company, New York, N. Y., a corporation of New York
Application August 24, 1945, Serial No. 612,416
20 Claims. (Cl. 107—4)

17. In a dough handling machine the combination comprising, an endless belt having a top substantially horizontal run, means to position an elongated roll of dough on said upward run with its axis extending substantially transversely of said belt, an orienting roller mounted above said run in the path of said roll and to one side of the path of the middle of said roll when carried forward by said run to cause said roll to be oriented for end on forward movement, means supporting said roller for free rotation about its axis with the latter arranged substantially normal to the surface of said run, and rotatable slashing means mounted above said run to receive said roll therebeneath after orientation to end on position and to form slashes along said roll as the latter is carried beneath said slashing means by said belt.

2,471,113
SPORTS SHOE
Frank A. Melchionna, Cincinnati, Ohio
Application September 29, 1947, Serial No. 776,840
15 Claims. (Cl. 36—2.5)

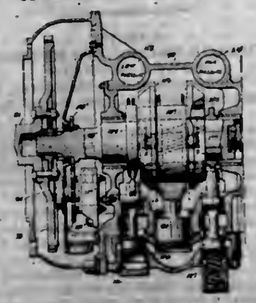
1. In a spike mounting plate for a sports shoe, a sheet metal plate adapted marginally for attachment to a selected face of an outer sole of a shoe, said plate having shallow bosses formed in predetermined relation and forming depressions in the top of the plate, said depressions each having a noncircular hole therethrough, spike elements comprising flat head portions seating in the depressions flush with the top surface of the plate and a threaded shank portion accessible from the bottom of the plate, said shank portions being swaged immediately below the head to form a noncircular portion conforming to and binding on the edge of the corresponding hole in said plate and conforming to and binding on a marginal surface of the boss surrounding the hole said elements are permanently and immovably fixed to the bosses.

2,471,114
POLISHING BONNET
George Edwin Metcalfe, Bridgeport, Conn.
Application October 16, 1947, Serial No. 780,283
4 Claims. (Cl. 15—230)



1. A polishing device comprising two sheets formed of flexible, sheet, polishing material, each sheet having a polishing side and a back side; and a flexible fastening strip having opposite longitudinal edge portions secured to edge portions respectively of the one sheet and the other and permanently securing the sheets together in back-to-back relation, substantially the entire edge portions of the strip and sheets being secured together whereby the sheets and strip form an enclosure, the strip engaging the polishing sides of the sheets and the edges of the sheets and strip facing in substantially the same directions whereby they may be all disposed within the said enclosure; and means carried by the fastening strip for removably securing the sheets and strip to a driving wheel whereby the sheets overlie the face of the wheel in superposed relation.

2,471,115
LUBRICATING OIL
Louis A. Mikeska, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 19, 1946, Serial No. 697,919
9 Claims. (Cl. 260—461)



6. A method of preparing an oil soluble additive for mineral lubricating oils which comprises reacting a mixture of paraffin wax-phenol and an unsubstituted aliphatic monohydroxy alcohol containing 1 to 18 carbon atoms, such mixture having 1 to 2 wax-phenol hydroxyl groups for each molecule of alcohol, with a sufficient amount of phosphorus pentasulfide to convert the phenol and alcohol present into dithiophosphoric acids, and further converting the product thus formed with an oxidizing agent selected from the group which consists of potassium triiodide, sulfur dichloride, and sulfur monochloride capable of converting the same into a polysulfide.

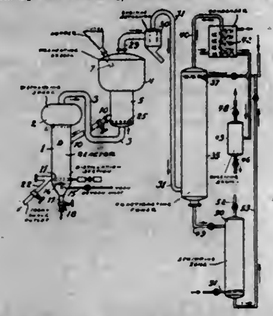
2,471,116
CIGARETTE SHIELD
Michael P. Newberger, Cleveland, Ohio
Application February 21, 1945, Serial No. 579,035
1 Claim. (Cl. 131—174)

A cigarette protector, consisting of a sleeve member having ends and formed of woven non-inflammable strands and capable of expanding radially when compressed longitudinally, the said sleeve member strands being spaced to form air or smoke vents when applied to a cigarette, one of the said ends being closed to encase the burning end of the cigarette, the other of the said ends being folded upon itself, and an adhesive between the layers of the fold fixing and stiffening the same to prevent radial expansion or contraction and longitudinal stretching thereof.

2,471,117
POWER TRANSMISSION
Elias Orshansky, Jr., Stamford, Conn., assignor to The Aerotorque Company, Stamford, Conn., a corporation of Connecticut
Application May 12, 1945, Serial No. 593,417
35 Claims. (Cl. 103—174)

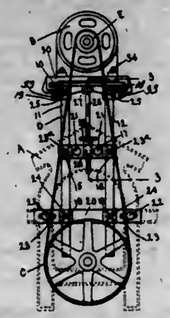
1. A hydraulic unit comprising, in combination, a cylinder, a piston reciprocable therein, means for varying the length of the stroke of said piston, said cylinder having a port for the passage of liquid, adjustable valve means for opening and closing said port, and means interconnecting said piston stroke varying means and valve means for changing the time of opening of said port in accordance with length of the piston stroke.

2,471,118
DETACHABLE ENGINE MOUNT AND ACCESSORY COUPLING
Charles E. Patterson, Pacific Palisades, Calif., assignor to North American Aviation, Inc., Inglewood, Calif., a corporation of Delaware
Application December 11, 1943, Serial No. 513,934
6 Claims. (Cl. 244—54)



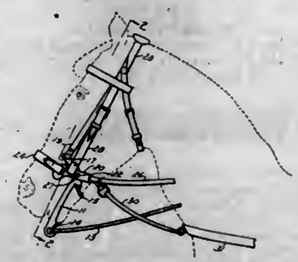
1. In an aircraft engine installation, a fuselage structural element, an engine mount structural element, a transverse fire-wall member having a plurality of openings therein intermediately disposed between said fuselage and engine mount structural elements, connecting means comprising a pair of plate elements each provided with a plurality of matching openings similarly spaced with respect to the openings in the other said plate and the openings in said fire-wall member to form coinciding openings therethrough, conduits arranged for the transmission of fluid through said matching plate elements and said fire-wall member, a portion of each said conduit removably mounted in one of a pair of the said matching openings in the respective plate elements, and fastening means extending through further matching openings in said plate elements and said fire-wall member, said fastening means arranged for the support of said engine mount structural element from said fuselage structural element and also the support of said plate elements in their matching relationship on opposite sides of said fire-wall member, said fluid conduits being disconnected simultaneously with the separation of said engine mount structural element from said fuselage structure upon detachment of said fastening means.

2,471,119
FLUIDIZED SHALE AUTOTHERMIC DISTILLATION
Edward B. Peck, Elizabeth, and Douglass G. Tomkins, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application September 22, 1943, Serial No. 503,394
9 Claims. (Cl. 202—6)



1. In the continuous distillation of oil-bearing shale, the improvement which comprises charging oil-bearing shale particles of about ¼ to ½-inch size to a preheating zone, flowing a mixture of hot combustion gases with hydrocarbon vapors from shale oil carrying in suspension dry shale powder into contact with said shale particles in the preheating zone, said mixture having substantially an oil shale distillation temperature, fluidizing and heating said shale particles in said preheating zone by said mixture to above the condensation temperature of the vapors, feeding the

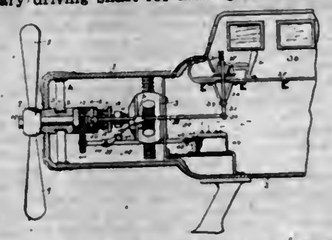
preheated shale particles into a separate distillation zone wherein they form a fluidized mass having an upper level, flowing hot combustion gases up through said fluidized mass at an oil shale distillation temperature to form the hydrocarbon vapors and disintegrate shale particles in the fluidized mass to dry shale powder, burning said spent shale particles with oxygen in the



lower portion of said distillation zone to form the hot combustion gases flowing up through the fluidized mass, disengaging hot combustion gases mixed with the hydrocarbon vapors and dry shale powder formed in the fluidized mass from oil-bearing shale particles at above said upper level of the fluidized mass to form said mixture flowing into the preheating zone, and withdrawing vapors and gases from said preheating zone.

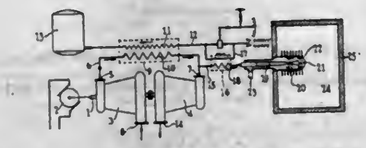
2,471,120
MOTOR MOUNTING ATTACHMENT
Nelson J. Pepin, Lowell, Mass.
Application November 29, 1944, Serial No. 565,705
2 Claims. (Cl. 248—23)

1. Mechanism for supporting a driving motor in such position above a shaft to be driven that a belt and pulley driving connection between motor and shaft may be maintained, said mechanism, including a platen, means for supporting the platen at a suitable elevation, said means being adjustable so that the platen may be moved vertically to a desired position and locked in said position, and means associated with the platen for facilitating the attachment to said platen of a motor base, said last mentioned means including elongated skids disposed in parallel relationship and slidably resting upon the upper surface of said platen so as to be bodily movable toward and away from each other, the end of each skid extending around the adjacent terminal edge of the platen and terminating beneath the platen and each skid having formed therein two spaced bolt receiving slots extending in directions transverse to the direction in which the skids may be bodily moved, bolts extending upwardly through said slots, respectively, and movable longitudinally therein and elements attached to the terminal ends of said skids, respectively, for securing said skids against movement relatively to each other and relatively to said platen, said elements being adapted to be brought into engagement with the undersurface of said platen.



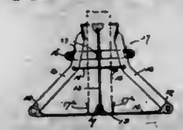
2,471,121
BRIDLE
Frank D. Reed, Jr., Detroit, Mich., assignor to Barbara Reed, Detroit, Mich.
Application April 26, 1946, Serial No. 665,223
2 Claims. (Cl. 54—6)

1. A bitless bridle comprising in combination a nose band, rearwardly extending arms joined to the ends of said nose band adapted for positioning on opposite sides of a horse's head, a pair of rotatable levers pivotally mounted on said arms, a headstall positioned back of the horse's ears with its free ends secured to the upper ends of said levers, said latter ends extending forwardly maintaining said headstall taut so that any forward pivotal movement of said ends will immediately apply control pressure back of the horse's ears, and manually operated reins joined to the lower ends of said levers to effect pivotal controlling movements thereof.



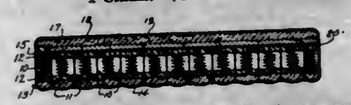
2,471,122
INTERCHANGE MECHANISM BETWEEN TWO POWER SOURCES
Artie Thomas Reynolds, McAlester, Okla.
Application September 18, 1946, Serial No. 697,688
3 Claims. (Cl. 74—339)

1. In a power-interchange mechanism, the combination of a driven element that includes a gear-wheel and a clutch element, a primary motor, a primary driving shaft operatively connected to said primary motor and journalled in said driven element, a clutch-element secured on said primary driving shaft and movable into and out of cooperative engagement with the first said clutch-element, a secondary driving shaft, a secondary motor operatively connected to said secondary driving shaft so as to effect rotation of the latter, a secondary gear-wheel united with said secondary shaft, means to shift the second-said clutch-element out of engagement with the first-said clutch-element, and means cooperative with the first-said means and with said secondary driving shaft for moving said secondary



gear-wheel into operative engagement with the first-said gear-wheel.

2,471,123
CALORIC ADJUSTING
Auguste Louis Marie Antoine Rouy, New York, N. Y.
Application June 2, 1945, Serial No. 597,290
2 Claims. (Cl. 257—9)

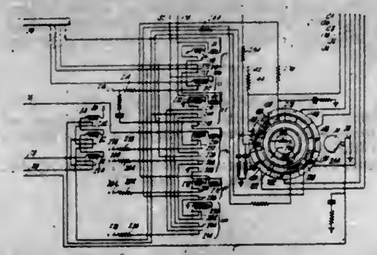


1. In a caloric adjusting device, including, in combination: a common shaft; a turbine compressor, a power turbine, and a gas turbine, provided with a combustion chamber, connected to the common shaft; a prime mover connected to the same common shaft whereby the prime mover may be utilized to initially rotate the common shaft and the power turbine may furnish part of the power needed to continue the rotation of the common shaft and the gas turbine may furnish the residue of power required; a hot water storage tank; an interconnecting duct between the outlet of the compressor and the inlet of the power turbine, and having a branch connected to the combustion chamber; a gas turbine duct connected to the outlet of the gas turbine and in heat exchange relation to the outlet from the power turbine; a source of water, two water supply ducts connecting the source of water and the hot water storage tank; a source of combustible fluid connected to the combustion chamber; an exhaust duct connected to the outlet of the power turbine; four heat power turbine exchangers, one interposed in the exhaust duct and the gas turbine exhaust duct, one interposed in the branch duct to the combustion chamber and the gas turbine exhaust duct, one interposed in one of the water supply ducts and the gas turbine exhaust duct, and one interposed in the other of the water supply ducts, the gas turbine exhaust duct and the interconnecting duct between the compressor and the power turbine whereby the compressor may be started initially by the prime mover and continued in operation by the gas turbine alone, but with the assistance of the power turbine and whereby the fluid compressed in the compressor is expanded in the power turbine to furnish power, part of the fluid heated by compression in the compressor is diverted to the combustion chamber of the gas turbine to furnish a heated combustion supporting fluid to combine with the combustible fluid supply to the combustion chamber of the gas turbine outlet whereby the fluid compressed in the compressor is in heat exchange relation to both the gas turbine and duct and one of the two water supply ducts and whereby the gas turbine duct is in heat exchange relation to the other of the water supply ducts and whereby the gas turbine outlet duct is in heat exchange relation to the power turbine exhaust whereby fluid of desired temperature may issue from the power turbine exhaust adapted for controlling the temperature of a desired space and hot water, adapted for domestic use, may be produced and stored, all with the expenditure of a minimum of energy.

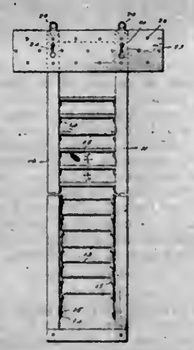
2,471,124
CHRISTMAS TREE STAND
Herman Amil Smith, Chicago, Ill., assignor of forty-nine per cent to Maynard A. Williams, Chicago, Ill.
Application November 28, 1947, Serial No. 788,462
1 Claim. (Cl. 248—44)

In a tree holder, pivotally connected base members, angular brace arms pivotally connected to said base members, the free ends of said brace arms being twisted and forked, a wire connecting said brace arms, a resilient pitted anchor ring adjustably connecting said brace arms above said wire, and resilient prongs carried by said base members spaced apart to receive the tree.

2,471,125
BED MATTRESS
Carl R. Sohn and Arthur G. Sohn, Chicago, Ill.
Application June 10, 1947, Serial No. 753,646
1 Claim. (Cl. 5—351)



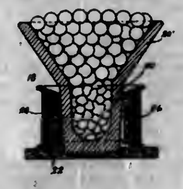
A bed mattress comprising an inner-spring unit, inner-pads of coarse fibre disposed one at each side of said unit, an outer-pad overlying one of said inner-pads, ticking overlying said outer-pad, a sheet of fabric overlying the other of said innner-pads, tufting threads extending through said ticking, inner-pads, inner-spring unit and fabric sheet, a bed-board structure overlying said fabric sheet and secured to said inner-spring unit, an outer-pad overlying said bed board, ticking overlying said last-mentioned outer-pad, and a border surrounding said mattress and secured at its edges to the edges of said ticking.



2,471,126
CODE CONVERTER AND ERROR DETECTOR
James A. Spencer, Teaneck, N. J., and Lewis A. Thomas, Brooklyn, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application October 24, 1946, Serial No. 705,314
6 Claims. (Cl. 178—3)

1. In a telegraph system utilizing uniform length code signals having a fixed number of

mark and space elements, a plurality of parallel impedance devices each respectively actuated by said mark elements, a plurality of error-detecting relays actuated under control of currents flowing through said impedance circuits, translating means responsive to the mark elements of said code signals and having a shift device adapted to actuate a plurality of shift conditions in the translating means each in response to a corresponding plurality of code signals, each said condition being maintained until a subsequent shift signal is received, means actuated by said translating means for converting said signals into code signals having a different number of mark and space elements, and means actuated by said error-detecting relays for causing said converter means to set up a predetermined code group indicative of an error whenever said signals contain an abnormal number of marking elements and actuating said shift device to select one of said shift conditions during an error indication and to return said shift condition to its preceding condition.

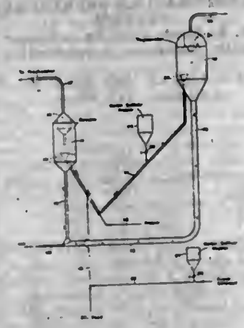


2,471,127
MAP AND KEY HOLDER
Nobe D. Stanley, Sr., Fayetteville, N. C.
Application May 27, 1947, Serial No. 750,792
2 Claims. (Cl. 211—104)

1. A wall rack for supporting folded maps or the like against a wall, said rack comprising a pair of fixedly spaced vertical siderails having means of suspension upon a wall, a plurality of vertically spaced substantially inverted U-shaped rack elements comprising bight portions only slightly shorter than the distance between the inward sides of the siderails and relatively short legs diverging downwardly from the ends of the bight portions and pivoted at points intermediate their ends to the inward sides of said rails, stops projecting inwardly from the inward sides of the siderails at points above and to the rear of the pivotal points of said legs and engageable by said legs below their pivotal points in a predetermined substantially horizontal position of said rack elements preventing downward pivoting of said rack elements beyond such predetermined horizontal position, said rack elements being formed of flat metal strap with the legs thereof frictionally engaging the inner sides of the siderails in a manner to limit free pivoting of said rack elements and enable said rack elements to retain positions imparted thereto between the predetermined horizontal position and a vertical position between said siderails whereby folded maps or the like can be supported by being gripped between two vertically adjacent rack elements or by being gripped between two vertically adjacent rack elements or by being pressed by one or more of said rack elements against the surface of the wall upon which the rack is suspended.

2,471,128
INCANDESCENT ELECTRIC HEATER
John I. Stein, Muncie, Ind.
Application October 23, 1945, Serial No. 623,905
2 Claims. (Cl. 219—47)

1. An electrically-operated space heater comprising a crucible shaped to provide a substantially cylindrical lower part, and a flared top part having a capacity greater than that of said lower part, a body of material capable of becoming incandescent upon induction heating thereof disposed within the lower part of said crucible, an electric induction coil arranged in surrounding relationship with respect to said lower part for inductively heating said body of material, and means operative to energize said induction coil, said flared top part of said crucible being adapted to hold a charge of fuel briquettes resting upon said body of material in said lower part for transfer of heat from said body of material to said briquettes to thereby heat said briquettes to a temperature such as to produce radiant heat.



2,471,129
HYDROCARBON SYNTHESIS
Hans G. Vesterdal, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application September 7, 1946, Serial No. 695,564
5 Claims. (Cl. 260—449.6)

1. The method of synthesizing hydrocarbons which comprises contacting a mixture of carbon monoxide and hydrogen at elevated temperatures with a catalyst consisting essentially of a reduced form of iron oxide having incorporated therein an alkali metal fluoborate.

2,471,130
PROCESS OF PREPARING AN IRON CATALYST PROMOTED WITH AN ALKALI METAL FLUOBORATE
Hans G. Vesterdal, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Original application September 7, 1946, Serial No. 695,564. Divided and this application July 12, 1947, Serial No. 760,691
3 Claims. (Cl. 252—433)

1. The method of forming an iron-containing catalyst suitable for use in promoting the synthesis of hydrocarbons from carbon monoxide and hydrogen, which comprises incorporating an alkali metal fluoborate into iron oxide in amounts such that the catalyst contains from 0.2 to 10 weight per cent alkali metal fluoborates and thereafter reducing at least a part of the iron oxide to the metallic state.

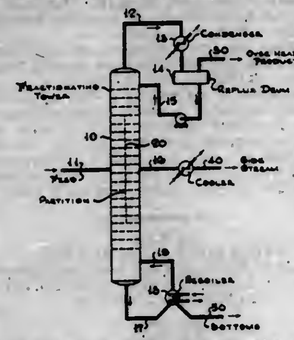
2,471,131
CATALYTIC CONVERSION OF HYDROCARBON OIL
Prentiss S. Viles, Goose Creek, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application June 22, 1946, Serial No. 678,542
1 Claim. (Cl. 196—52)

A method for catalytically converting hydrocarbons in a process involving a reactor and a regenerator zone in which a hydrocarbon is contacted with a finely divided suspension of a cracking catalyst contaminated with metals promoting the formation of carbon and fixed gases at a conversion temperature, which comprises separating products of the reaction from the catalyst, regenerating said catalyst by combustion in the presence of an oxygen-containing gas, recovering regenerated catalyst and introducing into the reactor zone said regenerated catalyst with a hydrocarbon oil and an inhibiting amount of nickel sulfide between 0.1 and 0.5 per cent by weight of the catalyst and sufficient to suppress the formation of carbon and fixed gases.

2,471,132
METHOD OF PRODUCING A SINTERED ABRASIVE BODY
Axel Charles Wickman, Coventry, England, assignor to A. C. Wickman Limited, Coventry, England, a British company
No Drawing. Application March 21, 1947, Serial No. 739,389. In Great Britain April 8, 1946
8 Claims. (Cl. 51—308)

1. A method of producing a sintered abrasive body which includes the steps of grinding a wet mixture including alumina and siliceous clay, drying the ground product, forming the dried product into granules, moulding a mixture of the granules with diamond particles, and sintering the moulded product under combined heat and pressure.

2,471,133
ELECTRIC WATER HEATER
Gerald C. Wicks, Buenos Aires, Argentina
Application January 16, 1946, Serial No. 641,911
2 Claims. (Cl. 219—39)



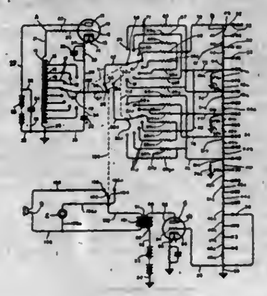
1. An electric water heater, including two elements of insulating material, each having a surface provided with a recess at least part of which has the shape of a tortuous groove of considerable length, a connecting member provided with two sealing surfaces of insulating material in intimate contact with the recessed surfaces of said two elements, respectively, to form a sealing cover for at least the major portions of both said tortuous grooves, said connecting member providing a passage therethrough from one end of the tortuous groove in one of said elements to one end of the tortuous groove in the other element, means for supplying water to be heated continuously to the other end of the tortuous groove of said first element end and for discharging heated water continuously from the other end of the tortuous groove of said second element, whereby said two closed tortuous grooves and said passage through said intermediate member define a flow-path for the water through the heater, and an electric heating unit disposed in said flow-path remote from the supply end and from the discharge end thereof.

2,471,134
FRACTIONATION APPARATUS
Richard O. Wright, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application July 17, 1946, Serial No. 684,142
2 Claims. (Cl. 196—100)

1. A vertical column fractionating tower provided with a single feed inlet approximately midway of the top and bottom of the tower, an overhead outlet at the top of the tower, and a bottoms outlet at the bottom of the tower, said tower having a vertical partition dividing an intermediate portion of the tower and a side stream outlet positioned on the opposite side of the tower

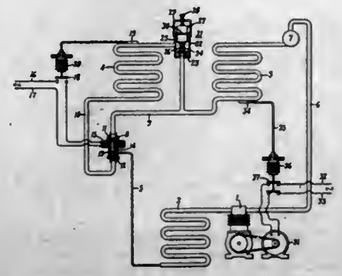
from the said feed inlet and at about the same vertical height on said tower, whereby said feed inlet and said side stream outlet are separated

by said vertical partition and whereby said vertical partition extends approximately equidistant above and below the said feed inlet and the said side stream outlet.



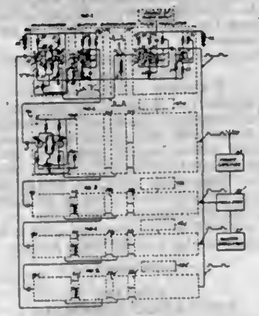
2,471,135
MOTOR VEHICLE
Nathaniel Wyeth, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application February 12, 1945, Serial No. 577,389
17 Claims. (Cl. 267—11)

2. In a vehicle including a pair of oppositely disposed road wheels and means supporting and guiding each of said wheels for independent rising and falling movement, each of said means including a member mounted for oscillatory movement about an axis spaced from such axis of the other member to accommodate movement of its associated wheel, stabilizing means including a pair of leaf springs respectively operably associated with said members and disposed generally transversely with respect to the axis of oscillatory movement of the associated member, said springs being relatively arranged to provide a pair of non-adjacent end portions respectively secured to the associated member at a location disposed outwardly with respect to the vehicle beyond the axis of said associated member for movement with the latter and a pair of adjacent end portions disposed intermediate said axis, and means connecting said adjacent end portions together whereby relative oscillation of said members is yieldably opposed by said springs.



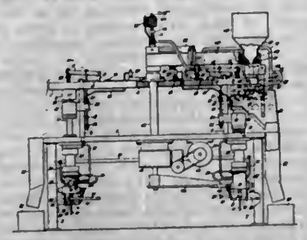
2,471,136
AUDIOMETER FOR AIR AND BONE CONDUCTING RECEIVERS HAVING A SCALE WITH A SINGLE ZERO HEARING LOSS REFERENCE
Ralph E. Allison, Minneapolis, Minn., assignor to Patent Management, Incorporated, Minneapolis, Minn., a corporation of Minnesota
Application December 9, 1946, Serial No. 715,048
11 Claims. (Cl. 179—1)

1. In an audiometer, a frequency generator adapted to produce alternating currents of predetermined frequencies, a number of circuits energized by said generator, there being one circuit for each frequency, an attenuator including a resistance having a number of resistors connected in series, said resistors being arranged in groups, a shunting resistor shunting certain of said groups



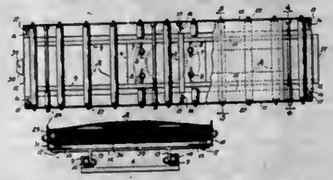
of resistors, said circuits being permanently connected to said resistance at various predetermined points between resistors, an attenuator switch connected to said resistance at various points between resistors, a receiver and means controlled by said attenuator switch for energizing said receiver.

2,471,137
TWO-TEMPERATURE REFRIGERATING SYSTEM
Leonard W. Atchison, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application April 22, 1947, Serial No. 743,015
6 Claims. (Cl. 62—8)



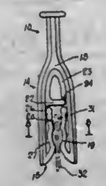
1. In a refrigerating system including condensing apparatus and two evaporators, a liquid line for conducting refrigerant from said condensing apparatus, and a temperature controlled valve disposed in said liquid line for controlling the flow of refrigerant to said evaporators, said valve being responsive to the temperature of one of said evaporators for positively directing said refrigerant to the other of said evaporators alone to the exclusion of said one of said evaporators or to both of said evaporators in series.

2,471,138
RADIO COMMUNICATION SYSTEM
Everhard H. B. Bartelink, Bronxville, N. Y., assignor to General Electric Company, a corporation of New York
Application August 16, 1946, Serial No. 690,864
5 Claims. (Cl. 250—9)



1. In a multiplex radio communication system, a transmitting station including a plurality of pulse generators having substantially the same predetermined repetition rate, each of said pulse generators producing a group of spaced apart pulses, means utilizing each of said groups of pulses to synchronize the generator of another of said groups of pulses in successive time relation, means for modulating a characteristic of the pulses of each of said groups in accordance with a desired signal, and a receiving station including a receiver pulse generator having substantially said predetermined repetition rate, means utilizing a selected group of said modulated pulses to synchronize said receiver pulse generator with said selected group of pulses, means maintaining said receiving station normally inoperative to translate said modulated pulses to its output, means utilizing said receiver generated pulses to render said receiving station periodically operative to translate only one group of said modulated pulses, and means for demodulating said one group of pulses to reproduce a signal.

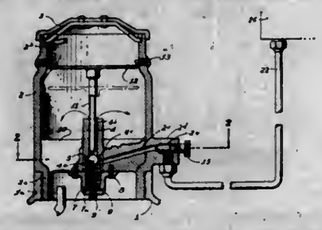
2,471,139
CONTINUOUS ROTOR MOLDING MACHINE
Clifford N. Benander, Meriden, Conn., and George B. Benander, Oaklawn, R. I., assignors to Monowatt Incorporated, a corporation of Connecticut
Application March 25, 1947, Serial No. 737,176
16 Claims. (Cl. 18—5)



9. In a molding machine, a plurality of molding stations comprising a molding material loading ring having a ring of circumferentially spaced measuring openings therethrough, one at each station, and a molding structure at each opening, means for supplying molding material to said measuring openings, means for effecting the opening and closing of said molding structures, a pivoted spout for transferring molding material from said measuring openings to said molding structures, means for turning said first and second named means and said spout at a uniform rate from station to station, and a cam at each station for turning the spout on its pivot to maintain its discharge end in line with a molding structure during the period molding material is being transferred from a measuring opening through the spout to such molding structure.

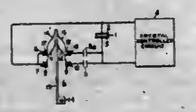
2,471,140
FEED TABLE FOR TIRE BUILDING MACHINES
Walter J. Breth, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a corporation of Ohio
Application November 13, 1946, Serial No. 709,609
4 Claims. (Cl. 193—35)

2. A feed device of the character described comprising a pair of longitudinal side bars, adjustable transverse spacing members connecting said bars, and spaced transverse stock supporting rollers between said bars, each roller comprising axially alined end members rotatably mounted on said side bars, a coil spring connected at its ends to said end members, and a sleeve fitting on said spring.



2,471,141
CLOTHESPIN
Charles Castelli, Union City, N. J., assignor to Columbia Protektosite Co., Inc., Carlstadt, N. J., a corporation of New Jersey
Application May 28, 1947, Serial No. 750,980
3 Claims. (Cl. 24—138)

1. As a new article of manufacture a plastic clothespin comprising an elongated body member having a finger piece portion at one end and a pair of generally parallel main jaws extending toward an entrance on the clothespin at the other end of the body member forming a bight between said jaw members, generally parallel auxiliary jaws between the main jaws, the auxiliary jaws formed to provide therebetween rope receiving transverse openings of different sizes, the larger opening being adjacent said

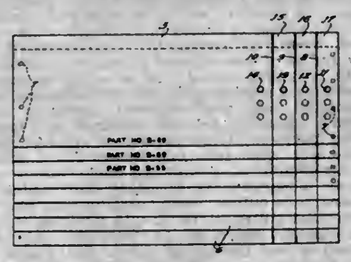


entrance, the smaller opening being spaced inwardly toward said bight, the auxiliary jaws having free ends adjacent the smaller openings and being integral with the respective main jaws adjacent said entrance, the jaws being resilient, the main jaws being of substantially greater length than the auxiliary jaws, and a stop element integrally formed with one of said main jaws, said stop element lying in proximity to and over said free ends of the auxiliary jaws serving to prevent a rope from traveling inwardly beyond the auxiliary jaws, said stop element being substantially spaced from the bight and free of the other main jaw to permit resilient deflection of the latter between the stop element and the bight.

2,471,142
INJECTION DEVICE
Floyd O. Chaffee, South Gate, Calif.
Application April 24, 1945, Serial No. 590,083
10 Claims. (Cl. 210—30)

1. In a means of the class described, a water receiver, a water inlet receptacle, open at its upper end, positioned at the upper portion of the receiver, a reacting agent supply means connected to the receptacle, a valve within said receptacle for controlling the flow of reacting agent from said supply means to said inlet receptacle, and means for normally and yieldably holding the valve in a closed position and the stem in a raised position said valve having a stem extending toward the open end of the receptacle and so constructed and located so as to be capable of being engaged by a water supply means capable of discharging water into the receptacle for unseating the valve.

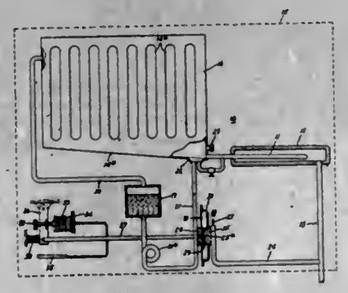
2,471,143
PIEZOELECTRIC APPARATUS
Jay J. Cress, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 8, 1945, Serial No. 576,754
7 Claims. (Cl. 171—327)



1. In combination, a piezoelectric element having a natural frequency of vibration subject to variation with temperature, a trimming capacitance connected in frequency determining circuit relation with said element, and thermal responsive means for disabling said trimming capacitance upon variation of temperature beyond a normal range.

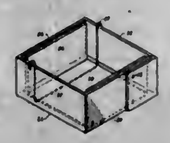
2,471,144
SALT SUBSTITUTE
Edward D. Davy, Delmar, N. Y., assignor to Sterling Drug Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application December 2, 1948, Serial No. 63,220
9 Claims. (Cl. 99—143)

1. A sodium-free preparation adapted as a substitute for common table salt containing chlorides of potassium and ammonium constituting the primary saline constituents and being present in an amount of 70–95% of the total ingredients, the potassium chloride being present in an amount several times that of the ammonium chloride, the preparation containing in addition a small proportion of calcium and magnesium cations and citrate and formate anions.



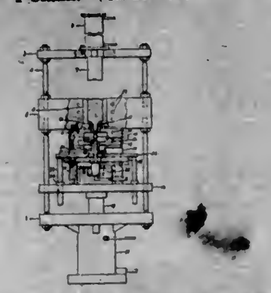
2,471,145
UNIT STRIP ASSEMBLY
Andrew L. Erickson, Cincinnati, Ohio, assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
Application December 30, 1944, Serial No. 570,589
4 Claims. (Cl. 206—57)

1. A method of making a connected set of tag blanks from slips of sheet material which comprises providing each slip with a plurality of spaced parallel transverse fold lines adjacent one end thereof extending across the entire width thereof and providing a row of apertures perpendicular to said fold lines in each strip, certain thereof lying between the fold lines, thereafter assembling the several slips into a group in overlapped relation so as to leave a portion of each slip exposed at each side face of the assembly for receiving identification matter, and applying adhesive to unperforated portions of said slips at the ends thereof to secure said slips together in assembled relation.



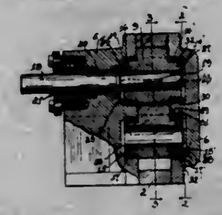
2. A shingled strip assembly comprising a plurality of strips of sheet material having a series of uniformly spaced transverse fold lines at on end of the strips with apertures intermediate the fold lines and apertures on opposite sides of said series of fold lines, said strips being separably secured in overlapped relation so that a portion of each strip is exposed to both sides of the assembly, each strip being connected to the adjacent strips at the end having the fold lines by a row of dots of adhesive between the end of the strip and the nearest fold line.

2,471,146
THERMOMOTIVE MODULATING HEAT TRANSFER SYSTEM
Marcus E. Fiene, deceased, late of Scotia, N. Y., by Clara E. Fiene, administratrix, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application May 14, 1947, Serial No. 748,149
5 Claims. (Cl. 237—9)



2. In combination, a vapor heat transfer system including a liquid vaporizer, a vapor condenser, and a source of heat for said vaporizer, means including a body normally supplied with heat from said source and a liquid percolator having liquid exchange connections with said system and having an element relatively movable into variable heat transfer relation with said body for variably heating said percolator to vary the amount of liquid circulating in said system, and thermomotive means for effecting relative movement between said element and said body.

2,471,147
FOLDING BERRY BOX
James Gagnon, Olalla, Wash.
Application September 8, 1947, Serial No. 772,810
2 Claims. (Cl. 220—16)



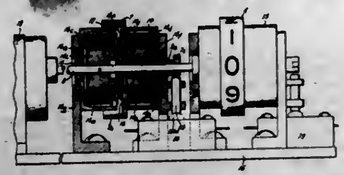
1. A true-volume folding berry box comprising four sides hingedly connected to each other and adapted to be folded flatwise, a bottom attached at one of its ends to one of said sides and hinged at a point substantially on the plane of the lower margin of said sides, and a wire loop attached at both its ends to the top portion of the side opposite said one of said sides and extending downwardly until the bottom portion of the loop is substantially on said plane, said bottom portion being bent substantially normal to said one of said sides and directed theretoward, thereby forming a bracket adapted to support the free end of said bottom substantially on said plane.

2,471,148
SPRUE CUTTER FOR TRANSFER MOLDING DEVICES
Marvin E. Gale and Frank W. Warner, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
Application January 6, 1948, Serial No. 766
1 Claim. (Cl. 18—30)

In a device for transfer molding a thermosetting molding compound, a mold having a stationary part and a movable part, said parts defining a mold cavity when the movable part is positioned against said stationary part, a transfer well for plasticizing said molding compound, a passage in said stationary mold part interconnecting the transfer well and the mold cavity, means for forcing plasticized molding compound from the transfer well through the aforesaid passage into the mold cavity, an aperture in said movable part, an ejector member movable in said aperture, said ejector member having an opening therethrough aligned with the exit of the passage into the mold cavity, and a sprue cut-off member movable in said opening into and out of telescoping engagement with the exit of the passage into the mold cavity, means including a hydraulic cylinder and piston for moving said cut-off member, and means for limiting the downward movement of said ejector member as the movable mold part moves away from said stationary part.

2,471,149
ROTARY GEAR PUMP
Adolph Girs, Cleveland, Ohio, assignor to East Shore Machine Products Company, Cleveland, Ohio, a corporation of Ohio
Application August 22, 1946, Serial No. 692,214
2 Claims. (Cl. 103—126)

1. In a pump, a chambered housing, pairs of oppositely arranged, circular recesses in said housing, bearing sleeves in said recesses extended thereinto in spaced relation with respect to the bottom walls thereof, complementary pump gears with shaft portions journaled in said bearing sleeves, communicating passages extended axially



through said gears for communication of the circular recesses of each pair of recesses with each other, and symmetrically arranged recessed channels in the wall of said housing in open communication with a circular recess of each of said pairs of said recesses, said recessed channels being symmetrically arranged with respect to said gears, intersecting the enmeshing area of said gears and extending diametrically opposite to the enmeshing area thereof to permit in forward and reverse rotation of said pump continuous, simultaneous withdrawal of excess and trapped liquid from said recesses and said enmeshing area and discharge of such liquid into neutral areas of said pump.

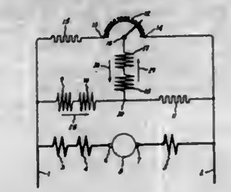
2,471,150

ACCOUNTING MACHINE

Charles J. Goodale and Harry B. Marvin, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

Application March 22, 1945, Serial No. 584,148
[illegible] Claims. (Cl. 235—61)

1. In an accounting machine, a constant speed driving member, a stationary member, a counting element normally in engagement with said stationary member, means for controlling the alternate engagement of said counting element with said stationary member comprising electric valve means provided with a control grid, means for controlling said electric valve means comprising a plurality of resistance-reactance timing circuits connected to said grid having time constants corresponding to different digit numerals, means for selecting for timing operation a circuit corresponding to a predetermined digit numeral, and means for controlling said electric valve means to effect the engagement of said counting element with said driving member and to initiate the timing action of the selected circuit to control said valve means to effect the reengagement of said counting element with said stationary member thereby to effect an amount of movement of said counting element corresponding to said predetermined digit numeral.



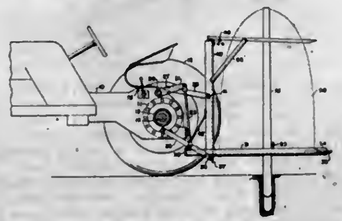
2,471,151

ADJUSTABLE SPEED DYNAMOELECTRIC MACHINE

Wesley R. Goss, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York

Application August 20, 1948, Serial No. 45,304
17 Claims. (Cl. 318—425)

1. In a commutator type direct current motor having an armature circuit and a field structure, a shunt field circuit arranged in parallel with said armature circuit and including a shunt field exciting winding and a resistor in series therewith, a second field exciting winding having one terminal connected between said shunt field exciting winding and said resistor, and a potentiometer having its two end terminals connected in parallel with said shunt field circuit and a variable center terminal connected to the other terminal of said second field exciting winding whereby the current flow in said second field exciting



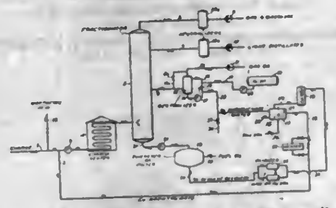
winding can be varied from a maximum in one direction through zero to a maximum in the other direction for adjusting the speed of said motor.

2,471,152

STACK CARRIER

Clyde C. Griffin, Branford, Fla.

Application November 3, 1947, Serial No. 783,821
2 Claims. (Cl. 214—131)



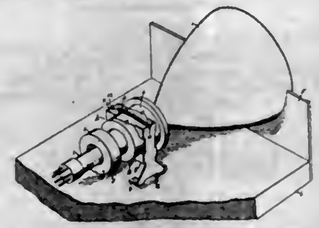
1. Means for transporting a stack of hay or other vegetation from one point to another comprising a hay carrying frame pivotally secured to the rear end of a tractor, said tractor having a hydraulic lift mechanism, said frame comprising a plurality of substantially parallel and rearwardly extending and diverging bars, a pair of angle bars secured in spaced relation to each other near the front end of the parallel bars, and an upright bar centrally disposed and secured at its lower end to one of said bars secured in transverse relation to the parallel bars, a transverse bar secured to the upper end of the upright bar and having a pair of spaced pointed angle members secured at one end thereto and extending rearwardly, a pair of links secured to the outer ends of one of the transverse bars and having their other ends secured to the frame of the tractor, said tractor having a pair of hydraulically operated lift arms, a pair of links connecting the free ends of the hydraulically operated lift arms to an intermediate portion of the two links connecting the transverse bar of the frame to the frame of the tractor, a connecting bar connecting an intermidate portion of the upright bar at one end and to the tractor frame at its other end, said parallel bars being adapted to be inserted beneath a stack of vegetation upon the tractor being backed toward the stack and whereby the two parallel bars with pointed rear ends will impale the upper portion of the stack and upon manipulation of the hydraulic lift mechanism the entire frame along with the stack of vegetation will be raised upwardly off the ground to transport it from one place to another.

2,471,153

PROCESS OF TREATING PETROLEUM OILS WITH A COPPER SOAP AND OF PRODUCING THE COPPER SOAP

Charles O. Hoover, Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York

Original application October 2, 1946, Serial No. 700,823. Divided and this application April 25, 1947, Serial No. 743,886
15 Claims. (Cl. 196—26)



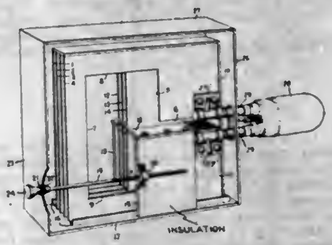
1. In the process of treating petroleum oil with a copper soap of a water-insoluble organic acid for the fixation of sulfur compounds contained therein in which the copper soap is introduced into the oil and the oil subsequently is subjected to heat treatment and the liberation of vapors containing the organic acid resulting from decomposition of the copper soap; the improvement which comprises separately withdrawing the copper compound and the liberated vapors containing the organic acid resulting from the decomposition of the copper soap from the zone of heat treatment passing withdrawn vapors into intimate contact with caustic with resultant formation of the sodium soap of the acid, and reacting the sodium soap so formed with a copper salt to form the corresponding cupric soap of the acid, and using the thus formed cupric soap as the source material of the copper soap used in the treatment of further amounts of oil.

2,471,154

SUPPORTING DEVICE FOR CATHODE-RAY TUBES

Donald B. Keim, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York

Application May 21, 1948, Serial No. 28,355
3 Claims. (Cl. 250—141)



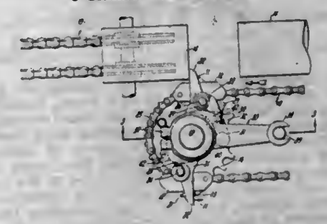
1. A support for a cathode ray tube of the type having a neck portion and which is adapted to have a beam focusing and deflecting device supporting said neck portion comprising a base, a pair of juxtaposed arms supported on said base and extending outwardly therefrom, each of said arms having a plurality of fingers extending toward the other arm, said fingers being adapted to engage the focusing and deflecting device of the cathode ray tube, and resilient means connected between said fingers to engage said device with sufficient force to support both the device and tube while permitting adjustment of the longitudinal and angular position of the device.

2,471,155

BALANCED VARIABLE REACTANCE DEVICE

Robert V. Langmuir and Philip H. Peters, Jr., Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

Application June 7, 1946, Serial No. 674,971
9 Claims. (Cl. 250—40)

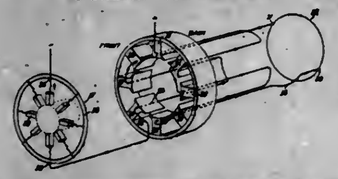


1. A variable reactance comprising a conductive plate having a loop constituting an inductive portion and surfaces of substantial area on opposite ends of said loop constituting a capacitative portion, said loop and said surfaces being symmetrically distributed with respect to a central transverse plane through said plate, a positionable member of substantial area having opposite halves symmetrically positioned on opposite sides of said transverse plane and juxtaposed in symmetrical relation to said loop and said surfaces, and means for moving said positionable member parallel to and in proximity to said plate, whereby the surface of said positionable member may be juxtaposed in varying proportions to said loop and said surfaces.

2,471,156

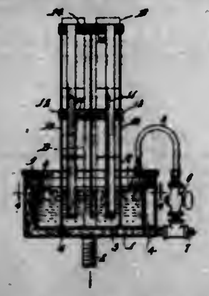
CAN EXTRACTOR

Ed Laxo, Oakland, Calif., assignor to Atlas Imperial Diesel Engine Co., Oakland, Calif., a corporation of Delaware



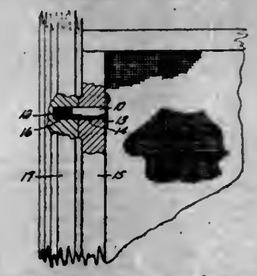
Application October 8, 1946, Serial No. 701,974
5 Claims. (Cl. 198—25)

1. Apparatus of the character described, comprising a conveyor chain having means located at spaced points thereon engageable with can bodies, a shaft, a sprocket for said chain secured to said shaft, a lever rotatable on said shaft for engaging and removing successive can bodies from said



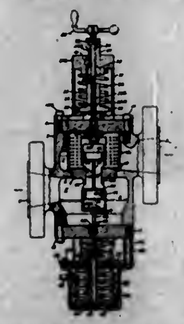
chain, an actuating lever pivoted on said sprocket and engageable with said lever, and a stationary cam around said shaft for moving said actuating lever on its pivot.

2,471,157
DYNAMOELECTRIC MACHINE
Thomas M. Linville, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 10, 1947, Serial No. 760,152
9 Claims. (Cl. 171—252)



1. In a dynamoelectric machine of the direct current type having a plurality of poles with an odd number of polar conductors per pole, means including at least one balancing ring of uniform cross-section with connections from two of said polar conductors to diametrically opposite points on said ring to balance magnetomotive forces produced by end connections between the remainder of said polar conductors.

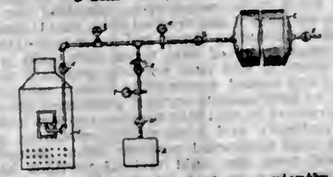
2,471,158
LIQUID TREATING APPARATUS
William Livingstone, La Grange, Ill., assignor to Kem-Stone Products Company, Inc., a corporation of Illinois
Application January 17, 1946, Serial No. 641,713
1 Claim. (Cl. 23—267)



An apparatus for dissolving detergents and water softening material in disk form, comprising an open top tank, an open top vessel arranged within the tank and spaced from the walls thereof, a pipe connected with a source of solvent supply directed to discharge into the vessel for accumulating therein a constant level of the solvent, said vessel having an over-flow opening at the brim thereof, an outlet pipe extending from the bottom of the tank, and an open framework rack rising from the bottom of the vessel, said rack consisting of upright bars and embraced by rectangular frames defining vertical magazine channelways for receiving and supporting a column of solvent treating tablets in disk form, whereby said tablets are stacked in said channelways in cylindrical surface to surface alignment, the lowermost tablet of said column being submerged in the solvent content accumulated in said vessel and exposing to solution, portions of all of its surfaces, curved and planar, as progressive dissolution affects gravitational descent of said column.

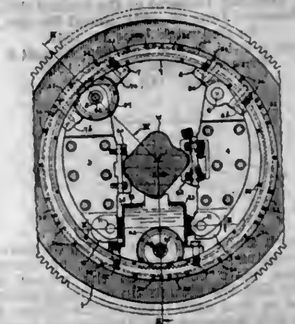
2,471,159
FASTENER FOR WINDOW SCREENS AND STORM SASHES
Lester Curtis MacDonald, Hamilton, Ontario, Canada
Application August 1, 1947, Serial No. 765,372
1 Claim. (Cl. 292—181)

In a fastener for screen and storm sash and the like, a pin adapted to slide back and forth in a sleeve which is constituted by a hole through a stile of the sash and a registering socket in the stile of the window frame, said pin being arranged in length to fully occupy said hole but only partially said socket, a keeper arranged to close the opening into said hole against egress of the pin, and a spring in said socket back of the pin and arranged to urge the pin entirely out of the socket on removal of the keeper from the hole entrance but not to itself leave the socket.



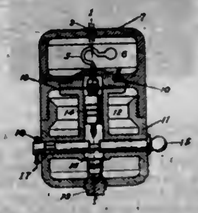
2,471,160
COMBINATION BALANCED SHUTOFF AND THROTTLING VALVE ASSEMBLY
William N. Matson and Stephen Jacobs, Fitchburg, Mass., assignors to General Electric Company, a corporation of New York
Application March 20, 1946, Serial No. 17,924
6 Claims. (Cl. 277—8)

1. A combined shut-off and throttling valve assembly for elastic fluid comprising a housing



forming an inlet chamber and an outlet chamber separated by a wall defining a circular valve seat opening, means secured in said opening and forming axially spaced stationary piston members concentric with the opening, each piston being of a diameter larger than the opening and spaced axially away therefrom on opposite sides thereof, said wall having a first annular beveled portion surrounding the opening adjacent the inlet chamber and a second annular portion surrounding the opening and projecting axially into the discharge chamber, said second annular wall portion having a substantially conical tapering outer surface adjacent the end thereof and a narrow annular seat portion axially spaced from the end thereof, a first cup piston member having a cylindrical inner surface slidably disposed over the stationary piston member in the inlet chamber, means for positioning the first cup piston including an axially slidable valve actuating stem and pilot valve means adapted to communicate pressure fluid in the inlet chamber to the space defined between the first cup piston and the cooperating stationary piston member, the outer surface of the first cup piston being beveled inwardly to form a narrow annular edge adapted to sealingly engage the wall surrounding said first beveled annular portion, a second cup piston member having an inner cylindrical bore slidably disposed over the other stationary piston member, the second piston having a tapered substantially conical outer surface terminating in an annular edge adapted to sealingly engage said annular valve seat, the inner diameter of the outlet chamber being of the order of two times the diameter of said annular seat, said last-mentioned seat being spaced at least one-quarter inch axially from adjacent wall surfaces surrounding the valve opening, a second valve-actuating stem connected to the bottom of the second cup piston and projecting slidably through an adjacent wall of the housing, the second cup piston having pressure balancing port means for substantially equalizing the pressure in the discharge chamber with that between the moving piston and the cooperating stationary piston, the second actuating stem being of a minimum diameter whereby a minimum force is exerted thereon by the fluid pressure in the outlet chamber, the relative dimensions of the parts defining the fluid path from inlet to outlet chamber being so proportioned that in normal operation the minimum flow path area occurs at the annular throttling orifice defined by the second cup piston, whereby energy losses in the valve assembly are minimized.

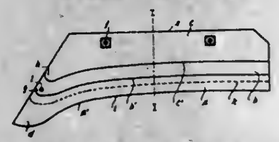
2,471,161
METHOD OF MIXING BOTTLED NATURAL GAS WITH VEGETATIVE GAS
Herbert E. McCardle, Groton, S. Dak.
Application February 9, 1948, Serial No. 7,035
3 Claims. (Cl. 48—197)



3. A method of safely and conveniently controlling combustion in a combustion chamber of a mixture of a low ignition point bottled hydrocarbon gas and a high ignition point vegetative gas which comprises introducing approximately 5% of said low ignition point gas into said high ignition point vegetative gas, promoting ready ignition in cold combustion chamber and when combustion chamber has reached a temperature sufficient to maintain combustion at a high temperature, decreasing the percentage of said hydro-carbon gas to approximately 1½% so that if combustion stops, the escaping unburned gas becomes non-combustible as it cools to living room temperatures.

2,471,162
CRANKSHAFT CHUCK
Walter R. Meyer and Harold J. Siekmann, Cincinnati, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application October 27, 1945, Serial No. 624,970
3 Claims. (Cl. 82—40)

1. In a center drive crankshaft chuck mounted in a center drive ring gear work spindle comprising a pair of clamping jaws pivotally mounted in the bore of said ring gear work spindle, means mounted in the bore of said ring gear work spindle for operating said jaws, an actuating shaft for said chuck operator, a gear on said shaft, and a wrench socket associated with said gear to effect rotation therein, a second gear coaxially journaled about a pivot of one of said clamping jaws, and common ring gear interconnecting means between said gears journaled in said center drive ring gear work spindle.



2,471,163
SAFETY PRESSURE DETONATOR BOMB
Robert E. Mitton, Lemon Grove, Calif.
Application August 18, 1944, Serial No. 550,063
2 Claims. (Cl. 102—81.6)

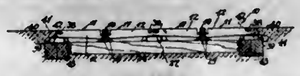
1. In a device of the class described, a chamber containing fluid under pressure, a frangible

member sealing an opening from said chamber, a cylinder connected with said opening, a firing pin carried by a piston slidable in said cylinder, a detonator positioned to be struck by said firing pin when said frangible member is broken and said fluid acts upon said piston to move said firing pin into contact with said detonator, a cross bore intercepting said cylinder between said firing pin and said detonator, a removable safety pin positioned in said bore to prevent said firing pin from striking said detonator, a reduced portion on said safety pin where said pin crosses said cylinder whereby premature breaking of said frangible member will drive said firing pin into said portion and prevent removal of said safety pin.

2,471,164
PLOWSHARE
Torben Möhl, Copenhagen, Denmark; vested in the Attorney General of the United States
Application June 26, 1941, Serial No. 399,875
In Denmark June 11, 1940
Sections 1, 3, 14, Public Law 690, August 8, 1946
Patent expires June 11, 1960
1 Claim. (Cl. 97—125)

A plough share composed of two or more layers of relatively thin steel plates, of which the uppermost plate constitutes the proper share plate and also the plough tip of the share, characterized in that each layer of the plough share consists of a plane or slightly arcuate hardened steel plate of uniform thickness, and that the width of these plates measured from the trailing edge of the share to the leading edge of each plate is of unequal value and decreases from the uppermost to the lowermost of the plate layers, said plate layers being secured adjacent each other, whereby the plough share, and the projecting plough tip of the uppermost plate, are given a considerable resiliency.

2,471,165
FANCY TRIMMING STITCH
Jack Nachman, Philadelphia, Pa.
Application July 1, 1946, Serial No. 680,808
2 Claims. (Cl. 2—244)



2. An ornamental tape effect created by a series of stitches upon a fabric wherein a zig-zag or sine-wave shaped thread is laid upon said fabric, a plurality of straight tapes or cords, the upper portion of said thread lying upon one of said straight tapes, a series of straight stitches parallel to one another and tacking said thread to said fabric, and having said upper tape between said parallel straight stitches, and a second straight tape or cord between a series of straight stitches at the lower portion of said thread, said upper and lower tapes or cords being symmetrically arranged with respect to a longitudinal axis.

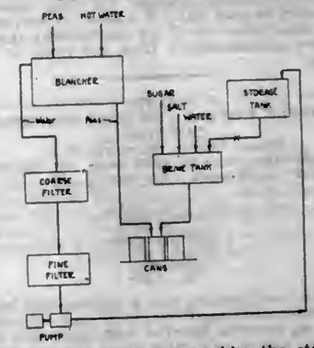
2,471,166
SHOCK ABSORBER WEBBING
Edward A. Neff, Chicago, Ill.
Application October 16, 1944, Serial No. 558,793
7 Claims. (Cl. 139—384)

4. Shock absorber webbing comprising in combination a first series of warp threads individual ones of which are transversely spaced from each other, a second series of warp threads of greater free elongated length than the warp threads of said first series and of sufficient strength to support a shock, said first series of warp threads being of lesser strength than said second series and thereby being adapted to break under said shock, groups of weft threads at longitudinally spaced intervals, individual threads of said groups of weft threads being interwoven with the individual threads of said first series at said intervals, groups of said second series of warp threads lying between said transversely spaced ones of said first series of warp threads and interwoven with said groups of weft threads, and filler threads in between said groups of weft threads cooperating only with the warp threads of said second series to effect bulking thereof for giving said increased length.

2,471,167
RAILROAD-HIGHWAY CROSSING CONSTRUCTION
Ellis C. Oxenrider, Chicago, Ill.
Application December 15, 1945, Serial No. 635,159
7 Claims. (Cl. 238—8)

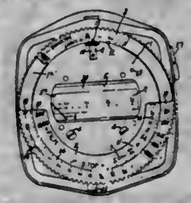
1. In a railway crossing having a track including cross ties and main track rails, said track rails comprising runner portions, vertical webs and base portions, the combination with said track rails, of two U-shaped channels secured to said track rails, respectively, abutting the inboard surfaces of said vertical webs, said U-shaped channels including upper and lower legs extending transversely of said track rails, said lower legs abutting said base portions and said upper legs being angled downwardly toward said lower legs; an intermediate support positioned between said track rails, said intermediate support including vertically and horizontally extending portions, said horizontal portions being connected to said cross ties, said vertical portions being perpendicular to said track rails and having slotted openings therein; crossing sections spanning the distance between said intermediate support and said track rails, said crossing sections having load bearing surfaces bearing against said horizontally extending portions, said crossing sections having projecting portions the upper and lower surfaces of which complement the angled inner surfaces of said U-shaped channels for interlocking engagement therewith, said U-shaped channels partially supporting said crossing sections and preventing transversal and vertical displacement thereof; and bolts extending through said crossing sections and said slotted openings for slidably securing said crossing sections to said intermediate support and preventing lateral movement of said crossing sections.

2,471,168
DEVICE FOR CONVERTING A SIGNAL OF VARIABLE AMPLITUDE INTO PULSES OF CONSTANT FREQUENCY AND VARIABLE DURATION
Klaas Posthumus, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application November 22, 1946, Serial No. 711,688
In the Netherlands September 25, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires September 25, 1965
13 Claims. (Cl. 332—15)



1. Apparatus for converting an amplitude-modulated signal into pulses of constant periodicity, the duration of said pulses being dependent on the instantaneous amplitude of said signal, said apparatus comprising means to generate a stepped wave the amplitude of which at isochronous moments steps to a value proportional to the instantaneous amplitude of said signal at said moments, said moments recurring at a rate corresponding to said constant periodicity, and means to convert each step of said wave into a pulse whose duration is proportional to the amplitude thereof.

2,471,169
GOLF BAG
Louis Salzberg, Newark, N. J., and Edwin J. Hughes, Jr., Larchmont, N. Y.
Application March 25, 1947, Serial No. 736,916
5 Claims. (Cl. 150—1.5)



1. A golf bag having a relatively stiff bag member, removable unitary means comprising spaced golf club holding tubular elements one of which is in the bag member and the other outside of the same, an elongated flexible portion interconnecting the elements at their upper portions, the bag member having a top opening having a stiff rim, and the elongated flexible portion extending over and resting on the rim, whereby the removable means can be separated from the bag member and carried with the flexible portion over one's shoulder.

2,471,170
TREATMENT OF VEGETABLES
George C. Scott, Le Sueur, Minn., and Robert E. Oltman, deceased, late of Le Sueur, Minn., by John T. Peterson, administrator, Le Sueur, Minn.
Application February 15, 1943, Serial No. 475,984
11 Claims. (Cl. 99—186)

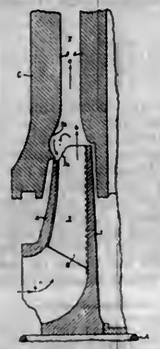
1. In the canning of vegetables the steps of washing vegetables, removing suspended impurities from the wash water, and introducing the purified water into cans with the washed vegetables.

2,471,171
VEST POCKET EXPOSURE METER HAVING OVERLAPPING SENSITIVITY RANGES AND CALCULATOR RINGS SURROUNDING THE METER SCALE
Allen G. Stimson, Lynnfield, Mass., assignor to General Electric Company, a corporation of New York
Application October 19, 1946, Serial No. 704,352
3 Claims. (Cl. 88—23)

1. In combination, a light meter and exposure calculator generally of the size of a large pocket watch comprising a casing, a transparent window forming the back wall of said casing, a light sensitive cell positioned flat against said window and exposed to any light admitted thereby, an electrical measuring instrument in said casing connected to be energized from said cell, a win-

dow in the central portion of the front wall of said casing, a scale and pointer for said instrument exposed in said window, an exposure calculator removably secured flat against the exterior of the front wall of said casing by securing means readily accessible on the front of said calculator at all times, said calculator comprising a pair of washer-shaped rings of different outer diameter and a wide open center supporting structure for concentrically supporting said rings at their inner peripheries for independent rotary adjustment about their central axes, said rings having concentrically exposed side-by-side exposure data scales on their front surfaces for correlating light value with film speed and stop opening with exposure time, said supporting structure and calculator rings surrounding and fully exposing the front window in said casing for all adjustments of said calculator whereby the light value as measured by said meter is framed by said exposure data scales and all are conveniently exposed to view simultaneously from the front of said casing.

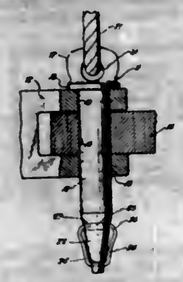
2,471,172
NIPPLE AND CAP FOR BABY NURSING BOTTLES
Daniel Stoller, Brooklyn, N. Y.
Application June 23, 1947, Serial No. 756,353
6 Claims. (Cl. 215—11)



1. The combination with a nursing milk bottle of a nipple and a cap mounted thereon, the nipple being of resilient material and collapsible into the cap, a series of shutter plates movable across the cap to hold the nipple collapsed, and means carried by the cap for simultaneously operating all plates.

2,471,173
FIBERBOARD CONTAINER FOR DISK-SHAPED ARTICLES
William H. Tayler, Lake Bluff, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application July 27, 1945, Serial No. 607,381
2 Claims. (Cl. 229—87)

1. In a container for a fragile disk, a structure formed of a single fibrous board profiled to afford a symmetrical polygonal center panel having an even number of sides, at least six in number, and a plurality of radially extending fringe panels, said center panel being of an area to encompass the disk to be packaged so that its polygonal sides are tangential to the circumference of said disk, the fringe panels being on continuous fold lines and comprising alternate rectangles and trapezoids completely surrounding the center panel, said trapezoidal panels and its adjacent rectangular panels being of such areas and angularity that, when a trapezoidal panel is folded in overlapping relation to the center panel, it will cover a corresponding section of said center panel bounded by three sides of the center panel which form boundaries respectively between the center panel and said trapezoidal panel and its two adjacent rectangular panels, said overlapped portion of the center panel being substantially a replica of said trapezoidal panel, and securing means on a pair of opposed rectangular fringe panels whereby, upon being last folded over, said pair of fringe panels effect retention of the other fringe panels.



2,471,174
CENTRIFUGAL COMPRESSOR STABILITY MEANS
William E. Trumpler, Olean, N. Y., assignor to Clark Bros. Co., Inc., Olean, N. Y., a corporation of New York
Application April 24, 1947, Serial No. 743,549
6 Claims. (Cl. 230—127)

1. A centrifugal compressor including cooperative impeller and diffuser means, said impeller having a pair of circular end members with blades disposed therebetween, and said diffuser means having a pair of walls disposed to receive therebetween discharge from said impeller, one of said impeller end members being of less diameter than the other, and the corresponding diffuser wall being annularly recessed thereadjacent, to provide a flow path for recirculation at low capacity operation of said compressor.

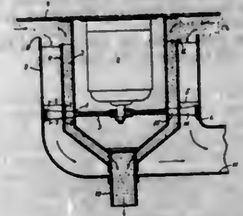
2,471,175
CLEVIS PIN
Iri I. Tubbs, Mount Vernon, Iowa, assignor, by mesne assignments, to Alice H. McIntyre, Cedar Rapids, Iowa, as trustee, and her successor trustees
Application April 19, 1946, Serial No. 663,463
11 Claims. (Cl. 278—65)

1. A device of the class described, comprising a draft member, a drawn member, said members having alignable apertures therein, and a clevis pin for connecting said members, comprising a main body portion engageable in said apertures, a head portion at one end of said body portion for positively limiting movement of the pin in one direction relative to said members, and a spring clip secured at its outer end to the other end of said body portion and having a curved portion at its inner end spaced from said members when said head portion is in contact therewith for preventing accidental withdrawal move-

ment of said pin in the opposite direction relative to said members, said clip being compressed by contact of said curved portion with said members during intentional withdrawal movement of said pin to enable complete voluntary removal thereof from said members.

2,471,176
TIME LAG FUSE LINK
Fred G. von Hoorn, Nichols, Conn., assignor to General Electric Company, a corporation of New York
Application October 28, 1947, Serial No. 782,475
5 Claims. (Cl. 200—135)

1. A fuse link comprising a basic fuse link element having a plurality of fusible portions in series joined by connecting portions, each of said connecting portions having attached thereto one or more circular disks of metal large enough to cover said connecting portions.

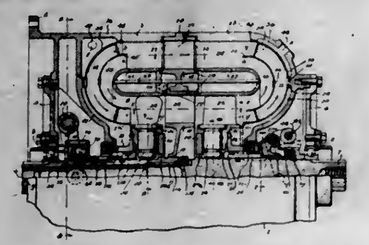


2,471,177
RENEWABLE FUSE
Fred G. von Hoorn, Nichols, Conn., assignor to General Electric Company, a corporation of New York
Application February 10, 1948, Serial No. 7,331
5 Claims. (Cl. 200—131)

3. In a renewable fuse having a fuse link assembly removably mounted within a housing and including spaced terminal members at each end of the housing, a renewable fuse link connecting said terminal members and a link securing screw, the combination therewith of a washer having a portion positioned between the head of the screw and the fuse link and comprising a cup-shaped member having flat bottom surface and a wall flaring outwardly from the bottom at an acute

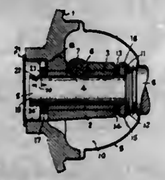
angle to the bottom and being thereby adapted to act as an arcing tip.

2,471,178
AIR CLEANING AXIAL FLOW BLOWER
Robert Walsh, Wilmington, Del., assignor to General Electric Company, a corporation of New York
Application September 3, 1947, Serial No. 771,955
5 Claims. (Cl. 183—87)



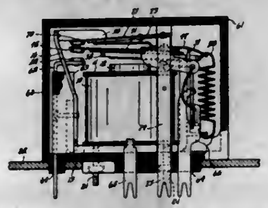
1. A gaseous fluid circulating and cleaning device comprising a cylindrical casing having an annular inlet chamber in which a particle-laden fluid stream to be cleaned is adapted to be directed, means in said casing for separating from said fluid stream a portion of said stream with substantially all of said particles entrapped therein, an annular discharge passage for said particles and portion of said stream, a coaxial annular cleaned fluid discharge passage and gaseous fluid impelling means comprising a radially inner and a radially outer set of radial blades concentrically arranged, with each of said sets disposed in operative relationship with a different one of said discharge passages and thereby adapted to propel the respective portion of said stream axially therethrough.

2,471,179
HYDROKINETIC TORQUE CONVERTER
Ernest E. Wemp, Detroit, Mich.
Application January 23, 1943, Serial No. 473,337
8 Claims. (Cl. 60—54)



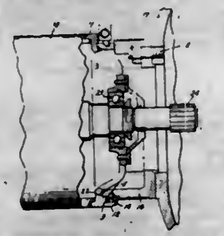
5. In a hydraulic torque converter, a torus chamber adapted to have a flow of liquid therein, a turbine, blades on the turbine operating in the

torus chamber whereby the turbine is driven, means mounting the blades for oscillation substantially on radial axes from low ratio position to high ratio position, said blades being disposed in an unbalanced manner relative to their axes so that the forces thereon tend to shift the blades toward low ratio position, a shiftable control



member for the blades, centrifugal means operated by the turbine, and means for transmitting the force thereof to the control member and including means for changing the mechanical advantage calculated so that the effect of the centrifugal force increases substantially directly with the speed.

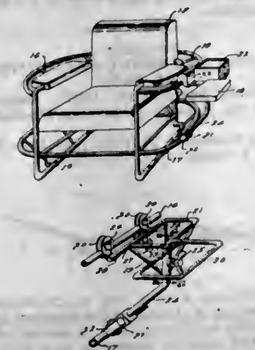
2,471,180
MECHANISM FOR ADJUSTING SHAFT END PLAY
Lawrance W. Wightman, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application September 24, 1948, Serial No. 50,945
12 Claims. (Cl. 308—161)



1. In combination, a bearing, a shaft rotatably supported by said bearing and extending on both sides thereof, means on one extension of said shaft for preventing axial movement of said shaft in the direction of the other shaft extension, said other shaft extension having a groove formed in its outer periphery at right angles to the axis of said shaft and spaced from said bearing, and means having one portion positioned on said other shaft extension extending over said groove and another portion adapted to prevent axial movement of said shaft toward said one shaft extension when said last-mentioned means is secured to said other shaft extension, said one portion having a part crimped into engagement with said groove for securing said last-mentioned means to said other shaft extension, said other portion being spaced from said crimped part by a distance which provides a predetermined amount of axial end play between said other portion and said bearing whereby the axial end play of said shaft can be adjusted to a predetermined amount by the location of said crimped part with respect to said other portion.

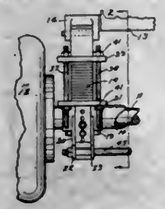
2,471,181
RELAY
John M. Wilson, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application November 30, 1942, Serial No. 467,364
14 Claims. (Cl. 200—104)

10. An electromagnetic relay, comprising in combination, a frame member with a core member mounted thereon, said frame member having a portion disposed from said core member and terminating in a pair of projections separated by a sharp edge, an armature having apertures at one end pivoted on said frame portion for movement relative to said core member, a flexible non-magnetic plate attached to one surface of said armature and movable therewith, said plate having apertures at one end to coincide with the apertures in said armature through which the projections of said frame portion extend, a further aperture in said flexible non-magnetic plate through which said sharp edge of said portion of said frame extends to engage said armature, a resilient member mounted on and movable with said armature, deformable means secured to said frame and positioned to be engaged by said resilient member to limit the movement of said armature away from said core member, and a spring member secured at one extremity to said frame member and attached at the other extremity to a portion of said resilient member extending beyond said frame portion, said spring member biasing said armature and said non-magnetic plate into engagement with said frame portion and away from said core member.



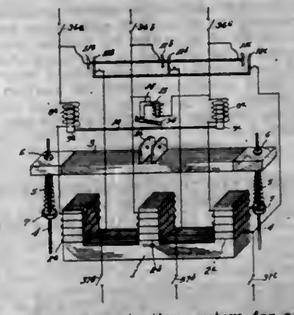
2,471,182
DYNAMOELECTRIC MACHINE
Thomas F. Worth, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application November 19, 1947, Serial No. 786,841
2 Claims. (Cl. 248—2)

1. A dynamoelectric machine having a flanged end portion, a circumferentially extending groove in an inner periphery of said flanged end portion, a split ring of springlike material located within said groove, said ring having a tapered side, a



mounting flange for said dynamoelectric machine, said mounting flange having a circumferentially extending groove having a tapered side adapted to cooperate with the tapered side of said split ring, and means for clamping together the ends of said split ring, whereby said ring may be caused to enter said second-mentioned groove and firmly attach said dynamoelectric machine to said mounting flange at any desired rotational position.

2,471,183
BEAUTY PARLOR ROLLING AUXILIARY CHAIR
Josiah Whitney Adams, Detroit, Mich.
Application September 30, 1946, Serial No. 700,192
2 Claims. (Cl. 155—81)

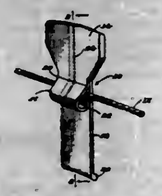


1. A chair for barber and beauty operator use comprising a frame supporting an upper and lower trackway, a movable stool assembly mounted upon said trackways, said stool assembly comprising a frame having a plurality of flanged rollers riding upon said upper trackway, said frame having a portion thereof extending downwardly and having secured thereto a flanged roller riding upon said lower trackway, means for raising and lowering said stool, said upper trackway having a removable section therein to provide means whereby said stool assembly may be disengaged from said trackways.

2,471,184
TRUCK HITCH
Edward F. Andrews, Youngstown, Ohio, assignor to The Miller Spreader Corporation, Youngstown, Ohio, a corporation of Ohio
Application July 31, 1947, Serial No. 765,214
1 Claim. (Cl. 280—33.44)

A hitch for attachment to the rear axle and spring assembly of a truck and including a horizontal body member displaced longitudinally of said truck, a pair of longitudinally displaced vertical channel members positioned on said horizontally body member, one of which is movable longitudinally with respect thereto, a T-headed member adjustably positioned in each of the said vertical channel members and having openings formed in the T heads thereof, brackets having openings therein and pairs of studs engaging the openings in the said brackets and the T-headed members, respectively, for mounting the said hitch on the said spring assembly of the truck, and a hitch pin affixed to the said horizontal body member and extending sidewardly therefrom.

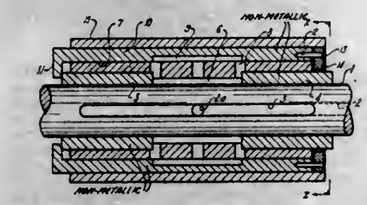
2,471,185
AUTOMATIC STARTER FOR ELECTRIC MOTORS
Boris Antipovitch, Mexico City, Mexico
Application August 24, 1946, Serial No. 692,881
17 Claims. (Cl. 172—289)



1. An automatic starting system for an alternating current motor comprising, in combination, a source of alternating current, electromagnet means including reactor coils connected in series with said source for limiting the motor starting current including an armature and spring means for biasing said armature away from said coils, and switch contacts operated by said armature for short-circuiting said reactor coils upon a predetermined decrease in motor current flow as the motor increases in speed.

15. An automatic starting system for an alternating current motor comprising, in combination, a source of alternating current, electromagnetic means comprising a core having a group of coils wound therearound, and a movable armature normally biased away from said core, each of said coils being connected in series with a terminal of said source and a motor terminal, a second group of coils wound on said core, a switch operable by attraction of said armature to said core for converting said groups of coils and said core from a voltage limiting reactor into an autotransformer, and means responsive to attainment of a predetermined speed and terminal voltage of said motor for short-circuiting said first group of coils to apply full line voltage to said motor.

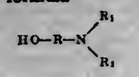
2,471,186
CLOTHESPIN
Ethel P. Asheroft, Colorado Springs, Colo.
Application January 29, 1946, Serial No. 643,975
1 Claim. (Cl. 24—137)



A clothespin formed of a single piece of plastic material comprising a head portion, a first leg

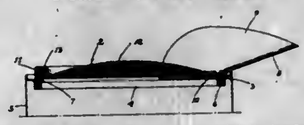
portion of predetermined length extending therefrom, a second leg portion of a predetermined length less than that of said first leg portion extending from said head portion at an angle to said first leg portion, a looped portion terminating said second leg portion and abutting against said first leg portion whereby said leg portions have regions spaced from each other thereby

forming a space adapted to receive a clothesline for supporting the clothespin, said looped portion and the region of said first leg portion abutting thereagainst being adapted to grip items of clothing, and a continuous metallic insert embedded in said head portion, second leg portion and looped portion for mounting the latter portion in yieldable abutting relationship with said first leg portion.



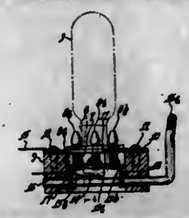
2,471,187
COMPOSITE FLOATING BEARING JOURNAL
Karl W. Atwater, Pittsburgh, Pa.
Application July 21, 1944, Serial No. 545,977
3 Claims. (Cl. 308—238)

1. A composite bearing structure comprising a plurality of superposed alternate metallic and non-metallic, bearing sleeves journaled for rotation relative to each other and having channelling extending to their respective bearing surfaces and communicating with a source of pressure fluid.



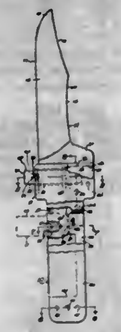
2,471,188
UREA RESINS CONTAINING AMINOALKOXY SUBSTITUENTS
Robert W. Auten, Jenkintown, Pa., assignor to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application July 28, 1945, Serial No. 607,851
5 Claims. (Cl. 260—70)

1. As a new composition of matter, a thermosetting resinous product, containing di-substituted aminoalkoxy groups, obtained by condensing at a pH of 4 to 7 (a) urea, and (b) an aldehyde from the group consisting of formaldehyde, acetaldehyde, butyraldehyde, furfuraldehyde, and benzaldehyde, to form an alkylol derivative of said urea, and etherifying said alkylol derivative with (c) a di-substituted amino-alcohol having the general formula



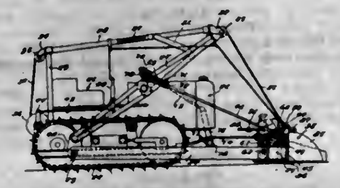
in which R is a saturated alkylene group of two to six carbon atoms, R_1 is a hydrocarbon group from the class consisting of alkyl groups of one to six carbon atoms, benzyl, phenyl and cyclohexyl groups, and R_2 is a hydrocarbon group from the class consisting of alkyl groups of one to six carbon atoms, benzyl and cyclohexyl groups, at a temperature from 60° C. to 105° C., the aldehyde being reacted in an amount from 2 to 3.0 mols per mol of urea and the amino-alcohol being reacted in an amount from 0.05 to 0.5 mol per mol of aldehyde.

2,471,189
STRAINER AND SPOUT ATTACHMENT FOR CANS
Frank Barteis, Sacramento, Calif., assignor of one-fifth to John G. Maslenka, Sacramento, Calif.
Application November 22, 1944, Serial No. 564,682
1 Claim. (Cl. 210—163.5)



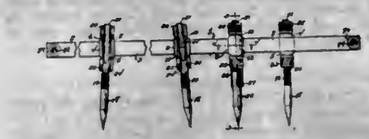
In combination with a can which includes a circular opening in its top and a channel formed in the top adjacent the opening, a pair of arcuate members, each member engaging in a portion of the channel to hold the members in position when the can is inverted, such members being of a size to complement each other to form a substantially full circle ring about the channel whereby to hold each member against displacement with respect to its fixed position in the channel, a spout fixed to one member, a lip on the spout projecting inwardly of the said one member and overhanging the adjacent inner edge of the circular opening of the can, and a strainer fixed on the other member, such strainer including a portion symmetrically fitting between the sides of the spout and overhanging and resting on the lip of the spout.

2,471,190
LAMP SOCKET
Sten E. Bartelson, Ashland, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 30, 1946, Serial No. 694,038
4 Claims. (Cl. 173—328)



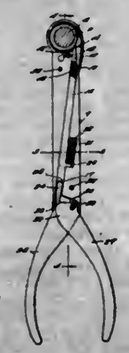
1. A socket for an electrical device comprising a hollow pedestal, an apertured disc mounted on said pedestal, a washer provided with pins upwardly extending through said apertures and disposed within said pedestal, at least one spring positioned between said disc and washer for biasing the washer in a downward direction, a cam acting directly on said washer for relieving the tension on said spring.

2,471,191
COMBINATION TOOL
Ruby R. Boshaw, Detroit, Mich.
Application April 6, 1946, Serial No. 660,114
6 Claims. (Cl. 279—77)



3. A combination tool comprising a handle having a longitudinal socket therein, a pivot member in said socket, a detent in said handle remote from said pivot member, and an implement having an elongated shank insertable in said socket and having a recess engageable with said pivot member and a locking portion engageable with said detent, said implement having and approximately right-angled cutaway abutment portion, and said handle having a rigidly-mounted approximately right-angled abutment member engageable with said right-angled cutaway abutment portion.

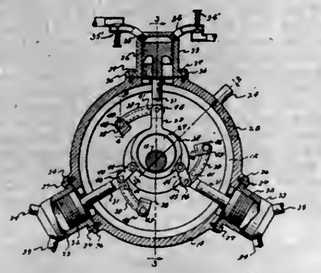
2,471,192
SHIFTING SHOVEL LOADER
Robert E. Boulton, Rifle, Colo.
Application February 12, 1947, Serial No. 727,997
7 Claims. (Cl. 214—132)



1. An earth working machine comprising a tractor, lifting means connected to the tractor for pivotal movement between lowered and raised positions, a shovel supporting member connected to the lifting means for lateral shifting movement, a shovel hinged upon the supporting member and adapted to be dropped down to release the dirt collected by the same, means for automatically latching the supporting member and the shovel against lateral shifting movement in lowered positions of said lifting means, means for automatically releasing said latching means and simultaneously shifting said supporting member and shovel laterally relative to said lifting means as an incident of lifting means elevation from lowered positions, and means for releasably retaining the shovel in a raised position upon the supporting member and against downward hinging movement therefrom.

2,471,193
BEAM COMPASS
James E. Brower, Pleasantville, N. J.
Application May 18, 1945, Serial No. 594,388
3 Claims. (Cl. 33—158)

1. A compass device, comprising a sectional longitudinal adjustable bar, a block formed on one of the ends of each section and having arcuate upper and lower faces, and a vertical elongated slot, a plurality of supports slidably mounted on the bar and having a transverse slot through which the sections of the bar are received, clamping nuts for holding the sections in adjusted position and the supports in place thereon, said supports having upper and lower arcuate faces and an elongated vertical slot, and implements carried in the slots of the supports and blocks and angularly movable with respect thereto, means for clamping the implements in position, said means engaging the arcuate faces of the supports and blocks.



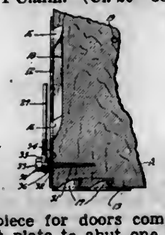
2,471,194
WRENCH
Alonzo V. Capps, Alamogordo, N. Mex.
Application October 30, 1944, Serial No. 561,091
3 Claims. (Cl. 74—128)

1. A ratchet wrench of the class described comprising an elongated body of general rectangular

cross-sectional form provided in one flat face with a diagonal groove opening through said face, said groove constituting a slideway, a thrust rod of a length less than and mounted for reciprocation in said slideway and disposed flush with said one face, said thrust rod being provided on one side intermediate its ends with a lateral abutment, and said body having a recessed pocket in which said abutment is situated and slidably operable, a return spring confined in said pocket engaging said abutment, toothed ratchet means at the outer end of said body, a pawl mounted on said body and cooperable with the teeth of said ratchet means, a pivoted thrust finger on the outer end of said thrust rod, said finger being located in said groove and being engageable with said teeth, together with a single cover plate fitted against the grooved face of said body and closing and shielding said groove, thrust rod, thrust finger, abutment, return spring, and also coacting with and assisting in holding said ratchet means in place, and handle means at the inner end of said body.

2,471,195
VARIABLE CAPACITY HYDRAULIC PUMP
Claude J. Christopher, Los Angeles, Calif.
Application December 5, 1947, Serial No. 789,827
3 Claims. (Cl. 103—174)

1. A hydraulic pump comprising a housing, pump cylinders radially arranged in the housing, pistons operable in the pump cylinders, a shaft extending into the housing and having an eccentric portion thereon, a driving plate connected to the eccentric portion, an adjustable plate forming a part of the housing and having anchor portions thereon, slotted links pivotally connected to the anchor portions, a slide operable between the slotted links, a piston rod connected to the slide, and a connection between the driving plate and the slotted links to operate the same and to effect the movement of the pistons.

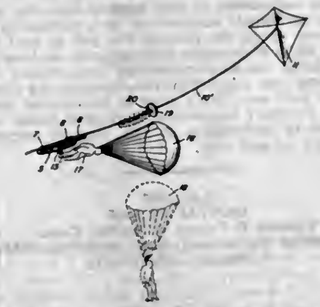


2,471,196
ADJUSTABLE PATTERN FOR COLLARS AND LAPELS
Dominick J. Cieri, Hartford, Conn.
Application April 30, 1945, Serial No. 590,989
1 Claim. (Cl. 33—15)

The combination of an adjustable garment pattern comprising a plurality of separably connected sections and including a pair of abutting separable front sections, and an independent adjustable collar pattern including a pair of adjustably connected collar sections superimposed upon and adjustably secured to said front sections; each of said front sections being detachable from the garment pattern as a unit with its

respective collar section to provide a pattern for a combined front and collar section of a garment.

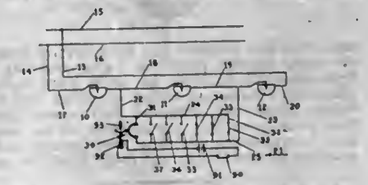
2,471,197
BRACKET FOR MOUNTING ROLLERS ON OVERHEAD DOORS
Henry B. Clark, Elizabeth, N. J.
Application October 11, 1944, Serial No. 558,265
1 Claim. (Cl. 20—38)



A corner piece for doors comprising a substantially flat plate to abut one face of a door and having two edges meeting at a right angular corner, and each formed with a flange perpendicular to the plate to abut the right angularly disposed side and bottom edges at a corner of such door, respectively, each flange having at least one integral lug projecting from the inner surface thereof in spaced and approximately parallel relation to said plate and extending diagonally away from said right angular corner and having a pointed end whereby said corner piece may be mounted on the corner of such door by slipping it over said door corner and forcing it longitudinally and transversely of the door so that said lugs will be driven into said edges of the door.

2,471,198
TUBING ROTATOR
David R. Cormany, Long Beach, Calif.
Application March 22, 1948, Serial No. 16,289
1 Claim. (Cl. 166—14)

Tubing rotating mechanism for a well apparatus including a casing within the well and a tubing within the casing extending upwardly above the upper end of the casing, said mechanism comprising a housing having a flanged base secured to the upper end of the casing and surrounding the tubing, a spinner plate fixed to the tubing, an antifriction bearing positioned between said spinner plate and the flanged base of said housing for supporting and permitting rotation of the tubing, a driven gear secured to said tubing coaxially therewith, a shaft journaled in bearing supports carried by said housing, a driving gear secured to said shaft in meshing engagement with said driven gear, said gears affording a reduction of speed of rotation of said tubing relative to said shaft, a toothed ratchet wheel secured to said shaft, an actuating arm pivotally mounted on said shaft, a ratchet finger on said arm for engagement with the teeth of said ratchet wheel for intermittent unidirectional rotation of said shaft upon oscillation of said arm, and means for oscillating said arm.



2,471,199
PARACHUTE RELEASE FOR KITES
Vincent C. Coyne and John W. Stuart, New Brunswick, N. J.
Application March 23, 1948, Serial No. 16,508
1 Claim. (Cl. 244—155)

A toy parachute release for kite strings comprising a slide, a pair of longitudinally aligned apertured guides rising from each end of the slide for suspending the slide on a kite string, a hook having a bill and being slidable longitudinally on top of the slide, guides for the hook closing the bill of the hook, a hanger having an open parachute attached thereto and releasably engaged on the bill of the hook in a suspended position from the slide, said hanger being released by a rearward movement of the hook and said slide being carried forwardly on the string by force of air currents subjected to the parachute, and a stop carried by the string in the path of the hook during forward movement of the stop to move the hook into its releasing position, said slide having an aperture therein through which said hanger depends from said bill and in which the hanger is confined during rearward movement of the hook to release said hanger.

2,471,200
COMPOSITE SWITCHING DEVICE
William Deans, Ridgewood, N. J., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 16, 1945, Serial No. 599,844
3 Claims. (Cl. 171—97)

1. A switching device for sequentially establishing and disconnecting a plurality of parallel circuits across an electrolytic cell in series with other electrolytic cells; said switching device comprising a support; a plurality of switches carried by said support; a handle individual to each of said switches; and an interlock member carried by each handle; each interlock member being engageable with the interlock member of an adjacent switch; the interlock member of one switch being arranged to block the movement of the interlock member and handle of an adjacent switch when the handles are in one position; and the interlock member of said adjacent switch being

arranged to block movement of the interlock member and handle of said first mentioned switch when the handles are in another position, each of said switches being arranged on operation of the handle to establish or disconnect one of said parallel circuits; and a circuit breaker member mounted on said support and arranged to connect and disconnect an additional circuit in parallel across said electrolytic cell; and means for opening said circuit breaker member after all of the other switches have been opened, said circuit breaker member having an arc extinguisher.

2,471,201
BODY-SUPPORTED INFANT'S CHAMBER POT
Neva R. Deardorff, New York, N. Y.
Application January 26, 1946, Serial No. 643,568
2 Claims. (Cl. 4—110)

1. A toilet utensil for an infant, comprising a generally oval vessel having an open top provided with a flange shaped for seating the infant thereon, and a pair of supporting members rigidly secured to the opposite sides of the vessel at the shorter diameter thereof and extending laterally from adjacent the top of the vessel, said members being curved to fit comfortably over the legs of an adult, when seated, adjacent and above the knees, and having portions at the outer ends thereof extending downwardly to fit over the outer sides of the adult's legs to hold the supporting members in place, whereby said vessel may be readily held between the adult's knees when in use by the infant.

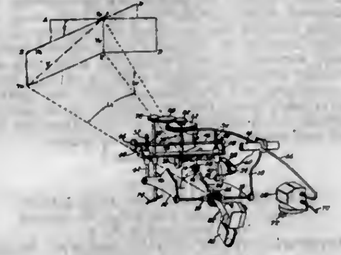
2,471,202
CHANCE CONTROLLED HEMISPHERICAL GAME PIECE
Hubert Desaulniers, Montreal, Quebec, Canada
Application January 11, 1946, Serial No. 640,427
In Canada December 17, 1945
1 Claim. (Cl. 273—146)

A game, comprising, a pair of cooperating identical but completely separate pieces, each

piece being a hemisphere solid throughout and having a flat unbroken surface and a hemispherical unbroken surface, the flat surfaces of the respective pieces adapted to be juxtaposed to mate the pieces so as to form a sphere which can be held in the hand for throwing but of which the hemispheres are free from connec-

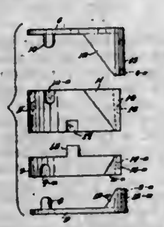
tion with one another and may readily separate on being thrown from the hand, the flat and hemispherical surfaces of each piece forming alternative bases on either of which the individual piece can come to rest when thrown on a playing surface, the surfaces of the respective hemispheres carrying contrasting indicia adapted to distinguish one piece from the other.

2,471,203
ARTICLE OF APPAREL AND METHOD OF MAKING SAME
Arnold Eddy, Middletown, Conn., assignor to Trubenising Process Corporation, New York, N. Y., a corporation of New York
Application February 1, 1946, Serial No. 644,938
3 Claims. (Cl. 2—143)



1. The method of producing a flexible fold line in an article of apparel having a plurality of plies of textile fabric fused together one of which contains a latently adhesive substance that is capable of being rendered adhesive by treatment with a solvent, which comprises applying to one of the plies along the predetermined fold line a coating of an aqueous solution of carboxymethyl cellulose, and drying the coating to form a non-spreading, strong pliable adhesion preventive film thereon which film is impervious to and insoluble in the solvent used to fuse the plies but is soluble in water.

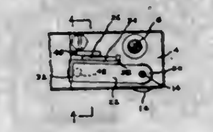
3. A washable article of wearing apparel having a preformed fold line, comprising a pair of external plies, an intermediate lining ply adhesively secured to at least one of said external plies, and a narrow, non-spreading, film of carboxymethyl cellulose on one of the plies in the region of the fold line to prevent adhesion of said ply to an adjacent ply along said zone, said film being completely dissolved and thereby removed from the article on the first washing thereof.



2,471,204
COMPUTING SIGHT
Richard M. Elliott, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application February 11, 1946, Serial No. 646,969
3 Claims. (Cl. 33—49)

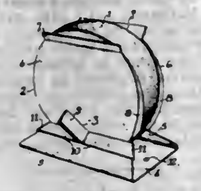
1. In a gun sight for use with a gun mounted to swing in azimuth and elevation, a sighting element, a sight bar carrying said element and mounted for universal movement about a pivot point which is fixed relatively to the gun, sight operating means comprising a support mounted for rotation about and translation along an axis which intersects a line parallel to the gun and passes through said fixed point, means operated in response to a movement of the gun in azimuth to impart an equal and opposite rotation to said support about said axis thereby to maintain constant the orientation of said support in space, means operated in response to a movement of the gun in elevation to impart an equal and opposite

angular movement to said support whereby said axis is constantly maintained in a vertical position, and means for causing the gun to lead the line of sight in elevation and azimuth, said means comprising operator-controlled connections for adjusting said support in translation in the direction of said axis and a slide to which said sight bar is pivotally connected, said slide being adjustable in translation on said support perpendicularly to said axis.



2,471,205
DENTAL FLASK
Thomas F. Fagan, Columbia, Conn.
Application November 5, 1946, Serial No. 707,959
3 Claims. (Cl. 18—33)

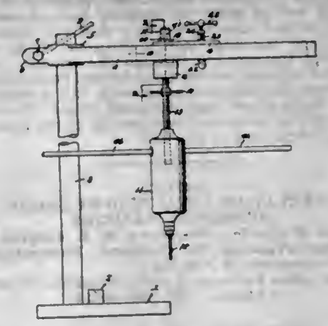
1. A molding flask of the character described including a unitary section having a surrounding wall with a single slit therein to permit opening of said section, and a cover having a perpendicular projection covering said slit and engaging the said section at opposite sides of the slit to retain the section in closed position.



2,471,206
FLINT HOLDER
Irving Florman, New York, N. Y.
Application March 1, 1946, Serial No. 651,353
2 Claims. (Cl. 67—7.1)

1. A flint holder for pyrophoric lighters, comprising a piece of sheet metal bent to form a tube square in cross-section, one wall of said tube extending laterally beyond the adjacent wall and being bent upwardly parallel to such adjacent wall but spaced therefrom to form a space therebetween, and a closure part comprising a piece of sheet metal bent to form a first portion adapted to close one end of the tube and a second portion

at right angles thereto adapted to fit into said space, said second portion having an outwardly turned flange at its free end arranged to engage the front edge of the upwardly bent part of the tube to hold said closure part in position to close the end of the tube.



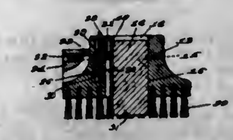
2,471,207
BLADE SHARPENER
Grover C. Freeman, Fort Leavenworth, Kans.
Application November 17, 1947, Serial No. 786,436
10 Claims. (Cl. 51—214)

1. A sharpener comprising a flat cylindrical stone, and a holder including side portions for freely supporting said stone therebetween, said side portions being resiliently biased to engage the sides of said stone and bias a blade against said stone when it is inserted between one of said side portions and the adjacent side of said stone, and flanges extending inwardly toward each other from the lateral edges of said side portions and overlapping and conforming to the peripheral surface of said stone, said flanges being tapered to provide inwardly inclined edges for guiding a blade at an angular position when it is inserted between a side portion and said stone.

2,471,208
PORTABLE DRILL BRACE
John E. Gay, Newborn, Ga.
Application October 28, 1947, Serial No. 782,593
1 Claim. (Cl. 77—59)

In a portable motor operated appliance, the combination with a stand including an upright post, a horizontal arm having an opening at one end thereof fitted over the post for vertical adjustment thereon, said horizontal arm having a slot formed longitudinally thereof and extending inwardly from a point adjacent to the free end thereof, a head formed with an upstanding stud extended through the slot, an elongated washer disposed longitudinally of the arm directly over the slot, said elongated washer having an opening adjacent to one end thereof in which the stud is rotatably mounted, a clamp clamping the opposite end of the washer to said arm, securing the head in positions of adjustment, a feed screw secured to the head and being threaded in an open-

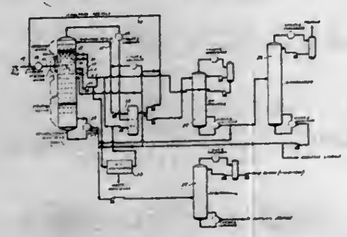
ing of a drill, whereby said drill is adjusted vertically to and from its work.



2,471,209
PROTECTOR FOR PIPES
Lassio Gasdik, McKeesport, Pa.
Application April 18, 1944, Serial No. 531,667
3 Claims. (Cl. 138—25)

2. In a method of protecting the enlarged ends of pipe from contact with each other when pipe lengths are handled in bundles by a sling, the steps including laying on each pipe length adjacent the enlarged end but inwardly thereof, a plurality of bearing members extending longitudinally of the length and covering substantially the entire circumference thereof and securing a tension bond about said members.

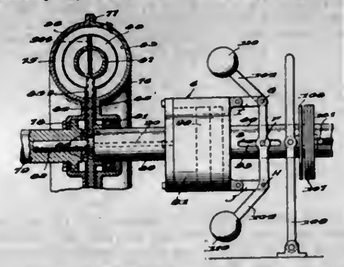
3. The combination with a pipe length including a barrel of uniform diameter and an enlarged muzzle at one end, of a spacer collar encircling the barrel adjacent said muzzle but disposed inwardly thereof, composed of a plurality of bearing blocks extending longitudinally of the length and disposed side-by-side around the circumference thereof and a tension bond about said blocks.



2,471,210
BATH BRUSH
Hartwell Griffin, Parton, Mass.
Application March 5, 1948, Serial No. 652,038
2 Claims. (Cl. 15—122)

1. A bath brush comprising an oval head formed with a central upstanding vertically apertured hand-gripping portion forming a well for

receiving a cake of soap, depending bristle tufts mounted in the lower surface of said brush head, inwardly directed spurs formed integrally on an inside wall of said well forming a fixed jaw, a movable jaw supported within said well opposite the fixed jaw and upon a threaded shank extending transversely through the opposite wall of said well and having spurs formed on the inner surface thereof, and a movable jaw operating nut disposed on said threaded shank whereby the cake of soap may be clamped in the desired adjusted position in said well.

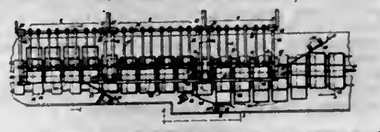


2,471,211
ALKYLATION CATALYZED BY LIQUID HYDROGEN FLUORIDE
Stuart T. Hadden, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application February 9, 1946, Serial No. 646,689
2 Claims. (Cl. 260—683.4)

1. In a process for the catalytic alkylation of isoparaffins by reaction with olefins in the presence of hydrogen fluoride in a fractionating column by introducing a fresh feed of isoparaffins and olefins below a tray in a reaction section of said column intermediate the upper and lower trays thereof, refluxing vapors from said reaction section in a refluxing section of said column above said reaction section and returning reflux liquid therefrom to said reaction section, stripping liquid from said reaction section in a stripping section of said column below said reaction section and returning vapors therefrom to said reaction section; the improvement which comprises passing liquid from said reaction section to a settling zone closed to vapor rising in said column, settling said liquid in said zone to provide a liquid hydrocarbon phase substantially free of liquid hydrogen fluoride, a liquid hydrogen fluoride phase substantially free of liquid hydrocarbons and a vapor phase, transferring said hydrocarbon phase to said stripping section, returning said vapor phase to said column at a point above said reaction section, and returning hydrogen fluoride so separated in said zone to said reaction section.

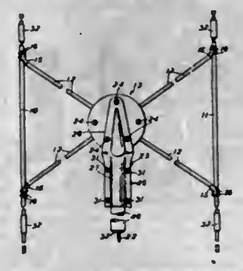
2,471,212
ROTARY TURBINE TYPE FLUID COUPLING
Estyle D. Hanson, Baltimore, Md.
Application April 5, 1946, Serial No. 659,912
4 Claims. (Cl. 60—54)

1. In a fluid coupling, a drive shaft, a driven shaft aligned with the drive shaft, an annular casing secured to the drive shaft, a helical vane carried by the casing and arranged on the inner surface thereof, a disc secured to the driven shaft, an annular core carried by the disc within said annular casing, a helical vane surrounding said annular core and secured thereto terminating at its outer periphery adjacent the inner edge of the



first helical vane, and a supply of liquid within said annular casing.

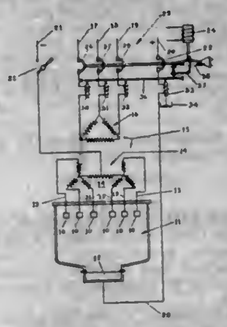
2,471,213
TREATMENT OF AQUEOUS LIQUIDS
Eric Berkeley Higgins, Tewin Wood, England, assignor to Tewin Industries, Inc., New York, N. Y.
No Drawing. Application June 5, 1942, Serial No. 445,981. In Great Britain January 22, 1937
13 Claims. (Cl. 210—24)



1. The process for the softening of water which comprises subjecting the water containing water-hardening compounds to contact with a cation-exchange material produced by heating a residual acid sludge from the refining of mineral oil fractions, and treating the resultant heated sludge mass with an alkali metal compound, and separating the water from said cation-exchange material.

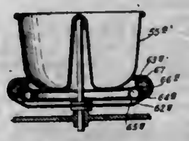
2,471,214
GATHERING MACHINE DISTRIBUTOR
Eric S. Hope, Elizabeth, N. J., assignor, by mesne assignments, to Conveyor & Machinery Manufacturers, Inc., New York, N. Y., a corporation of New York
Application January 24, 1948, Serial No. 4,100
20 Claims. (Cl. 226—14)

1. In a distributing apparatus for receiving and delivering sheets from the feed rollers of a gathering machine of the class described, a plurality of successive pairs of coacting delivery members positioned to receive therebetween sheets from said feed rollers, each of said pairs of members having a receiving end and a discharge end and containing cooperative sheet-engaging elements continuously moving from said receiving end towards said discharge end, a continuous conveyor disposed below and movable transversely with respect to the said moving elements of the said delivery members, said conveyor having thereon a plurality of open trays each containing a flat base plate adapted to receive thereupon boxes for receiving the sheets, and a plurality of deflector guides disposed along the path of said conveyor in different predetermined positions relative to the longitudinal center-line of the conveyor and disposed above said base plates, whereby the guides may engage and operatively move the boxes on the said base plates to predetermined positions relative to said discharge ends of the delivery members.



2,471,215
RADIO ANTENNA
Donald Jackson, Cambridge, England, assignor to Pye Limited, Cambridge, England, a company of Great Britain
Application November 15, 1946, Serial No. 710,118
In Great Britain September 27, 1945
8 Claims. (Cl. 250—33.65)

2. An ultra-short wave antenna comprising an antenna rod, an insulating housing, a coaxial cable extending from said housing with one end of said cable within said housing, an impedance matching unit within said housing including an insulating moulding having exposed terminal connectors thereon and impedance matching means for coupling said antenna rod to said cable embedded and sealed within said moulding and conductively connected to said terminal connectors, said end of said cable being embedded and sealed in said moulding in conductive connection with said matching means, means for supporting said housing, a pair of metallic stay rods supporting said antenna rod from said housing, said stay rods being conductively secured at one end thereof to said antenna rod at spaced feed points therealong and said stay rods extending at the other ends thereof into said housing, said other ends of said stay rods being tubular and respectively fitting over said terminal connectors of said matching unit to conductively connect said stay rods with said matching means for the purpose and with the effect that said stay rods function also as feeders connecting said feed points of said antenna rod to its said matching means, and means for holding said tubular ends of said stay rods captive in said housing.

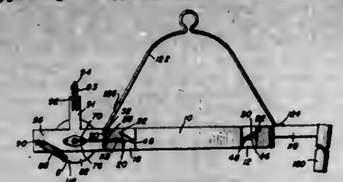


2,471,216
LOW-VOLTAGE RECTIFIER PROTECTION
Otto Jensen, Malvern, Pa., assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 18, 1945, Serial No. 623,109
3 Claims. (Cl. 321—12)

1. In a rectifier circuit comprising a plurality of alternating current conductors connected to the primary of a transformer, a rectifier having an anode connected to the secondary of the transformer and a cathode connected to a direct current conductor; a protective device comprising a multipole circuit breaker, the poles of the circuit breaker being simultaneously operable to open and closed position; one of the poles of the circuit breaker being connected in the direct current conductor; and being calibrated for time delay in response to overloads; and the other poles of the circuit breaker being connected in the alternating current conductors, each pole of the circuit breaker having a tripping device energized

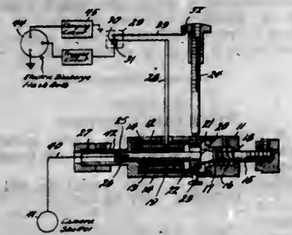
by the conductor in which the pole is connected; each of the tripping devices energized by the alternating current conductors being calibrated for instantaneous trip at a predetermined current level.

2,471,217
ROTATABLE DEVICE
Philip A. Johnson, Van Nuys, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application July 13, 1945, Serial No. 604,764
3 Claims. (Cl. 74—573)



1. A device of the type described comprising: a rotatable body and means supporting it for rotation about a predetermined axis and for swinging movement about a center located in said axis; an axially symmetrical receptacle concentric with respect to said predetermined axis and axially displaced from said center and rotatable with said body, said receptacle comprising an annular channel open on its inner side and adapted to retain a ring of liquid by centrifugal force during rotation; and an annular member secured to said body and extending into said annular channel during rotation of said device.

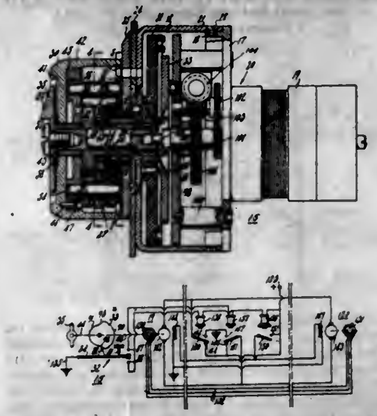
2,471,218
BAG HOLDER AND RELEASER
Lovic O. Jones, Greenfield, Tenn.
Application October 30, 1947, Serial No. 783,097
8 Claims. (Cl. 248—95)



1. A bag holder comprising an annular open frame, hanger means carried by said frame for engaging a supporting structure, a tightly coiled spring element rotatably and slidably carried by said frame, a plurality of circumferentially spaced bag supporting members fixed to said element, means acting on said element for normally

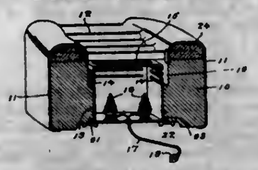
retaining said members in a raised position for supporting a bag, and means for rotating said

element to actuate said members to a lowered position for releasing a bag.



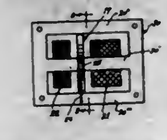
2,471,219
PHOTOFLASH SYNCHRONIZER WITH TRIPPER-OPERATED SAFETY SWITCH
Arthur Kennedy, Wood-Ridge, N. J., assignor to A. F. Smuckler and Charles C. Cullen, doing business as A. F. Smuckler & Company, New York, N. Y.
Application December 3, 1946, Serial No. 713,645
2 Claims. (Cl. 95—11.5)

1. A device of the class described, comprising: a casing having registered openings at its opposed ends, and operating rod passing through said casing and through said openings, said rod having a withdrawn or cocked position and a retracted position, means operable to latch the rod in its cocked position, tripping means to release said rod from its cocked position, resilient means within the casing for moving said rod through an operational stroke from the cocked to the retracted position, said rod having means at one end adapted to operate a camera shutter, electrical switch means within the casing operable to its closed position at the end of the operational stroke, and a second switch in series with said switch means and operable by said tripping means to its closed position and operable to its open position upon the conclusion of the tripping operation and release of the tripping means, said switches cooperating to control the operation of a flash bulb.



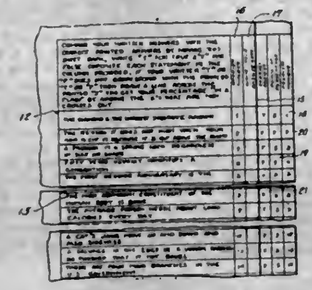
2,471,220
REMOTE POSITIONING AND INDICATING SYSTEM
William P. Lear, North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich., a corporation of Illinois
Application January 11, 1944, Serial No. 517,831
7 Claims. (Cl. 318—31)

1. A position preselecting and indicating unit comprising, in combination, a housing; said housing having a tubular extension; a shaft extending through said extension; a sleeve rotatably mounted on said shaft; a switch mounting plate in said housing secured to the inner end of said sleeve; a cam in said housing secured to the inner end of said shaft; a position selector mounted on said housing; means securing said selector against rotation relative to said sleeve; a position indicator; means securing said position indicator to the outer end of said shaft; a cup shaped knob rotatably mounted on said shaft; a clutch device rotatably mounted on said shaft within said knob; releasable means nor-



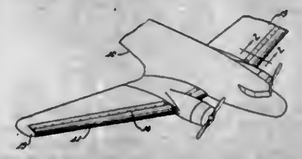
mally connecting said knob and clutch device for movement as a unit; reduction gearing mounted in said knob and operatively connecting said clutch device to said position selector and said switch mounting plate; switch means on said switch mounting plate operatively associated with said cam selectively operable by displacement of said cam from a neutral position; an electric motor mounted on said housing; gearing operatively connecting said motor to said cam; and circuit connections between said switch means and said motor.

2,471,221
ELECTRIC FOOT-WARMING OTTOMAN
George W. Lindstrom, Westport, Conn.
Application May 18, 1946, Serial No. 27,659
1 Claim. (Cl. 219—19)



An electric foot-warming ottoman comprising a main body having an opening extending vertically therethrough, foot rest bars spaced from one another and extending over the top of the opening, and a heater unit disposed in the opening beneath the foot rest bars, said heater unit including a casing having top and side openings, the opening in the main body being inset adjacent the side openings of the heater casing whereby to provide a recess for circulation of air through the heater casing and the foot rest bars and means carried by the bottom of the main body for retaining the heater unit within the body.

2,471,222
REGULATED TRANSFORMER
Lionel Lorant, Long Island City, N. Y.
Application November 7, 1947, Serial No. 784,557
1 Claim. (Cl. 171—119)



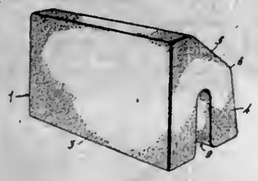
In an electrical transformer of the character described, a core having an outer ring and a leg across said outer ring forming a pair of openings in said core, a primary coil and a secondary coil carried on said leg in spaced relation and an auxiliary core member rotatably mounted intermediate its ends about said leg between the coils, adapted upon operation of the transformer to be influenced to movement from a normal rest position to a position whereby said auxiliary core member shall provide magnetic leakage paths shunting said leg and ring across each of said openings in the core; the extent of movement of the auxiliary core member being determined by the intensity of the magnetic field between the coils when the transformer is operated and the amount of the leakage being determined by the extent of movement of the auxiliary core member, and means urging the said core member to normal rest position.

2,471,223
SELF-QUIZ DEVICE
Charles Lorber, Louisville, Ky.
Application June 14, 1946, Serial No. 676,627
2 Claims. (Cl. 35—48)

1. A knowledge testing device including an upper and a lower sheet joined at one lateral edge, said sheets being of substantially the same width, the upper sheet being adapted for lateral slippage relative to the lower sheet to expose a portion of said lower sheet at the free lateral edges thereof, said upper sheet having a vertical crease intermediate its lateral edges said upper sheet including a flat portion at its free lateral edge adapted to lie flat with reference to the lower sheet extending from its free lateral edges to said crease, the remainder of the upper sheet bulging upwardly away from the lower sheet when pressed laterally, the first upper sheet having a column of appropriately defined blank spaces along its marginal edge and a column of printed problems laterally alined with the blank spaces, the lower sheet having a column of indicia along its marginal edge indicating answers to said problems, the indicia being laterally alined with the blank spaces when exposed by lateral slippage of the first sheet, the lower sheet having a column of indicia along its marginal edge indicating answers to said problems.

2,471,224
MEANS FOR PREVENTING THE ACCUMULATION OF ICE ON AIRCRAFT SURFACES AND THE LIKE
Dwight L. Loughborough, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application April 19, 1945, Serial No. 589,124
20 Claims. (Cl. 244—134)

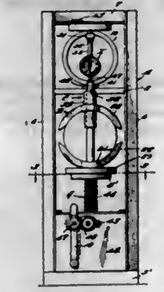
6. Apparatus adapted to be mounted on the leading edge of an airfoil exposed to icing conditions for preventing accumulation of ice thereon, said apparatus comprising an inflatable boot of flexible, elastic rubbery material having an exposed surface comprising a flexible elastic silicone, said surface being resistant to the adhesion of ice under said icing conditions.



2,471,225
GRADING MACHINE BIN
McSherry Lupton, Winchester, Va.
Original application August 9, 1941, Serial No. 406,177. Divided and this application July 26, 1946, Serial No. 686,543
2 Claims. (Cl. 209—74)

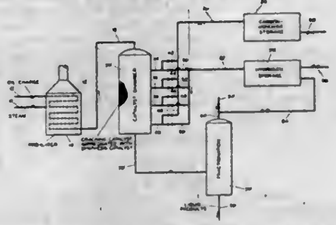
1. In a machine of the class described, a padded packing bin having upright sides for receiving fruit to be packed, said bin having a door padded on its inner surface and pivoted to the bottom of the bin so as to be flush with the side of the bin when in the upright closed position, and a detent device engaging said door for maintaining said door in the upright closed position against the weight of the fruit in the bin and limits its closing movement upwardly and inwardly at the termination of the upward closing movement, said door having a plate extending from the door downwardly when the door is in

the upright position and said detent device including a leaf spring mounted on and extending from beneath said bin floor and having at its outer end an upwardly extending end element, said plate being adapted to have its outer edge portion bear against the upper surface of said spring and engage the upwardly extending element whereby inward closing movement of the door is limited, said detent exercising its maximum resistance to the movement of the door as the door approaches and leaves the vertical position.



2,471,226
CONCRETE CURB BLOCK
Emil C. Maccario, Maplewood, N. J.
Application April 13, 1945, Serial No. 588,105
2 Claims. (Cl. 94—31)

1. A concrete curbing construction for highways and the like, comprising in combination, a concrete foundation, a number of concrete blocks each having front, rear, top, bottom and end surfaces and having recesses opening through said bottom and end surfaces, said blocks being arranged end to end on said foundation with portions of said concrete foundation extending upwardly into said recesses, and mortar material interposed between the end surfaces of said blocks and substantially filling said recesses thereby forming a binding connection between said mortar material, said concrete foundation and the adjacent blocks, said connection being cross-shaped in horizontal cross section through said recesses and inverted T-shaped in longitudinal vertical section through said recesses whereby the blocks are securely held on the foundation and prevented from displacement horizontally relatively to said foundation and to each other.

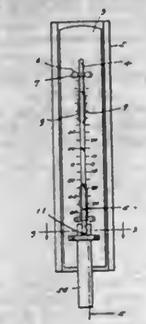


2,471,227
METHOD OF PRODUCING AND TESTING SPECIMENS OF PAVING MIXTURES
Bruce G. Marshall, Jackson, Miss.
Original application February 9, 1944, Serial No. 521,692. Divided and this application May 6, 1946, Serial No. 667,573
3 Claims. (Cl. 73—15.6)

1. The herein described method, which consists in pressing a quantity of paving mixture into a compact disk-like circular body to provide a test specimen, heating the specimen to an appropriate testing temperature, subjecting the heated specimen to compression diametrically thereof between a pair of opposed substantially similar arcuate members each embracing and contacting the peripheral edge of the specimen for nearly one half the circumference thereof and until failure of the same occurs, measuring the pressure to which the specimen is subjected and noting the degree thereof when failure of the specimen occurs to determine the stability value of the mixture, and measuring the diametric deformation of the specimen resulting from the compression thereof and noting the degree of such deformation at the

time failure of the specimen occurs to determine the flow value of the mixture.

2,471,228
PRODUCTION OF HYDROCARBONS
Eugene V. Mathy, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application September 3, 1946, Serial No. 694,543
3 Claims. (Cl. 196—52)

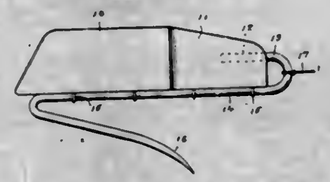


1. The process which comprises passing a mixture of gas oil and steam through an elongated catalyst zone in contact with a bauxite cracking catalyst impregnated with about five weight per cent of nickel oxide synthesis catalyst at a temperature of about 950 to 1000° F., and a flow rate of one liquid volume gas oil per volume of catalyst per hour, passing a mixture of hydrogen with carbon monoxide in approximately a 3:1 volume ratio of hydrogen to carbon monoxide into said catalyst zone at a plurality of points along the length thereof in total quantities of about 50,000 cubic feet of said mixture per hour to form hydrocarbons substantially entirely heavier than methane, and recovering as unsaturated products from effluents of said catalyst zone cracked hydrocarbons and synthesized hydrocarbons including gasoline in admixture.

2,471,229
THERMOMETER WITH HEAT CONDUCTOR
Edward L. McDonald, Sydney, Nova Scotia, Canada
Application March 27, 1946, Serial No. 657,595
1 Claim. (Cl. 73—376)

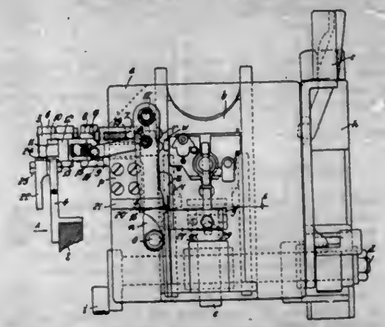
In combination, a back member, a thermometer tube and a bulb at the lower end thereof mounted on said back member, said tube being of some resiliency and having its bulb normally

engaging said back member, and a strip of heat conducting material frictionally held between



said bulb and back member and projecting beyond one end of said back member.

2,471,230
RESIDUE CARBOXYLIC ACID - ALKYLENE DIAMINE RESINS
Charles H. McKeever, Philadelphia, Pa., assignor to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 4, 1945, Serial No. 609,033
3 Claims. (Cl. 260—78)



1. A fusible, organic, solvent-soluble resinous composition, being the reaction product obtained by heating together at 120° to 270° C. in amounts which are chemically equivalent within ten per cent an alkylene primary diamine of not over ten carbon atoms and the amber-colored viscous residue containing long-chained polycarboxylic acids, having an acid number between 140 and 165, having an iodine number between thirty and sixty, and being the non-volatile material remaining from vacuum-distilling at 270° C. under four mm. pressure the by-product acids obtained in the preparation of sebacic acid from castor oil by treatment with alkali.

2,471,231
BIRD RETRIEVER
Benjamin Miller, Andover, Mass.
Application April 4, 1947, Serial No. 739,521
2 Claims. (Cl. 43—49)

1. A bird retrieving device comprising a float body tapered at its forward end and having a flat bottom and a hook having a straight shank and a bent back portion at one end of the shank and an engaging formation at the opposite end of the shank, the straight portion of said hook being attached to the flat bottom of the float longitudinally thereof so that the engaging formation will extend vertically downwardly therefrom, said float having a hole extending inwardly from its forward tapered end and receiving the bent back portion of the hook whereby to prevent the float from twisting to one side or the other of the hook.

2,471,232
FIRING MECHANISM FOR AUTOMATIC GUNS HAVING TRANSVERSELY MOVABLE BREECH BLOCKS
Desmond Walter Molins, London, England, assignor to Molins Machine Company, Limited, Deptford, London, England
Application July 20, 1943, Serial No. 495,522
In Great Britain June 25, 1942
14 Claims. (Cl. 89—4)

1. In firing mechanism for automatic guns of the kind described having a breech block and a breech ring, a cocking member movable into and out of firing position as the breech block is closed and opened, a fire-control-device, a firing member on the block constructed and arranged to be operated by said fire-control-device, a second firing member on the breech ring through which said first firing member is operated, and a catch device arranged to prevent said fire-control-device and said second member from operating said first firing member until said cocking member has moved into firing position and the breech block is closed comprising a lever pivoted at one end to the breech ring and connected by a link to said second firing member, the free end of said lever being arranged to engage said cocking member until said cocking member has moved into firing position.

2,471,233
MECHANICAL HORSE
Ephriam V. Monson, Salt Lake City, Utah
Application March 12, 1947, Serial No. 734,003
7 Claims. (Cl. 280—1.19)

5. In a rocking horse, front and rear pairs of ground wheels, front and rear axles for said pairs of wheels, one of said axles being a driving axle and having one wheel of the pair thereon fast thereto, a frame, means connecting said frame to said axles for lateral rocking movement including a ring on said frame through which said driving axle extends diametrically and is laterally slidable and rotatable therein, said ring being rockable by said frame about an axis transverse to said axle and in a plane oblique to the vertical to swing said axle for steering, a horse, means to mount said horse on said frame for lat-

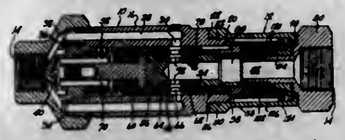
eral rocking to rock said frame and including a pivot on which said horse is rockable forwardly and rearwardly, a drive between said horse and said driving axle operative by forward and rear-

ward rocking of said horse, and spring means in said ring opposing rocking of said ring and thereby counterbalancing said frame and horse against lateral rocking movement.

2,471,234
METHYLPENTADIENE-ARALKENYL COPOLYMERS
Rupert C. Morris, Berkeley, Alva V. Snider, Richmond, and Eugene T. Bishop, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application June 15, 1944, Serial No. 540,548
9 Claims. (Cl. 260—83.7)

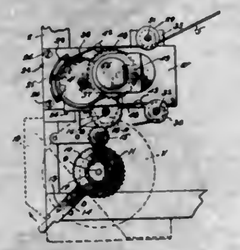
1. A process of producing an elastomer having improved milling properties comprising co-polymerizing from about 0.1% to about 5% of alpha-methylstyrene with from about 99.9% to about 95% of a mixture of 2-methyl-1,3-pentadiene and 4-methyl-1,3-pentadiene at a temperature of below 75° C. in the presence of a Friedel-Crafts catalyst.

2,471,235
ANIMAL SKINNING DEVICE
George A. Nick, Sacramento, Calif.
Application July 11, 1944, Serial No. 544,398
2 Claims. (Cl. 30—276)



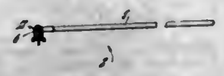
1. A carcass skinning tool comprising an elongate body forming a handle, a cutting disc mounted on the body adjacent its forward end outwardly of and adjacent one longitudinal face thereof in substantially parallel relation thereto, a drive shaft extending lengthwise of the body and projecting from the rear end thereof, another shaft operatively connected to the disc and extending along the body to and overlapping the drive shaft in parallel spaced relation, a spur gear on the overlapping portion of said other shaft, a second spur gear meshing with the first gear but partially offset therefrom whereby portions of the gears are clear of each other, and a third gear slidably but non-turnably mounted on the drive shaft in position to mesh with both first named gears and adapted to shift along the drive shaft from a position meshing with the clear portion only of the first gear to a position meshing with the clear portion only of the second gear.

2,471,236
CLEANING DEVICE FOR FUSES AND FUSE HOLDERS
Allen J. Parker, West Palm Beach, Fla.
Application December 7, 1945, Serial No. 633,574
3 Claims. (Cl. 51—205)



1. A device for removing cartridge type fuses from their fuse block terminals and for cleaning said terminals, consisting of a rigid member of general T-shape comprising a shank and a transverse head which lie substantially at right angles to each other the opposite ends of the head being of cylindrical form and projecting substantially equidistantly beyond the shank and being roughened to constitute abrasive elements dimensioned to abrasively engage within the terminals of a fuse block, the terminal end of the shank being curved forwardly to form a hook-like member extending across the free end of said shank, said hook-like member constituting a finger grasp by which the cylindrical roughened ends of the head may be rocked back and forth within the terminals to clean the same, said hook-like member being dimensioned to engage about the body of a cartridge fuse to pull the same out of its fuse block terminals when the device is inverted and the head is grasped as a handle and pulled outwardly and away from said fuse block.

2,471,237
SEPARABLE FLUID COUPLING
Harry S. Pasturczak, East Moline, Ill., assignor of one-half to William J. Bleasdale, South Bend, Ind.
Application July 8, 1948, Serial No. 37,631
18 Claims. (Cl. 284—19)

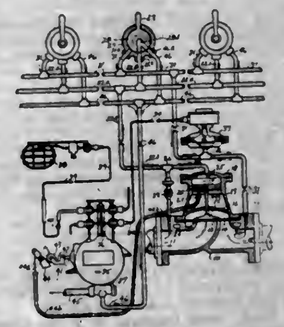


1. A separable fluid coupling comprising a pair of parts interfitting telescopically, one of said parts comprising a housing having a socket formed therein and a fluid passage terminating in a transverse port open at said socket intermediate the ends thereof, a spool valve slidable in said housing socket and having a longitudinal socket and a transverse port adapted to register with said housing socket in one position, the other part comprising a body having an end portion adapted to fit in said spool valve socket, said body having a fluid passage terminating in a lateral port adapted to register with said spool valve port when said end portion fits operatively in said spool valve socket, and a sleeve slidable on said end portion between a port-sealing position and a coupling position clear of said port.

2,471,238
RIBBON FEEDING AND INKING MECHANISM FOR TYPING MACHINES
George Ernest Pelton, Middleburg, Va., assignor to Ida S. Pelton, Round Hill, Va.
Application November 12, 1946, Serial No. 709,377
29 Claims. (Cl. 197—171)

14. In a typing mechanism for printing impressions upon a surface which employs an ink carrying ribbon that is moved between spools during the operation thereof, the combination comprising shaft means driven during the operation of said mechanism, an ink reservoir, rotary means in contact with said ribbon for transferring ink from said reservoir to said ribbon, means for driving said rotary means by said shaft means, means for rotatably supporting a ribbon spool, driving means for rotating said ribbon spool by said shaft means, and means for selectively disengaging said driving means between said shaft means and said ribbon spool.

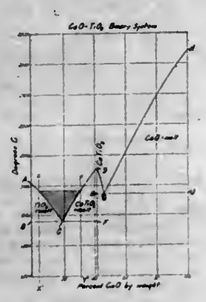
2,471,239
RAKE CLEANER
Norman H. Richards, West Springfield, Mass.
Application April 1, 1947, Serial No. 738,572
1 Claim. (Cl. 56—400.08)



The combination of a rake head having a longitudinal bar and spaced teeth depending therefrom with a cleaning device comprising in combination, a plurality of U-shaped hangers having upper transverse portions for resting on the longitudinal bar of the rakehead and side arms depending downwardly from opposite ends of the transverse portions in spaced relation and spaced outwardly from opposite forward and rearward sides of the teeth of the rakehead, separate and parallel longitudinal cleaning bars spaced outwardly from opposite forward and rearward sides of the teeth of the rakehead and secured to the lower free ends of the sidearms of said hangers spacing the said hangers relative to the longitudinal bar of the rakehead, and transverse retainer members extending transversely between the teeth and having opposite ends fixed to said cleaning bars, said hangers and cleaning bars being movable up and down relative to the rakehead with the transverse portions of said hangers limiting downward movements of said hangers and cleaning bars and said retainer members limiting upward and longitudinal movements of said hangers and cleaning bars.

2,471,240
HEAT ACTUATED DEVICE
Harry N. Rider, Youngstown, Ohio, assignor to "Automatic" Sprinkler Company of America, Youngstown, Ohio, a corporation of Delaware
Application February 3, 1945, Serial No. 576,063
3 Claims. (Cl. 297—15)

1. A heat actuated device comprising a two part walled structure defining an air tight enclosure, one wall of said enclosure being flexible, tubular means in communication with the other of said walls, the flexible wall portion of the said structure consisting partially of a disc-like centrally positioned bimetallic member capable of altering its shape upon attainment of a given temperature, an outer annular portion of the said flexible wall surrounding the centrally positioned disc-like bimetallic member being of a single thin metal to provide increased flexibility.



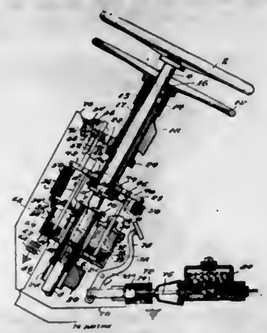
2,471,241
FLUID VALVE AND REMOTE-CONTROL SYSTEM
Harry N. Rider, Youngstown, Ohio, assignor to "Automatic" Sprinkler Company of America, Youngstown, Ohio, a corporation of Delaware
Substituted for application Serial No. 569,031, December 20, 1944. This application January 14, 1948, Serial No. 2,166
4 Claims. (Cl. 169—5)

1. A fluid valve and remote control system therefor, said fluid valve including a diaphragm and pressure responsive means for operating the said diaphragm to close a fluid passageway through the said valve, means in communication with the said fluid valve and pressure responsive diaphragm operating means for normally maintaining fluid pressure in the said pressure responsive diaphragm operating means, manual and heat actuated relief valves in communication with said pressure responsive diaphragm operating means for relieving fluid pressure therefrom so as to permit the said fluid valve to open, heat actuated devices in communication with said heat actuated relief valve, said manual valve including a normally open channel establishing communication between the said diaphragm operating means and the said heat actuated relief

valve, resetting mechanism on said heat actuated relief valve, and motion transmitting means connecting the said pressure responsive diaphragm operating means and the said resetting mechanism of the said heat actuated relief valve so that movement of the said pressure responsive diaphragm operating means may be used to reset the said heat actuated relief valve after operation.

2,471,242
PROCESS OF TREATING TITANIFEROUS IRON ORES
Percy H. Royster, Bethesda, Md., assignor to Pickands Mather & Co., Cleveland, Ohio, a co-partnership
Application January 27, 1944, Serial No. 519,922
10 Claims. (Cl. 75—30)

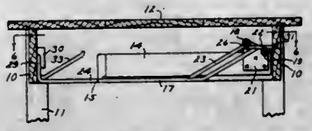
1. In the process of smelting titaniferous iron ore with carbon and added flux consisting essentially of a basic oxide of the group consisting of calcium oxide and magnesium oxide, the improvements which consist in so proportioning the charge as to produce a slag consisting essentially of titanium oxide, basic oxides and incidental impurities, in which charge the molar ratio of TiO_2 to basic oxides is maintained within the limits 12 to 1 and 3 to 2, and smelting said charge in a furnace at a temperature between 1550° C. and 1700° C. to produce molten iron and a fluid, titanium-rich, slag.



2,471,243
ALDEHYDE - POLYCYANOACETAMIDO-COMPOUND CONDENSATION PRODUCTS AND THE PROCESS OF MAKING SAME
John B. Rust, West Orange, N. J., assignor, by direct and mesne assignments, of one-half to Montclair Research Corporation, and one-half to Ellis-Foster Company, both corporations of New Jersey
No Drawing. Application March 25, 1944, Serial No. 528,163
6 Claims. (Cl. 260—72)

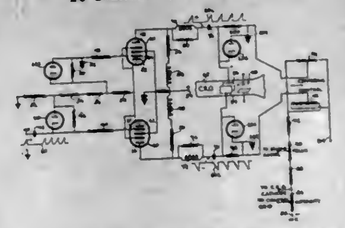
1. A resinous condensation product of an aldehyde and a polycyanoacetamide compound of the formula

$$\begin{matrix} HN & [R & N]_n & H \\ & | & & \\ & COCH_2CN & COCH_2CN & \end{matrix}$$



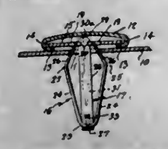
where R is a divalent hydrocarbon radical selected from the group consisting of alkylene and arylene radicals having from two to six carbon atoms and n is a number from 1 to 5.

2,471,244
BRAKING SYSTEM FOR MOTORCARS
John Lee Self, Forest Hill, La.
Application November 21, 1946, Serial No. 711,331
4 Claims. (Cl. 188—163)



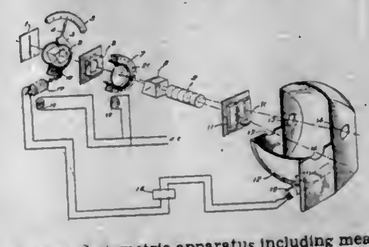
3. The combination with an automobile having a braking system and a steering wheel having a steering shaft, of a variable resistance mounted with fixed relation to the steering shaft and an electrical circuit for the resistance normally open, a solenoid in the circuit and a core for the solenoid having operable connection with the braking system, a casing in encircling engagement with the shaft and cylinders mounted on opposite sides of said casing, pistons and rods for the cylinders, cross arms receiving the free ends of the piston rods one arm having a notched bar operably connected with said resistance to vary the same, and circuit closing means on one cylinder operable under sliding movement of the shaft in the casing responsive to an upward thrust against the steering wheel to close the circuit and vary the resistance.

2,471,245
TABLE
Abraham J. Shoenberg, Clinton, Mass., assignor to Empire Furniture Manufacturing Company, Clinton, Mass., a corporation of Massachusetts
Application March 16, 1946, Serial No. 654,921
7 Claims. (Cl. 45—77)



1. A table comprising a frame, a drawer located within the frame, a track at each side of the drawer, and a pair of wheels on each side of the drawer near the rear thereof, one of the wheels in each pair being located somewhat above and in front of the other wheel, the front wheels engaging the upper surfaces of the tracks, and the rear wheels engaging the lower surfaces of the tracks, each track having a substantially horizontal rear portion, a downwardly and forwardly inclined intermediate portion, and a substantially horizontal front portion arranged to support the drawer as it moves forwardly beneath the front portion of the frame toward its open position, the inclined portions of the tracks having a depth greater than that of the horizontal portions and such as to support the drawer substantially level during its downward and forward movement.

2,471,246
ELECTRONIC APPARATUS
Lester C. Smith, Westmont, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 25, 1944, Serial No. 537,276
10 Claims. (Cl. 315—26)

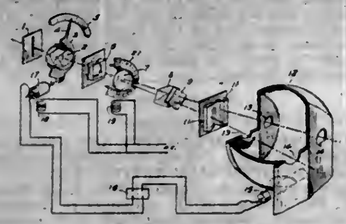


1. A cathode ray oscilloscope including an amplifier tube having a cathode, a control electrode and an anode, means for applying a predetermined static bias potential between the control electrode and the cathode of said tube, condenser means for applying voltage variations extending in a predetermined potential direction and of varying wave form to the control electrode of said tube, a unilateral conducting device associated with the control electrode of said tube to confine the operation of the tube to a predetermined portion of its operating characteristic so that amplified voltage variations are present at the anode of said tube, a cathode ray tube including a pair of cathode ray beam deflecting electrodes, means for applying a predetermined static bias potential to one of the deflecting electrodes relative to a point of fixed potential, condenser means for applying the amplified voltage variations to the said one deflecting electrode, and means including a unilateral conducting device for preventing a shift in the area traversed by the deflected cathode ray beam by reason of changes in the wave form of the applied voltage variations.

2,471,247
CLIP FOR ATTACHING MOLDING TO AUTOMOBILE BODIES AND FENDERS
John Stadler, Long Hill, Conn.
Application August 25, 1948, Serial No. 46,106
6 Claims. (Cl. 24—213)

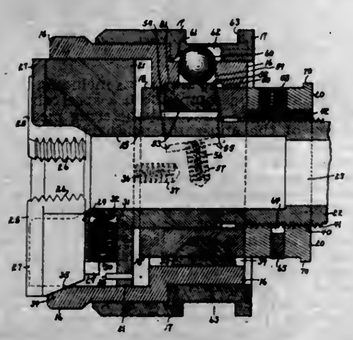
1. A clip for attaching moldings including longitudinal flanges to automobiles, comprising a plate adapted to seat at opposite edges on said flanges and provided with an opening including two sets of recesses at opposite sides of the openings at substantially right angles to each other, a spring including connected side members each provided with notches in its side edges adjacent its free end to seat in a pair of said recesses, a second spring including inclined connected side arms inclined outwardly away from said connection and then bent inwardly to provide inwardly inclined end portions to extend into the other set of notches and by said inclined end portion to provide a camming action in an opening in a body to draw the plate toward the body and clamp the molding.

2,471,248
PHOTOMETRIC APPARATUS AND SPECTROPHOTOMETER USING POLARIZED LIGHT AND AN OPTICALLY ACTIVE PLATE
Edwin I. Stearns, Jr., North Plainfield, and George L. Buc, Orange, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application March 17, 1948, Serial No. 15,464
In Canada October 20, 1944
20 Claims. (Cl. 88—14)



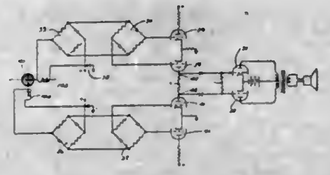
1. In a photometric apparatus including means for illuminating a sample with a spectrally narrow band of light and photometering means, an element of the apparatus polarizing light to a material extent sufficient to give different responses from a polarizing sample at various orientations, the improvement which comprises a plate of transparent optically active material intermediate the sample and the polarizing element cut with faces at right angles to its optic axis and of such thickness that the light path therethrough parallel to the optic axis of the material is sufficiently long so that the difference in the rotation of the planes of polarization of plane polarized light at the ends of each 10 millimicron band width throughout the visible spectrum is at least 90° whereby the reflectance of a polarizing sample is substantially invariant with the azimuth of the sample.

2,471,249
PHOTOMETRIC APPARATUS AND SPECTROPHOTOMETER USING POLARIZED LIGHT AND A MULTIPLE RETARDATION PLATE
Edwin I. Stearns, Jr., North Plainfield, and George L. Buc, Orange, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application December 27, 1944, Serial No. 569,946
20 Claims. (Cl. 88—14)



1. In a photometric apparatus including means for illuminating a sample with a spectrally narrow band of light and photometering means, an element of the apparatus polarizing light to a material extent sufficient to give different responses from a polarizing sample at various orientations, the improvement which comprises a multiple retardation plate intermediate the

sample and the polarizing element of birefringent material with faces cut parallel to the optical axis, of such thickness that the light path through the retardation plate is sufficiently long so that at

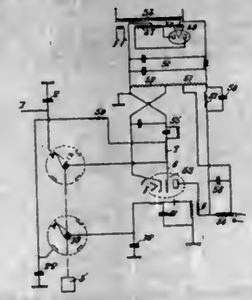


least five complete retardation cycles are effected for the wave lengths of each 10 millimicron band throughout the visible spectrum whereby the response from polarizing samples is substantially invariant with the azimuth of the sample.

2,471,250
SELF-OPENING DIE HEAD
Royce M. Strickland, New Haven, Conn., assignor to The Geometric Tool Company, New Haven, Conn., a corporation of Connecticut
Application May 11, 1945, Serial No. 593,209
4 Claims. (Cl. 10—95)

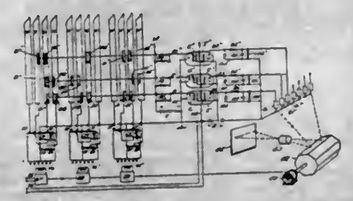
1. A self-opening die-head, including in combination: a body-unit having a front and provided with a latch-guiding recess having parallel front and rear walls both of which extend inwardly from a lateral outer surface of the body-unit toward the longitudinal axis thereof but at an angle which progresses away from the said front as it progresses inwardly toward the said axis; a plurality of thread-cutting chasers carried by and movable with respect to the front of the said body-unit toward and away from the longitudinal axis thereof; a chaser-operating member operatively-associated with the said chasers and provided with a rearwardly-facing latching abutment, the said member being movable in a direction longitudinally of the said body-unit into and out of position to hold the said chasers in their advanced or thread-cutting position; spring-means yieldingly urging the said chaser-operating member rearwardly into a position wherein the said chasers are retired into inoperative position; and a latch-member having parallel front and rear walls respectively engaging with the inclined front and rear walls of the latch-guiding recess in the said body-unit, the said latch-member being provided with a forwardly-facing latching-abutment releasably engageable with the rearwardly-facing latching-abutment of the said chaser-operating member and disengageable therefrom by an inward and rearward movement of the latch-member in the latch-guiding recess of the body-unit, the latching-abutment of the latch-member extending in a plane more nearly perpendicular with respect to the longitudinal axis of the said body-unit than the front and rear walls of the latch-guiding recess therein.

2,471,251
MAGNETIC TRANSDUCER ADAPTED TO COMPENSATE FOR TWISTING OF THE RECORD WIRE
Howard E. Tompkins, Media, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 6, 1945, Serial No. 614,739
18 Claims. (Cl. 179—100.2)



7. In a system for reproducing sound from a magnetized wire which is subject to arbitrary twists, two pick-up coils at right angles to each other at substantially the same location longitudinally on the wire and arranged to be responsive to component magnetic flux from said wire, means including circuit connections to said pick-up coils for producing from said flux two signals, one of the signals being shifted in phase substantially 90° with respect to the other, and means including circuit connections to said last circuit connection means for vectorially adding the resultant signals to produce a signal which is varied in accordance with the magnetization of said wire and independent of the orientation angle of the magnetism of the wire.

2,471,252
SINGLE-STAGE HIGH-GAIN AMPLIFIER
Pierre Marie Gabriel Toulon, Neuilly-sur-Seine, France
Application April 30, 1947, Serial No. 744,826
In France August 16, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires August 16, 1964
8 Claims. (Cl. 179—171)

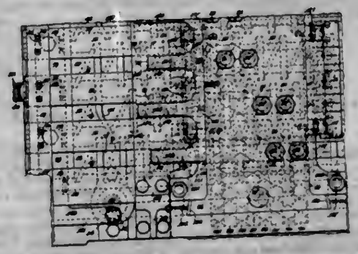


1. A device for amplifying a small difference of direct potential which comprises, in combination, a low frequency amplifier adapted to pass only a narrow frequency band, at least two condensers each adapted to supply, by discharge thereof, a voltage impulse having its fundamental oscillation inside said frequency band, one of said condensers being mounted to be charged by said difference of direct potential, means for periodically discharging said condenser to produce successive voltage impulses, means for applying said

impulses to the input of said amplifier, a rectifier having its input connected to the output of said amplifier, means for periodically charging the other condenser from the output of said rectifier, means for periodically discharging said

second mentioned condenser to produce successive voltage impulses during the intervals between discharges of the first mentioned condenser, and means for applying said second mentioned impulses to the input of said amplifier.

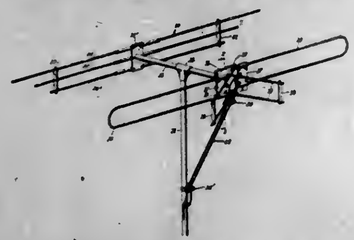
2,471,253
SIGNAL DISTRIBUTING SYSTEM
Pierre Marie Gabriel Toulon, Puteaux, France
Application June 11, 1936, Serial No. 213,289
In France June 15, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires June 15, 1957
8 Claims. (Cl. 178—7.3)



5. A signal distributing system, comprising, a channel for receiving a plurality of successive signals, a plurality of branch channels connected to said channel each for receiving said plurality of successive signals, means normally blocking each of said branch channels, means for periodically unblocking said branch channels in sequence, each for a short time interval, to pass successive ones of said signals via different ones of said branch channels, said means for blocking comprising a thermionic tube in each of said branch channels, said thermionic tubes having control electrodes normally biassed negatively to cut-off potential, said means for periodically unblocking comprising means for generating electrical control impulses and means for applying said electrical control impulses to said control electrodes in such sense as to drive said control electrodes to a potential adapted to enable current flow in said thermionic tubes, and a plurality of electro-optical elements one connected in each of said channels for actuation by said signals, said means for generating electrical control impulses comprising a plurality of interlocked oscillators for generating each a sinusoidal signal at a different frequency harmonically related to a predetermined frequency, means for deriving from each of said sinusoidal signals a plurality of quadrature phase displaced signals, means for deriving from said quadrature phase displaced signals intermediately phase displaced signals by selectively attenuating and combining a plurality of said quadrature phase displaced signals, and means for superposing said intermediately phase displaced signals of different frequency.

2,471,254
MOLDING CLIP
David H. Waara, Detroit, Mich., assignor to Robert L. Brown, Ferndale, Mich.
Application July 17, 1946, Serial No. 684,223
5 Claims. (Cl. 85—5)

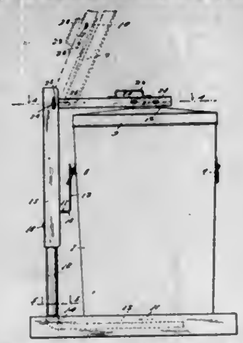
1. A sheet metal fastening device comprising a fastener and a locking member, said fastener comprising a concave body portion the ends of which are adapted to engage the inwardly turned flanges of a hollow molding, an arm struck from said body portion for engagement with the underside of the molding, a second arm struck from said body portion in a direction opposite to said first named arm with an upturned resilient locking finger at its outer end, said second arm being adapted to be inserted through an aperture of a supporting member, said locking member comprising a base portion having means struck from the body thereof of cooperating with said locking finger of said fastener and the aperture of the supporting member to lock said fastener in position and close the aperture of the supporting member, said locking member being pressed over said second arm of said fastener between resilient locking finger and the supporting member.



2,471,255
MACHINE FOR APPLYING SPOTS TO BOTTLE CAPS
Andrew Weisenburg, Overbrook Hills, Pa., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application February 3, 1942, Serial No. 429,369
46 Claims. (Cl. 154—1.5)

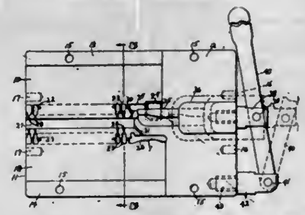
1. In a machine for affixing protective spot material to caps, a plurality of tracks side by side,

means for progressing rows of caps uniformly spaced along the tracks with stop and go motion and with the caps or one row in echelon with respect to those of another row in which the centers of the caps of one row are equally distant from the centers of the most closely adjacent caps of the next row, means for progressing a strip of protective spot material transversely over the rows with stop and go motion having corresponding stop periods, and means located at stop points for simultaneously cutting out and affixing protective spots to at least one cap in each of at least three rows.



2,471,256
RADIO ANTENNA
Vern M. Wintermute, North Plainfield, N. J., assignor to Lyte Paris Company, Plainfield, N. J., a corporation of New Jersey
Application May 22, 1948, Serial No. 28,712
1 Claim. (Cl. 250—33)

In an antenna for the reception of television signals or the like, in combination, a pair of antenna elements; each element consisting of a linear conductor folded back on itself to provide a pair of parallel legs having a closed end and an open end and angularly formed so that the closed end with a substantial portion of the linear conductor lies in one plane while the open end and a substantial portion of the remainder of the conductor lies in an intersecting plane, the closed ends of the antenna elements being directed oppositely outwardly in an identical plane and the open ends of the conductors being interleaved and crossing each other on one side of said identical plane; metallic brackets carrying the parallel legs of each conductor element adjacent the location of angular formation and providing electrical connection therebetween, an insulating panel member supporting said conductor carrying brackets whereby the antenna elements may be maintained in said interleaved, planar relationship, and a transmission wiring connection on each conductor carrying bracket.

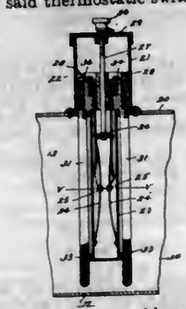


2,471,257
GARBAGE CAN AND COVER KEEPER
Ronald G. Blank, Robbinsdale, Minn.
Application May 21, 1947, Serial No. 749,415
5 Claims. (Cl. 248—146)

1. In a device of the class described, an upright channeled body member applicable to a fixed support, a horizontally disposed keeper arm, one end portion of which extends between the flanges of the body member, said body member having upright slots in its flanges, said keeper arm having longitudinal slots in its flanges intersecting the slots in the body member, a pivot pin extending through said intersecting slots, and means on the keeper arm for detachably securing the cover of a garbage can to the keeper arm, said keeper arm being free for endwise sliding engagement with

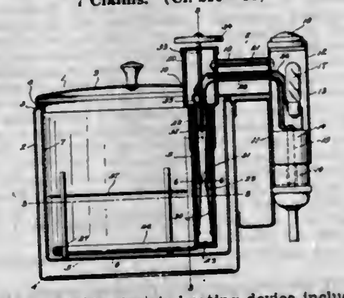
the back of the body member to hold the same in a raised inclined position.

2,471,258
MOLD FOR SLIDING CLASP FASTENERS
John Bolten, Jr., Andover, Mass., assignor to The Bolta Company, Lawrence, Mass., a corporation of Massachusetts
Application July 25, 1946, Serial No. 686,232
5 Claims. (Cl. 18—42)



1. Moulding apparatus for simultaneously moulding upon the respective stringers of a sliding clasp fastener complementary interengaging elements comprising a mould having cooperating mould sections provided with complementary parallel longitudinal grooves to receive the respective stringers, complementary cavities for the interlocking elements enclosing the edge portions of the respective stringers, a runner extending longitudinally of and intermediate of said cavities having gates communicating with the respective cavities, complementary cavities respectively for a pin and for a bottom stop retainer enclosing the edge portions of the respective stringers and communicating with said runner, a removable core member extending longitudinally across the retainer cavity, and means for introducing mouldable material into said runner whereby said mouldable material will be caused to fill all of said cavities.

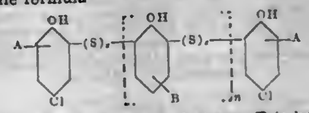
2,471,259
ELECTRICALLY ACTUATED HEATER
Harold P. Chapman, Columbus, Ohio, assignor of one-half to Elf F. Mangold, London, Ohio
Application June 7, 1944, Serial No. 539,044
6 Claims. (Cl. 219—44)



1. An electrically actuated heater comprising a pan, an adjustable thermostatic switch mecha-

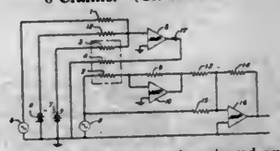
nism carried by said pan, said mechanism including a depending heat-sensitive tube arranged vertically within and adjacent to one side of said pan for immersion in liquid contained therein, a heating element embodying an electrically energized horizontally disposed heating coil arranged in said pan immediately adjacent to and parallel with the bottom thereof, said coil terminating in upstanding parallel leg portions joined with said thermostatic switch mechanism,

a foraminated tray removably mounted in said pan, said tray having a horizontal portion arranged over said coil and an upstanding vertical portion arranged in spaced relation to said heat-sensitive tube and the upstanding leg portions of said heating element, and a removable cover for the top of said pan, said heat-sensitive tube containing a switch therein and functioning as an element of a bimetallic thermostat actuating said switch.



2,471,260
ELECTRICAL FLUID HEATER
Harold P. Chapman, Columbus, Ohio, assignor of one-half to Elf F. Margold, London, Ohio
Application January 30, 1947, Serial No. 725,316
7 Claims. (Cl. 219—44)

5. A portable electric heating device including a receptacle, a heating element located in the receptacle adapted to be energized by an electric current, a thermostatic switch mechanism in said receptacle and mounted adjacent to and in heat conducting relationship with said heating element, said switch mechanism comprising a tubular metallic casing containing a pair of bowed metallic strips therein having a different coefficient of expansion than the metal of the tubular casing, said casing defining one element of a bimetallic thermostat, said strips being provided with contact means to make and break the electrical circuit providing current for energizing the heating element, and means for placing into and removing from the receptacle the heating element and the switch mechanism as a unit, said means having a hollow handle portion which houses an incandescent lamp and electrical connections and facilitates portability of the device.



2,471,261
MILDEW-PROOFING
Elmer W. Cook, New York, N. Y., and Philip H. Moss, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 9, 1946, Serial No. 668,458
4 Claims. (Cl. 117—138.5)

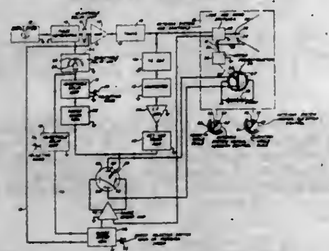
1. A permeable organic material normally subject to attack by fungi, said material being mildew-proofed by a content of about 0.01% to about 5% of a heavy metal salt of a halogenated polyphenol sulfide containing from 3 to 10 phenol radicals, said halogenated polyphenol sulfide having the formula

in which A is hydrogen or halogen, B is halogen or alkyl, x is a whole number not greater than 2, and n is a whole number not greater than 8.

2,471,262
MEANS FOR MULTIPLYING VOLTAGES
Van M. Cousins, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 24, 1946, Serial No. 705,427
8 Claims. (Cl. 250—27)

1. An amplifier having an input and an output circuit, a device having a controlling element connected across said output circuit and at least one controlled element, two sources of voltages of opposite polarity, an impedance connected in serial relationship with said controlled element to the free poles of said sources, and a connection from the junction of said impedance and said controlled element to the input circuit of said amplifier, whereby the characteristics of said controlled element are varied proportionally with the voltages from said sources.

2,471,263
IONIC DISCHARGE DEVICE
Charles Depew, Oakland, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 24, 1946, Serial No. 672,010
12 Claims. (Cl. 250—27.5)



5. An ultra-high frequency spark gap device for high power output operation, comprising coaxially mounted cathode and anode electrodes, a cylindrical vitreous vessel enclosing said electrodes, metallic terminal cap members sealed to

opposite ends of said vessel and supporting said electrodes therein, one of said members having a larger diameter than the other, coaxial sleeve portions extending from opposite sides of said

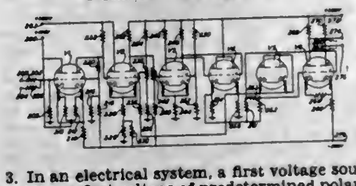
larger diameter member, said cathode being attached to the inner sleeve portion on said member, and a recessed cap fitted in the outer sleeve portion.

2,471,264
RADIO OBJECT LOCATION SYSTEM
William H. Doherty, Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 1, 1945, Serial No. 570,939
4 Claims. (Cl. 343—11)

2. In a direction and range determining system of the type in which a pulsed beam of exploratory energy is radiated by a highly directive emitting device and reflections thereof are received and timed to determine the range or distance of objects from which reflected pulses are received, the combination which comprises a first means for repeatedly sweeping an arc in a first plane with said emitting device, a second means for abruptly altering the directivity of said emitting device between two positions approximately the width of the beam apart in a second plane substantially at right angles to said first plane, the periodicity of said second means being that of said first means, and a third means for simultaneously presenting, in juxtaposition on a common indicator, two independent patterns of indications on separate portions of the screen of said indicator showing angular direction in said first plane versus relative range for each reflecting object, range being indicated for each indication by the distance of the indications from the proximate borders of said respective separate portions, direction in said first plane being indicated for each indication by the transverse position of the indication, one pattern relating to one beam position in said second plane the other relating to the other beam position in said second plane, direction in said second plane being indicated by the relative intensities of corresponding indications of said two patterns, said third means comprising a cathode ray oscilloscope cooperatively connected with a range sweep generator, a reversible range sweep amplifier, sources of voltage controlled by said first and said second means to control the sweeping action of the ray of said oscilloscope and a radio receiver responsive to echos of said emitted pulsed beam to intensity modulate the ray of said oscilloscope whenever an echo is received, whereby directivity in each of said two planes and the relative ranges of all the objects from which reflections are received can be simultaneously represented.

2,471,265
PARASITICIDAL COMPOSITIONS COMPRISING ALKYL-HALO-NAPHTHALENES
Robert R. Dreisbach and Fred W. Fletcher, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application January 29, 1942, Serial No. 428,756
1 Claim. (Cl. 167—24)

An insecticidal composition comprising an alkyl-halo-naphthalene and pyrethrin as active toxicants.

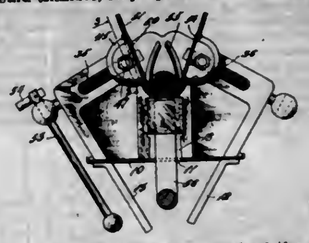


2,471,266
VINYL POLYMERS PLASTICIZED WITH AIR-BLOWN EXTRACTS OF MINERAL OIL FRACTIONS
Eric William Musther Fawcett, Eric Sylvester Narracott, and Kathleen Joan Rowland, Sunbury-on-Thames, England, assignors to Anglo-Iranian Oil Company Limited, London, England, a British joint-stock corporation
No Drawing. Application December 22, 1944, Serial No. 569,418. In Great Britain December 22, 1943
6 Claims. (Cl. 260—29.1)

1. The composition of matter of improved low temperature flexibility and electrical properties comprising an intimate admixture of a polymeric substance selected from the group consisting of polyvinyl chloride, vinyl chloride-vinyl acetate co-polymer, vinyl chloride-methyl acrylate co-polymer and vinyl chloride-vinylidene chloride co-polymer and with an air-blown hydrocarbon material prepared by the air-blowing for a prolonged period of from about 5 hours up to 50 hours at a moderately elevated temperature within the range 150–300 °C. of extract hydrocarbons derived from a mineral oil fraction by solvent extraction with a selective polar solvent, the extracted hydrocarbons containing up to two unsaturated linkages per molecule and having a carbon content of on average at least .6 atom of carbon per atom of hydrogen, the molecular weight of the hydrocarbons being in the range of from about 200 to about 800, and the initial and final boiling points being in the range of from about 250° C. to about 800° C. at 760 mm. Hg pressure.

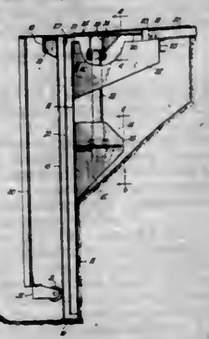
2,471,267
VINYL POLYMERS PLASTICIZED WITH SULFUR TREATED EXTRACTS OF MINERAL OIL FRACTIONS
Eric William Musther Fawcett, Eric Sylvester Narracott, and Albert Millien, Sunbury-on-Thames, England, assignors to Anglo-Iranian Oil Company Limited, London, England, a British joint-stock corporation
No Drawing. Application December 30, 1944, Serial No. 570,790. In Great Britain January 6, 1944
6 Claims. (Cl. 260—30.8)

1. The composition of matter of improved electrical properties comprising an intimate admixture of a polymeric substance selected from the group consisting of polyvinyl chloride, vinyl chloride-vinyl acetate co-polymer, vinyl chloride-vinylidene chloride co-polymer and vinyl chloride-methyl acrylate co-polymer with a sulphur treated hydrocarbon material prepared by the treatment with sulphur at a moderately elevated temperature within the range 150–300° C. for an extended period of from about 5 hours up to 60 hours of extract hydrocarbons derived from a mineral oil fraction by solvent extraction with a selective polar solvent, the proportion of sulphur being in the range of from about 5% to about 15% of the weight of said extract hydrocarbons, the extract hydrocarbons containing up to two unsaturated linkages per molecule and having a carbon content of on average at least .6 atoms of carbon per atom of hydrogen, the molecular weight of the hydrocarbons being in the range 200–800, and the initial and final boiling points being in the range of 250–800° C. at 760 mm. Hg pressure.



2,471,268
INDEX PULSE GENERATING CIRCUIT
Wilbur L. Gaines, Great Neck, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 22, 1945, Serial No. 595,210
4 Claims. (Cl. 250—27)

3. In an electrical system, a first voltage source providing a first voltage of predetermined polarity which varies between particular limiting values, a second voltage source providing a second voltage of the opposite polarity to said first voltage, the value of which is adjustable to any discrete value within the said limiting values and means including a summing amplifier cooperatively associated with and responsive to said first and said second voltage sources to provide an electrical impulse of a predetermined and invariable polarity at instants during which said first voltage passes in either direction through the value to which said second voltage is adjusted said last-stated means also including in tandem relation with said summing amplifier a phase inverter vacuum tube circuit, a cathode follower circuit, a rectifying circuit and a pulse generating circuit.

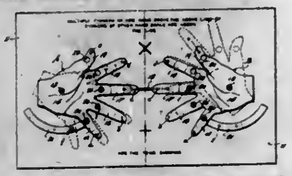


2,471,269
RIGGER'S VISE FOR SPLICING WIRE AND LIKE MATERIAL
Erich Gaulke, New Bedford, Mass.
Application September 7, 1944, Serial No. 553,033
3 Claims. (Cl. 81—17.5)

1. In a rigger's vise, a body portion having an elongate and open-end slot extending inwardly from one side thereof, a pair of jaws on said body portion adjacent a side opposite to said slotted side, means on the body portion to guide said jaws each at an acute angle to the center line of said slot and at an obtuse angle to each other, a removable block insertable in said slot to serve as an anvil for a thimble and a cable to be spliced therearound, and cooperating means between the edges of said slot and said block to hold said block in position in said slot, said slot and removable block permitting a ring member to be interlinked with said thimble, in preparation for the splicing

operation, and permitting removal of the interlinked assembly, after completion of the splicing operation.

2,471,270
GAS RESERVOIR
Philip S. Graver, Chicago, Ill., assignor to Graver Tank & Mfg. Co., Inc., East Chicago, Ind., a corporation of Delaware
Application December 2, 1944, Serial No. 566,349
3 Claims. (Cl. 48—176)



1. In a gas reservoir, a tank comprising upright circular walls spaced apart to provide a launder, a movable roof for said tank having a dip ring depending within the launder for sealing the roof with respect to the tank while permitting vertical movement of the roof to vary the vapor space within, a rain shed skirt depending from the periphery of the roof and encircling the launder, and means guiding the roof during said vertical movement thereof including diagonally extending guide rails fixed to the exterior wall of the launder in spaced relation and at the same angle with respect to a horizontal plane as determined in one direction around the launder, and rollers carried by the lower end of the rain shed skirt and having contact with said guide rails respectively.

2,471,271
EDUCATIONAL DEVICE
Martin Green, Newark, N. J.
Application November 6, 1945, Serial No. 627,011
2 Claims. (Cl. 35—31)

1. An educational device of the kind and for the purposes described comprising a base member

having a base reference line inscribed upon its face, a pair of rotatable hand-like members mounted on said base member in spaced apart opposed relation, said hand-like members having pivotal connections with said base member coincident with said base reference line, each hand-like member having spread apart digit-like extensions radial to the pivotal point thereof, corresponding digit-like extensions of said hand-like members having like numerals inscribed thereon to provide factors of multiplication problems to

be solved, each extension having a through opening formed therein, said base member having inscribed thereon a series of spaced number tens extending from and below the base reference line and aligning with said openings, whereby to be exposed therethrough, and each hand-like member having a cover strip extending therefrom and movable therewith, whereby to conceal all said tens on the base member not in register with openings in the extensions of said hand-like members.

2,471,272

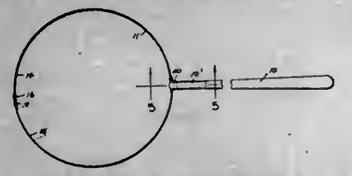
WATER-SOLUBLE CELLULOSE ETHER PLASTICIZED WITH A CYCLOMETHYLENE SULFONE

George W. Hooker, Sarnia, Ontario, Canada, and Norman R. Peterson, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Application July 28, 1945, Serial No. 607,664

10 Claims. (Cl. 106—176)

1. A composition of matter consisting of a water-soluble cellulose ether, and from 10 per cent to about 67 per cent of a compound selected from the group consisting of 3,4-dehydro-cyclotetramethylene sulfone, the 3-methyl derivative thereof, cyclotetramethylene sulfone, and the 3-methyl-, 3-alkoxy-, and 3-methyl,4-alkoxy derivatives of cyclotetramethylene sulfone, wherein the alkoxy groups contain from 1 to 8 carbon atoms, inclusive.



2,471,273

LANDING NET

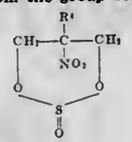
Camilla M. Kincannon, Milwaukee, Wis.

Application April 23, 1947, Serial No. 743,432

1 Claim. (Cl. 43—12)

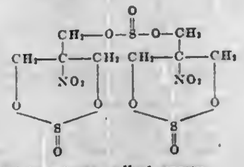
In a landing net, the combination of a handle, a net frame comprising a pair of resilient strips, one of said strips being longer than and having its ends extended beyond the other strip, said strips being pivotally connected together near the ends of said shorter strip thereby constituting joints and movable relative to each other to form a hoop with the extended ends of the longer strip disposed inside the ends of the shorter strip and the outermost of said joints so formed having the medial portion of the adjacent strips at that joint spaced apart, a locking collar cooperable with the parts of said outermost joint and movable over said medial portion to a location to hold the outermost joint of said frame in the plane of the innermost of said joints, and means connected with the handle for locking the innermost joint formed by the other extended end of the longer strip and the adjacent portion of the shorter strip in the opened up position of said members.

2,471,274



NITROALKYL SULFITES AND PROCESS FOR PREPARING THEM

Shirley P. Lingo, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland



No Drawing. Application July 29, 1946, Serial No. 686,947

5 Claims. (Cl. 260—327)

3. As new compositions of matter, sulphite esters selected from the group consisting of:

and

wherein R^4 is a lower alkyl group.

2,471,275

FURNACE DOOR

Henry R. Loxterman, Chicago, Ill., assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey

Application June 28, 1945, Serial No. 602,121

2 Claims. (Cl. 122—498)

1. A furnace door, comprising in combination, a pair of spaced hollow side flanges, spaced hollow top and bottom flanges extending between said side flanges, all of said flanges having inner faces, a plurality of spaced hollow panels disposed side-by-side and extending between said top and bottom flanges, the outer faces of said panels lying substantially in a common surface, the inner faces of said panels lying substantially in the surface of a vertical cylinder whose axis is adjacent the inner side of said door and is substantially equidistant from said side flanges, said inner faces of said panels being set back from said inner faces of said flanges and thereby defining with said flanges a concave space, a refractory brick lining of substantially uniform thickness disposed in said space, said lining having its outer surface coinciding substantially entirely with said surface of said vertical cylinder, whereby a refractory lining of uniform thickness may be quickly and readily made of standard brick and be subject to continuous visible overall observation.

2,471,276

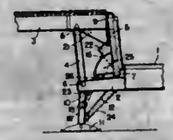
MAGAZINE GUN WITH INTEGRAL BREECH BOLT AND HAND GRIP

Charles J. Manville, Pontiac, Mich., assignor to Lake Erie Chemical Company, Cleveland, Ohio, a corporation of Ohio

Application July 26, 1946, Serial No. 686,523

9 Claims. (Cl. 42—18)

1. In a gun of the type described the combination of a barrel, a breech bolt mechanism slidable within said barrel to effect insertion of a shell into said barrel and positioning of the shell for firing, the said breech bolt mechanism including a firing pin for engaging and firing a shell positioned in said barrel, a member fixed to said firing pin adjacent the rear end of the latter and slidable within said barrel, a sear carried by said member and adapted to project into an elongated aperture in said barrel, a rear hand grip for said gun connected with said bolt for actuation thereof which actuation also disposes said sear within said aperture adjacent one end thereof thereby cocking said firing pin, a trigger carried by said hand grip and adapted to be actuated only when said hand grip has been returned to its original position to effect disengagement of said sear from said aperture thereby releasing the said firing pin for movement into firing engagement with the shell in said barrel.



2,471,277

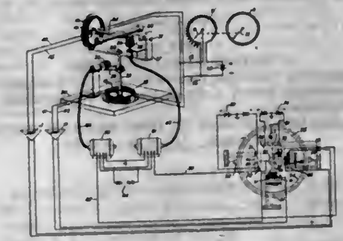
OPERATING MEANS FOR TRAILER GOOSENECKS

William E. Martin, Kewanee, Ill.

Application August 17, 1945, Serial No. 611,036

12 Claims. (Cl. 214—85)

1. Operating means for a trailer loading-ramp comprising, in combination, a trailer frame, frame-supporting means pivotally connected to the frame to be raised into transporting position and lowered into supporting position, a spring connected to the frame, a flexible means connected to the spring and to the frame-supporting means to withdraw the supporting means from supporting position, an elevatable ramp having forward and rearward links connected to the ramp and to the trailer frame serving to support the ramp in elevated position with relation to the trailer frame and carrying the ramp into loading position, and hydraulic means connecting the frame-supporting means and part of said rearward links, whereby to cause raising of said ramp and lowering of the frame-supporting means upon extension of said hydraulic means.



2,471,278

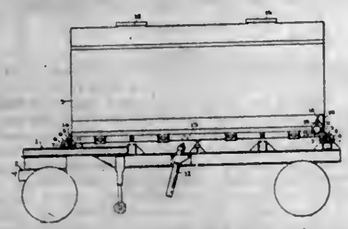
GUN SIGHT CONTROL

Larned A. Meacham, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 1, 1943, Serial No. 512,450

3 Claims. (Cl. 33—49)

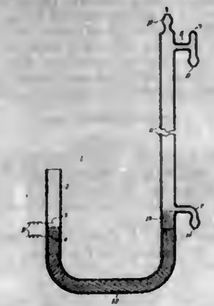
1. Means for determining the required direction of gunfire from an airplane changing course in pursuit of a moving target of which the motion has a component transverse to said course comprising means for measuring the range of said target, means for sighting on said target, said sighting means being normally aligned parallel to said course, a gyroscope supported in gimbal mountings in said airplane and rotating initially about an axis of rotation parallel to the fore and aft axis of said airplane, a first source of voltage, a first motor means for deflecting said sighting means perpendicularly to the fore and aft of said axis of said airplane, a first contact means carried by said gyroscope and adapted to apply said first source of voltage to said first motor means when said fore and aft axis departs horizontally from parallelism with said axis of rotation, a second source of voltage, a second motor means for deflecting said sighting means perpendicularly to said fore and aft axis and to the deflection producible by said first motor means, a second contact means carried by said gyroscope and adapted to apply said second source of voltage to said second motor means when said fore and aft axis departs vertically from said parallelism, a third source of voltage, means controlled by said range measuring means for deriving from said third voltage a voltage inversely proportional to said range, potentiometric means connected to said sighting means for deriving from said inversely proportional voltage a first and a second fractional voltage, said fractional voltages becoming proportional respectively to the time rates of horizontal and of vertical change of said course when said sighting means is deflected oppositely to the sense of change of said course through an angle equal to said range multiplied by the time rate of change of said course, and means energized by said fractional voltages to effect precession of said axis of rotation to regain parallelism



with said fore and aft axis, whereby said fore and aft axis lies in said required direction when said sighting means is aligned directly on said target.

2,471,279
COMB
Anton B. Mensing, New York, N. Y.
Application November 26, 1946, Serial No. 712,401
4 Claims. (Cl. 132—11)

1. A comb comprising an oval dish-shaped body provided with teeth in one edge.

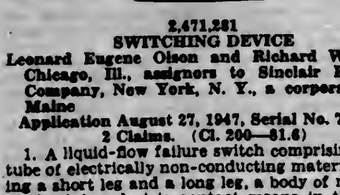


2,471,280
SHIPPING CONTAINER
Ragnar A. Norbom, New York, N. Y., assignor to National Fitch Corporation, a corporation of Delaware
Application February 12, 1946, Serial No. 647,060
14 Claims. (Cl. 214—83.28)

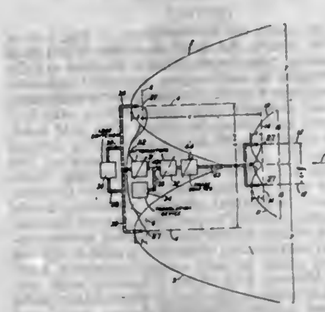
1. A container for transporting finely divided bulk material having a plurality of outlet openings in a lower portion at one end thereof, discharge means comprising; a discharge conduit adjacent to said outlet openings and having inlet openings aligned with and spaced from said outlet openings, the spacing between said outlet and inlet openings forming passageways between said container and said conduit adjacent to said openings through which a current of air may flow past said outlet openings and into said inlet openings.

2,471,281
SWITCHING DEVICE
Leonard Eugene Olson and Richard Wertzler, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application August 27, 1947, Serial No. 770,932
2 Claims. (Cl. 200—81.6)

1. A liquid-flow failure switch comprising a U-tube of electrically non-conducting material having a short leg and a long leg, a body of mercury in the tube, electric contact means in the tube actuated by the mercury, inlet means on the long leg for receiving liquid flowing in a conduit, means for the continuous removal of liquid from the long leg whereby a constant pressure of liquid is maintained on the mercury, a vent in the upper part of the long leg to insure drainage of the long leg, and a drain means which is continuously open on the long leg for removing liquid on failure of the flow in the conduit to change the position of the mercury.



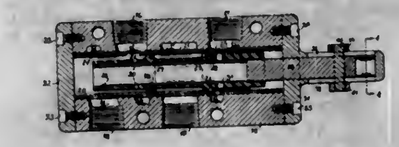
2,471,282
TREATMENT OF LIVERS
Levi Scott Paddock, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application June 16, 1945, Serial No. 599,958
3 Claims. (Cl. 99—107)



1. A process for conditioning the blood vessels of an animal liver with a proteolytic enzyme for the tenderization thereof without affecting the meat tissue of the liver which comprises essentially the steps of immersing an animal liver characterized by having an outer layer of connective tissue and a network of tough, thick-walled blood vessels in a solution of a proteolytic enzyme in a confined zone, subjecting the immersed liver to a vacuum of between approximately 20 to 30 inches of mercury to open and distend the blood vessels, and releasing the said vacuum so as to allow the proteolytic enzyme solution to enter the distended blood vessels without rupture of said vessels, whereby the enzyme becomes associated with the tough blood vessels without contacting the said meat tissue of the liver.

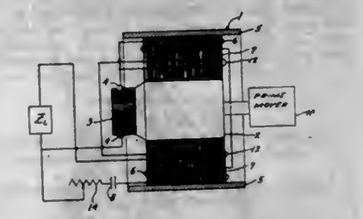
2,471,283
AIRCRAFT CONTROL SYSTEM
Arnold G. Parker, Longueuil, Quebec, Canada
Application July 16, 1945, Serial No. 605,310
6 Claims. (Cl. 244—83)

1. In an aircraft control system, the combination with a movable control element of means for operating said element including a motion transmitting unit comprising a rotary shaft, an inclined disc carried by and rotatable with said shaft, a yoke through which said shaft extends, means mounting said yoke for swinging movement about an axis passing transversely through said shaft, means interconnecting said disc and yoke so that swinging movement is imparted to the yoke by rotary movement of the shaft and disc through a predetermined angle in either direction from a neutral position, means interconnecting the yoke and the control element so that the latter is caused to operate in response to swinging movement of the yoke, and means for tilting said shaft and disc about a transverse axis coinciding with the aforesaid axis about which the yoke is swingable.



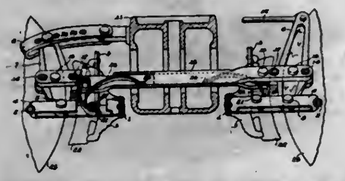
2,471,284
DIRECTIVE ANTENNA SYSTEM
Wilton T. Rea, Manhasset, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 25, 1945, Serial No. 595,697
6 Claims. (Cl. 250—33.65)

1. In combination, a first linear array comprising a pair of antenna elements spaced in a given plane a predetermined electrical distance, a second linear array comprising a pair of antenna elements spaced in a plane parallel to said plane a different electrical distance, said last-mentioned distance being a function, and equal to approximately one third, of the first-mentioned distance, a translation device, a pair of main lines connected to said device, a first pair of branch lines connecting said first-mentioned pair of elements to one of said main lines, a second pair of branch lines having equal lengths and connecting said second-mentioned pair of elements to the other main line, an adjustable phase shifter included in one of said main lines, and an adjustable attenuator included in one of said main lines.



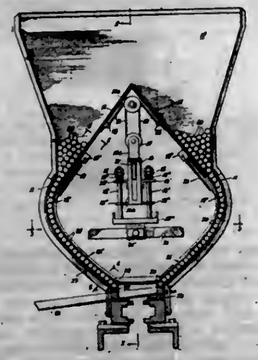
2. In combination, a first directive antenna system comprising a first pair of cylindrical parabolic reflectors having a large double opening, a second directive antenna system comprising a second pair of cylindrical parabolic reflectors having a small double opening, said reflectors facing in the same direction and having parallel focal lines, said large double opening containing said small double opening, substantially, the spacing between the focal lines of the second pair of reflectors being one-third, and a function, of the spacing between the focal lines of the first pair of reflectors, a primary antenna aligned with the focal line of each reflector and comprising a plurality of dipoles, a translation device, all of said dipoles being simultaneously connected to said device.

2,471,285
VALVE
David Y. Rice, Avon Lake, Ohio
Application November 8, 1944, Serial No. 562,451
5 Claims. (Cl. 251—78)



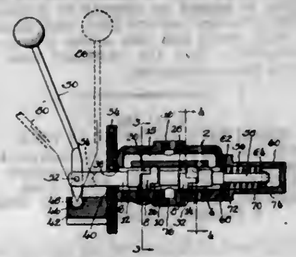
1. In a valve of the character described, a cylinder having longitudinally spaced ports, and a plunger of plastic material slidable therein, said plunger having integral spaced resilient peripheral ribs formed in one piece with the plunger and bearing upon the cylinder walls for separating or joining certain of said ports dependent upon the selected position of the plunger, said ribs being undercut on one side to provide annular peripheral flanges, and said cylinder having intake connections adapted to expose said undercuts to fluid pressure.

2,471,286
ALTERNATING CURRENT GENERATOR
Carl S. Roys, West Chicago, Ill., assignor, by mesne assignments, to Nader Engineering Company, a corporation of Illinois
Application March 29, 1946, Serial No. 658,060
2 Claims. (Cl. 322—96)



1. A self-excited, constant frequency, alternating current, commutator type generator comprising an armature winding, an exciting field winding wound on the field structures of said machine and disposed in cooperative relation to said armature winding, a capacitive reactance connected in series with said field winding, means connecting said capacitive reactance and said field winding to be energized in series by the generated voltage of said armature winding, said capacitive reactance being selected to substantially neutralize the inductive reactance of said field winding circuit at a predetermined frequency, and a compensating field winding on said generator constructed and disposed on common field structures with said exciting field winding and positioned in magnetic relation to said armature so as to substantially neutralize armature reaction flux, whereby the generated output of said generator will be substantially equal to said predetermined frequency and independent of the speed of the generator or character of the load supplied.

2,471,287
BRAKE RIGGING WITH BEAM-RETRACTING SPRING
Frederic Schaefer, Pittsburgh, Pa.
Application November 15, 1947, Serial No. 786,234
5 Claims. (Cl. 188—213)

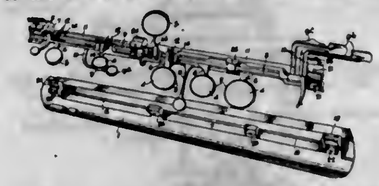


1. Railway car brake rigging comprising a brake beam, an operating lever extending transversely of the beam and pivotally connected to it, a substantially horizontal hollow connecting rod spaced vertically from the beam and having one end pivotally connected to the lever, and a leaf spring having one end disposed in said rod and the other end connected to the beam, and said spring being formed to urge the beam toward the opposite end of the rod to normally hold the beam in brake-released position.

2,471,288
LABELING MACHINE ATTACHMENT
Frederick Jacob Schuls, Rensselaer, N. Y., assignor, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware
Application February 27, 1945, Serial No. 580,043
5 Claims. (Cl. 312—80)

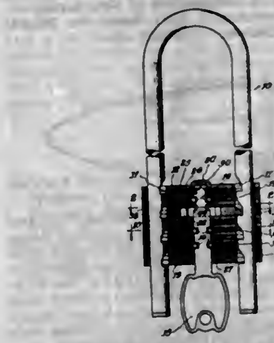
1. A device for feeding cartridges to an associated machine for further handling which comprises a hopper of relatively large capacity, the bottom of which is constructed in the form of an inverted V, a plurality of throats depending from and communicating with said hopper, slide mechanisms forming a part of said hopper bottom for guiding a single row of cartridges into each of the said throats, a flexible spring blade mounted between said throats intermediate the tops and bottoms thereof and means for actuating said spring blade to contact said cartridges in said throats through windows provided therein to maintain the cartridges in horizontally aligned positions.

2,471,289
PREFERENTIAL OPERATING VALVE
Robert K. Sedgwick, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application June 5, 1944, Serial No. 538,720
21 Claims. (Cl. 251—76)



1. A slide valve for distribution of liquid to a plurality of hydraulic devices, which comprises a valve casing, a cylindrical bore therein, spaced discharge ports in said casing adjacent opposite ends thereof, each communicating with said bore, an inlet port in said casing intermediate said discharge ports and communicating with said bore, a movable valve element inside said casing having two piston-like portions slidably engaging the wall of said bore, said element comprising three portions of reduced cross-sectional area forming two end and one central annular chambers inside said bore, said pistonlike portions having notches in the bore engaging surfaces thereof communicating with said central chamber, a pair of spaced distribution ports in said casing adjacent each extremity thereof and communicating with one of said end chambers, all of said distribution ports being closed against communication with said central chamber by said pistonlike portions in the neutral position of said element, actuating means for moving said element longitudinally of said bore and for rotating said element therein, said element being adapted, when displaced in either direction longitudinally of the bore from its neutral position, to open one pair of said distribution ports to communication with said central chamber through the associated notch, and said element being adapted, when rotated in either direction while in said displaced position, to decrease the opening of one of said last-mentioned ports into the associated notch, and resilient means for resisting movement of said element from its neutral position.

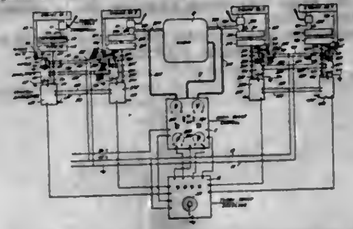
2,471,290
SAXOPHONE
Hector Sommaruga, London, England
Application February 27, 1947, Serial No. 731,335
In Great Britain December 14, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires December 14, 1965
3 Claims. (Cl. 84—385)



3. In a saxophone, a tubular member, tone holes disposed at intervals along said member, locater lugs integral with the pillar, terminal pillars slidably engaged over and detachably secured to said lugs, axles secured in said terminal pillars, additional locater lugs formed on the tube between said terminals lugs, corresponding additional pillars detachably secured to said latter lugs and receiving said axles, valves normally closing said tone holes, means connecting the valves to the said axles, an inverted channel section guard

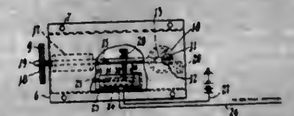
shrouding the axles and secured to said pillars, a buffer strip along one edge of said guard acting as a buffer for the means connecting the valves to the axles, springs on the axles loading the

valves to the closed position, and keys carried by said axles for operating the valves, the said pillars, axles, valves and associated means and the said guard being detachable as a unit from the said tubular member.



2,471,291
PADLOCK
Harry E. Soref and Daniel J. Foote, Milwaukee, Wis., assignors to Master Lock Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 7, 1946, Serial No. 695,357
6 Claims. (Cl. 70—38)

1. In combination, a padlock which includes a casing having a laminated portion composed of a plurality of superimposed plates formed with registered openings, a locking lever approximating in thickness the combined thickness of said plates and movable in said opening toward and from locking position, said lever having an opening to admit a key and having a shoulder adjacent said opening, one of said plates having a fixed tumbler portion projecting into the opening of said plate, said plate which has the fixed tumbler portion being adapted to be transposed with any other plate of said group in the process of assembling the lock to produce a lock requiring a different key.



2,471,292
AIRFLOW CONTROL APPARATUS FOR CABIN PRESSURIZING AND ENGINE SUPERCHARGING
Daniel G. Taylor, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application December 26, 1944, Serial No. 569,759
15 Claims. (Cl. 244—59)

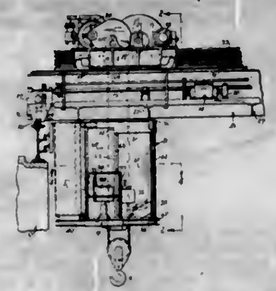
2. In a compound electrical network, a plurality of individual networks; an adjustable control network common to all of said individual networks for simultaneously adjusting same, means for modifying the adjustment of one of said individual networks, and means connecting said modifying means to said adjustable control network so that rate of modification permitted by said modifying means is dependent on the adjustment of said control network.

9. In an aircraft having a pressurized enclosure, a plurality of engines, a supercharger for each engine for supplying air thereto, reversible electric motor means for controlling each of said superchargers, electric circuit means including control devices for regulating the operation of said motors and thereby the operation of said superchargers, one of said control devices comprising a pressure selector means manually adjustable from low to high pressure settings for causing said superchargers to supply air under lower or higher pressures to said engines, at least one of said superchargers also supplying air to said enclosure, means responsive to the flow of air to said enclosure, and voltage modifying means adjusted by said flow responsive means, said voltage modifying means being connected in said circuit in a manner to modify the operation of said one supercharger, the permissible amount of such modification being diminished by adjusting said pressure selector means to higher settings.

2,471,293
ANTITHEFT LOCK FOR AUTOMOBILES
Norman A. Truesdell, Scarboro Bluffs, Ontario, Canada
Application May 20, 1947, Serial No. 749,235
1 Claim. (Cl. 70—254)

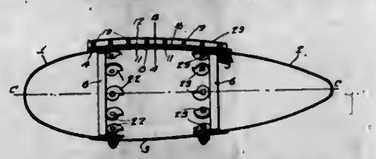
In an anti-theft device for an automobile, a slide bar reciprocably mounted for endwise projection into locking engagement with the brake lever of the automobile, a relatively fixed lock having a key-controlled barrel rotatable between unlocked and locked positions, a crank on said barrel for turning therewith, a pitman connecting said crank to said slide bar for projecting the slide bar when said barrel is turned to locked position, a circuit breaker electrically connected in the electric system of the automobile, said circuit breaker having a depressible element by which it is actuated, said depressible element being disposed in the plane of the swing of said pitman, and an adjustable member transversely carried by said pitman remote from its connec-

tion with said slide rod and disposed to depress said depressible element when said pitman is swung to a dead centre position by turning said barrel to project said slide bar.



2,471,294
SHOCK ABSORBER
Raymond Watts, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application February 19, 1944, Serial No. 523,019
11 Claims. (Cl. 267—64)

1. In a shock absorber, a cylinder comprising a wall intermediate the ends thereof dividing said cylinder into two chambers, a fluid medium within said cylinder, a central opening through said wall affording means of communication for said medium between said chambers, a plurality of passages through said wall around said opening, a tube slidably fitted within said opening and comprising a plurality of slots therethrough, a series of discs in one of said chambers sleeved over said tube around said slots, the disc at one end of said series bearing against said wall, a member connected to said tube and bearing against the disc at the opposite end of said series, means associated with said member for urging the same toward said wall and thereby urging said discs into engagement with one another, an annular valve plate in the other chamber, spring means for urging said plate against the adjacent extremities of said passages, said plate having a central opening aligned with the first-mentioned opening, a piston reciprocal within said other chamber, said discs being movable axially of said cylinder to create interstices therebetween on the closure stroke of said piston, said first-mentioned means comprising a rod bearing against said member and extending through the head of said cylinder in threaded engagement therewith.

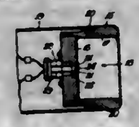


2,471,295
CRANE CAB
William G. Wehr, North Madison, Ohio, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio, a corporation of Ohio
Application November 6, 1944, Serial No. 562,234
17 Claims. (Cl. 212—21)

1. An overhead operator's cab comprising a generally cylindrical tubular member having the side walls thereof composed largely of transparent material, means for supporting said member with the longitudinal axis thereof extending

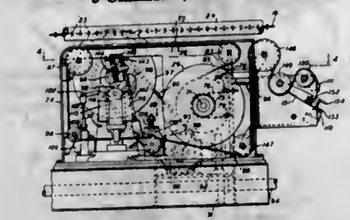
vertically, and a platform movably connected to said member for rotation about the exterior thereof.

2,471,296
JETTISON FUEL TANK
Dwight P. Allen, Birmingham, and Royale Wise, Detroit, Mich., assignors to Thermoid Company, Trenton, N. J., a corporation of New Jersey
Application December 14, 1944, Serial No. 568,160
3 Claims. (Cl. 220—5)



1. A tank comprising a tubular midsection and two cupped end sections, said end sections being adapted for assembly within the midsection with their open ends confined within the respective ends of the midsection, the said ends of the midsection tapering outwardly and the confined ends of the end sections having complementary tapers for wedging engagement within the tapering ends of the midsection, means including elements carried by the midsection in the interior thereof in position to engage the inner ends of said end sections for forcibly outwardly displacing said latter sections into the said wedged engagement with the midsection, means connected with said elements and extending through the wall of the midsection for actuating said elements from the exterior of the midsection, means for admitting said end sections to the interior of the midsection including a longitudinal slit in the wall and from one end of said midsection permitting radial expansion of said end for admission of the proximate end section, and means for releasably closing said slit.

2,471,297
PRODUCTION OF PALLADIUM ARTICLES
Ralph Hall Atkinson, Westfield, and George Paul Gladis, Bayonne, N. J., assignors to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application November 8, 1945, Serial No. 627,538
8 Claims. (Cl. 113—112)

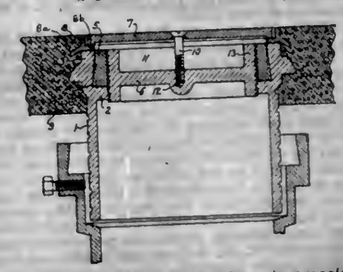


4. The method of fabricating soldered articles made of palladium-base metals which comprises soldering the articles with a neutral to oxidizing torch flame of acetylene and a gas containing free oxygen, said soldering involving numerous alternate heatings and coolings of the metal being soldered.

2,471,298
CATHODE CUP CONSTRUCTION
Zed J. Atlee, Elmhurst, Ill., assignor to General Electric X-Ray Corporation, Chicago, Ill., a corporation of New York
Application October 2, 1943, Serial No. 504,742
5 Claims. (Cl. 250—144)

2. An electronic device embodying an anode and a cooperating cathode comprising a disc forming an electron guiding member, said disc having an elongated pocket formed in the surface thereof facing said anode, a plurality of elongated electron emission elements disposed in side by side spaced apart relationship in said pocket, said plate being formed with relatively narrow grooves at the opposite ends of said pocket and in alignment with the medial axis thereof, and a partition comprising a strip of metal extending between an adjacent pair of said emission elements, said partition having a medial portion extending in said pocket and end portions mounted in said grooves.

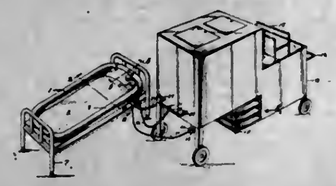
2,471,299
CABLE FORMING MACHINE
Edward Bertalan, Glen Arm, Md., and Julius A. Wagner, Cleveland Heights, Ohio, assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Original application March 31, 1942, Serial No. 436,988. Divided and this application March 21, 1945, Serial No. 583,918
5 Claims. (Cl. 113—33)



1. In a cable unit forming machine having a tube-forming means for forming a tape having tabs thereon into a tube over washers applied to a central conductor to form a coaxial cable unit and means for advancing a cable unit thus formed at a predetermined rate of speed, the combination of a reciprocable press for forming tabs on the tape, means for actuating the press, means for driving the actuating means, a clutch serving to connect and disconnect the actuating means to and from the driving means, means driven by the actuating means for intermittently advancing the tape through the press in synchronization with the press at an average rate of speed greater than that at which the tape is advanced through the tube-forming means, means for operating the clutch to connect the driving means to the actuating means when the slack in the portion of the tape between the tape-advancing means and the tube-forming means is less than a predetermined amount, and means for operating the clutch to disconnect the driving means from the actuating means when the slack in said portion is greater than a predetermined amount.

2,471,300
BRACELET CLASP
David Block, Philadelphia, Pa.
Application September 5, 1945, Serial No. 614,551
1 Claim. (Cl. 24—68)

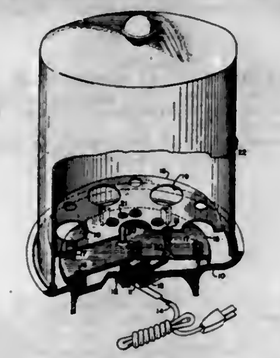
An extensible bracelet clasp comprising a casing including a base, a top, and a longitudinally slotted shelf intermediate and substantially parallel to said top and said base and forming upper and lower spaces between said top and said shelf and shelf and said base, a spring member in said upper space with one end attached to said casing, a series of relatively slidable link members nested in said lower space, a pin on one end of one of said link members extending through the slot in said shelf and into said upper space and attached to the opposite end of said spring, said link member having a longitudinal slot formed therein, a solid link member underlying the first said link member, a pin in one end of said solid link extending into the longitudinal slot of the first said link member, a longitudinally slotted link member underlying said solid link member, a second pin at the opposite end of said solid link member extending into the longitudinal slot of the third said link member, and means comprising a catch member constructed and arranged to engage one of a plurality of notches in said third link member for retaining said nested link members in a collapsed locked relationship within the casing against projection therefrom by said spring.



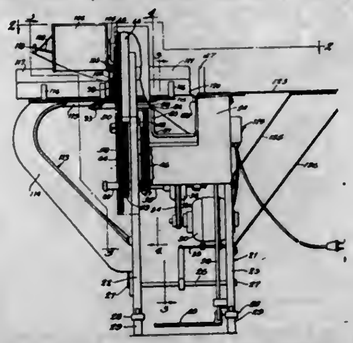
2,471,301
CAULKING PLUG
Edward W. N. Boosey, Detroit, Mich.
Application July 20, 1944, Serial No. 545,845
2 Claims. (Cl. 138—89)

1. A plumbing fitting comprising in association with a conduit having an open upper end positionable in a floor, an internally and externally flanged ring positioned in the floor at the upper

end of the conduit, said conduit having an inwardly extending threaded flange and the inner face of the conduit above the flange having longitudinal grooves of greatest depth at the flange, and means for sealing the upper end of the conduit comprising an externally threaded plug engageable with the internally threaded flange, said plug having means by which it may be rotated to turn the same into or out of its normal position, and a caulking material forced into position between the threaded face of the plug and the grooved surface of the end of the conduit, to thereby provide a threaded surface on the inner face of the caulking thereby permitting the plug to be turned into or from normal position, the grooves in the end of the conduit preventing rotation of the caulking by rotation of the plug in removal thereof, and a cover member seating on the inner flange of the ring, and means for removably securing the cover to the plug.



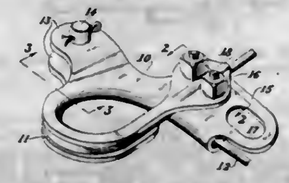
2,471,302
COLLAPSIBLE BATHTUB
Nellie Margaret Boward, Richmond, Va.
Application July 30, 1946, Serial No. 687,165
3 Claims. (Cl. 4—177)



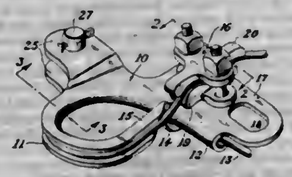
1. A unitary tub construction comprising a flexible base impervious to liquid and air, a flexible wall secured to the edge portion of said base and adapted to be inflated or deflated, and a control block secured within said wall, in association with a liquid inlet pipe, a liquid outlet pipe, and an air inlet pipe, all said pipes carried by said block and said wall for controlling the inflation and deflation of said flexible wall, and for controlling the flow of liquid into and out of the bottom of said tub.

2,471,303
BOTTLE-STERILIZING ARRANGEMENT
Oliver H. Brewster, Essex Fells, N. J., assignor to Electrical Industries, Inc., Newark, N. J., a corporation of New Jersey
Application December 3, 1946, Serial No. 713,693
7 Claims. (Cl. 21—79)

1. In a bottle sterilizer, a bottle-supporting arrangement comprising: a sterilizer base member including a plurality of spaced vapor jets integrally formed therewith and protruding therefrom and each adapted to receive the mouth of an individual bottle to be sterilized, each of said jets having an effective transverse dimension substantially equal to the internal diameter of said bottle mouth to restrain said bottle against substantial movement at the region of the mouth thereof but having at least one circumferential groove longitudinally thereof to permit drainage of vapor condensate out of said bottle; and an apertured plate member secured to said base member in spaced relation therewith and with the apertures thereof corresponding in number to said vapor jets and arranged in alignment therewith to support individual ones of said bottles at a circumferential region thereof spaced from said vapor jets, whereby each of said bottles is supported on said base for sterilization only by an individual one of said jets and said plate member.



2,471,304
TYING MACHINE FOR ELONGATED PACKAGES
Benjamin H. Bunn, Chicago, Ill., assignor to B. H. Bunn Company, Chicago, Ill., a corporation of Illinois
Original application December 10, 1941, Serial No. 422,317. Divided and this application March 7, 1945, Serial No. 581,484
14 Claims. (Cl. 100—31)



1. In a machine for wrapping relatively heavy packages, said machine having an annular wrapping head, a driving motor, a drive train comprising a plurality of gears, drive chains and sprockets operatively connecting said motor to said wrapping head, clutch means interposed in said drive train, clutch-actuating means for effecting alternate engagement and release of said clutch means, and a cam mounted on one of said drive train elements for coaction with said clutch-actuating means automatically to release said clutch means at a predetermined point in the rotation of said cam; a mechanically actuated brake comprising a brake disc journaled concentrically with and laterally adjacent to one of the drive train members, a brake actuating element mounted to operate synchronously with the cam, and means operatively interconnecting the brake actuating element and the brake to move the disc into braking engagement with its adjacent drive train member, upon the completion of a predetermined cycle of operation of said cam and associated parts.

2,471,305
CLAMP
Charles S. Card, Cortland, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a corporation of New York
Application April 5, 1946, Serial No. 659,835
4 Claims. (Cl. 24—135)

3. A clamp comprising a sheet-metal body bent upon itself to provide a main plate, a channeled cable-receiving element and a secondary plate, said plates being integral with said element and disposed at opposite ends thereof with the secondary plate beyond the channel of said element, said element being disposed to have its channel extend outwardly and being curved so that said plates are overlapped and extend in substantially parallel planes, said plates being movable with respect to each other incident to a flexing of said element, at least one of said plates having its face adjacent the second plate formed with a cable-receiving groove and securing means extending between said plates and to each side of said groove for clamping between said plates an interposed cable.

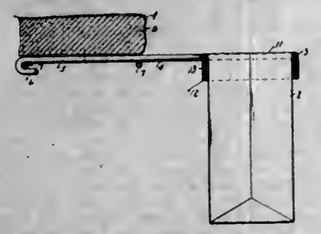
2,471,306
CLAMP
Charles S. Card, Cortland, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a corporation of New York
Application April 5, 1946, Serial No. 659,836
4 Claims. (Cl. 24—135)

3. A cable clamp of the snubbing type comprising an elongated body member formed into a loop providing a curved channel-shaped snubbing seat extending substantially therearound and having a taut cable end and a slack cable end said body member having a yoke-like portion extending beyond the slack cable end of the snubbing seat and offset laterally therefrom, said yoke-like portion straddling the body member adjacent the taut cable end of the snubbing seat so as to resist distortion of the body member and means forming a part of said clamp for securing a cable against movement with respect to the same.

2,471,307
METHOD AND APPARATUS FOR FORMING THREADED CAPS
Leslie R. N. Carvalho, Decatur, Ill., assignor, by mesne assignments, to Crown Cork Specialty Corporation, Decatur, Ill., a corporation of Illinois
Application May 4, 1943, Serial No. 485,640
2 Claims. (Cl. 93—36)

1. A method of securing together a top element formed of a top wall disk, liner disk and a surrounding tubular skirt, comprising applying adhesive to a face of one of said disks, positioning said face of the last-mentioned disk in contact with a face of the other disk, positioning the two disks in one end of the skirt, and pressing the two disks together so that a portion of the adhesive will flow from between them and upon the peripheral edges of the disks and the opposed inner wall of the skirt, and adhesively securing to the internal surface of the free part of the skirt a cylindrical threaded element having a width substantially corresponding to the axial length of such free portion of the skirt.

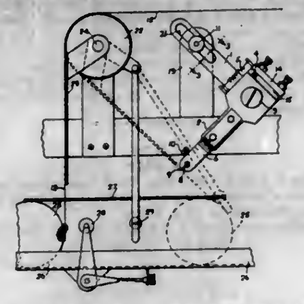
2. Apparatus for forming a threaded strip comprising a pair of rolls rotatable about parallel axes, the respective rolls being provided with cooperating punch elements arranged along helical lines about the roll, means to guide a strip between the rolls along a line normal to the axes and tangential of the rolls so that a series of open slots will be punched in the strip along a line extending obliquely of the strip, a second pair of rolls mounted on parallel axes, and means associated with said second pair of rolls to guide a strip between the rolls along a line which is oblique with respect to a line passing through and normal to both roll axes and with the planar faces of the strip normal to both axes, so that said last-mentioned rolls will exert lateral pressure upon the edges of the strip and mold a ridge therein along the line of the slots in the strip.



2,471,308
SANITARY HOLDER FOR SMALL ARTICLES
Lola A. Casnati, New York, N. Y.
Application December 8, 1947, Serial No. 790,419
12 Claims. (Cl. 294—25)

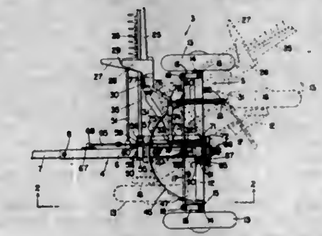
12. A sanitary holder for picking up small articles comprising a sheet of folded paper or like material having an upwardly directed central apex portion and a plurality of downwardly directed side apex portions into which one may engage one's fingers for pressing the side apex portions toward each other, and tongs carried by said

folded sheet and projecting from the bottom portions of said side apex portions, there being an addition of foldable sheet material integrally carrying all said tongs, said addition interfitted with certain of the folded portions of said sheet, said tongs being carried at the outer ends of ribs established by foldings of said addition, said rib-establishing foldings being so aligned as to establish said ribs and tongues, over at least a major portion of the length of each, as formations V-shaped in cross-section, said addition being formed from a blank substantially cruciform in outline and having a central opening outwardly from which said ribs radiate, said addition also including webs arranged interveningly of said ribs, said ribs near said opening having portions locally projected in directions to establish outward bulges near the upper ends of the side walls of said central apex portion, said locally projected rib portions being struck-out tongues, and said sheet having slits so placed that when said addition is added to the folded sheet, said tongues pass through said slits, said tongues being so directed and so passed through said slits, that said tongues extend through the walls of said central apex portion into said side apex portions for seizure coaction with one's fingers engaged with said side apex portions.



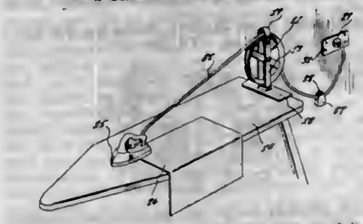
2,471,309
SICKBED WASTE RECEPTACLE HOLDER
Harry L. Chandler, Portland, Oreg.
Application April 10, 1946, Serial No. 661,030
1 Claim. (Cl. 248—95)

The combination, in a sick bed waste receptacle, of a stock paper bag having its open end provided with a cuff formed by folding over and creasing the unopened bag from each side, tearing one side down to the fold, and then turning the bag inside out down to said fold and a holder formed of a length of wire having its middle portion bent into a loop adapted to be received between the cuff and the body portion of the bag and its end portions extended in right angled parallel juxtaposition from one side of said loop and then diverged to provide lateral stability with the extremities terminating in hooks to engage the springs of a bed beneath the mattress.



2,471,310
TAPE SEVERING DEVICE
George Kenneth Charles, Wincanton, England
Application May 6, 1946, Serial No. 667,641
In Great Britain May 22, 1945
3 Claims. (Cl. 219—29)

1. A tape severing device comprising a severing element consisting of an electrical resistance wire, a support for said wire, leads for supplying electric current to the wire for the purpose of rendering it incandescent, means for moving a tape to be severed into contact with said severing element, and a needle carried by said support adjacent said severing element and for engaging the

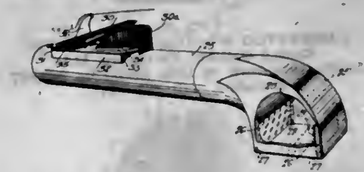


tape to retain it in contact with said element until severed.

2,471,311
MOWER
Nolan D. Colvin, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application September 28, 1944, Serial No. 556,233
3 Claims. (Cl. 56—25)

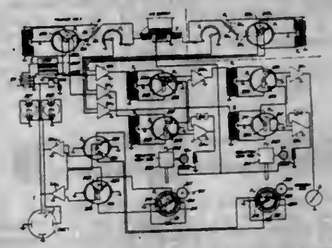
1. A mower of the trailing type, comprising a generally longitudinally extending draft tongue having means thereon for a single point of connection on a vertical pivot axis to a source of draft power; a cutter-bar-supporting frame disposed generally transversely to the tongue, and including a laterally extending cutter bar; means including a vertical pivot, spaced longitudinally of the aforesaid pivot axis, for connecting the frame to the tongue for rearward swinging of the frame and cutter bar about said pivot with respect to the tongue when the cutter bar strikes an obstruction and for forward return movement of said frame and cutter bar to normal position when such obstruction is cleared; releasable means connected between the tongue and frame and normally holding the frame and cutter bar against swinging; a wheel-mounting portion on the frame spaced laterally of said vertical pivot and thereby movable generally fore and aft as said frame and cutter bar swing as aforesaid; a ground-engaging wheel steerably mounted on said portion for carrying the frame; and means including a steering link connected to the wheel and pivotally connected to the tongue at a point spaced longitudinally from the aforesaid frame pivot for holding the wheel substantially in straight-ahead position to prevent lateral shifting of the tongue as it trails behind the source of draft power, said link providing for maintaining the wheel in substantially straight-ahead position as it shifts fore and aft when the frame and cutter bar swing rearwardly and return forwardly as aforesaid.

2,471,312
ELECTRIC IRONING CORD GUIDE
George A. Corbliss, Long Island City, N. Y.
Application April 8, 1943, Serial No. 19,687
2 Claims. (Cl. 248—51)



1. An electric iron cord guide comprising a base adapted to be connected to an ironing board, side portions extending upwardly from the base, a pulley wheel pivotally connected between the side portions and adapted to receive the ironing cord, and means for providing weight upon the cord outwardly of the ironing board whereby to cause the cord to be lowered as the iron is returned toward the pulley, means for connecting said side portions to the base for swivel movement about a vertical axis, and a top portion lying over the pulley and joining the upper ends of the side portions, said side portions having interior faces lying flush with the interior face of the top portion.

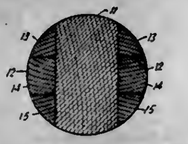
2,471,313
BRAKE RIGGING
Theodore C. Crossman, Wilkinsburg, Pa., assignor to the American Brake Company, Swissvale, Pa., a corporation of Missouri
Application June 21, 1947, Serial No. 756,206
6 Claims. (Cl. 188—46)



1. A brake rigging for a six wheel truck comprising in combination with the truck frame, a first hanger lever pivotally attached intermediate its ends to the truck frame at the forward side of the one rear wheel of the truck and provided at its lower end with means for frictionally engaging said one rear wheel, a second hanger lever pivotally suspended from the truck frame at the forward side of the one middle wheel of the truck and provided intermediate its ends with means for frictionally engaging said one middle wheel, a third hanger lever supported intermediate its ends at the rear side of the one forward wheel of the truck and provided intermediate its ends with means for frictionally engaging said one forward wheel, means operatively connecting the lower ends of said second and third hanger levers, a brake cylinder secured to the truck frame outboard of the wheels between said one rear wheel and said middle wheel, a transversely extending floating equalizer lever connected at its outer end with said brake cylinder and at its inner end with the upper end of said first hanger lever, a second transversely extending equalizer lever pivotally supported intermedate its ends and operatively connected at its inner end with the upper end of said third hanger lever, and means operatively connecting said two equalizer levers.

2,471,314
GATHERING HEAD FOR COTTON HARVESTING MACHINES
Grover C. Curtis, Bryan, Tex.
Application April 10, 1944, Serial No. 530,308
1 Claim. (Cl. 56—32)

A gathering head for cotton harvesters including a suction tube having an orifice therein, a nozzle on one end of said tube opening at right angles to the longitudinal axis of the tube, a pair of substantially flat plates hinged on opposite sides of said nozzle opening and influenced by suction through said tube to open inwardly thereof, a multiplicity of cotton impaling prongs carried by each of said plates and inclined towards the midsection of said nozzle, a valve hinged to said suction tube and movable to open and close the orifice in said tube and a substantially U-shaped, foraminous guard affixed to said tube and partially embracing said orifice.

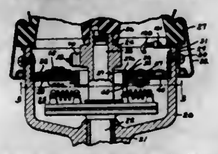


2,471,315
AIRCRAFT TRAINER FOR AERIAL GUNNERS
Richard C. Dehmel, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 3, 1944, Serial No. 520,912
27 Claims. (Cl. 35—25)

14. In an aircraft trainer operable by a trainee in simulation of flight, means for determining the instant values of the Cartesian coordinates of the simulated changing position of the trainer in the simulated flight, means for determining the instant values of the Cartesian coordinates of the simulated changing position of a moving target, means for subtracting said coordinates and resolving the remainders into the polar coordinate potentials representative of the range and azimuth and elevation angles of a path from the simulated flight position of the trainer to the

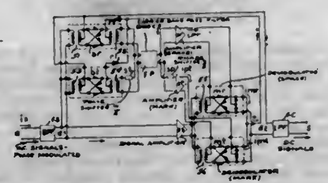
target, a first indicator operable in response to said range potential to indicate the instant range, a second indicator having a screen operable in response to the azimuth and elevation angle potentials to indicate the instant position of the target with respect to the line of simulated flight of the trainer, and a key operable to simulate the firing of a gun at the target and operable when said target position is at a predetermined position adjustable at will on the screen of said second indicator to alter the vertical coordinate of said result whereby the target position on the screen of said second indicator is depressed to indicate the target as hit and falling.

2,471,316
LAMINATED WOODEN BOWLING PIN
Russell C. Diehl, Baltimore, Md.
Application April 26, 1946, Serial No. 665,057
4 Claims. (Cl. 273—62)



2. A wooden bowling pin comprising a transverse central section having two parallel sides, extending between opposite sides of the pin and forming the head, neck, and a portion of the base of said pin, the grain of said section running generally parallel to said parallel sides, and a side section secured to each of said parallel sides and forming the remainder of the base thereof, the grain of said side sections running generally perpendicular to the grain of said central section.

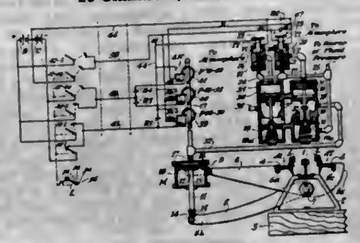
2,471,317
HEAT EXCHANGER
Arthur J. Fausek and Irwing F. Fausek, Clayton, Mo.
Application October 23, 1944, Serial No. 559,889
3 Claims. (Cl. 257—246)



1. A heat exchanger comprising a structure which includes an elongated tubular member, means providing a pair of adjacent passageways which are extended helically about said elongated tubular member at the outside thereof, inlet conductors leading to said passageways, and outlet conductors leading from said passageways, one of said pair of adjacent passageways being produced by a pair of spaced fins formed on and extended helically about said elongated tubular member, said fins having portions which are bent toward each other and secured together to produce said helical passageway.

2,471,318
IGNITION TIMER
John T. Fitzsimmons and William D. Schrope, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 26, 1946, Serial No. 679,337
9 Claims. (Cl. 200—30)

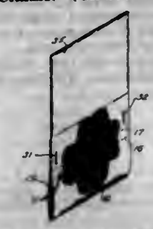
2. An ignition device for an internal combustion engine comprising in combination, a housing, a cam rotatably supported by the housing; a circuit breaker having a rubbing block operated by the cam, a movable plate for supporting the circuit breaker; a stationary plate; a plurality of bosses carried by the movable plate for laterally supporting the movable plate near its periphery on the stationary plate; means rotatably supporting the movable plate at its central portion; and resilient means carried by the movable plate and disposed between one of the bosses and the central supporting means resiliently urging the bosses carried by the movable plate against the stationary plate, said resilient means operating to prevent tilting of the movable plate when the cam engages the rubbing block of the circuit breaker.



2,471,319
ALTERNATING-CURRENT SIGNAL TRANSMITTING SYSTEM
Henri Gardère, Paris, France, assignor to Compagnie Generale d'Electricite, Paris, France, a corporation of France
Application May 20, 1946, Serial No. 670,891
In France May 7, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires May 7, 1965
4 Claims. (Cl. 178—66)

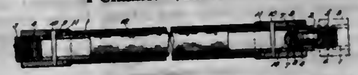
1. In a receiver for receiving and reconverting into direct current signal elements of successively opposite polarity, a transmitted alternating current signal consisting of successive short trains of two alternating currents of the same frequency but having a substantial determined phase difference W which is substantially less than π, receiving terminals for receiving said trains of the so determined different phase, a carrier current suppressing balanced demodulator unit having input terminals and output terminals and control terminals, said input terminals of said demodulator unit being connected to said receiving terminals, a pair of blocking devices having substantial conducting asymmetry and each having input terminals and output terminals and control terminals and each being adapted to pass a relatively large current from its input terminals to its output terminals when direct current of a particular characteristic is applied to its control terminals and to pass only a relatively small current from its input terminals to its output terminals when its control terminals are not so energized, a carrier band pass filter of relatively large time constant, a connection between the input of said carrier filter and the output terminals of said blocking devices, said connection comprising dephasing means for dephasing the output of one of said blocking devices relative to the output of the other blocking device by a substantial angle which is substantially less than π and equal to said determined phase difference W of said two alternating currents applied to said receiving terminals, the output of said carrier filter being connected to the control terminals of said demodulator unit, direct current output connections for said receiver connected to the output terminals of said demodulator unit, and control connections from the output terminals of said demodulator unit to the control terminals of said blocking devices, said control connections and said blocking devices comprising means whereby one and only one of said blocking devices at a time is selectively unblocked to pass a relatively large current according to the polarity of the direct current output of said demodulator unit, whereby the output of said demodulator unit consists of successive direct current signal elements of both polarities as uniquely determined by the phase of the received alternating current signal trains and whereby the phase of the currents applied to the input of said carrier filter is substantially constant and the amplitude of said output is independent of the amplitude of said transmitted alternating current signal trains.

connecting said line wire to said supply means so that at times a current of one polarity flows in the line wire and at other times a current of opposite polarity flows in the line wire, and means connecting said line wire to said winding including oppositely poled asymmetric units so that the current in the winding is of the same polarity regardless of the polarity of the current in said one line wire.



2,471,320
RAILWAY BRAKING APPARATUS
Robert M. Gilson, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application February 28, 1948, Serial No. 11,975
13 Claims. (Cl. 303—20)

1. Control apparatus, comprising an electrical winding, an electrolytic condenser connected in parallel with said winding to delay deenergization thereof, two electrical circuits for energizing said winding and said condenser from a remote point with direct electric potentials of the same polarity, including a line wire extending between said winding and said point, direct electrical energy supply means, means at said point for

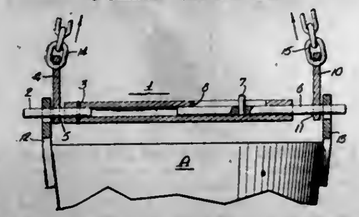


---

2,471,321
DISPLAY CARD AND PACKAGE
Sidney R. Gittens, Philadelphia, Pa.
Application August 2, 1945, Serial No. 608,465
5 Claims. (Cl. 206—79)

4. A combined display card and package for an article such as one or more screen patches comprising a pair of subpanels, a cross-bar separating said subpanels, windows adjacent the ends of said cross-bar and respectively adjacent the four corners of said subpanels, score lines forming extensions of said cross-bar for bending of said card to bring in opposed relation said windows to provide for ready insertion on one side of said cross-bar and through said windows of the article, said subpanels being provided with score lines for movement thereof over the article and to provide side walls equal to the thickness of the article, said card being provided with a score line to define a back panel for movement over and against said subpanels, and means for holding said back panel in place against and in supporting relation with said subpanels.

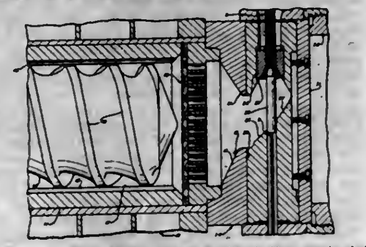
2,471,322
MICROMETER GAUGE AND THE LIKE
Leonard Ernest Glover, Leatherhead, England, assignor to himself and Pitter Gauge & Precision Tool Co. Limited, Leatherhead, England, a company of Great Britain
Application July 28, 1944, Serial No. 546,992
In Great Britain August 14, 1943
4 Claims. (Cl. 287—12)



1. A length bar for use in gauging lengths and adapted to be connected to another gauging member having its end faces accurately finished in a plane at right angles to the axis of the bar, a threaded plug part extending beyond one end and an internally threaded part at the other end, one of said parts having an end with a transverse hole which flares outwardly from the centre and said end disposed within the end of the length bar and a pin passing through the hole and having its ends in the wall of the length bar.

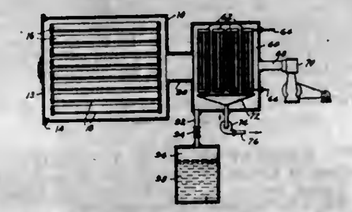
3. A length bar for use in gauging lengths and adapted to be connected to another gauging member having its end faces accurately finished in a plane at right angles to the axis of the bar,

a threaded plug part extending beyond one end and an internally threaded part at the other end, one of said parts having an end with a transverse hole which flares outwardly from the centre and said end disposed within the end of the length bar, a pin passing through the hole and having its ends in the wall of the length bar, a ferrule mounted somewhat loosely on the length bar, a pin fixed at its ends only in the ferrule and said length bar having holes slightly larger than the pin which passes through them.



2,471,323
HOISTING AND LIFTING DEVICE
William J. Harrington, Coatesville, Pa., assignor to Lukens Steel Company, Coatesville, Pa., a corporation of Pennsylvania
Application June 25, 1948, Serial No. 35,273
6 Claims. (Cl. 294—93)

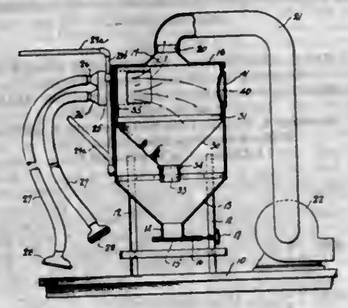
6. In an adjustable lift device, a pair of relatively rotatable and telescopically slidable members, means to limit relative sliding and relative rotational movement of said members, means on one of said members engageable with the other member upon relative rotation of said members in one direction to prevent relative sliding movement of the members, a lift arm associated with one of said members in predetermined relation circumferentially with respect thereto, and a lift arm associated with the other member and disposed at an angle with respect to the first lift arm so that lift forces applied to said arms causes relative rotation thereof toward an in-line position and engages and maintains the means on said one member in engagement with the other member to prevent relative sliding movement of said members, the angular disposition of said arms in the disengaged position of said means being greater than the maximum rotational movement of said means into and out of engagement with the said other member so that in the engaged position of said means with the other member the arms are angularly disposed with respect to each other and lifting forces thereon tend continuously to exert a positive force upon the means to maintain it engaged with said other member.



2,471,324
APPARATUS FOR ADVANCING NON-METALLIC PLASTIC MATERIAL
George E. Henning, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 13, 1946, Serial No. 709,479
1 Claim. (Cl. 18—13)

An apparatus for advancing non-metallic plastic material, which comprises an extrusion cylinder having a bore formed therein, a stock screw positioned in the bore and having threads extending helically in a predetermined direction thereabout, and means for rotating the stock screw to advance plastic material through the extrusion cylinder in a predetermined direction, said extrusion cylinder being provided with a plurality of internal grooves extending along a predetermined portion thereof, said grooves being slightly helical in a direction opposite to that of the

threads of the stock screw so that the material in the grooves is forced therealong, said grooves serving to prevent revolution of the plastic material with the stock screw and thereby increasing the delivery efficiency of the stock screw.

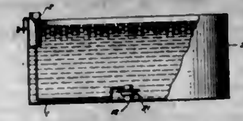


2,471,325
VACUUM DEHYDRATION
Kenneth C. D. Hickman, Rochester, N. Y., assignor to Distillation Products, Inc., Rochester, N. Y., a corporation of Delaware
Original application October 18, 1944, Serial No. 559,190. Divided and this application October 17, 1947, Serial No. 780,570
2 Claims. (Cl. 34—5)

1. The dehydration process which comprises exposing water containing material in a frozen state to vacuum over a substantial time interval and under such controlled conditions as to remove therefrom progressively decreasing amounts of water in the form of water vapor, progressively admixing with said removed water vapors the vapors of a normally liquid substance having the property of lowering the freezing point of water, said vapors being admixed in such relative amounts as to provide progressively increasing proportions of said freezing point lowering vapors in the mixture, progressively condensing said admixed vapors to produce a liquid mixture of water and said substance and progressively removing said liquid mixture while in liquid form.

2,471,326
LEAF SEPARATOR FOR BERRY PICKING MACHINES
William Clinton Hoyt, Sr., Aberdeen, Wash.
Application April 17, 1944, Serial No. 531,405
1 Claim. (Cl. 209—144)

In a berry picking machine, a closed, vertically disposed cylindrical housing providing a closed separating chamber and having a horizontal upper end wall formed centrally with a suction connection, and closed at its lower end by a wall forming a berry receiving hopper, a suction manifold opening into the housing adjacent the upper end wall, tangentially thereof, and equipped for the attachment of sucker tubes thereto, a fabric basin suspended in the chamber from the side walls thereof as a partition wall between upper

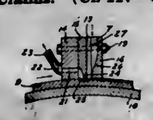


and lower end portions of the housing, and forming a conical receiving basin for berries drawn into the chamber through the suction manifold; said basin having a restricted central discharge opening into the receiving hopper and said hopper having a normally closed discharge opening and said housing being formed above the partition wall with a vacuum relief opening and a removable closure therefor.

2,471,327
ANGULAR AND LINEAR CALCULATING INSTRUMENT
Ernest William Hunt, Crows Nest, near Sydney, New South Wales, Australia, assignor of one-half to Henry Phipps John Woodward, Waverton, near Sydney, New South Wales, Australia
Application December 12, 1945, Serial No. 634,454
In Australia January 23, 1945
2 Claims. (Cl. 235—61)

1. An angle and linear calculating instrument consisting of a base incorporating a slidable scale with a zero mark thereon juxtaposed graduations on the base parallel to the slidable scale said graduations being calculated as a pitch scale for indicating the length of an inclined member where rise per foot run and span are known; a rotatable cursor mounted on said base, at least two pointers on said rotatable cursor one of said pointers being juxtaposed gradustions on the slidable scale and the other said pointer being juxtaposed graduations on said base formed radially about said cursor and calculated as a pitch scale; said pointers being arranged in relation to the scales formed radially about the cursor so that if the zero mark on the slidable scale is set to a particular value of pitch on said base scale and one of said pointers is set to the pitch scale juxtaposed said cursor the other said pointer will indicate on the sliding scale the length of the inclined member.

2,471,328
WATER REGULATOR FOR CATTLE TANKS
Homer T. Jones, Ord, Nebr.
Application January 10, 1947, Serial No. 721,370
1 Claim. (Cl. 137—68)

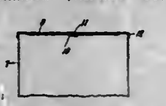


The combination with a water regulator situated in the central and bottom part of a cattle drinking tank and having a primary diaphragm, a relatively small in diameter but relatively tall liquid container having means for attaching to the outer and upper edge of said tank, a liquid conveying means adapted to communicate liquid from said container to the upperside of said diaphragm, means whereby water in said tank can freely communicate with the underside of said diaphragm, a main inlet conduit adapted for connecting to a supply pipe of said tank and terminating with a valve seat, a secondary valve diaphragm member its face adapted to close on said valve seat and close said main inlet conduit said secondary valve member being considerably larger in diameter than said valve seat, a chamber back of said secondary valve member having relatively small inlet and outlet conduits which have adjacent valve seats said relatively small inlet conduit being adapted to convey the water pressure from said main inlet conduit into said chamber, a primary valve member situated between said adjacent valve seats, and means whereby a small movement of said primary diaphragm will actuate said primary valve member from one to the other of the said adjacent valve seats.

2,471,329
METHOD OF MAKING MEASURING TAPES
Adolf W. Keuffel, Essex Fells, N. J., assignor to Keuffel & Esser Company, Hoboken, N. J., a corporation of New Jersey
Original application November 11, 1942, Serial No. 465,286. Divided and this application September 4, 1948, Serial No. 47,905
2 Claims. (Cl. 117—12)

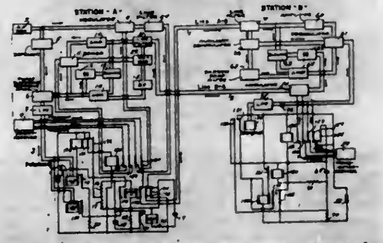
2. The method for making a coated metal measuring tape which comprises preparing a metal strip to receive a coating composition, passing the strip in contact with a roller which carries and applies to the strip a pigmented coating composition comprising a synthetic resin which will set while retaining its elasticity, passing the coated metal strip through a heated zone to remove the solvents and permanently set the coating, applying indicia comprising numerals and graduations to the coated metal strip with an ink which will firmly bond with the coating and applying a top coat of a transparent coating composition to the printed coated strip.

2,471,330
METHOD OF CONTINUOUSLY COATING POROUS SHEETS
George D. Knight and Ben W. Rowland, Appleton, Wis., assignors to The Institute of Paper Chemistry, Appleton, Wis., a corporation of Wisconsin
Application February 17, 1947, Serial No. 729,062
4 Claims. (Cl. 117—61)



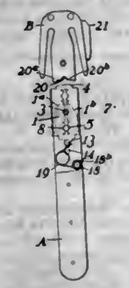
1. The method of continuously coating a porous sheet, which comprises, evacuating fluid ingredients from a region adjoining and within a surface of the sheet, removing the evacuated region from the zone of evacuation to a coating zone and promptly thereafter applying fluent coating substance to said removed region under at least atmospheric pressure before direct exposure of the region to the ambient atmosphere, and relatively moving the sheet and the evacuation and coating application zones to enlarge the coated area.

2,471,331
APRON
Hershal J. Lee, Bremerton, Wash.
Application October 11, 1946, Serial No. 702,621
1 Claim. (Cl. 2—48)



An apron of the character described comprising a body portion equipped with means whereby it may be secured about the waist portion of the wearer, and having an upwardly pointed bib portion formed at its upper end with a button hole designed for application to a button of the apron wearer's shirt for the support of the bib; said bib having a cross slit spaced from and below the said button hole, designed to receive the end portions of a necktie, as applied about the neck of the apron wearer, for the passing of the tie ends to the inside of the apron.

2,471,332
METHOD OF SEALING EMPTY CANS
Paul T. Lemmel, Madison, Wis., assignor to The Borden Company, New York, N. Y., a corporation of New Jersey
Application June 28, 1944, Serial No. 542,526
2 Claims. (Cl. 226—80)



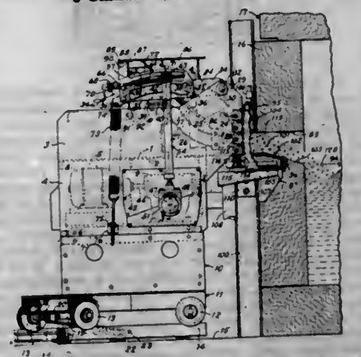
1. The process of treating empty plated metal cans having an aperture therein adapted for the introduction of a food product therein, the edges thereof forming said aperture being unplated, said process comprising filling said aperture completely and covering said edges completely with a plug of waxy material whereby the interior of said can remains in a substantially clean and sterile condition and the corrosion of said edges is prevented during storage, and removing said plug prior to filling said can with a food product.

2,471,333
PHASE REVERSAL TELEGRAPH SYSTEM
Robert Pierre Leroy, Paris, France
Application November 6, 1945, Serial No. 627,026
In France March 12, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 12, 1963
1 Claim. (Cl. 178—66)

In a system of carrier frequency telegraphy transmitting on the line signals comprising carrier frequency, signal elements of opposite phase, a first station, a second station, two uni-directional lines connecting said stations, said first station comprising an audio carrier frequency generator, each of said stations comprising transmitting keying means, transmitting modulating means controlled by said keying means adapted to change keying impulses of opposite polarity into carrier frequency pulses of opposite phases, and receiving demodulating means adapted to change received carrier frequency pulses of opposite phases into continuous current impulses of opposite polarity, each said receiving demodulating means comprising means for deriving a portion of the received modified carrier frequency current and converting the same into unmodified original carrier frequency current, said transmitting modulating means at said first station being connected to said generator, said transmitting means at said second station being connected for energization by the carrier frequency output of said deriving and converting means at said second station for converting into unmodified carrier frequency current, each of said lines connecting said transmitting modulating means of one said station to said receiving demodulating means of the other said station, a phase adjuster at said first station having its input connected to said generator, phase difference responsive demodulating means at said first station having one input connected to the output of said phase adjuster and having its other input connected to the output of said deriving and converting means at said first station for converting into unmodified carrier frequency current, and being adapted to deliver output direct current which is a function of the difference of phase of its two inputs, telegraph receiving means at each said station connected to the output of said receiving demodulating means at said station, control relay means at said first station connected for actuation by the ouput of said phase difference responsive means, pulsing relay means at said first station having a controlled contact connected in series in the output line of said transmitting demodulating means at said first station, first interlocking relay means connected for actuation by said control relay means and adapted when actuated to open the circuits of said transmitting keying means to said modulating means and of said telegraph receiving means at said first station and also to actuate said pulsing relay means, master relay means at said second station, a rectifier and a low-pass filter at said second station connected between the output of said receiving demodulator at said second station and the actuating winding of said master relay means, and second interlocking relay means connected for actuation by said master relay means when in deenergized condition and adapted to open the circuits of said transmitting keying means and said telegraph receiving means at said second station, whereby a momentary opening and immediately subsequent reclosing of either of said lines maintains the original correspondence of polarity of keyed signals from a keying means at one said station and the telegraph receiving means at the other said station.

2,471,334
PAPER CUTTER
Henry H. Levin, Newark, N. J.
Application October 20, 1947, Serial No. 780,889
5 Claims. (Cl. 30—287)

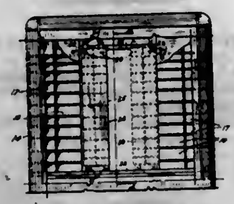
1. A utility tool comprising a handle; an elongated flat bar extending rigidly therefrom; a double-edged thin detachable cutting blade mounted immovably on said bar adjacent its extremity; a guard pivoted to said bar and having a notch in its rear end, a latch axially slidable in an elongated slot in said bar; and a spring urging said latch forwardly to normally retain it in said notch and thereby maintain said guard in alignment with said bar to cover both cutting edges of said blade; said latch being adapted to be finger-pressed to the rear out of said notch to permit said guard to swing either to the right or left to expose the tip of either edge of said blade.



2,471,335
AUTOMATIC ROPE LOCK
Max Lomner, New York, N. Y.
Application October 5, 1946, Serial No. 701,570
1 Claim. (Cl. 24—136)

In a rope lock having a main member formed with an elongated opening and having end walls at the ends of the opening with an eye member mounted on one of the end walls for the attachment of the end of a piece of rope and the main member having its side walls formed with aligned elongated slots on opposite sides of the elongated opening and closely adjacent the other end wall thereof, a pin extended across the elongated opening and having its ends slidable in the aligned slots for movement toward and away from the other end wall of the main member, a knurled roller on the elongated pin within said opening to have the free end of a second rope passed through the elongated opening on the side of said roller opposite the other end wall and engaged about said roller and then passed back through the elongated opening between said roller and the other end wall, whereby a pull on the ropes in opposite directions will move said

knurled roller toward the other end wall securely clamping the end of the second rope between the other end wall and said knurled roller, and a U-shaped member engaged about the end of the main member at the other end wall thereof and having its side arms extending along the side walls of the main member, said pin having its ends projected beyond the side walls of the main member and connected to the free ends of the side arms of said U-shaped member for moving said pin and said knurled roller longitudinally of the main member within the limits of the aligned slots against the normal action of the pull on the ropes to free the end of the second rope, said knurled roller being rotative on said pin to function as a pulley in the loosened condition of the second rope.



2,471,336
APPARATUS FOR FEEDING BATCH TO GLASS MELTING FURNACES
Edward H. Lorenz, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware
Application August 28, 1945, Serial No. 613,095
3 Claims. (Cl. 214—23)

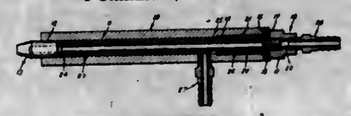
1. A batch feeder comprising a chamber adapted to receive a continuous supply of batch and

having a forward end portion provided with an outlet, a shaft extending transversely across and above said chamber, an arcuately curved batch pusher mounted to oscillate about the axis of said shaft in the batch in said chamber toward and away from said outlet, the axis of the curvature of said pusher coinciding with the axis of said shaft, a transverse wall in said chamber having an aperture in its lower portion through which the pusher oscillates, a packing on said transverse wall around said aperture and in wiping contact with the surface of the oscillating pusher, a lever on each side of the pusher and fixedly connected thereto, each lever having an arcuate slot therein, a shaft extending below said chamber in a direction transverse thereof, a crank on each of the opposite ends of said second-named shaft, means for rotating the second-named shaft about its axis, a connecting rod comprising an upper section and a lower section telescopically associated with each other and a compression spring acting on said sections to resist separation of said sections, said compression spring being arranged to yield if the pusher encounters an obstruction, the lower section of said connecting rod being mounted on the crank at a side of the pusher and the upper section of the connecting rod being adjustably connected with the slotted portion of the corresponding lever, there being a connecting rod at each of the opposite sides of the pusher, and a vertically disposed coil spring at each of the opposite sides of the pusher, each coil spring being attached at its upper end to the free end of said slotted lever and at its lower end to a fixed support so as to be under tension and to urge said pusher on its forward stroke.

2,471,337
AUTOMOTIVE PARTS TRUCK
Henry Luby, Denver, Colo.
Application September 7, 1948, Serial No. 48,037
3 Claims. (Cl. 296—24)

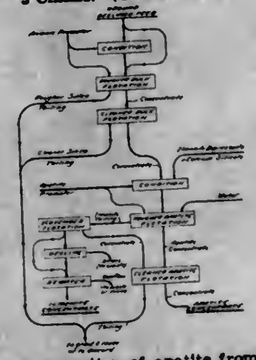
1. A vehicle for the storage and transportation of small parts, comprising: an automotive truck chassis; a relatively large, rectangular, enclosed body mounted on the chassis; a plurality of side doors hinged in the body in closely spaced relation along both sides thereof; a relatively large rear door hingedly mounted in the middle of the back of the body; a plurality of outside shelf cases, there being one outside shelf case mounted inside of each of the side doors; an inside shelf case mounted immediately inside of each outside shelf case so as to face inwardly into the body to form sides on a longitudinally extending central aisle-way in the body, said rear door providing access to said central aisle-way; guide means extending transversally of said body between said inside shelf cases and across said aisle-way; and movable shelf cases mounted on said guide means so that they may be moved to either side of said aisle-way.

2,471,338
INTERCHANGEABLE EYE LENS FRAME
Peter J. Massaro, New York, N. Y., assignor to Isidore F. Fishman, New York, N. Y.
Application December 29, 1945, Serial No. 638,047
2 Claims. (Cl. 88—47)



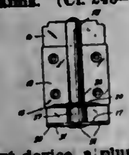
1. In an eyeglass frame having a semi-circular mount engaged about the bottom of a lens and continuing at one side into a nose-bridge, a narrow arcuate upper portion continuing from the top ends of the mount and extending across the upper periphery of the front face of the lens and spaced therefrom, a lock member pivotally attached at one end to the mount on the side remote from the nose-bridge for extension across the upper portion of the lens between the ends of the mount, and means holding said lock member releasably in its operative position across the upper portion of the lens, said lock member being of inverted U-shaped cross-section to seat over the top edge of the lens behind said arcuate upper portion with its top face flush with the upper edge of said arcuate upper portion.

2,471,339
LONG-CHAIN AMINE SALTS AS FUNGICIDES AND BACTERICIDES
Arthur Minich, Westfield, N. J., and Milton Nowak, Brooklyn, N. Y., assignors, by direct and mesne assignments, to Nuodex Products Co., Inc., Elizabeth, N. J., a corporation of New Jersey
No Drawing. Application June 6, 1946, Serial No. 674,940
2 Claims. (Cl. 167—22)



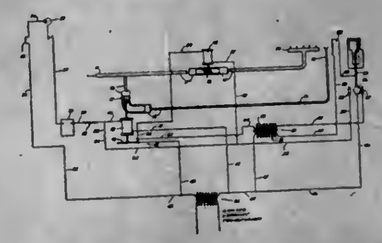
1. A microbicidal agent comprising: the reaction product of dodecylamine approximately 65%, lactic acid approximately 16% and salicylic acid approximately 19%.

2,471,340
ELECTRODE HOLDER
Robert F. Morrissey, South Britain, Conn.
Application August 6, 1948, Serial No. 42,899
6 Claims. (Cl. 219—4)



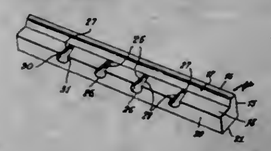
1. In a welding electrode holder, a hollow elongated body having a tapered socket opening through one end to receive a tip, said body internally threaded through its other end, a head including a portion of a diameter over-lying the said other end of said body and an externally threaded stem threaded into said internally threaded end of the body, a tube extending longitudinally in said body and at one end lying adjacent said socket and at its other end threaded into said stem, a lock nut threaded onto said tube and abutting the inner end of said stem and securing said parts together against casual relative movement, said head having a passage therethrough communicating with said other end of said tube, said head and stem rotatable relative to said body to further thread the stem into the latter and force said tube against a tip to eject the latter from the socket, means between said head and the said other end of said body and forming a seal between said parts to prevent the escape of water from between them, and said means adapted for compression to permit of said further threading of the stem into the body to eject the tip by a thrust from said tube and then adapted for expansion to yet comprise a seal on reversal of said movement to retract the tube to permit of the mounting of another tip in said socket.

2,471,341
FROTH FLOTATION OF APATITE USING CALCIUM SILICATE
Samuel Payne Moyer, Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
Application December 20, 1945, Serial No. 636,200
3 Claims. (Cl. 209—167)



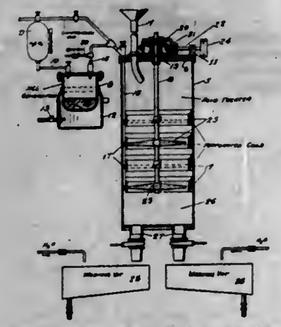
1. In the separation of apatite from mixtures thereof containing at least one titanium-bearing oxide mineral, the improved procedure which comprises forming an aqueous, substantially slime-free, pulp of the mixture, conditioning the aqueous pulp with sodium silicate, an alkali, and calcium silicate, subjecting the conditioned pulp to froth flotation in the presence of an anionic promoter for the apatite, and collecting the resultant flotation concentrate as an apatite concentrate.

2,471,342
BRACKET
Arthur E. Nelson, University City, Mo.
Application June 25, 1945, Serial No. 601,485
7 Claims. (Cl. 248—289)



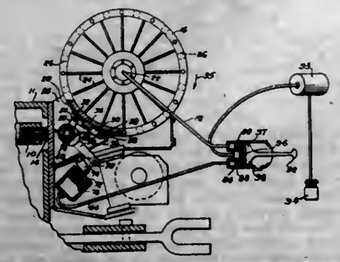
1. In a bracket device, a plurality of L-shaped bracket elements the backs of which are secured together to provide two spaced shelves projecting therefrom, a pin secured in both of said shelves and projecting upwardly therefrom, and a cover member removably secured over said bracket elements, said cover member having a hole through which the pin projects.

2,471,343
CONTROL SYSTEM
Eric P. Newman, Clayton, Mo., assignor, by mesne assignments, to Missouri Automatic Control Corporation, a corporation of Missouri
Application January 6, 1945, Serial No. 571,624
12 Claims. (Cl. 158—117.1)



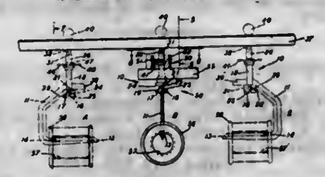
1. In a fuel control for use with main and pilot burners, a main valve, a pilot valve, an external control, a pilot flame combustion switch closed in response to combustion at the pilot burner, means responsive to operation of the external control for opening the pilot valve, a pilot switch means closed by opening of the pilot valve, means including the pilot switch means and the combustion switch in closed position responsive to existence of pilot flame for opening the main valve, and electrical means energized upon closure of the combustion switch to prevent initial closure of the pilot switch means when the combustion switch is in closed position.

2,471,344
LINGUAL MOLD BAR FOR DENTAL MOLDS
Irving Neustadter, Brooklyn, N. Y.
Application May 29, 1948, Serial No. 30,011
2 Claims. (Cl. 18—34.1)



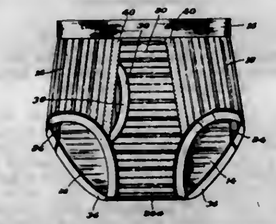
1. A dental mold for molding artificial teeth, said teeth having smooth peg-shaped lingual portions of the character described, said mold being a multi-part mold including two complementary parts having recesses for forming the labial and occlusal portions of the teeth, a machined lingual mold bar in said mold having smooth peg shaped cavities which are exactly alike, said cavities opening into the recesses aforesaid for forming smooth lingual peg shaped portions of the teeth, said lingual mold bar having an upstanding wall extending the length of the bar, said wall having an angularly inclined surface facing said recesses in molding association therewith.

2,471,345
METHOD OF OBTAINING CONCENTRATES OF URANIUM AND VANADIUM FROM THEIR ORES
Ralph D. Nye and Dana J. Demorest, Columbus, Ohio
Application February 10, 1944, Serial No. 521,840
5 Claims. (Cl. 23—14.5)



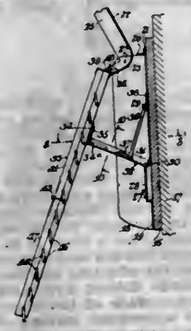
1. In a process for producing concentrates from uranium and vanadium-containing ores, the steps which comprise agitating a crushed finely divided water-dampened body of such ores in a confining receptacle, introducing into said receptacle for intimate engagement with said ores a dry hydrochloric acid gas in a heated state, maintaining the ores within the receptacle at such temperatures as to cause the gaseous hydrochloric acid to be absorbed in the moisture present on the damp surfaces of the crushed ore grains and forming a highly concentrated aqueous hydrochloric acid solution, there being insufficient water present during said reaction to form any continuous liquid or acid solution phase from which the acid gas may be evolved, and thereafter separating from said ores by a washing operation a hydrochloric acid solution of uranium and vanadium.

2,471,346
BRAKE MOUNTING AND CONTROL
Oscar R. Peterson, Oakland, and Robert A. Peterson, San Leandro, Calif.
Application November 19, 1945, Serial No. 629,342
9 Claims. (Cl. 188—77)



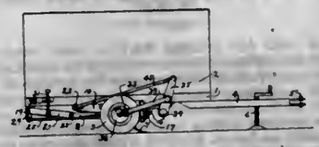
1. A brake comprising a drum, a housing disposed adjacent said drum, a brake band disposed about said drum, lugs secured to each end of said band, a fixed stop secured to said housing and engaging one of said lugs, a movable stop engaging the other lug, means securing said movable stop for pivotal movement toward and away from the associated lug, spring-loaded means normally bearing on said movable stop to urge the adjacent end of the brake band against the drum, and means for moving said movable stop out of engagement with the associated lug to permit said brake band to be displaced axially from said drum.

2,471,347
CONVEYER
Vincent A. Rayburn, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 21, 1945, Serial No. 636,401
2 Claims. (Cl. 198—177)



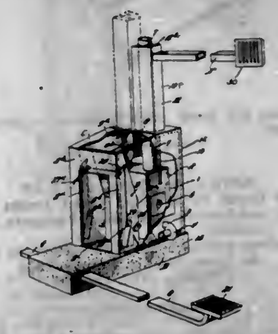
2. A conveyer, which comprises a conveyer chain, means for guiding the chain along a predetermined path, a shaft pivotally secured to the conveyer chain, a hook, a sleeve rotatably and slidably mounted on the shaft for supporting the hook, a cylindrical cam having a pair of diametrically opposed lobes formed thereon and positioned on the bottom of the rod for securing the sleeve upon the rod, said cylindrical cam also being provided with depressions positioned between the lobes, a second cylindrical cam secured to the sleeve for intermeshing with the first-mentioned cylindrical cam to lock the sleeve in either of two positions spaced 180° apart, said cams having no dwell portions so that said second cylindrical cam falls automatically into mesh with the first-mentioned cylindrical cam if it is moved out of intermeshing engagement therewith, a four-lobe pinion secured to the sleeve, and a rack positioned in the path of the pinion for rotating the pinion to rotate the sleeve and move the second cam out of intermeshing engagement with the first-mentioned cam.

2,471,348
GARMENT
Harriet L. Redmond, Boston, Mass., assignor to The William Carter Company, Needham Heights, Mass., a corporation of Massachusetts
Application November 9, 1946, Serial No. 708,882
5 Claims. (Cl. 2—224)



1. A garment of the type described comprising a waistband, side panels of knit fabric joined to said waistband and having the wales thereof extending vertically to provide circumferential stretchability to the garment in the areas of the side panels, a rear panel of knit fabric joined to said waistband, joining said side panels across the back of the garment and having the wales thereof extending laterally to provide vertical stretchability to the garment in the area of the rear panel, a central panel joined to the waistband in front and extending downwardly between said side panels and through said crotch and being joined to said rear panel along a line of stitching disposed rearwardly of said crotch, said central panel comprising two layers of knit fabric, one of said layers having the wales disposed in crossed relation with the wales of the other layer and both of said layers being stitched to said waistband and to said side and rear panels.

2,471,349
NECKTIE RACK
Frank Reiss, Philadelphia, Pa.
Application November 30, 1946, Serial No. 713,270
12 Claims. (Cl. 211—99)

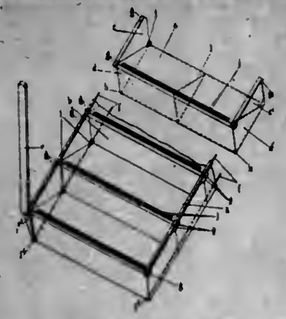


8. A necktie rack comprising a back panel, forwardly projecting sides mounted on the back panel in spaced relation, a cover pivotally hinged to said sides at the forward upper portions thereof, an inturned extension on the upper end of said cover and rotatable within the space between the sides and the back panel, a hinge plate mounted on the back panel, a brace slidably connected at its inner end to said plate, a hanger hinged to said plate and slidably connected to the brace, and an arm structure hinged to the cover extension and to the outer end of said brace, said arm structure having article holding means thereon.

2,471,350
PICKUP HAY WAGON
William H. Rodefeld, Richmond, Ind.
Application January 27, 1947, Serial No. 724,506
6 Claims. (Cl. 214—79)

1. In a machine to take up hay and similar material a set of forwardly extending teeth arranged to pass under material as the machine moves forward and arranged to rise with the said material, a plurality of pushers arranged to move forward between the said teeth when raised and with the pushers arranged to move beyond the ends of the teeth and into a passage to a compartment.

2,471,351
DUAL HOT-AIR HEATER UNIT FOR FIREPLACES
Robert D. Russell, St. Petersburg, Fla.
Application October 18, 1948, Serial No. 704,256
5 Claims. (Cl. 126—121)

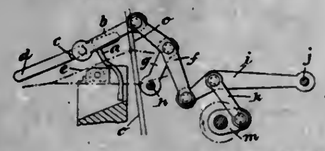


1. A dual heater unit adapted to be installed within the fireplace area of a home, said unit comprising an open-front fireplace shell having end walls and a back wall, a casing located rearwardly of the back wall of the shell and containing a burner, and a housing enclosing said casing and the end and back walls of the shell in spaced relation thereto, a conduit leading from adjacent the top of the shell to the exterior of the housing for the removal of combustion products from the shell, a flue extending outwardly from the casing through the housing for the removal of combustion products from the casing, said housing being open at its bottom to provide openings for the admission of air through the space between the corresponding end walls of the shell and housing, a warm air outlet in the housing adjacent its upper end, deflectors adjustably mounted between the said end walls adjacent the air-admission openings for directing the air into and out of heat-exchange relation with the end walls of the shell, and control means for adjusting said deflectors.

2,471,352
CONSTRUCTION OF STAIRCASES
Otto Safir, Beaconsfield, England
Application February 18, 1946, Serial No. 648,262
In Great Britain September 29, 1945
4 Claims. (Cl. 189—43)

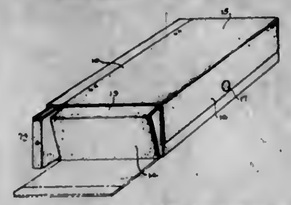
1. A staircase comprising a number of step units cast in aluminium alloy, each unit consisting of a horizontal portion forming the tread, a riser, and at each end two triangular webs corresponding to parts of the usual stringer beam, one above and the other below the tread, in combination at each end with two rods by which the said units are assembled to form a flight of the required length, the one rod running parallel to

and near the upper edge of the web lying above the tread and the other rod running parallel to



and near the lower edge of the web lying below the tread.

2,471,353
LINE-CARRYING ROCKET
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England
Application September 4, 1946, Serial No. 694,682
In Great Britain July 17, 1946
3 Claims. (Cl. 102—89)

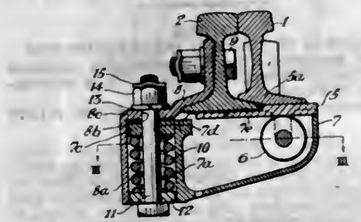


1. A line-carrying rocket comprising a casing, a band slidable on said casing, bars secured to said band and extending rearwardly thereof, a cylindrical band secured to the rear ends of said bars, said band, bars and cylindrical band constituting a sliding tail, and a stirrup, adapted for the attachment thereto of a line, secured to said cylindrical band.

2,471,354
LOOM BEAT-UP MECHANISM
Derrick Walter Shimwell, Rowsley, England
Application August 20, 1946, Serial No. 691,746
In Great Britain August 21, 1945
1 Claim. (Cl. 139—191)

A beat-up mechanism for a narrow ware loom, comprising a reed having a straight top part and a lower part the end of which extends at an angle to the top part, a link at each side of the loom, said link carrying the reed, means for guiding one end of each link in a path substantially parallel to the upper row of warp threads in the shed, a lever pivoted at one end to the other end of each link, a pivotal support, turning about a fixed point, for an intermediate point of said lever, a second lever pivoted to the other end of said lever at one end and turning about a fixed point at its other end, and a crank pin connected with said second lever, the arrangement being such that the link and levers are substantially in line at the beat-up position of the reed, and the reed has a substantially circular movement while the crank pin moves through a considerable arc about its back dead centre position relatively to the second lever.

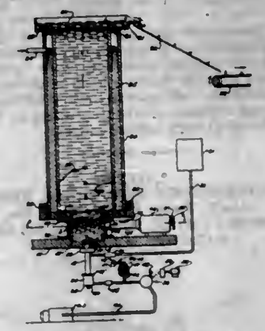
2,471,355
RAZOR HONING AND STROPPING MECHANISM
Charles Romano and Frederick Schmid, Philadelphia, Pa.
Application November 20, 1946, Serial No. 711,160
5 Claims. (Cl. 51—65)



1. In a razor sharpening apparatus, in combination, a stationary base having a pair of laterally spaced, parallel tracks, a shift plate mounted for reciprocable movement in a horizontal plane along said tracks, said shift plate being provided upon opposite faces thereof with stropping and honing surfaces and being reversible to present either of said surfaces uppermost for reciprocation in the same horizontal plane, an oscillatable support for a blade to be sharpened, means interposed between said blade support and said shift plate for effecting relative movement between the blade cutting edge and said shift plate while one surface of the blade is in contact with said uppermost surface of the shift plate, and means for reversing said relative movement to present the opposite face of the razor blade in contact with said uppermost surface of the shift plate.

2,471,356
MILL FOR CUTTING FEATHERS
Thomas Slick, San Antonio, Tex.
Application May 19, 1945, Serial No. 594,849
12 Claims. (Cl. 19—4)

1. A mill for cutting feathers and materials of similar nature, which comprises in combination a casing, a rotary cutting wheel mounted in said casing, a hopper mounted above said casing for receiving the material to be comminuted provided at the bottom with a feeding slot communicating with said casing, a feeding wheel mounted at the bottom of said hopper, agitating blades mounted on said feeding wheel adapted to agitate said material and tending to force the material to be comminuted through said feeding slot, a cutting bar mounted along one edge of said slot, a plurality of cutting blades having outer cutting edges mounted on said cutting wheel and cooperating with said cutting bar to cut material passed through said feeding slot, a cylindrical shield extending between said cutting blades spaced immediately adjacent and not over ½ inch below said cutting edges and adapted to check the feathers passing through said feeding slot and to hold them adjacent said cutting bar, means for exhausting air and comminuted product from said casing mounted substantially at right angles to said feeding slot in the direction of travel of said cutting blades and means for rotating said cutting wheel and said feeding wheel.

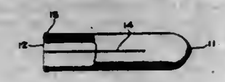


2,471,357
RAILWAY SWITCH
Harry R. Smith, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 16, 1946, Serial No. 683,885
1 Claim. (Cl. 246—438)

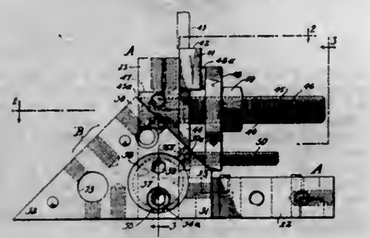
The combination with a railway switch comprising a track rail and a switch point movable toward and away from the rail, of a spring bracket secured to the outer side of the rail and provided with a laterally projecting portion terminating in a depending portion having curved ends, two spring bolts extending with clearance through holes provided in said laterally projecting portion and provided above said laterally projecting portion with nuts, a spring plate mounted on the lower end of said bolts, coil springs surrounding said bolts between said spring plate and said laterally projecting portion, a rigid cantilever member extending underneath said switch point and said switch rail and provided at its outer end with a lip having formed therein holes that receive said bolts between said springs and said laterally projecting portion and with a vertical portion which cooperates with said depending portion to form a housing for said springs, a roller journaled in the inner end of said cantilever member, and a roller plate secured to the under side of said switch point and extending underneath said rail and riding on said roller, said adjusting nuts being adjusted to compress said springs sufficiently to cause said roller to partially support said switch point.

2,471,358
CAPSULATING METHOD AND APPARATUS
Vernon V. Stephenson, Seattle, Wash.
Application November 22, 1946, Serial No. 711,702
6 Claims. (Cl. 18—1)

1. Capsulating apparatus comprising receptacle means containing a body of liquid capsulating material, a conduit in connection with the bottom part of the receptacle means for the supply thereto of liquid content substance, valve means comprising a valve seat in the conduit adjacent said receptacle means and a spring loaded valve body cooperating with said seat and normally preventing discharge from said conduit, said valve body being magnetic, a coil with respect to which said valve body is arranged as an armature, an energizing circuit for said coil and a normally open switch therein, a source of content substance, a pump having its intake side in connection with said source and its output side in connection with said conduit, expansible chamber means associated with said pump for the operation thereof, expansible chamber means for operating said switch, a source of air under pressure, a control valve in connection with said air source and both of said expansible chamber means, means for operating said control valve for the intermittent supply of air to both of said expansible chamber means, and choke means between said control valve and the expansible chamber operating means for the pump.



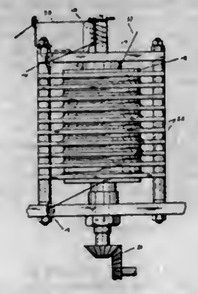
2,471,359
TIRE CASING REPAIR DEVICE
Nichols Stevens, Chicago, Ill.
Application January 30, 1946, Serial No. 644,342
3 Claims. (Cl. 152—369)



3. In a repair device for tire casings, a washer arranged to be placed on the inner face of a tire casing, means to clamp the washer on the tire casing, said washer having a curled edge, a cap having resilient rims engaging the inner sides of the open curled edges, and a pliable pad, having split rivets formed with flaring heads seating in holes formed in the washer.

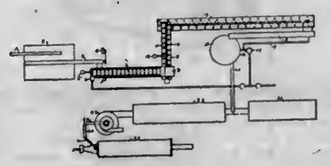
2,471,360
PROSTHETIC DEVICE
Cyril J. Thorne, Los Angeles, Calif.
Application February 10, 1947, Serial No. 727,707
9 Claims. (Cl. 128—79)

1. A prosthetic apparatus of the character stated comprising: a hollow, virtually cylindrical thin-walled sheath provided with a rounded, closed end portion and an open end, said sheath being normally of cartilaginous strength and rigidity but capable of disintegrating in the presence of fluids at body temperatures.



2,471,361
MACHINIST'S UNIVERSAL VISE
Otto F. Trefz, Philadelphia, Pa.
Application July 18, 1945, Serial No. 605,805
9 Claims. (Cl. 90—59)

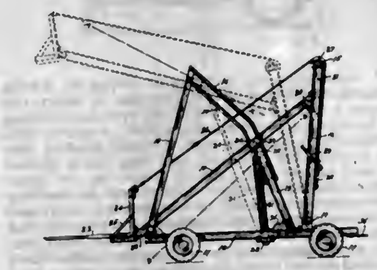
2. A machinist's universal vice, comprising a work-holding plate, a cooperating foot plate, a circular opening in the foot plate having an internal shoulder, a disk crank rotatable in said opening and adapted to seat on said shoulder, a shouldered aperture in said disk crank, a threaded hole in an edge of the holding plate, and a headed clamping bolt having its shank threaded to fit the threads in said holding plate hole, whereby the holding plate and the foot plate may be adjusted as to their relative angularity in the plane of the foot plate and then clamped together.



2,471,362
FEEDING APPARATUS FOR YARN OR THE LIKE
René Vin, Paris, France, assignor to Société Etablissements Poron, Troyes (Aube), France
Application February 8, 1940, Serial No. 317,923
In France April 7, 1939
7 Claims. (Cl. 28—71.5)

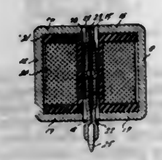
1. In a feeding apparatus for yarn or the like, the combination of a rotatable cylinder, mounted on a driving shaft, on which the yarn is caused to make a number of coils; a frame supporting said shaft; supporting plates rigid with said frame and surrounding said cylinder; means for guiding each coil of yarn from one side of a supporting plate to the other side; a second cylinder mounted on the same driving shaft, said second cylinder having a smaller diameter than the first cylinder; means adapted to guide the yarn from the output of said first cylinder to the input of said second cylinder; and an apertured device adapted to

guide and support the coils of yarn round said second cylinder.



2,471,363
PROCESS OF MAKING FOOD PRODUCTS
Daniel Boscawen Vincent, Tampa, Fla., assignor to Dan B. Vincent, Inc., Tampa, Fla., a corporation of Florida
Application November 27, 1945, Serial No. 631,072
15 Claims. (Cl. 99—2)

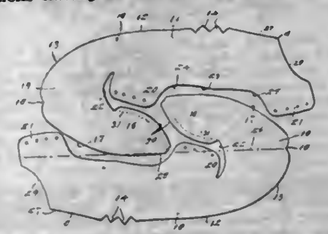
1. The method of producing a bulky, highly absorptive food product from citrus cannery waste material which comprises completely coating the individual pieces of untreated citrus cannery waste with a weak aqueous solution of a non-toxic alkaline compound of sufficient concentration to neutralize the free acids of the citrus juices associated with the waste but of insufficient concentration and duration of time to materially react upon the pectins in the waste, quickly shredding the coated waste material, immediately thereafter rapidly mixing the shredded waste material in the presence of a sufficient aqueous non-toxic alkaline solution to neutralize newly released acids and form a gel, continuously and uniformly moving the gelled mass for a predetermined time to permit breaking the gel into a watery mother liquor and pulpy solids to a point where the mother liquor drains freely therefrom and thereafter drying the partially expressed solids.



2,471,364
HAY STACKER
Jonah C. Weber, Lamar, Colo.
Application July 14, 1947, Serial No. 760,739
3 Claims. (Cl. 214—139)

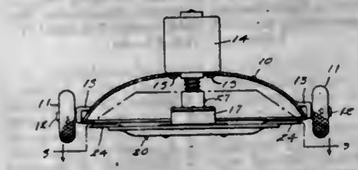
1. A stacker and loader comprising: a wheeled frame; A-shaped frame rising vertically from each side of said wheeled frame; a front leg in each A-frame; a back leg in each A-frame; a parallel track member forming the upper extremity of each back leg; a pair of swinging booms hingedly mounted on said wheeled frame rearwardly of said A-frames and extending upwardly; rake arms hingedly mounted at their rearward extremities on said swinging booms and extending normally forward and downward therefrom; a rake device carried on the forward extremities of said rake arms; rollers carried by said rake arms intermediate their extremities and traveling in said track members; means for raising and lowering said rake arms; rigid projecting portions on said swinging booms extending above the hinge

mountings of said rake arms; a cable sheave carried at the upper extremities of said projecting portions; a strut extending upwardly from said rake member, said strut being substantially equal in length to said projecting portions; a flexible member extending from the upper extremity of said strut over said cable sheave; and releasable means attaching the rearward extremities of said flexible cables to said swinging boom.



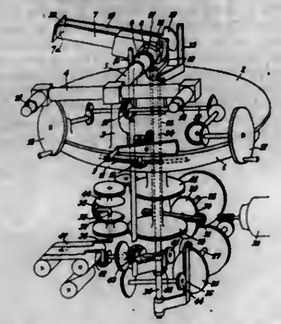
2,471,365
ARMATURE STRUCTURE FOR ELECTRO-MAGNETIC APPARATUS
Palle-Finn Beer, Lidingo, Sweden, assignor, by mesne assignments, to Electrical Fono-Films Co. A. S., Copenhagen, Denmark, a corporation of Denmark
Application April 13, 1945, Serial No. 588,234
In Sweden May 12, 1944
9 Claims. (Cl. 175—339)

1. In an electro-magnetic device, a fixed structure including permanent magnet means provided with two spaced air gaps, an armature extending between both of said air gaps, and a plate spring for movably supporting said armature, said spring being secured to said armature in the vicinity of one of said air gaps and to said fixed structure in the vicinity of the other air gap.



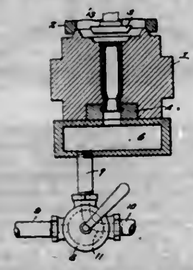
2,471,366
BLANK FOR SHOE UPPERS
Erminio Cassano, Framingham, Mass.
Application September 23, 1946, Serial No. 698,790
3 Claims. (Cl. 36—48)

1. A shoe upper blank comprising an elongated sheet having a longitudinal edge disposed on a long convex curve for the major portion of the length thereof and terminating at the forward end thereof in a sharp curve, a rearwardly extending member on the forward end of said sheet having an outer convex curve complementary to said first mentioned sharp curve, a pair of longitudinally spaced inwardly extending lacing portions on said sheet, one of said lacing portions being disposed immediately adjacent said forward end, the edge of said sheet between said lacing portions having an intermediate convex curva-



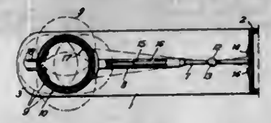
ture and merging concave outer curvatures, and said sheet having a concave cut out at the inner portion of the vamp adjacent the forward lacing portion and extending across the median line of the vamp portion a substantial distance at each side thereof whereby the inner edge of the vamp will be disposed a substantial distance forwardly of said quarters in the complete shoe.

2,471,367
LAWN MOWER
James D. Cavaness, Arlington, Tex.
Application October 1, 1945, Serial No. 619,460
2 Claims. (Cl. 56—25.4)



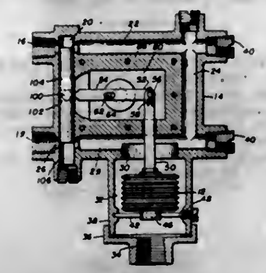
1. In a power lawn mower having a source of power, a shaft rotatable by said source of power, and a rotatable cutting member; coupling means for yieldably and rockably mounting said cutting member on said shaft for rotation therewith at substantially right angles to the axis thereof, said coupling means comprising fastening means forming a shoulder on the end of said shaft, a first element slidably carried by said shaft, a second element fixed to said cutting member and loosely engaging said shaft between said first element and said fastening means, one of said elements being formed with a flat surface and the adjacent surface of the other of said elements being convex, means fixed on said second element engaging said first element for rotation therewith, and a clutch member rotatable with said shaft and adapted to frictionally engage said first element.

2,471,368
GUNFIRE CONTROL TRAINING APPARATUS
Gunnar Ekström, Stockholm, and Paul Wilhelm Dietmann, Jonkoping, Sweden, assignors to Arenco Aktiebolag, Stockholm, Sweden, a Swedish joint-stock company
Application November 27, 1944, Serial No. 565,296
In Sweden September 7, 1942
15 Claims. (Cl. 35—25)



4. An apparatus for training in laying a gun, comprising in combination, a target pointer mounted to swing about an axis, a cam-operated driving device operatively connected with said target pointer for imparting a predetermined movement thereto, a tracking pointer mounted to swing about said axis in the proximity of said target pointer, a setting mechanism in driving connection with said tracking pointer, and recording device including a stylus operatively connected through a differential gear with said driving device and said setting mechanism so as to record the movement of said tracking pointer relatively to that of said target pointer.

2,471,369
METHOD OF MAKING PARISONS
Charles B. Garwood, Linthicum Heights, Md., assignor to Carr-Lowrey Glass Co., Baltimore, Md.
Application June 26, 1944, Serial No. 542,171
4 Claims. (Cl. 49—80)

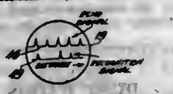


1. The method of producing a parison which includes the steps of subjecting a partially formed blank to a blow-back to expand the blank against the inner surfaces of the cavity in a parison shaping structure and to the shape of the cavity in said structure, and immediately thereafter subjecting the parison to suction to collapse it and disengage it from surfaces of said structure before removing said structure from the parison.

2,471,370
MENDING OF STOCKINGS IN SEWING MACHINES
Fritz Gegauf, Steckborn, Switzerland, assignor to Fritz Gegauf's Sohne Aktiengesellschaft, Steckborn, Switzerland
Application December 7, 1944, Serial No. 566,998
In Switzerland July 31, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 31, 1963
4 Claims. (Cl. 112—121)

1. Apparatus for mending stockings on sewing machines provided with a free arm in which the looper is located and over which arm the stocking to be mended is drawn comprising, a carrier arm supported by said free arm, a closed holding ring for holding the stocking, said ring being carried by said carrier arm support means on the upper side of the free sewing machine arm for limiting the lateral movement of the holding ring, and an internal spreading clamping ring for clamping the stocking in the closed holding ring, said carrier arm comprising two telescopic parts which are adjustable with respect to each other in a longitudinal direction.

2,471,371
AUTOMATIC WATER TEMPERATURE CONTROL
James Randolph Hassell, South Dos Palos, Calif.
Application April 9, 1947, Serial No. 740,285
2 Claims. (Cl. 236—12)

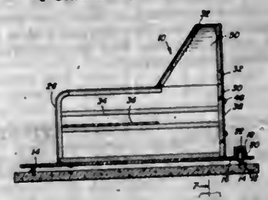


1. An automatic water mixing valve including a casing having a base, spaced hot and cold water inlets, a valve plunger slidably mounted in said casing with the ends thereof adapted to simultaneously and oppositely vary the opening of said inlets, a common outlet communicating with said inlets, and a thermostat in said outlet operatively connected with said valve plunger by a lever pivotally connected to said thermostat and to said plunger, said lever having an aperture intermediate its ends, and a shaft extending through a watertight connection to the exterior of said casing, said shaft having a pivot pin eccentrically disposed on its inner end and receivable in said aperture, whereby said lever may be shifted to vary the position of the plunger.

2,471,372
PLIERS WITH DETACHABLE END JAWS
Ivan Jankovich, Kenosha, Wis.
Application September 26, 1945, Serial No. 618,714
1 Claim. (Cl. 81—52)

Pliers comprising members pivoted to each other and having rearwardly extending handles and forwardly extending arms, the arms being solid and having forward portions spaced from each other and formed with longitudinally extending threaded sockets leading from their front ends, jaws at front ends of said arms cooperating with each other to form an annular nut-receiving socket having a bolt receiving opening at the center, each jaw having a solid arcuate body and a forwardly extending flange along its outer marginal edges, said jaws being disposed transversely of the arms with portions projecting from opposite sides thereof and each having its body formed midway its ends with an opening registering with the threaded socket of the arm against which the jaw fits, and screws passed through the openings of the jaws and screwed into the threaded sockets to firmly hold the jaws against front ends of the arms in detachable engagement therewith.

2,471,373
PULSE ECHO RECOGNITION SYSTEM
Archibald A. Joyner, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 30, 1942, Serial No. 460,291
4 Claims. (Cl. 343—13)

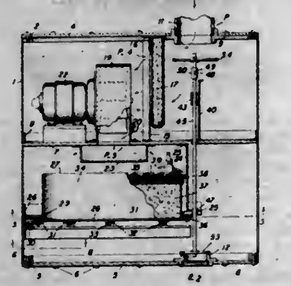


4. A pulse echo and pulse recognition system including means for radiating pulses of energy, means for receiving said radiated pulses after reflection from a craft remote from said receiving means and subject to challenge, cathode ray tube means connected to said receiving means for indicating along a time axis said received reflected pulses as a function of the distance of the reflecting craft, means on said remote craft responsive to said radiated pulses for delaying and retransmitting pulses from said craft in response to a challenge, means for receiving said retransmitted pulses, means for applying said received retransmitted pulses to said cathode ray tube for indicating them along a time axis to show which signals are responsive to said challenge by comparing the reflected signal indications and the recognition signal indications, and means for shifting the positions of the first and second pulse indications with respect to each other in the direction of the time axis to correct for displacement introduced by said delay in retransmission.

2,471,374
DRILL JACK
Samuel H. McAfee, Jr., Oakdale, Pa.
Application October 27, 1945, Serial No. 625,000
2 Claims. (Cl. 77—13)

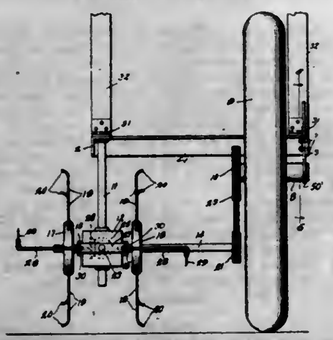
1. A drill jack comprising an elongated rack bar having a longitudinal series of spaced transverse semi-cylindrical fulcrum members, an elongated attaching bar fixed to and extending forwardly from said rack bar and having an inverted hook on its forward end for engagement over a flange of a piece of work, said attaching bar being offset laterally with respect to the rack bar, and a vertical jack lever having a transverse pintle on its lower end selectively engageable in any desired one of the fulcrum members at the front of the latter.

2,471,375
BARBECUE PIT
Coy E. Moseley, Arlington, Tex.
Application January 28, 1948, Serial No. 4,878
5 Claims. (Cl. 126—25)



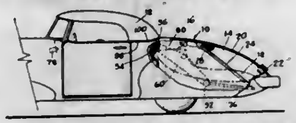
1. A sectional barbecue pit comprising in combination, a furnace jacket, longitudinal grill supporting means secured at various levels to the inner surfaces thereof, grills removably positioned on said supporting means, a chimney, means for removably securing said chimney to said jacket furnace, a flat plate, means for removably securing said flat plate to the back portions of said furnace jacket, a base plate, means for removably securing said furnace jacket to said base plate, and means secured to and beneath said base plate whereby the pit may be rotated to any desired position, said furnace jacket, said chimney, and said flat plate including a lining of fire clay and lugs secured to the inner surfaces of said furnace jacket, said chimney, and said flat plate for retaining said lining of fire clay.

2,471,376
APPARATUS FOR DEHUMIDIFICATION
Brice G. Peters, Baltimore, Md.
Application July 22, 1946, Serial No. 685,395
11 Claims. (Cl. 183—4.5)



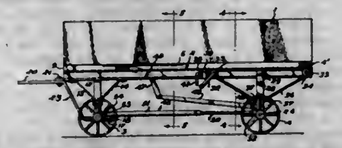
1. A dehumidification apparatus comprising a casing having top, side, and bottom walls, a

partition dividing the interior thereof into intake and discharge chambers, a second partition in the intake chamber having an opening therein, dividing the same into an inlet compartment and a blower compartment, a blower in the blower compartment adapted to deliver air drawn from the inlet compartment through said opening to the discharge chamber, a body of desiccant material in the discharge chamber through which the air is forced by the blower, two intake openings in the intake chamber, two openings in the discharge chamber, a pair of valve rods ex-



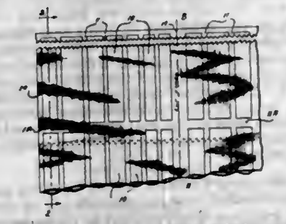
tending through the first mentioned partition aligned with said openings, a valve on each end of each rod, means connected to the rods to reciprocate the rods simultaneously in opposite directions, thereby to close the one intake opening and to open one discharge opening of one pair and to open the one intake opening and to close the discharge opening of the other pair, and means for actuating the last mentioned means to control the flow through said pairs of openings for air drying and for reactivation of the adsorbent, respectively.

2,471,377
COTTON CHOPPER AND CULTIVATOR
John V. Schug, Paragould, Ark.
Application February 13, 1946, Serial No. 647,292
4 Claims. (Cl. 97—12)



1. A cotton chopper and cultivator including a wheel supported main frame, spaced depending supporting arms attached to said main frame, a forwardly extending U-shaped angle frame pivotally attached to said depending arms, a vertically adjustable bracket on one leg of said angle frame, a stub shaft supported by said bracket, a ground engaging driving wheel on said stub shaft, a sprocket on said shaft being rotatable with said wheel, a gear box supported by the other leg of said angle frame, inter-connected right angularly extending shafts in said gear box, rotatable dirt loosening fingers on one of said shafts, a rotary cotton chopper on the other of said shafts, and a driving connection between said first mentioned shaft in the gear box and the sprocket upon said stub shaft.

2,471,378
SOLID CONVERTIBLE TOP
George E. Shilala, Los Angeles, Calif.
Application July 17, 1945, Serial No. 605,531
1 Claim. (Cl. 296—107)

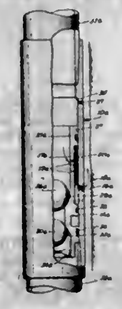


In a vehicle body, the combination with a compartment in the rear of said body, a cover hingedly connected to the rear of said body and mounted for opening and closing movement with respect to said compartment, and a top hingedly connected to said body and mounted for pivotal movement into and out of said compartment, of a means for causing opening and closing movement of said cover, said means comprising a first link having one end pivotally connected to said cover, a second link having one end pivotally connected to the other end of said first link, a gear secured to the other end of said second link, a reversible motor mounted in said vehicle body, means including a chain and sprocket operatively connecting said motor to said gear for actuating said first and second links to cause opening and closing movement of said cover, and means operatively connecting said motor to said top for causing pivotal movement of the latter, said last-named means comprising a plurality of spaced ears secured to said top, a horizontally-disposed rotatable shaft supported in said vehicle body and secured to said ears, a worm gear journaled on an end of said shaft, a rotatable inclined shaft supported in said vehicle body, a worm mounted on the upper end of said inclined shaft and arranged in meshing engagement with the worm gear on said horizontally disposed shaft, and a worm gear on the lower end of said inclined shaft operatively connected to said motor.

2,471,379
DUMP WAGON
Louie W. Smith, Fort Dodge, Iowa
Application August 31, 1946, Serial No. 694,210
6 Claims. (Cl. 296—17)

4. In a dump wagon including front and rear wheels, a frame supported at the front end thereof by the front wheels for swinging about the axis of said front wheels into downwardly and rearwardly inclined position to lower the rear end of the frame, means to mount the rear wheels on said frame for forward swinging thereon to permit said frame to swing into said position under the influence of gravity, a body hinged on said frame for swinging thereon into a downwardly and rearwardly inclined position, and means operative by the means first mentioned to swing said body, the means first mentioned comprising a pair of link bars pivoted on said frame at opposite sides thereof for swinging forwardly beneath the frame and having the rear wheels mounted thereon, and cable and pulley means for swinging said bars, the second mentioned means comprising a pair of body engaging rockers on said frame, and operating connections between said link bars and rockers.

2,471,380
METHOD OF WEAVING TEXTILE CONTAINERS
Alfred Wallwork, Charlotte, N. C., assignor to Carlyle Sales Corporation, Charlotte, N. C., a corporation of North Carolina, trustee
Application February 13, 1948, Serial No. 8,093
1 Claim. (Cl. 28—72)

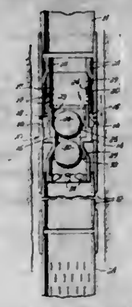


A method of making textile fabric containers comprising weaving fabric areas having varying widths of double thickness, joining the areas by a portion of single thickness along each longitudinal and transverse edge of the areas, forming an indicating line by omitting warp threads in the desired longitudinal portions of single thickness, severing the fabric longitudinally along the indicating line, and cutting a pinked edge in the fabric transversely along a line parallel to the transverse portion of single thickness to provide an open upper end and a lower end having a portion of single thickness.

2,471,381
SAFETY DEVICE FOR BLASTING CAPS
Joseph Yurick and Francis J. Yurick, Shamokin, Pa.
Application October 4, 1946, Serial No. 701,274
4 Claims. (Cl. 102—28)

1. A safety device for blasting caps adapted to be used with an explosive charge comprising a housing having an end closure with apertures therein, the said housing being provided with a recess adjacent said apertured end for receiving a priming charge, and the apertures being in communication with said recess, a seat extending longitudinally of the housing and merging with said recess, a detonating cap disposed within said seat, a channel communicating with and extending axially of said seat, electric conductors extending through said channel and being attached to said detonating cap for igniting said priming charge whereby fire from the primer escapes from said housing through the apertures for detonating the explosive charge.

2,471,382
WELL CEMENTING DEVICE
William S. Althouse, Jr., Alhambra, and Eugene Graham, Jr., Los Angeles, Calif., assignors to Baker Oil Tools, Inc., Vernon, Calif., a corporation of California
Continuation of application Serial No. 434,912, March 16, 1942. This application April 21, 1945, Serial No. 589,508
4 Claims. (Cl. 166—1)



1. Apparatus of the character described, including a tubular member having ports and adapted to form part of a casing string, a shiftable tubular body having ports positioned within said member and provided with a medial portion of lesser external diameter than the diameter of the inner wall of said tubular member to form an annular chamber therewith, said medial portion containing said body ports, valve means within said chamber for preventing return passage of fluids from said chamber through said body ports to the interior of said body, means initially retaining said body in such position within said member as to prevent passage of fluids between said chamber and the ports of said tubular member, and means for shifting said body within said member to a position permitting passage of fluids between said chamber and tubular member ports.

2,471,383
WELL CEMENTING DEVICE
William S. Althouse, Jr., Alhambra, and Eugene Graham, Jr., Los Angeles, Calif., assignors to Baker Oil Tools, Inc., Vernon, Calif., a corporation of California
Original application March 16, 1942, Serial No. 434,912. Divided and this application April 21, 1945, Serial No. 589,509
14 Claims. (Cl. 166—1)

1. Apparatus of the character described, including a ported tubular member adapted to form part of a casing string, a tubular body having ports within said member and provided with portions contacting the inner wall of said member and a medial portion between said wall contacting portions of lesser external diameter than the diameter of the inner wall of said tubular member to form an annular chamber communi-

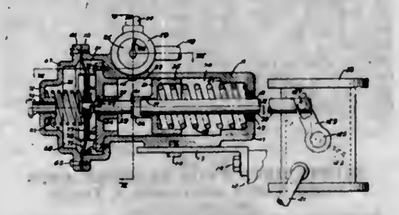
cating with said tubular member ports, said medial portion having said body ports therein, valve means within said chamber for preventing return flow of fluids from said chamber through said body ports to the body interior, means having an

initial position preventing passage of fluids through said body ports, said preventing means being slidable along an inner wall of said body, and means for sliding said preventing means within said body and along its inner wall to a position opening said body ports.

2,471,384
FROTH FLOTATION OF SULFIDE ORES
Robert B. Booth, Springdale, and Roy A. Pickens, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 16, 1946, Serial No. 670,313
3 Claims. (Cl. 209—167)

1. In the beneficiation by froth flotation of a metallic sulfide mineral by means of a promoter selected from the group consisting of the xanthate, dithiophosphoric acids and dithiophosphate types, the improvement which comprises carrying out the separation in the presence of 0.01–0.50 lbs. per ton of a surface-modifying agent which comprises a salt of a lignin sulfonate.

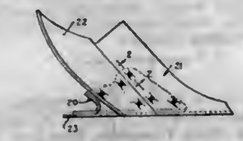
2,471,385
ZINC BASE ALLOYS
Edward S. Bunn, Rome, N. Y., assignor to Revere Copper and Brass Incorporated, Rome, N. Y., a corporation of Maryland
No Drawing. Application June 10, 1943, Serial No. 490,326
4 Claims. (Cl. 75—178)



1. Workable alloys containing 0.4 to 5% copper, 0.03 to 0.25% silver, at least one metal of the group consisting of manganese, iron, nickel and cobalt but not less than 0.06% or more than 0.75% of metal of said group, the sum of the silver and metal of said group not exceeding one-third the amount of the copper, the balance being zinc.

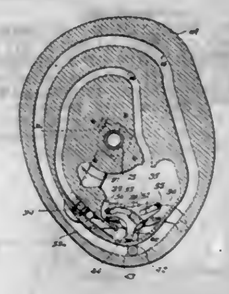
2,471,386
POCKET AND METHOD OF MAKING
Robert E. Carter, Mount Holly Springs, Pa., assignor to C. H. Masland & Sons, Carlisle, Pa., a corporation of Pennsylvania
Application November 1, 1946, Serial No. 707,168
16 Claims. (Cl. 2—247)

14. In a pocket, a one-piece blank comprising a pocket front, having cut curved bottom corners, side flaps folded over upon the front, bottom tabs on the side flaps each having, when folded over, an edge extending diagonally of the pocket and an edge cooperating with the curve of the corner, a bottom extension from the pocket front folded over on the front on the same side as the side flaps, lateral flaps on the bottom extension each having, when folded over, an edge extending diagonally of the pocket and cooperating with the diagonal edge on the bottom tab and a curved edge cooperating with a curved bottom corner, in combination with stitching uniting the diagonal edges of the corresponding bottom tabs and lateral tabs, stitching uniting the pocket front to the corresponding bottom tabs and lateral tabs at the bottom corners and straps extending above and secured to the pocket at the lateral edges.



2,471,387
ENGINE PROTECTIVE DEVICE
James H. Cooper, Memphis, Tenn., assignor to Heiskell Weatherford, Jr., Memphis, Tenn.
Application September 14, 1946, Serial No. 697,137
20 Claims. (Cl. 123—198)

1. In combination with an internal combustion engine having a lubricating system for supplying oil under pressure during operation, and an air intake pipe for drawing a flow of air into said engine for combustion; a protective device for said engine which includes a valve in said intake pipe adapted in closed position to cut off said air flow and thereby effect interruption of engine operation; a cylindrical chamber in fluid communication with said lubricating system to receive oil under pressure therefrom, a reciprocable piston in said chamber coupled to said valve, whereby said valve is moved toward open and closed positions respectively responsive to movement of said piston, and spring means in said chamber urging said piston to move said valve to closed position; means opposing closing movement of said piston when said engine is inoperative, comprising a diaphragm, second spring means associated with one side thereof, and a floating rod associated with the other side thereof and projecting into said chamber, said second spring urging said diaphragm and said floating rod toward said piston, to bring said floating rod into opposing contact with said piston, to hold said valve partially open, the spring side of said diaphragm being enclosed in a chamber which is in air flow communication with said air intake pipe, whereby air is withdrawn from said diaphragm chamber into said air intake pipe during engine operation, to reduce the pressure in said chamber below atmospheric pressure, the rod side of said diaphragm being open to atmospheric pressure whereby a differential of pressures on the opposite sides of said diaphragm is created, said diaphragm being moved by said pressure differential in opposition to its related said spring away from piston opposing position; said piston being moved against its related said spring to open said valve responsive to introduction of oil under pressure into said piston chamber, said piston spring moving said piston to effect closure of said valve upon loss of said oil pressure in said piston chamber, whereby interruption of engine operation is effected and said air flow is cut off; cut-off of said air flow equalizing the pressures on the opposite sides of said diaphragm and releasing said diaphragm spring to return said diaphragm and floating rod to piston opposing position, moving said piston to partially open said valve for subsequent engine operation.



2,471,388
PLOWSHARE
Warren H. Farr, Grosse Pointe Farms, Mich., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 5, 1946, Serial No. 645,542
3 Claims. (Cl. 97—113)

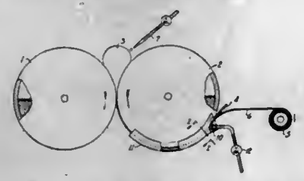
1. In a plow in combination, a supporting member having therein a hole for a bolt, a plow member having a hardened front wear face and an arcuate undercut slot on the rear side, the slot being deepest at its mid-length and sloping up to zero depth at each end and a bevelled head bolt fitting in the slot and passing through the hole for securing the plow member to the supporting member.

2,471,389
WRAPPER CARRIER OPERATING MECHANISM
John F. Halstead, Brooklyn, N. Y., assignor to International Cigar Machinery Company, a corporation of New Jersey
Application March 21, 1945, Serial No. 583,875
4 Claims. (Cl. 131—105)

1. A wrapper transfer for cigar machines comprising in combination, a vertical driven shaft, an elongated member fastened on said shaft and extending radially therefrom, an operating arm having one of its ends pivotally mounted on the outer end of said member, a second shaft pivotally mounted in the other end of said operating arm, a wrapper carrier fastened to said second shaft, means for revolving said driven shaft in one direction to move said carrier in a closed path, a stationary cam plate provided with a continuous cam track, and a cam follower connected to the outer end of said operating arm and engaging

said continuous cam track to guide said second shaft and wrapper carrier in a predetermined closed path from a wrapper-receiving position to a wrapper-applying mechanism, said operating arm extending rearwardly from its pivotal connection to said member in a direction away from the direction in which said member is moved by said driven shaft, and said cam track having a predetermined configuration whereby said cam follower will be pulled along said continuous cam track.

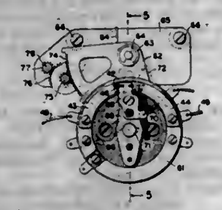
2,471,390
FLUSHING COMPOSITION FOR ENGINE LUBRICATING SYSTEMS
John D. Morgan, South Orange, and Russell E. Lowe, East Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y., a corporation of Pennsylvania
No Drawing. Application July 8, 1946, Serial No. 682,157
1 Claim. (Cl. 252—171)



A solvent composition for flushing engine lubrication systems consisting essentially of about 50 per cent by volume of ortho dichloro benzene, about 19 per cent of cresylic acid, about 30 per cent by volume of naphtha having a boiling range of about 163° to 177° F., about 1 per cent by volume of sulphurized tributyl phosphite containing about 50 per cent sulfur, and about 0.5 per cent by volume of magnesium soap of wax acids.

2,471,391
PREPARATION OF DIOLS AND ESTER DERIVATIVES THEREOF
Curtis W. Smith, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 12, 1946, Serial No. 709,086
4 Claims. (Cl. 260—491)

4. The process for the preparation of a diester of a 1,3-alkanediol with a saturated, lower aliphatic monocarboxylic acid, comprising subject-

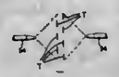


ing a triester of a 1,1,3-alkanetriol with a saturated, lower aliphatic monocarboxylic acid at a temperature between about 50° C. and about 350° C. in the presence of a base metal hydrogenation catalyst to the action of hydrogen gas at a pressure between about 500 pounds per square inch and about 5000 pounds per square inch to produce principally the ester of the monocarboxylic acid with the 1,3-alkanediol containing the same number and arrangement of carbon atoms as said 1,1,3-alkanetriol.

2,471,392
REFINING RECLAIMED RUBBER WITH COOLING OF THE RUBBER TO FACILITATE SEPARATION OF TAILINGS
Charles Herbert Campbell, Kent, Ohio
Application September 25, 1946, Serial No. 699,269
2 Claims. (Cl. 18—2)

2. In the process of refining reclaimed rubber in which the reclaimed rubber fed from a bank in the bite of the rolls is worked between and sheeted out by the rolls of a two-roll refining mill which are cooled internally by cooling water circulated therethrough, one of which rolls is rotated at a higher speed than the other whereby the bank of rubber is rolled toward this roll, the improvement which comprises cooling the bank of rubber as it is being milled by blowing between the bank of the rubber and the roll that is rotating fastest, air which has a temperature at least as low as 40° F. and is of lower relative humidity than the surrounding atmosphere.

2,471,393
ELECTRICAL CONTROL INSTRUMENT
John A. Caldwell, Philadelphia County, William H. Wannamaker, Jr., Flourtown, and Gregor W. Kuntny, Mount Airy, Pa., assignors, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application August 31, 1946, Serial No. 694,400
12 Claims. (Cl. 201—48)

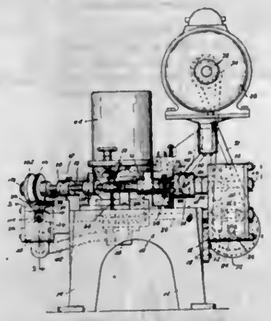


1. In a control instrument, a frame, a supporting plate pivoted to said frame, a resistance carried by said plate, a shaft pivoted in said plate, a contact carried by said shaft and engaging said resistance, a part movable in response to variations in a measurable condition, connecting means between said part and said shaft whereby said shaft is rotated as said part moves, and means to move said supporting plate and the elements carried thereby relative to said part.

2,471,394
SALICYLATE AND SUCCINATE THERAPEUTIC PREPARATIONS
Richard Gubner, Brooklyn, N. Y.
No Drawing. Application September 30, 1946, Serial No. 700,349
15 Claims. (Cl. 167—65)

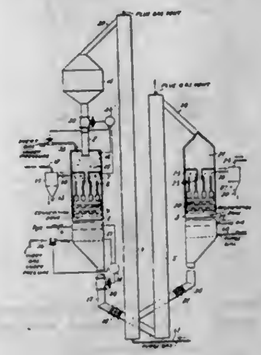
1. A pharmaceutical composition effective for relief of rheumatic fever, rheumatism and rheumatic arthritis by containing a salicylate drug effective for relief of said ailments, said preparation being effective for such relief at a protracted dosage regimen including grams of salicylate daily and for days at a time and under which its salicylate content would provoke toxic manifestations when administered alone, and at such dosage regimen effective without toxic manifestations because of its therapeutic ingredient contents consisting essentially of its salicylate content and a non-toxic succinic acid substance having the formula $ROOC \cdot CH_2 \cdot CH_2 \cdot COOR$ wherein R is a cation which is a member of the class consisting of hydrogen, an alkali metal, the ammonium radical, and an alkaline earth metal, the latter then being represented by both elements R jointly, and said succinic acid substance being in such proportion to the salicylate content to permit its administration without the toxic manifestations accountable to the salicylate at the protracted dosage regimen, and in the range for the succinic substance, calculated as calcium succinate, of from about one-third to about ten times the quantity of salicylate, calculated as acetyl salicylic acid, said preparation being free of effective purgative and laxative components when the salicylate is an alkali metal salt of salicylic acid and the succinic acid substance is an alkali metal succinate, and otherwise free of ingredients that would cause the preparation to provoke toxic manifestations when taken at the protracted dosage regimen.

2,471,395
METHOD OF MAKING MEASURING TAPES
Adolf W. Keuffel, Essex Fells, N. J., assignor to Keuffel & Esser Company, Hoboken, N. J., a corporation of New Jersey
Original application August 7, 1937, Serial No. 157,944. Divided and this application November 11, 1942, Serial No. 465,286
5 Claims. (Cl. 117—12)



3. The method of making coated metal measuring tapes which comprises withdrawing from adjacent rolls a plurality of metal strips whereof at least one surface has been treated to be corrosion-resistant and receptive to a pigmented coating composition comprising a synthetic resin which will set while retaining its elasticity, guiding the strips in staggered relation whereby alternate strips are disposed respectively in two parallel planes with the strips in one plane opposite the spaces between those in the other plane, spraying from each side of the strips a pigmented coating composition comprising a synthetic resin which will set while retaining its elasticity whereby the strips are coated on both sides and both edges respectively with a complete flexible sheath, and passing the coated metal strips through a heated zone to remove the solvents and permanently set the coating, and printing graduations and indicia of a contrasting color on the surface of said coating composition.

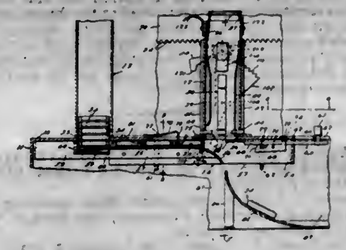
2,471,396
AQUEOUS EMULSIONS OF MIXED PHTHALIC GLYCERIDE AND MELAMINE-FORMALDEHYDE RESINS
Donald W. Light, Longmeadow, Mass., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application January 1, 1943, Serial No. 471,026
6 Claims. (Cl. 260—7.5)



1. A method of preparing a stable aqueous synthetic resin emulsion of the oil-in-water type which comprises preparing a liquid mixture comprising 5–60% of phthalic glyceride resin having an acid number of at least 25 and 95–40% of the reaction product of methylol melamine with a primary monohydric alcohol in the presence of an acidic condensing agent, and agitating said mixture with an aqueous solution containing at least 2% of a proteinaceous emulsifying agent until an emulsion of the oil-in-water type is produced.

2,471,397
SOLE-CEMENTING MACHINE
Angelo Perri, Groveland, Mass., assignor to Allied Shoe Machinery Corp., Haverhill, Mass., a corporation of Massachusetts
Application October 16, 1946, Serial No. 703,534
8 Claims. (Cl. 91—51)

2. In a cementing mechanism, means for feeding a curved edge work element so that the margin of the element is progressively engaged by the feeding means all around the element, said means comprising a work engaging wheel rotatable on a fixed generally horizontal axis, means below said wheel holding a supply of cement in which a peripheral portion of the wheel is submerged so that cement is carried upward on the periphery of the wheel and applied to the engaged portion of the work element, a second work engaging wheel rotatable on a generally horizontal axis which is movable in directions generally toward and from said fixed axis, said movable axis being disposed in a vertical plane which is at an acute angle to the vertical plane of said fixed axis, whereby said second wheel strongly urges the work element laterally of the direction of primary feed of the element between the wheels, power means driving said wheels in opposite directions, and a pair of spaced guide elements laterally of the wheels in positions to be engaged by the curved edge of the work element for guiding the course of the feeding work element, said second wheel being yieldable away from the first wheel to accommodate variations in thickness of the work and to facilitate removal of a work element.



2,471,398
CONTINUOUS CATALYTIC SYSTEM
Thomas P. Simpson and John W. Payne, Woodbury, N. J., and John A. Crowley, Jr., New York, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 15, 1946, Serial No. 676,984
13 Claims. (Cl. 196—52)

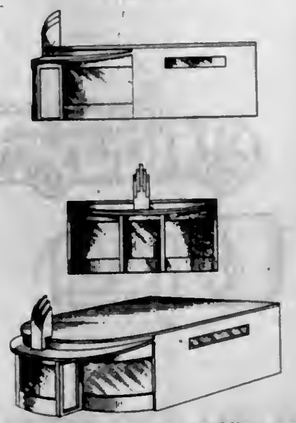
1. In a cyclic process for the conversion of hydrocarbons in contact with a particle-form adsorbent contact mass material wherein the adsorbent is passed downwardly through a reaction zone in which it is contacted with hydrocarbons under reaction conditions of temperature and pressure and after removal from the reaction zone the adsorbent is regenerated while passing through a regeneration zone wherein contaminant deposited thereon in said reaction zone is burned and then returned to the reaction zone, that improvement which permits transfer of adsorbent from the regeneration zone to the reaction zone while preventing substantial escape of hydrocarbon gas through the adsorbent inlet means without resorting to a vapor sealing valve which comprises the following steps, withdrawing regenerated adsorbent from said regeneration zone, thoroughly contacting said regenerated adsorbent with steam, introducing the adsorbent into the reaction zone through a compact elongated stream of said adsorbent particles extending upwardly above said reaction zone to an elevation sufficient to provide a head of adsorbent particles great enough to force it into said reaction zone and maintaining a blanket of steam in said elongated stream adjacent its lower end at a pressure above the hydrocarbon pressure in the upper section of said reaction zone.

2,471,289
BUTTER DISPENSER
Ralph E. Dodge, Takoma Park, Md.
Application December 19, 1947, Serial No. 792,763
11 Claims. (Cl. 31—6)

1. A dispensing device comprising a platform, a food magazine and a food receptacle magazine mounted on said platform in proximity to each other, said food magazine being adapted to contain a body of food movable downwardly therein and said receptacle magazine being adapted to contain a stack of food-receiving receptacles, and a manually-operated slide supported on said platform below both of said magazines for reciprocation in a direction extending from one of said magazines to the other, said slide comprising a pair of substantially parallel side rails, a transverse plate between the rearward portions of said side rails having a downwardly-curved front end and providing thereabove a guideway for food receptacles, a hook secured to the rear end of said plate for moving receptacles from the bottom of a stack of such receptacles in said receptacle magazine onto said guideway, a food cutting wire extending transversely between said

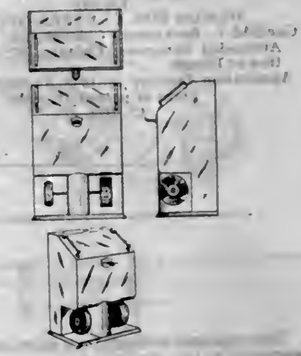
side rails ahead of said plate, and a hand knob operatively connected to said side rails and accessible at the top of said platform.

DESIGNS



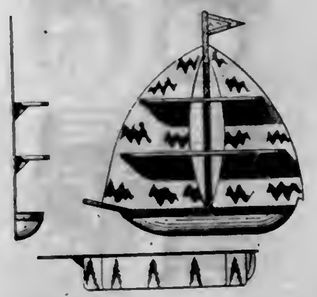
MAY 24, 1949

153,840
DESIGN FOR A PERFUME ATOMIZER
Harry Anbender and William J. Weinstein, Detroit, Mich.
Application March 22, 1947, Serial No. 737,820
Term of patent 7 years
(Cl. D83—1)



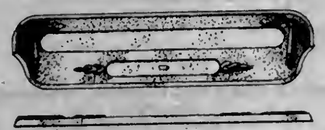
The ornamental design for a perfume atomizer, substantially as shown.

153,841
DESIGN FOR A BUILDING
John V. Avila, San Jose, Calif.
Application December 2, 1946, Serial No. 135,217
Term of patent 14 years
(Cl. D13—1)



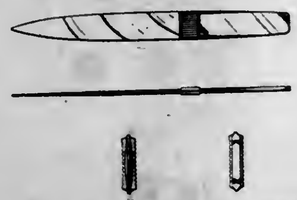
The ornamental design for a building, as shown and described.

153,842
DESIGN FOR AN AUTOMATIC SHOESHINE MACHINE
Carl Bader, St. Louis, Mo.
Application January 22, 1949, Serial No. 407
Term of patent 14 years
(Cl. D9—2)



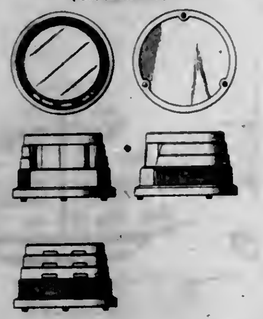
The ornamental design for an automatic shoeshine machine, substantially as shown.

153,843
DESIGN FOR A SAILBOAT SHELF FIGURE
Eugene R. Bartolomeo, Waterbury, Conn.
Application May 10, 1947, Serial No. 138,978
Term of patent 7 years
(Cl. D33—3)



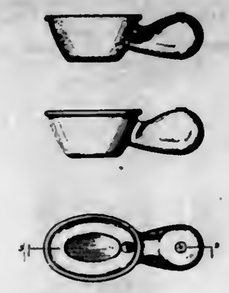
The ornamental design for a sailboat shelf figure, substantially as shown.

153,844
DESIGN FOR A BURIAL VAULT NAME PLATE
Leo Stephen Bassiay, Chicago, Ill.
Application April 9, 1948, Serial No. 145,625
Term of patent 7 years
(Cl. D19—2)



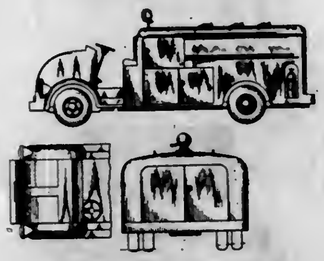
The ornamental design for a burial vault name plate, as shown.

153,845
DESIGN FOR A LETTER OPENER
Garfield L. Beckstrom, Chicago, Ill., assignor to Autopoint Company, Chicago, Ill., a corporation of Illinois
Application January 10, 1948, Serial No. 143,651
Term of patent 14 years
(Cl. D74—1)



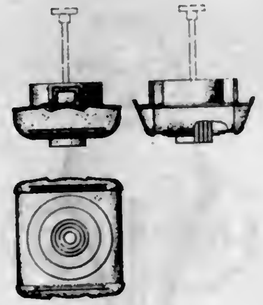
The ornamental design for a letter opener, substantially as shown.

153,846
DESIGN FOR A TEMPERATURE AND HUMIDITY INDICATOR HOUSING
Garfield L. Beckstrom, Chicago, Ill., assignor to Autopoint Company, Chicago, Ill., a corporation of Illinois
Application January 26, 1948, Serial No. 144,042
Term of patent 14 years
(Cl. D52—7)



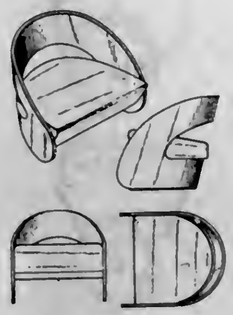
The ornamental design for a temperature and humidity indicator housing, substantially as shown.

153,847
DESIGN FOR AN EYECUP
Saturnino Tofé Bonilla, New York, N. Y.
Application February 20, 1948, Serial No. 144,629
Term of patent 14 years
(Cl. D83—1)



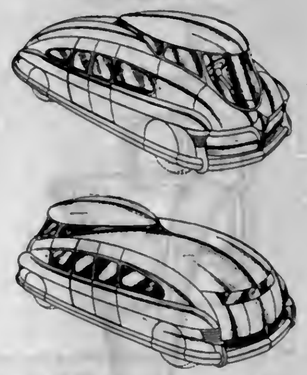
The ornamental design for an eye cup, as shown.

153,848
DESIGN FOR A TANK TRUCK
Theodore G. Branham, North Kansas City, Mo., assignor to Standard Steel Works, North Kansas City, Mo., a corporation of Missouri
Application April 24, 1948, Serial No. 128,911
Term of patent 7 years
(Cl. D14—3)



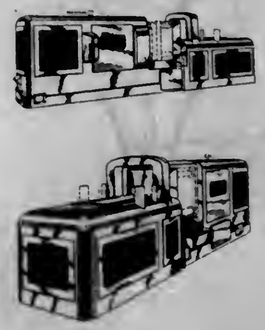
The ornamental design for a tank truck, as shown.

153,849
DESIGN FOR AN INCANDESCENT LIGHTING FIXTURE
Carl C. Braun, Riverside, Conn.
Application March 29, 1948, Serial No. 145,412
Term of patent 7 years
(Cl. D48—23)



The ornamental design for an incandescent lighting fixture, as shown and described.

153,850
DESIGN FOR A CHAIR
William N. Brazauski, Chicago, Ill.
Application August 30, 1947, Serial No. 141,129
Term of patent 14 years
(Cl. D15—1)



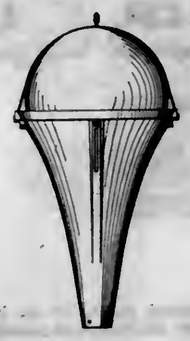
The ornamental design for a chair, substantially as shown.

153,851
DESIGN FOR A TAXICAB
Lynn Brodton, New York, N. Y.
Application September 4, 1947, Serial No. 141,207
Term of patent 14 years
(Cl. D14—3)

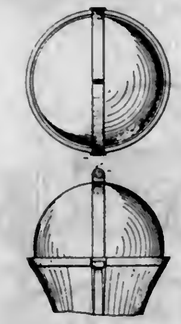
The ornamental design for a taxicab, substantially as shown and described.

153,852
DESIGN FOR AN INJECTION MOLDING MACHINE
Artie C. Carlson, Detroit, Mich., assignor to Wickes Brothers, Saginaw, Mich., a corporation of Michigan
Application June 7, 1947, Serial No. 139,513
Term of patent 3½ years
(Cl. D55—1)

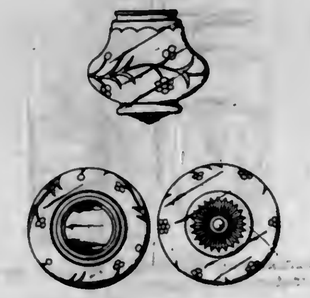
The ornamental design for an injection molding machine, as shown and described.



153,853
DESIGN FOR A RECEPTACLE FOR FIRE EXTINGUISHING GRENADES
Arthur Cisek, Denver, Colo., assignor to Red Comet Incorporated, Littleton, Colo., a corporation of Colorado
Application November 12, 1947, Serial No. 142,491
Term of patent 14 years
(Cl. D16—2)



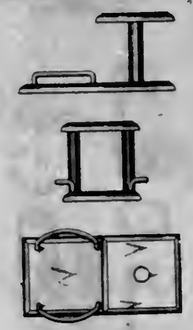
The ornamental design for a receptacle for fire extinguishing grenades, as shown and described.



153,854
DESIGN FOR A COMBINED FIRE EXTINGUISHING GRENADE AND HOLDER
Arthur Cisek, Denver, Colo., assignor to Red Comet Incorporated, Littleton, Colo., a corporation of Colorado
Application November 12, 1947, Serial No. 142,492
Term of patent 14 years
(Cl. D16—2)

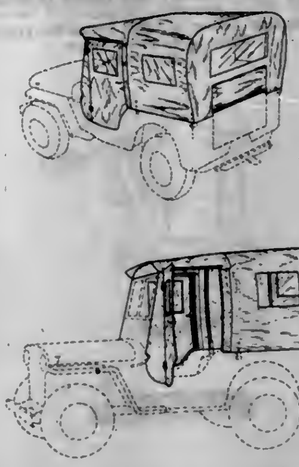
The ornamental design for a combined fire extinguishing grenade and holder, as shown and described.

153,855
DESIGN FOR A LIGHTING GLOBE
Hugh J. Claspy, Monaca, Pa., assignor to The Phoenix Glass Company, Monaca, Pa., a corporation of West Virginia
Application October 18, 1948, Serial No. 149,172
Term of patent 7 years
(Cl. D48—15)



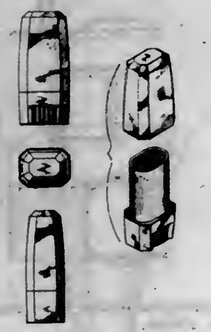
The ornamental design for a lighting globe, as shown.

153,856
DESIGN FOR A LIGHTING BOWL
Hugh J. Claspy, Monaca, Pa., assignor to The Phoenix Glass Company, Monaca, Pa., a corporation of West Virginia
Application October 18, 1948, Serial No. 149,173
Term of patent 7 years
(Cl. D48—15)



The ornamental design for a lighting bowl, as shown.

153,857
DESIGN FOR A STAND FOR COFFEE MAKER
John E. Comeau and Harry C. Mitchell, Kansas City, Mo.
Application July 19, 1947, Serial No. 140,390
Term of patent 3½ years
(Cl. D44—26)



The ornamental design for a stand for coffee maker, as shown.

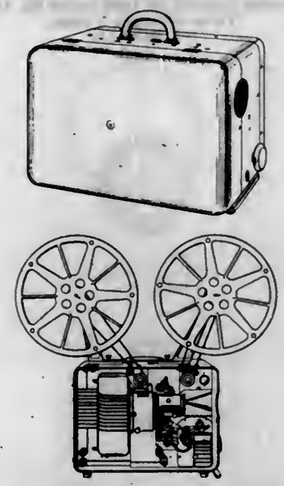
153,858
DESIGN FOR A TOP FOR VEHICLE BODY
Norman D. Cosner, Tecumseh, Mich., assignor to Meyers Aircraft Company, Tecumseh, Mich., a corporation of Michigan
Application April 28, 1947, Serial No. 138,656
Term of patent 14 years
(Cl. D14—27)

The ornamental design for a top for vehicle body, substantially as shown and described.

153,859
DESIGN FOR A COSMETIC HOLDER
Walton B. Crane, Beverly Hills, Calif., assignor to Max Factor & Co., Hollywood, Calif., a corporation of Delaware
Application May 3, 1948, Serial No. 146,141
Term of patent 14 years
(Cl. D86—10)

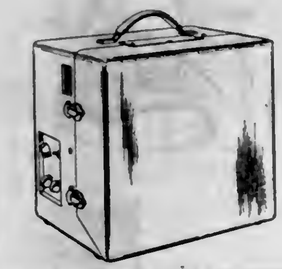
The ornamental design for a cosmetic holder, substantially as shown.

153,860
DESIGN FOR A COMBINED TELEPHONE STAND AND LAMP
Joseph Dern, Roxbury, and Joseph H. Harris, Brookline, Mass.
Application August 9, 1948, Serial No. 148,008
Term of patent 7 years
(Cl. D48—20)

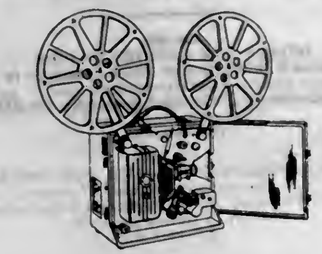


The ornamental design for a combined telephone stand and lamp, as shown.

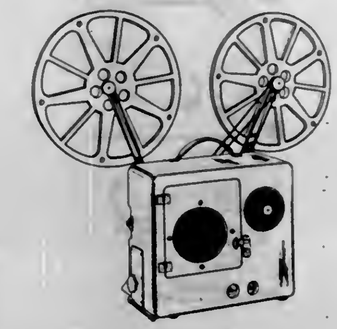
153,861
DESIGN FOR A DISPENSER FOR POWDERED MATERIALS
John F. De Sales, Kew Gardens, Long Island, N. Y.
Application March 25, 1947, Serial No. 137,867
Term of patent 7 years
(Cl. D52—2)



The ornamental design for a dispenser for powdered materials, as shown.

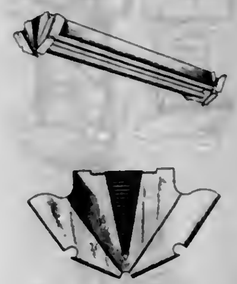


153,862
DESIGN FOR A COMBINED PORTABLE MOTION-PICTURE PROJECTING MACHINE AND CARRYING CASE THEREFOR
William Charles De Vry, Chicago, Ill., assignor to De Vry Corporation, Chicago, Ill., a corporation of Illinois
Application November 19, 1947, Serial No. 142,649
Term of patent 3½ years
(Cl. D61—1)



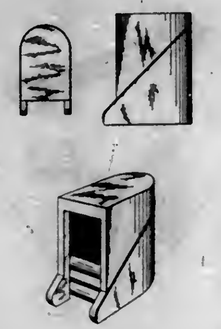
The ornamental design for a combined portable motion-picture projecting machine and carrying case therefor, as shown and described.

153,863
DESIGN FOR A COMBINED PORTABLE MOTION-PICTURE PROJECTOR APPARATUS AND CARRYING CASE THEREFOR
William Charles De Vry, Chicago, Ill., assignor to De Vry Corporation, Chicago, Ill., a corporation of Illinois
Application November 19, 1947, Serial No. 142,650
Term of patent 3½ years
(Cl. D61—1)



The ornamental design for a combined portable motion-picture projector apparatus and carrying case therefor, as shown and described.

153,864
DESIGN FOR AN ELECTRIC LIGHTING FIXTURE
MacInnis M. Dunbar, Highland Park, Ill., assignor to Lighting Products, Inc., Highland Park, Ill., a corporation of Illinois
Application March 18, 1947, Serial No. 137,727
Term of patent 14 years
(Cl. D48—23)



The ornamental design for an electric lighting fixture, as shown.

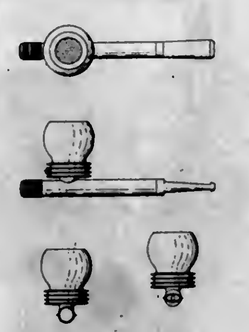
153,865
DESIGN FOR A SPRAY GUN
Sigmund E. Edelstone, Chicago, and Albert L. Jenks, Dixon, Ill., assignors to Dupli-Color Products Company, Chicago, Ill., a corporation of Illinois
Application December 18, 1947, Serial No. 143,202
Term of patent 7 years
(Cl. D62—2)

The ornamental design for a spray gun, substantially as shown and described.

153,866
DESIGN FOR A SELF-CONTAINED REFRIGERATION UNIT
Ernest W. Ekstrand, Orange, N. J., assignor to Ekstrand Manufacturing Company, Orange, N. J., a corporation of New Jersey
Application April 16, 1947, Serial No. 138,426
Term of patent 14 years
(Cl. D67—3)

The ornamental design for a self-contained refrigeration unit, as shown and described.

153,867
DESIGN FOR A BAND-SAW MACHINE
Ted Farrell, Berkeley, Calif.
Application October 18, 1947, Serial No. 142,007
Term of patent 14 years
(Cl. D93—3)

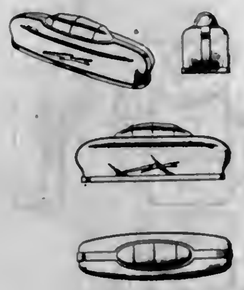


The ornamental design for a band-saw machine, as shown.

153,868
DESIGN FOR A FINGER RING OR KINDRED ARTICLE
James B. Fishburne, Norfolk, Va.
Application March 4, 1946, Serial No. 144,895
Term of patent 3½ years
(Cl. D45—10)

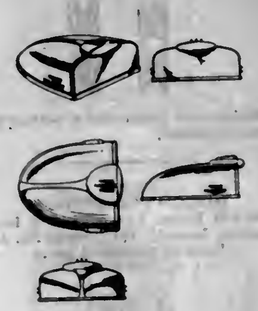
The ornamental design for a finger ring or kindred article, substantially as shown and described.

153,869
DESIGN FOR A SMOKER'S PIPE
Forest F. Flint, Detroit, Mich., assignor to Leo D. Gentle
Application April 22, 1947, Serial No. 138,531
Term of patent 7 years
(Cl. D85—8)



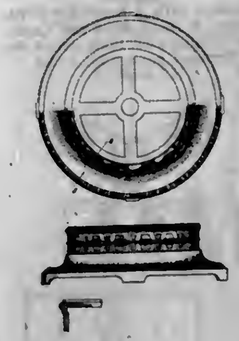
The ornamental design for a smoker's pipe, as shown.

153,870
DESIGN FOR A CHILD'S FOLDABLE CHAIR
Genevive E. Frush, Los Angeles, Calif.
Application June 18, 1947, Serial No. 139,792
Term of patent 3½ years
(Cl. D15—8)



The ornamental design for a child's foldable chair, substantially as shown.

153,871
DESIGN FOR A TAXICAB CRUISING LAMP
Robert W. Garrett, Washington, D. C.
Application September 22, 1948, Serial No. 148,707
Term of patent 14 years
(Cl. D48—32)

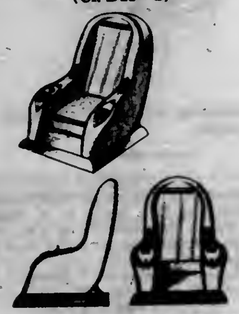


The ornamental design for a taxicab cruising lamp, as shown.

153,872
DESIGN FOR A TAXICAB CRUISING LAMP
Robert W. Garrett, Washington, D. C.
Application September 22, 1948, Serial No. 148,708
Term of patent 7 years
(Cl. D48—32)

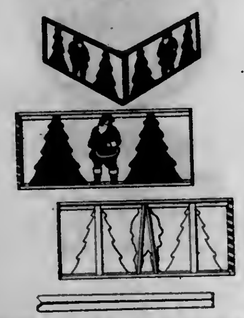
The ornamental design for a taxicab cruising lamp, as shown.

153,873
DESIGN FOR A FLOOR LAMP BASE
Irving I. Gotliffe, New York, N. Y., assignor to Remsen Lamp Manufacturing Co., Brooklyn, N. Y., a partnership composed of Joseph Zweig and Benjamin Zweig
Application November 10, 1947, Serial No. 142,443
Term of patent 3½ years
(Cl. D48—20)



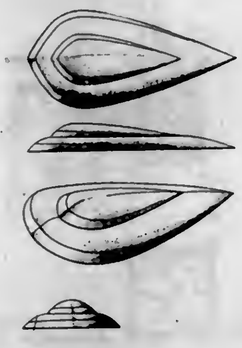
The ornamental design for a floor lamp base, as shown and described.

153,874
DESIGN FOR A TEXTILE FABRIC
Bernard J. Greenbaum, Weston, Conn.
Application June 22, 1948, Serial No. 147,117
Term of patent 3½ years
(Cl. D92—1)



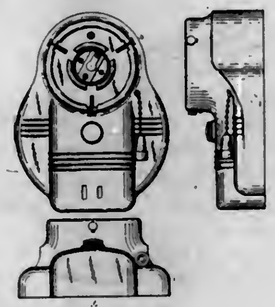
The ornamental design for a textile fabric, as shown and described.

153,875
DESIGN FOR A CHAIR
Floyd D. Hager, Council Bluffs, Iowa
Application June 27, 1947, Serial No. 139,982
Term of patent 14 years
(Cl. D15—1)



The ornamental design for a chair, as shown.

153,876
DESIGN FOR A FENCE PANEL
Nelson J. Hays, Burbank, Calif.
Application February 26, 1948, Serial No. 144,747
Term of patent 3½ years
(Cl. D28—1)

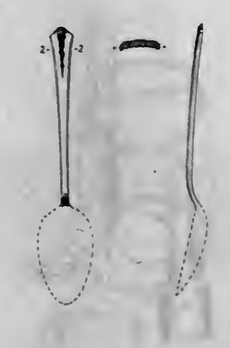


The ornamental design for a fence panel, substantially as shown.

153,877
DESIGN FOR AN AUTOMOBILE HOOD ORNAMENT OR SIMILAR ARTICLE
William H. Johnsen, Dallas, Tex.
Application June 2, 1947, Serial No. 139,405
Term of patent 7 years
(Cl. D14—18)

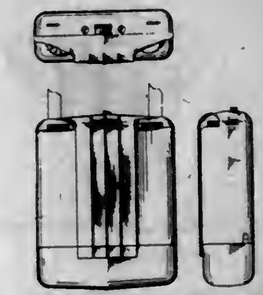
The ornamental design for an automobile hood ornament or similar article, substantially as shown.

153,878
DESIGN FOR AN ELECTRIC LIGHT WALL BRACKET
Arthur A. Johnson, New Bedford, Mass., assignor to John I. Paulding, Inc., New Bedford, Mass., a corporation of Massachusetts
Application December 19, 1947, Serial No. 143,246
Term of patent 14 years
(Cl. D48—4)

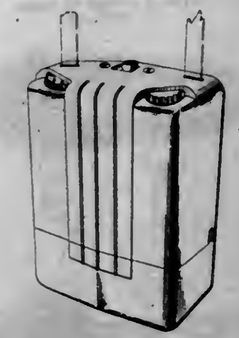


The ornamental design for an electric light wall bracket, as shown.

153,879
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 24, 1949, Serial No. 420
Term of patent 7 years
(Cl. D45—4)



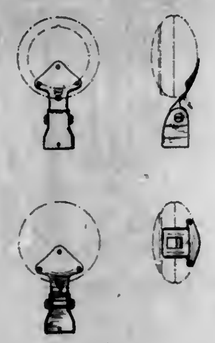
The ornamental design for a bracelet or similar article, substantially as shown and described.



153,880
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Sol P. Kaufman, New York, N. Y., assignor to The International Silver Company, Meriden, Conn., a corporation of Connecticut
Application June 30, 1948, Serial No. 147,305
Term of patent 14 years
(Cl. D54—12)

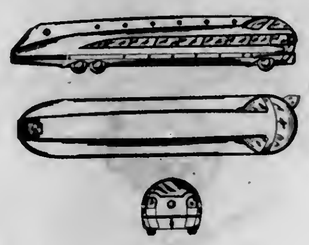
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

153,881
DESIGN FOR A RADIO RECEIVER
George H. Kress, Vestal, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application July 23, 1947, Serial No. 140,462
Term of patent 14 years
(Cl. D56—4)



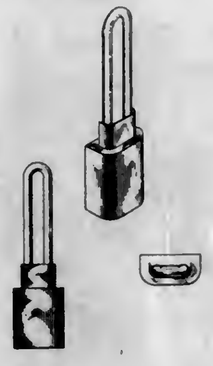
The ornamental design for a radio receiver, as shown and described.

153,882
DESIGN FOR A BOTTLE CARRIER
Joseph K. Laier, Kansas City, Mo.
Application February 9, 1948, Serial No. 144,371
Term of patent 7 years
(Cl. D58—4)



The ornamental design for a bottle carrier, as shown.

153,883
DESIGN FOR AN AUTOMOBILE LAMP SUPPORT BRACKET
Sol H. Lapidus, Brooklyn, N. Y.
Application September 1, 1948, Serial No. 148,410
Term of patent 14 years
(Cl. D48—32)



The ornamental design for an automobile lamp support bracket, as shown and described.

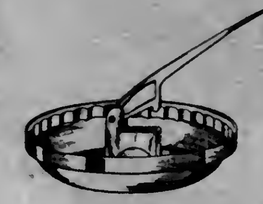
153,884
DESIGN FOR A BUS
George S. Lawson, St. Clair Shores, Mich.
Application October 9, 1946, Serial No. 133,832
Term of patent 7 years
(Cl. D14—3)

The ornamental design for a bus, as shown and described.

153,885
DESIGN FOR A LIGHT FIXTURE
Jules L. Libby, Elgin, Ill.; Robert I. Burstein, administrator of said Jules L. Libby, deceased, assignor to Libby Engineering Corporation, Elgin, Ill., a corporation of Illinois
Application June 7, 1947, Serial No. 139,522
Term of patent 14 years
(Cl. D48—20)

The ornamental design for a light fixture, as shown.

153,886
DESIGN FOR A COMBINATION KNIFE AND SCISSORS SHARPENER
Charles W. Lynch, Perry, Okla.
Application November 26, 1946, Serial No. 135,096
Term of patent 7 years
(Cl. D37—1)



The ornamental design for a combination knife and scissors sharpener, as shown.

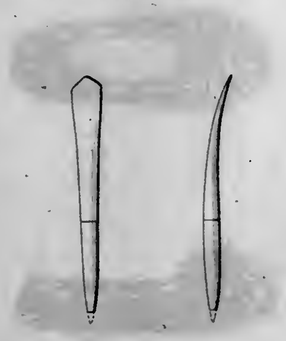
153,887
DESIGN FOR A CUP
Allen T. Macaulay, Perry, Okla., assignor to Tamac, Inc., Perry, Okla., a corporation of Oklahoma
Application June 10, 1947, Serial No. 139,560
Term of patent 3½ years
(Cl. D44—9)

The ornamental design for a cup, as shown.

153,888
DESIGN FOR A NUT CRACKER
John K. Martens, Hutchinson, Kans.
Application April 7, 1947, Serial No. 138,207
Term of patent 7 years
(Cl. D44—1)

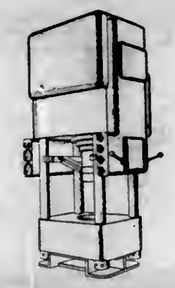
The ornamental design for a nut cracker, as shown.

153,889
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Laurel J. Martin, Yucca Valley, Calif.
Application August 3, 1948, Serial No. 147,917
Term of patent 14 years
(Cl. D7—7)

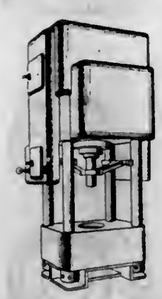


The ornamental design for a shoe or similar article, as shown.

153,890
DESIGN FOR A SHOE OR SIMILAR ARTICLE
James Matrick, Portsmouth, N. H.
Application October 8, 1948, Serial No. 149,039
Term of patent 3½ years
(Cl. D7—7)

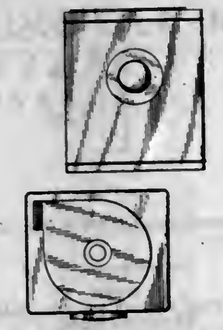


The ornamental design for a shoe or similar article, substantially as shown.

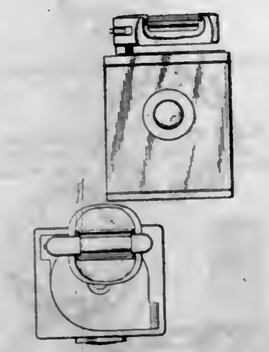


153,891
DESIGN FOR A WRITING INSTRUMENT OR THE LIKE
Stanley Joseph Meno, Toronto, Ontario, Canada
Application March 12, 1948, Serial No. 145,048
Term of patent 14 years
(Cl. D74—24)

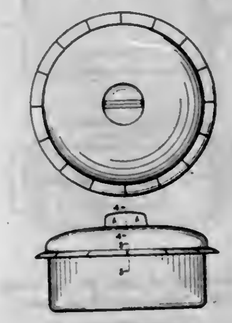
The ornamental design for a writing instrument or the like, substantially as shown and described.



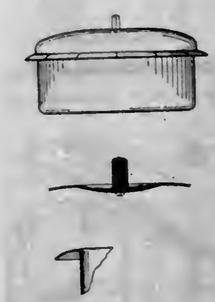
153,892
DESIGN FOR A HYDRAULIC PRESS
Howard V. Mills, Columbus, Ohio, assignor to The Denison Engineering Company, Columbus, Ohio, a corporation of Ohio
Application March 25, 1948, Serial No. 145,339
Term of patent 14 years
(Cl. D63—1)



The ornamental design for a hydraulic press, substantially as shown.

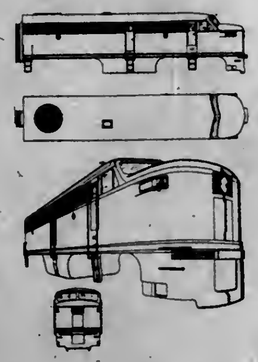


153,893
DESIGN FOR A COMBINED WASHING MACHINE AND WRINGER
Jack Morgan, Chicago, Ill., assignor to Automatic Washer Company, Newton, Iowa, a corporation of Delaware
Application May 3, 1947, Serial No. 138,796
Term of patent 14 years
(Cl. D49—1)



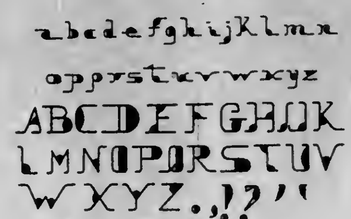
The ornamental design for a combined washing machine and wringer, substantially as shown and described.

153,894
DESIGN FOR A DUTCH OVEN
Albert D. Mortrude, Detroit, Mich., assignor to Kromex Corporation, Cleveland, Ohio, a corporation of Ohio
Application June 12, 1947, Serial No. 139,616
Term of patent 14 years
(Cl. D44—1)



The ornamental design for a dutch oven, substantially as shown.

153,895
DESIGN FOR A LEATHER STRAP BUCKLE MEMBER
Ludwig Oppenheimer, Los Angeles, Calif.
Application December 29, 1947, Serial No. 143,402
Term of patent 3½ years
(Cl. D17—1)

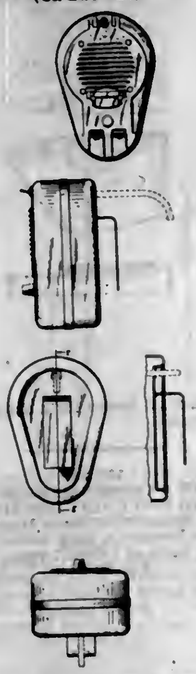


The ornamental design for a leather strap buckle member, substantially as shown.

153,896
DESIGN FOR A LOCOMOTIVE BODY
Ray Patten, Norwalk, Conn., assignor to General Electric Company, a corporation of New York
Application August 16, 1946, Serial No. 132,587
Term of patent 3½ years
(Cl. D66—1)

The ornamental design for a locomotive body, substantially as shown and described.

153,897
DESIGN FOR A FONT OF PRINTING TYPE
Dana Petersen, Newton, Mass.
Application June 9, 1947, Serial No. 139,555
Term of patent 3½ years
(Cl. D44—12)



The ornamental design for a font of printing type, as shown.

153,898
DESIGN FOR A CURTAIN OR DRAPERY FESTOON RING
Manfred J. Pollak, Chicago, Ill., assignor to Western Newell Mfg. Co., Freeport, Ill., a corporation of Illinois
Application October 15, 1947, Serial No. 141,914
Term of patent 14 years
(Cl. D21—1)

The ornamental design for a curtain or drapery festoon ring, as shown.

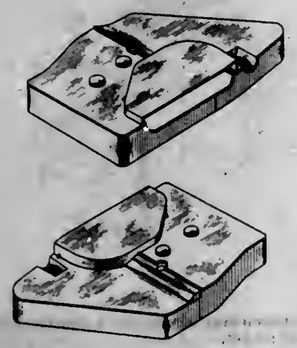
153,899
DESIGN FOR A SPEAKER HOUSING
Robert F. Poorman, Montgomery County, Ohio
Application August 23, 1947, Serial No. 141,033
Term of patent 14 years
(Cl. D26—14)

The ornamental design for a speaker housing, as shown.

153,900
DESIGN FOR A LADDER BOOT
Walter P. Regan, Lowell, Mass.
Application April 10, 1947, Serial No. 138,286
Term of patent 7 years
(Cl. D15—8)

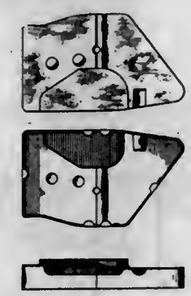
The ornamental design for a ladder boot, as shown.

153,901
DESIGN FOR A TOASTER
Jean O. Reinecke, Oak Park, Ill., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application July 9, 1946, Serial No. 131,408
Term of patent 14 years
(Cl. D81—10)



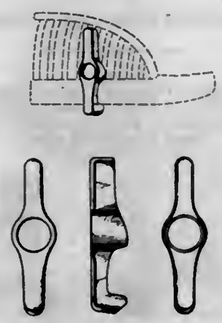
The ornamental design for a toaster, substantially as shown.

153,902
DESIGN FOR A TOASTER HANDLE
Jean O. Reinecke, Oak Park, Ill., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application July 9, 1946, Serial No. 131,412
Term of patent 14 years
(Cl. D81—10)

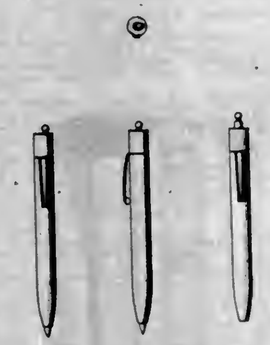


The ornamental design for a toaster handle, substantially as shown.

153,903
DESIGN FOR A CAPPING MACHINE GUARD
Manuel S. Resina, Brooklyn, N. Y.
Application October 31, 1946, Serial No. 134,403
Term of patent 3½ years
(Cl. D55—1)

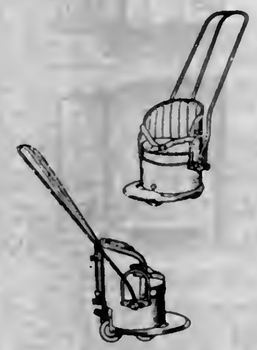


153,903—Continued



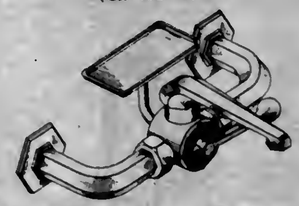
The ornamental design for a capping machine guard, as shown.

153,904
DESIGN FOR A COMBINED BUMPER GUARD AND FOG LIGHT HOUSING
Edwin F. Eygasewicz, Santa Monica, Calif.
Application January 6, 1948, Serial No. 143,543
Term of patent 7 years
(Cl. D14—6)



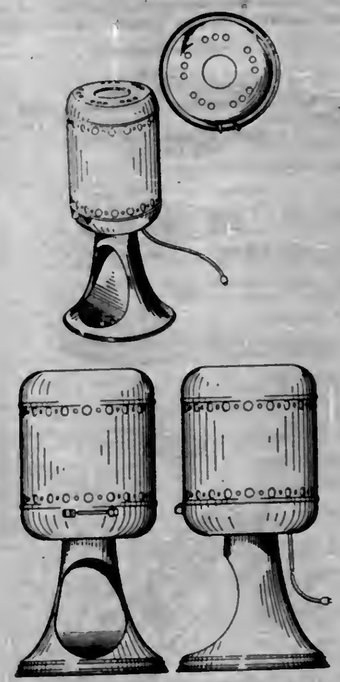
The ornamental design for a combined bumper guard and fog light housing, substantially as shown and described.

153,905
DESIGN FOR A BALL PEN OR SIMILAR ARTICLE
Solomon M. Sager, Chicago, Ill.
Application June 24, 1947, Serial No. 139,887
Term of patent 3½ years
(Cl. D74—17)



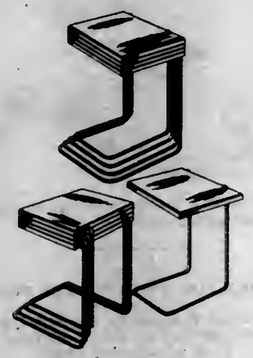
The ornamental design for a ball pen or similar article, as shown and described.

153,906
DESIGN FOR A CHILD'S PUSH-CHAIR
Herbert Richard Shaw, Shirley, England
Application August 26, 1946, Serial No. 133,892
In Great Britain March 14, 1946
Term of patent 3½ years
(Cl. D14—14)



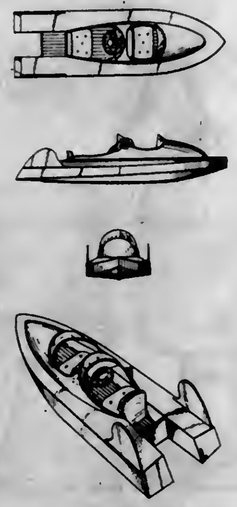
The ornamental design for a child's push-chair, as shown.

153,907
DESIGN FOR A DOUBLE ACTING SINK VALVE FAUCET UNIT
Michael Smolensky, Cleveland, Ohio
Application August 1, 1947, Serial No. 140,661
Term of patent 14 years
(Cl. D91—3)



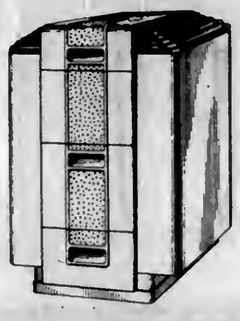
The ornamental design for a double acting sink valve faucet unit, as shown.

153,908
DESIGN FOR A HEATER FOR FOOD PRODUCTS
Alexander F. Stolitzka, Summit, Ohio
Application February 10, 1948, Serial No. 144,385
Term of patent 14 years
(Cl. D81—10)



The ornamental design for a heater for food products, as shown.

153,909
DESIGN FOR A SERVICE TRAY AND STAND NESTABLE UNIT
Will E. Wais, Chicago, Ill.
Application January 20, 1947, Serial No. 136,523
Term of patent 14 years
(Cl. D32—14)



The ornamental design for a service tray and stand nestable unit, as shown and described.

153,910
DESIGN FOR A BOAT
Val K. Williamson, Phillipsburg, Ohio
Application August 8, 1947, Serial No. 140,782
Term of patent 14 years
(Cl. D71—1)

The ornamental design for a boat, as shown.

153,911
DESIGN FOR A SOLID FUEL BURNING ROOM HEATER
De Witt H. Wyatt, Columbus, Ohio
Application March 20, 1948, Serial No. 145,248
Term of patent 14 years
(Cl. D81—19)

The ornamental design for a solid fuel burning room heater, substantially as shown.

Leather. The Orlean-Pfleger Tanning Co. 186,388, July 8, 1924. Republished May 24.

Leather, Sole. The United States Leather Selling Corporation. 258,868, renewed July 16, 1949. O. G. May 24.

Materials, Synthetic resinous. The Resinous Products & Chemical Company. 438,701, May 11, 1948. Republished May 24.

Materials, Synthetic resinous. The Resinous Products & Chemical Company. 438,855, May 11, 1948. Republished May 24.

Rosin. The Newport Company. 264,640, Dec. 3, 1929. Republished May 24.

CLASS 2

Cups, Empty plastic. Spir-It, Inc. 430,424, June 22, 1948. Republished May 24.

Holders. J. P. Eustis Mfg. Co. 54,753, June 26, 1906. Republished May 24.

Oilers with spouts, Portable. Chase Brass & Copper Co. Incorporated. 257,780, renewed June 18, 1949. O. G. May 24.

Vaults, Burial. Wilbert W. Hasse Co. 434,078, Nov. 4, 1947. Republished May 24.

CLASS 4

Buffing and/or polishing composition. The Matchless Metal Polish Co. 323,758, Apr. 30, 1935. Republished May 24.

Hand cleanser. R. E. Sleight. 510,141, May 24; Serial No. 519,226.

Naphtha compound, Nonexplosive. Gate City Oil Co. 250,966, Aug. 13, 1929. Republished May 24.

Preparation for fabric cleaners, Liquid, metal polish, nickel polish, etc. Purfex Mfg. Co., Inc. 256,426, renewed May 14, 1949. O. G. May 24.

Shaving cream. Darnee Inc. 256,947, renewed May 28, 1949. O. G. May 24.

Soap powder. D. J. Dellaripa. 510,135, May 24; Serial No. 504,039.

Toilet extracts, essences, oils, waters, etc. Roger & Gallet. 33,093, re-renewed June 20, 1949. O. G. May 24.

Washing and cleaning preparation. The Special Formula Corporation. 307,218, Aug. 25, 1942. Republished May 24.

CLASS 5

Glue. Cudahy Brothers Co. 47,847, Nov. 21, 1905. Republished May 24.

Glues, cements, and glue cement. The Scholl Mfg. Co., Inc. 235,618, Nov. 22, 1927. Republished May 24.

CLASS 6

Absorbents. Wallerstein Company, Inc. 339,576, Oct. 13, 1936. Republished May 24.

Analgesic cream. The Scholl Mfg. Co., Inc. 305,473, Aug. 15, 1933. Republished May 24.

Antiseptic preparation. C. A. Mosso Company. 418,232, Dec. 11, 1945. Republished May 24.

Carbon black. Continental Carbon Company. 367,617, May 23, 1939. Republished May 24.

Chemical composition for impregnating wood. E. L. Bruce Co. 252,754, renewed Feb. 12, 1949. O. G. May 24.

Chemical preparation for bleaching or stripping colors from textile fibres, yarns, and fabrics. Watson-Park Company. 255,263, renewed Apr. 16, 1949. O. G. May 24.

Chemical preparation for use in waterproofing textile materials and textile fabrics. Watson-Park Company. 255,265, renewed Apr. 16, 1949. O. G. May 24.

Chemical preparation. Watson-Park Company. 255,266, renewed Apr. 16, 1949. O. G. May 24.

Comminuted, free-flowing, fire-extinguishing dry chemical. Ansul Chemical Company. 430,295, June 15, 1948. Republished May 24.

Composite barium-calcium extender. Wishnick-Tumpeer, Inc. 404,799, Dec. 21, 1943. Republished May 24.

Corn pads, Medicated. The Scholl Mfg. Co., Inc. 343,032, Mar. 9, 1937. Republished May 24.

Corn-plasters and foot-powders. The Scholl Manufacturing Company. 94,031, Oct. 28, 1913. Republished May 24.

Coru plasters and pads, Medicated. The Scholl Mfg. Co., Inc. 320,443, Jan. 1, 1935. Republished May 24.

Corn plasters and pads, and corn salve, Medicated. The Scholl Mfg. Co., Inc. 327,406, Aug. 27, 1935. Republished May 24.

Creams, salves, ointments, etc. The Scholl Mfg. Co., Inc. 325,377, June 18, 1935. Republished May 24.

Deodorisers. The Cando Corporation. 260,302, renewed Aug. 20, 1949. O. G. May 24.

Disinfectants and insecticides. E. Taussig. 32,482, re-renewed Feb. 7, 1949. O. G. May 24.

Douche powder, Water soluble. R. L. Gladke. 510,129, May 24; Serial No. 568,943, published Feb. 15, 1949.

Hard wax-like substance. Witco Chemical Company. 426,247, Dec. 24, 1946. Republished May 24.

Insecticide and insect repellant. R. D. Spiers. 422,591, July 30, 1946. Republished May 24.

Laxative, Anti-acid. T. R. Barnes. 437,857, Mar. 30, 1948. Republished May 24.

Laxative medicinal preparation. M. G. Gibbs. 191,920, Nov. 25, 1924. Republished May 24.

Laxative preparations. The Weber Medical Tea Company. 252,568, renewed Feb. 12, 1949. O. G. May 24.

Liniment. The Scholl Mfg. Co., Inc. 243,734, June 26, 1928. Republished May 24.

Liniment, Antiseptic. C. M. Shipman. 167,809, May 8, 1923. Republished May 24.

Lotion, Eye, and depilatories. George B. Evans Laboratories, Inc. 382,601, Oct. 29, 1940. Amended. O. G. May 24.

Lotion, Foot, corn salve, foot balm, etc. The Scholl Mfg. Co., Inc. 345,879, Aug. 17, 1937. Republished May 24.

Lotion for bunions. The Scholl Mfg. Co. Inc. 404,588, Dec. 7, 1943. Republished May 24.

Lotion, Toilet. H. S. Grove. 328,434, Sept. 24, 1935. Republished May 24.

Material, Semisolid coating. Winner Manufacturing Co. Inc. 401,130, Apr. 27, 1943. Republished May 24.

Medicated and perfumed foot-bath tablet. The Scholl Mfg. Co., Inc. 243,240, June 12, 1928. Republished May 24.

Medicines, Dog. E. W. Sharland. 248,120, renewed Oct. 16, 1948. O. G. May 24.

Oil, Pine. General Naval Stores Company, Inc. 257,604–5, June 11, 1929. Republished May 24.

Ointment, Lubricating and soothing. The Scholl Mfg. Co., Inc. 243,618, June 26, 1928. Republished May 24.

Pads, Medicated corn, callous, and bunion. The Scholl Mfg. Co., Inc. 349,460, Aug. 31, 1937. Republished May 24.

Pectin solutions, preparations, and compositions consisting of pectin mixed with water, etc. The Exchange Orange Products Company. 259,060, renewed Aug. 6, 1949. O. G. May 24.

Perfumes, toilet waters, colognes, etc. L. de Lescinskia 510,143, May 24; Serial No. 522,588.

Petroleum asphalt product. Witco Chemical Company. 421,906, May 28, 1946. Republished May 24.

Pharmaceutical product. Aktiengesellschaft Vormals B. Siegfried. 206,538, Dec. 8, 1928. Republished May 24.

Preparation for the hair, scalp, and skin, Medicated. Barclay & Barclay. 73,059, re-renewed Mar. 18, 1949. O. G. May 24.

Preparation for the relief of epidermophytosis, golfer's itch, gym foot, etc. The Scholl Mfg. Co., Inc. 321,752, Feb. 12, 1935. Republished May 24.

Shampoo. The Procter & Gamble Company. 439,291, June 15, 1948. Republished May 24.

Shampoo powder. Evan Williams Company Limited. 160,906, renewed July 8, 1943. O. G. May 24.

Shields or pads, Adhesive medicated. The Scholl Mfg. Co., Inc. 276,209, Sept. 16, 1930. Republished May 24.

Shields or pads, Adhesive medicated. The Scholl Mfg. Co., Inc. 278,423, Dec. 16, 1930. Republished May 24.

Shields, pads or plasters, Adhesive medicated. The Scholl Mfg. Co., Inc. 295,814, July 12, 1932. Republished May 24.

Softeners, Rubber. Wishnick-Tumpeer Chemical Co. 217,396, Aug. 31, 1926. Republished May 24.

Toilet extracts, essences, oils, waters, etc. Roger & Gallet. 33,093, re-renewed June 20, 1949. O. G. May 24.

Toilet preparations. Darnee Inc. 256,399, renewed May 14, 1949. O. G. May 24.

Toilet requisites. F. R. Arnold & Company. 257,894, renewed June 18, 1949. O. G. May 24.

Toilet water and cologne. Lanvin-Parfums, Inc. 510,160, May 24; Serial No. 561,316.

CLASS 7

Ropes, cords, and twines. Tubbs Cordage Company. 436,047, Jan. 20, 1948. Republished May 24.

CLASS 8

Humidors and ash trays, Cigarette. Chase Brass & Copper Co. Incorporated. 257,690, renewed June 18, 1949. O. G. May 24.

CLASS 11

Ink, India. Societe Anonyme des Anciens Etablissement. J. M. Paillard. 255,241, renewed Apr. 16, 1949. O. G. May 24.

CLASS 12

Cement for construction work. Century Cement Corporation. 265,523, Dec. 31, 1929. Republished May 24.

Cement for construction work. Century Cement Corporation. 273,127, July 22, 1930. Republished May 24.

Elbows, Sheet-metal. Chase Brass & Copper Co. Incorporated. 257,662, renewed June 18, 1949. O. G. May 24.

Material to be added to dry cement for water-proofing concrete. Toch Brothers. 74,640, re-renewed Aug. 10, 1949. O. G. May 24.

Paints, varnishes, stains, Dry, paste and ready-mixed, etc. Duralac Chemical Corporation. 258,580, renewed July 9, 1949. O. G. May 24.

Plaster. United States Gypsum Company. 255,568, renewed Apr. 23, 1949. O. G. May 24.

Putty; Glaser's, stiff, dry, paste, and ready-mixed paint; oils. N. V. Tot Voortz, Der Zaken Van Pieter Schoen & Zoon. 324,608, May 21, 1935. Republished May 24.

CLASS 13

Caps and suspension rings, etc., Metallic. Chase Brass & Copper Co. Incorporated. 257,783, renewed June 18, 1949. O. G. May 24.

Culverts, Corrugated, plain conductor-pipes, round corrugated conductor-pipes, etc. The Newport Rolling Mill Company. 120,095, Mar. 19, 1918. Republished May 24.

Equipment, Door. Frantz Manufacturing Company. 283,724, June 2, 1931. Republished May 24.

Eyelets. J. C. Rhodes & Co. Incorporated. 256,432, renewed May 14, 1949. O. G. May 24.

Fittings, Screwed pipe, pipe flanges, screwed and flanged pipe unions, etc. Crane Company. 143,927, June 21, 1921. Republished May 24.

Holders. J. P. Eustis Mfg. Co. 54,753, June 26, 1906. Republished May 24.

Hollow ware, Aluminum cooking and serving. Century Metalcraft Corporation. 370,772, Sept. 5, 1939. Republished May 24.

Pencils, Lead, colored pencils, copying pencils, etc. A. W. Faber, Inc. 259,960–1, renewed Aug. 13, 1949. O. G. May 24.

Rods, Curtain. Moriarty Manufacturing Co. 442,748, May 24; Serial No. 462,151.

Washers, Lock. Eaton Manufacturing Company. 510,155, May 24; Serial No. 551,880.

CLASS 14

Alloys, Iron or steel. Taylor-Wharton Iron and Steel Company. 257,188, renewed May 28, 1949. O. G. May 24.

Sheet Iron, galvanized or otherwise. Pontnewynydd Sheet and Galvanizing Company, Limited. 74,296, re-renewed June 29, 1949. O. G. May 24.

Sheets, rods, and plain wire; etc., Brass, copper, and nonferrous alloy. Chase Brass & Copper Co. Incorporated. 257,679, renewed June 18, 1949. O. G. May 24.

Steel and iron sheets. Pontnewynydd Sheet and Galvanizing Company, Limited. 74,296, re-renewed June 29, 1949. O. G. May 24.

CLASS 15

Oils, Lubricating, and greases. The Continental Oil Company. 166,145, Mar. 27, 1923. Republished May 24.

Oils, Lubricating, and greases, fuel and illuminating oils, road-oils, etc. Phinney Brothers Company. 146,778, Aug. 16, 1921. Republished May 24.

Petroleum products. MacMillan Petroleum Corporation. 302,949–50, May 2, 1933. Republished May 24.

Gasolines. Phillips Petroleum Company. 254,924, Apr. 2, 1929. Amended. O. G. May 24.

Oil; Penetrating, spraying gun oil, etc. Purfex Mfg. Co., Inc. 257,621, renewed June 11, 1949. O. G. May 24.

Oils and greases, Lubricating. Georgia-Carolina Oil Company. 257,661, renewed June 18, 1949. O. G. May 24.

CLASS 16

Composition in the nature of a paint, Anti-fouling. Reeder Oliver & Son, Incorporated. 510,115, May 24; Serial No. 546,512, published Feb. 8, 1949.

Enamel, Liquid paint. Nu-Enamel Corporation. 510,017, May 24; Serial No. 512,130, published Feb. 8, 1949.

Enamel, Liquid paint. Stetson Paint & Varnish Company. 510,081, May 24; Serial No. 539,773, published Feb. 8, 1949.

Enamel, Paint. Continental Paint & Varnish Co. 510,078, May 24; Serial No. 539,659, published Feb. 8, 1949.

Paint. W. W. Lawrence & Company. 510,075, May 24; Serial No. 538,792, published Jan. 11, 1949.

Paint. Stetson Paint & Varnish Company. 510,082, May 24; Serial No. 539,776, published Feb. 16, 1949.

Paint and paint enamel. Stetson Paint & Varnish Company. 510,083, May 24; Serial No. 539,785, published Feb. 8, 1949.

Paint, Antifouling bottom. International Paint Company, Inc. 510,086, May 24; Serial No. 540,675, published Jan. 25, 1949.

Paint, Asphalt, asphalt aluminum paint, paint enamels, etc. American Asphalt Paint Company. 331,732, Jan. 21, 1936. Republished May 24.

Paint, Black bituminous liquid. The Federal Composition & Paint Company, Inc. 256,494, renewed May 21, 1949. O. G. May 24.

Paint, Enamel. Phelan-Faust Paint Manufacturing Company. 120,422, Feb. 5, 1918. Republished May 24.

Paint, House, concrete paint, and paint colors. Phelan-Faust Paint Mfg. Co. 510,048, May 24; Serial No. 533,355, published Jan. 11, 1949.

Paint, Industrial asphalt. Witco Chemical Company. 415,969, Aug. 21, 1945. Republished May 24.

Paint, Liquid resinous. Drake Paint Company. 510,079, May 24; Serial No. 539,675, published Feb. 8, 1949.

Paint, Utility. Stetson Paint & Varnish Company. 510,080, May 24; Serial No. 539,771, published Feb. 8, 1949.

Paints and enamels, Ready-mixed. The Glidden Company. 259,598, renewed Aug. 6, 1949. O. G. May 24.

Paints, Artists'. M. Grumbacher, Inc. 510,105, May 24; Serial No. 544,085, published Jan. 11, 1949.

Paints, paint enamels, etc., Ready-mixed. Wesson Oil & Snowdrift Co., Inc. 510,063, May 24; Serial No. 536,021, published Jan. 11, 1949.

Paints, Ready mixed barn. Armstrong Paint & Varnish Works. 510,073, May 24; Serial No. 538,077, published Feb. 8, 1949.

Paints, varnishes, lacquers, etc. Manufacturing Industries, Inc. 510,072, May 24; Serial No. 536,018, published Jan. 11, 1949.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 24TH DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ancet, Victor M. J., Lyon, France, assignor, by mesne assignments, to Regina, S. A., a societe anonyme, Tangiers, Morocco. Thread operated stop motion in circular looms. Re. 23,114, May 24.
Chrysler Corporation, assignee: *See*—
Uts, Chester C.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Lonts, John F.
Lonts, John F., Nutley, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Plant regulant composition and method. Re. 23,115, May 24.
Regina, S. A., a societe anonyme, assignee: *See*—
Ancet, Victor M. J.
Uts, Chester C., Magnolia, Redford Station, assignor to Chrysler Corporation, Highland Park, Mich. Motor vehicle stabilizing means. Re. 23,116, May 24.

LIST OF PLANT PATENTEES

Byrum, Roy L., assignor to Joseph H. Hill Company, Richmond, Ind. Rose plant. 838, May 24.
Byrum, Roy L., assignor to Joseph H. Hill Company, Richmond, Ind. Rose plant. 839, May 24.
Hill, Joseph H., Company, assignee: *See*—
Byrum, Roy L.
Sodano, Jimmy: *See*—
Sodano, Vincenzo.
Sodano, Vincenzo, known as Jimmy Sodano, Madison, N. J. Rose plant. 840, May 24.

LIST OF DESIGN PATENTEES

Anbender, Harry, and W. J. Weinstein, Detroit, Mich. Perfume atomizer. 153,840, May 24.
Automatic Washer Company, assignee: *See*—
Morgan, Jack.
Autopoint Company, assignee: *See*—
Beckstrom, Garfield L.
Avila, John V., San Jose, Calif. Building. 153,841, May 24.
Bader, Carl, St. Louis, Mo. Automatic shoeshine machine. 153,842, May 24.
Bartolomeo, Eugene R., Waterbury, Conn. Sail boat shelf figure. 153,843, May 24.
Basalay, Leo S., Chicago, Ill. Burial vault name plate. 153,844, May 24.
Beckstrom, Garfield L., assignor to Autopoint Company, Chicago, Ill. Letter opener. 153,845, May 24.
Beckstrom, Garfield L., assignor to Autopoint Company, Chicago, Ill. Temperature and humidity indicator housing. 153,846, May 24.
Bonilla, Saturnino T., New York, N. Y. Eyecup. 153,847, May 24.
Branham, Theodore G., assignor to Standard Steel Works, North Kansas City, Mo. Tank truck. 153,848, May 24.
Brann, Carl C., Riverside, Conn. Incandescent lighting fixture. 153,849, May 24.
Brazauski, William N., Chicago, Ill. Chair. 153,850, May 24.
Brodton, Lynn, New York, N. Y. Taxicab. 153,851, May 24.
Burstein, Robert L., administrator: *See*—
Libby, Jules L.
Carlson, Artie C., Detroit, assignor to Wickes Brothers, Saginaw, Mich. Injection molding machine. 153,852, May 24.
Cizek, Arthur, Denver, assignor to Red Comet Incorporated, Littleton, Colo. Receptacle for fire extinguishing grenades. 153,853, May 24.
Cizek, Arthur, Denver, assignor to Red Comet Incorporated, Littleton, Ohio. Combined fire extinguishing grenade and holder. 153,854, May 24.
Claspy, Hugh J., assignor to The Phoenix Glass Company, Monaca, Pa. Lighting globe. 153,855, May 24.
Claspy, Hugh J., assignor to The Phoenix Glass Company, Monaca, Pa. Lighting bowl. 153,856, May 24.
Comeau, John E., and H. C. Mitchell, Kansas City, Mo. Stand for coffee maker. 153,857, May 24.
Coro, Inc., assignee: *See*—
Katz, Adolph.
Cosner, Norman D., assignor to Meyers Aircraft Company, Tecumseh, Mich. Top for vehicle body. 153,858, May 24.
Crane, Walton B., Beverly Hills, assignor to Max Factor & Co., Hollywood, Calif. Cosmetic holder. 153,859, May 24.
Denison Engineering Company, The, assignee: *See*—
Mills, Howard V.
Dern, Joseph, Roxbury, and J. H. Harris, Brookline, Mass. Combined telephone stand and lamp. 153,860, May 24.
De Sales, John P., Kew Gardens, Long Island, N. Y. Dispenser for powdered materials. 153,861, May 24.
De Vry Corporation, assignee: *See*—
De Vry, William C.
De Vry, William C., assignor to De Vry Corporation, Chicago, Ill. Combined portable motion-picture projector machine and carrying case therefor. 153,862, May 24.
De Vry, William C., assignor to De Vry Corporation, Chicago, Ill. Combined portable motion-picture projector apparatus and carrying case therefor. 153,863, May 24.
Dunbar, MacInnis M., assignor to Lighting Products, Inc., Highland Park, Ill. Electric lighting fixture. 153,864, May 24.
Dupli-Color Products Company, assignee: *See*—
Edelstone, Sigmund E., and Jenks.
Edelstone, Sigmund E., Chicago, and A. L. Jenks, Dixon, assignors to Dupli-Color Products Company, Chicago, Ill. Spray gun. 153,865, May 24.
Ekstrand, Ernest W., assignor to Ekstrand Manufacturing Company, Orange, N. J. Self-contained refrigeration unit. 153,866, May 24.
Ekstrand Manufacturing Company, assignee: *See*—
Ekstrand, Ernest W.
Factor, Max, & Co., assignee: *See*—
Crane, Walton B.
Farrell, Ted, Berkeley, Calif. Band-saw machine. 153,867, May 24.
Fishburne, James B., Norfolk, Va. Finger ring or kindred article. 153,868, May 24.
Flint, Forest F., Detroit, Mich., assignor to L. D. Gentle. Smoker's pipe. 153,869, May 24.
Frush, Genevive E., Los Angeles, Calif. Child's foldable chair. 153,870, May 24.
Garrett, Robert W., Washington, D. C. Taxicab cruising lamp. 153,871, May 24.
Garrett, Robert W., Washington, D. C. Taxicab cruising lamp. 153,872, May 24.
General Electric Company, assignee: *See*—
Patten, Ray.
Gentle, Leo D., assignee: *See*—
Flint, Forest F.
Gotliffe, Irving L., New York, assignor to Remsen Lamp Manufacturing Co., Brooklyn, N. Y. Floor lamp base. 153,873, May 24.
Greenbaum, Bernard J., Weston, Conn. Textile fabric. 153,874, May 24.
Hager, Floyd D., Council Bluffs, Iowa. Chair. 153,875, May 24.
Harris, Joseph H.: *See*—
Dern, Joseph, and Harris.
Hays, Nelson J., Burbank, Calif. Fence panel. 153,876, May 24.

International Business Machines Corporation, assignee: *See*—
Kress, George H.
International Silver Company, The, assignee: *See*—
Kaufman, Sol P.
Jenks, Albert L.: *See*—
Edelstaou, Sigmund E., and Jenks.
Johnsen, William H., Dallas, Tex. Automobile hood ornament or similar article. 153,877, May 24.
Johnson, Arthur A., assignor to John I. Paulding, Inc., New Bedford, Mass. Electric light wall bracket. 153,878, May 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 153,879, May 24.
Kaufman, Sol P., New York, N. Y., assignor to The International Silver Company, Meriden, Conn. Spoon or other article of flatware. 153,880, May 24.
Krass, George H., Vestal, assignor to International Business Machines Corporation, New York, N. Y. Radio receiver. 153,881, May 24.
Kromer Corporation, assignee: *See*—
Mortrude, Albert D.
Laier, Joseph K., Kansas City, Mo. Bottle carrier. 153,882, May 24.
Lapides, Sol H., Brooklyn, N. Y. Automobile lamp support bracket. 153,883, May 24.
Lawson, George S., St. Clair Shores, Mich. Bus. 153,884, May 24.
Libby Engineering Corporation, assignee: *See*—
Libby, Jules L.
Libby, Jules L., deceased; R. I. Burstein, administrator, assignor to Libby Engineering Corporation, Elgin, Ill. Light fixture. 153,885, May 24.
Lighting Products, Inc., assignee: *See*—
Dunbar, Macinnis M.
Lynch, Charles W., Perry, Okla. Combination knife and scissors sharpener. 153,886, May 24.
Macaulay, Allen T., assignor to Tamac, Inc., Perry, Okla. Cup. 153,887, May 24.
Martens, John K., Hutchinson, Kans. Nut cracker. 153,888, May 24.
Martin, Laurel J., Yucca Valley, Calif. Shoe or similar article. 153,889, May 24.
Matrick, James, Portsmouth, N. H. Shoe or similar article. 153,890, May 24.
McGraw Electric Company, assignee: *See*—
Reinecke, Jean O.
Meno, Stanley J., Toronto, Ontario, Canada. Writing instrument or the like. 153,891, May 24.
Meyers Aircraft Company, assignee: *See*—
Cosner, Norman D.
Mills, Howard V., assignor to The Denison Engineering Company, Columbus, Ohio. Hydraulic press. 153,892, May 24.
Mitchell, Harry C.: *See*—
Comeau, John E., and Mitchell.
Morgan, Jack, Chicago, Ill., assignor to Automatic Washer Company, Newton, Iowa. Combined washing machine and wringer. 153,893, May 24.
Mortrude, Albert D., Detroit, Mich., assignor to Kromex Corporation, Cleveland, Ohio. Dutch oven. 153,894, May 24.
Oppenheimer, Ludwig, Los Angeles, Calif. Leather strap buckle member. 153,895, May 24.
Patten, Ray, Norwalk, Conn., assignor to General Electric Company. Locomotive body. 153,896, May 24.
Paulding, John L., Inc., assignee: *See*—
Johnson, Arthur A.
Peterson, Dana, Newton, Mass. Font of printing type. 153,897, May 24.
Phoenix Glass Company, The, assignee: *See*—
Clasby, Hugh J.
Pollak, Manfred J., Chicago, assignor to Western Newell Mfg. Co., Freeport, Ill. Curtain or drapery festoon ring. 153,898, May 24.
Poorman, Robert F., Montgomery County, Ohio. Speaker housing. 153,899, May 24.
Red Comet Incorporated, assignee: *See*—
Cisek, Arthur.
Regan, Walter P., Lowell, Mass. Ladder boot. 153,900, May 24.
Reinecke, Jean O., Oak Park, assignor to McGraw Electric Company, Elgin, Ill. Toaster. 153,901, May 24.
Reinecke, Jean O., Oak Park, assignor to McGraw Electric Company, Elgin, Ill. Toaster handle. 153,902, May 24.
Remaen Lamp Manufacturing Co., assignee: *See*—
Gotliffe, Irving L.
Resina, Manuel S., Brooklyn, N. Y. Capping machine guard. 153,903, May 24.
Rygaswics, Edwin F., Santa Monica, Calif. Combined bumper guard and fog light housing. 153,904, May 24.
Sager, Solomon M., Chicago, Ill. Ball pen, or similar article. 153,905, May 24.
Shaw, Herbert R., Shirley, England. Child's push-chair. 153,906, May 24.
Smolensky, Michael, Cleveland, Ohio. Double acting sink valve faucet unit. 153,907, May 24.
Standard Steel Works, assignee: *See*—
Branham, Theodore G.
Stolitzka, Alexander F., Summit, Ohio. Heater for food products. 153,908, May 24.
Tamac, Inc., assignee: *See*—
Macaulay, Allen T.
Wais, Will E., Chicago, Ill. Service tray and stand nestable unit. 153,909, May 24.
Weinstein, William J.: *See*—
Anbender, Harry, and Weinstein.
Western Newell Mfg. Co., assignee: *See*—
Pollak, Manfred J.
Wickes Brothers, assignee: *See*—
Carlson, Artie C.
Williamson, Val K., Phillipsburg, Ohio. Boat. 153,910, May 24.
Wyatt, De Witt H., Columbus, Ohio. Solid fuel burning room heater. 153,911, May 24.

Ans, Thomas, Tampa, Fla. Shoe heel plate and skate fastening means. 2,470,840, May 24.
Arco Company, The, assignee: *See*—
Bobalek, Edward G.
Arenco Aktiebolag, assignee: *See*—
Ekstrom, Gunnar, and Dietmann.
Arnold, Michael H. M., and W. E. Perry, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Production of salts of amino methionic acid. 2,471,018, May 24.
Asbill, Clarence M., Jr., assignor, by mesne assignments, to Callaway Mills Company, La Grange, Ga. Dispensing apparatus. 2,471,095, May 24.
Ashcroft, Ethel P., Colorado Springs, Colo. Clothespin. 2,471,186, May 24.
Ashton, Benjamin N., assignor to Electrol Incorporated, Kingston, N. Y. Connecting device. 2,470,800, May 24.
Aske, Leonard E., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Rheostat control device. 2,470,968, May 24.
Atchison, Leonard W., Erie, Pa., assignor to General Electric Company. Two-temperature refrigerating system. 2,471,137, May 24.
Atkinson, Ralph H., Westfield, and G. F. Gladia, Bayonne, N. J., assignors to The International Nickel Company, Inc., New York, N. Y. Production of palladium articles. 2,471,297, May 24.
Atlas Imperial Diesel Engine Co., assignee: *See*—
Laxo, Ed.
Atlee, Zed J., Elmhurst, assignor to General Electric X-Ray Corporation, Chicago, Ill. Cathode cup construction. 2,471,298, May 24.
Atomic Energy Commission, United States of America, as represented by the United States, assignee: *See*—
Marlowe, Elbert W., and Wilcox.
Attorney General of the United States, Vested in the: *See*—
Möhl, Torben.
Orthner, Ludwig, Balle, Schild, Schürmann, Broderseen, and Quaedvlieg.
Atwater, Karl W., Pittsburgh, Pa. Composite floating bearing journal. 2,471,187, May 24.
Auten, Robert W., Jenkintown, assignor to Rohm & Haas Company, Philadelphia, Pa. Urea resins containing aminoalkoxy substituents. 2,471,188, May 24.
"Automatic" Sprinkler Company of America, assignee: *See*—
Rider, Harry N.
Ayre, James E., Mount Royal, Quebec, Canada, assignor to Clay-Adams Company, Inc. Cervical scraper. 2,471,088, May 24.
Baak, Albert E., Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Hydraulic stoker control. 2,470,969, May 24.
Baer, Massimo, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Preparation of granular polymers of vinyl halides. 2,470,908, May 24.
Baer, Massimo, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Preparation of granular polymers of a vinyl halide. 2,470,909, May 24.
Baer, Massimo, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Preparation of granular polymers of vinyl halides. 2,470,910, May 24.
Baer, Massimo, Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Preparation of granular polymerization products of vinyl halides. 2,470,911, May 24.
Baker, Merle E., Santa Cruz, Calif. Singeing tool. 2,471,019, May 24.
Baker Oil Tools, Inc., assignee: *See*—
Althose, William S., Jr., and Graham.
Balle, Gerhard: *See*—
Orthner, Ludwig, Balle, Schild, Schürmann, Broderseen, and Quaedvlieg.
Barch, William E., Bronx, assignor to Standard Brands Incorporated, New York, N. Y. Separation of hydroxy organic acids. 2,470,841, May 24.
Barrington, Robert W., Throckmorton, Tex. Trailer hitch. 2,470,842, May 24.
Bartelink, Everhard H. B., Bronxville, N. Y., assignor to General Electric Company. Radio communication system. 2,471,138, May 24.
Bartels, Frank, assignor of one-fifth to J. G. Maslonka, Sacramento, Calif. Strainer and spout attachment for cans. 2,471,189, May 24.
Bartelson, Sten E., Ashland, N. J., assignor to Radio Corporation of America. Lamp socket. 2,471,190, May 24.
Barton, Robert C.: *See*—
Woods, Harold A., Yates, Klingen, and Barton.
Battelle Memorial Institute, assignee: *See*—
Strader, James E.

Becher, Paul: *See*—
Schlesinger, Walter, and Becher.
Bee Chemical Company, assignee: *See*—
Bjorksten, Johan, and Crowley.
Beer, Palle-Finn, Lidingo, Sweden, assignor, by mesne assignments, to Electrical Fono-Filma Co. A. S., Copenhagen, Denmark. Armature structure for electromagnetic apparatus. 2,471,365, May 24.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Cousins, Van M.
Dehmel, Richard C.
Depew, Charles.
Doherty, William H.
Gaines, Wilbur L.
Mathes, Robert C.
McMahon, William.
Meacham, Larned A.
Rea, Wilton T.
Stoller, Hugh M.
Benander, Clifford N., Meriden, Conn., and G. B. Benander, Oaklawn, R. I., assignors to Monowatt Incorporated. Continuous rotor molding machine. 2,471,139, May 24.
Benander, George B.: *See*—
Benander, Clifford N. and G. B.
Bendix Aviation Corporation, assignee: *See*—
Johnson, Philip A.
Benoit, Frederic, Vassy, France. Electrical apparatus for use in obstetrics. 2,470,970, May 24.
Benton, Harold Z., Woodstock, Ill. Radio antenna mounting and connector. 2,471,020, May 24.
Beretneff, Alexis A., assignor to Carrier Corporation, Syracuse, N. Y. Control arrangement for absorption refrigeration systems. 2,470,756, May 24.
Bertalan, Edward, Glen Arm, Md., and J. A. Wagner, Cleveland Heights, Ohio, assignors to Western Electric Company, Incorporated, New York, N. Y. Cable forming machine. 2,471,299, May 24.
Best, Frank P., Chelmsford, C. D. Colchester, Danbury, and J. Twatt, Chelmsford, England, assignors to Radio Corporation of America. Navigation siding apparatus. 2,470,912, May 24.
Bierwirth, John A., and F. Klaeden, Austin, Tex. Door hook. 2,471,089, May 24.
Bird, Whitworth F., Swarthmore, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Apparatus for drafting textile fibers. 2,471,056, May 24.
Bird, Whitworth F., Swarthmore, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Method and apparatus for drafting textile fibers. 2,471,057, May 24.
Bird, Whitworth F., Swarthmore, assignor to Collins & Aikman Corporation, Philadelphia, Pa. Control of textile fibers during drafting operations. 2,471,058, May 24.
Birginal, Sylvester J., Omaha, Nebr. Blind stitching apparatus. 2,470,914, May 24.
Bishop Company, The, assignee: *See*—
Devoe, Arthur R.
Bishop, Eugene T.: *See*—
Morris, Rupert C., Snider, and Bishop.
Bjorksten, Johan, Chicago, and T. C. Crowley, Plainfield, Ill., assignors to Bee Chemical Company. A coolant for metal machining processes. 2,470,913, May 24.
Blackburn, Clifford L., Grand Rapids, Mich. Front wheel and steering apparatus for wagons. 2,470,971, May 24.
Blank, Ronald G., Robbinsdale, Minn. Garbage can and cover keeper. 2,471,257, May 24.
Blaw-Knox Company, assignee: *See*—
Loxterman, Henry R.
Blemaide, William J., assignee: *See*—
Pasturczak, Harry S.
Block, David, Philadelphia, Pa. Bracelet clasp. 2,471,300, May 24.
Blok, Henri, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Receiver input circuit. 2,470,882, May 24.
Blums, Rene: *See*—
Delorme, Jean, and Blums.
Bobalek, Edward G., assignor to The Arco Company, Cleveland, Ohio. Interpolymer produced from polybydric alcohol, polybasic acid, and interpolymer of monovinylaromatic compound, olefinic acid, and drying oil or oil fatty acid. 2,470,752, May 24.
Bobalek, Edward G., assignor to The Arco Company, Cleveland, Ohio. Interpolymer of monovinylaromatic compound, monocarboxylic olefinic acid, and drying oil or acid. 2,470,757, May 24.
Boger, Sam, Dodge City, Kans. Crankcase oil heater. 2,470,972, May 24.
Bolsson, Pierre, Pont-a-Mousson, assignor to Compagnie De Pont-a-Mousson, Nancy, France. Pipe connection and packing ring therefor. 2,470,883, May 24.
Bolidens Gruvaktiebolag, assignee: *See*—
Gustafsson, G. V. A., and Malmqvist.
Bolta Company, The, assignee: *See*—
Bolten, John, Jr.
Bolten, John, Jr., Andover, assignor to The Bolta Company, Lawrence, Mass. Mold for sliding clasp fasteners. 2,471,258, May 24.
Boltman, Ralph B., Pittsburgh, Pa. Tractor tread. 2,470,801, May 24.
Bondurant, John E.: *See*—
De Rolsblanc, Deslande R., and Bondurant.
Boosey, Edward W. N., Detroit, Mich. Caulking plug. 2,471,301, May 24.
Booth, Earl C., assignor to Noblitt-Sparks Industries, Inc., Columbus, Ind. Collapsible support for ironing boards. 2,471,050, May 24.
Booth, F. E., Company Inc., assignee: *See*—
Almquist, Herman J., and Davis.
Booth, Robert B., Springdale, and R. A. Pickens, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Froth flotation of sulfide ores. 2,471,384, May 24.
Boothroyd, Wilson F., and W. H. Forster, assignors, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Stop-on carrier tuner. 2,470,843, May 24.
Borden Company, The, assignee: *See*—
Lemmel, Paul T.
Bosh, James E., Berwyn, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Dual purpose sleeve-spring spring jack. 2,470,915, May 24.
Boshaw, Ruby R., Detroit, Mich. Combination tool. 2,471,191, May 24.
Boulton, Robert E., Rifle, Colo. Shifting shovel loader. 2,471,192, May 24.
Bovee, Ranson Y., Van Nuys, assignor of one-fifth to E. E. Moore, Los Angeles, Calif. Necktie and collar combination. 2,470,973, May 24.
Boward, Nellie M., Richmond, Va. Collapsible bathtub. 2,471,302, May 24.
Boydstun, Willard E., Baker, Oreg. Post driver. 2,470,974, May 24.
Boynton, Earl S.: *See*—
O'Brien, Joseph F., and Boynton.
Braden, Rene A., Princeton, N. J., assignor to Radio Corporation of America. Microwave device. 2,470,802, May 24.
Bradley, William E., Swarthmore, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Radio wave gnide. 2,471,021, May 24.
Breth, Walter J., assignor to The General Tire and Rubber Company, Akron, Ohio. Feed table for tire building machines. 2,471,140, May 24.
Brewer-Titchener Corporation, The, assignee: *See*—
Card, Charles S.
Brewster, Oliver H., Essex Fells, assignor to Electrical Industries, Inc., Newark, N. J. Bottle-sterilizing arrangement. 2,471,303, May 24.
Bristow, Paul W., assignor to Scott & Williams, Incorporated, Laconia, N. H. Knitting machine. 2,470,803, May 24.
Brodersen, Karl: *See*—
Orthner, Ludwig, Balle, Schild, Schürmann, Brodersen, and Quaedvileg.
Bromfield, St. Clair, Jackson Heights, Long Island, N. Y. Distribution board. 2,470,884, May 24.
Brower, James E., Pleasantville, N. J. Beam compass. 2,471,193, May 24.
Brown, Robert L., assignee: *See*—
Waara, David H.
Brownscombe, Philip J., Chatham, assignor to Griscombe Corporation, Newark, N. J. Combined photographic copying stand and apparatus. 2,470,844, May 24.
Brydon, Thomas W.: *See*—
Parker, Irvine E., and Brydon.
Buc, George L.: *See*—
Stearns, Edwin I., Jr., and Buc.
Budd, Company, The, assignee: *See*—
Farr, Warren H.
Bunn, B. H., Company, assignee: *See*—
Bunn, Benjamin H.
Bunn, Benjamin H., assignor to B. H. Bunn Company, Chicago, Ill. Tying machine for elongated packages. 2,471,304, May 24.
Bunn, Edward S., assignor to Revere Copper and Brass Incorporated, Rome, N. Y. Zinc base alloys. 2,471,385, May 24.
Burrows, Robert J., and A. O. Williams, Battle Creek, assignors to Clark Equipment Company, Buchanan, Mich. Resilient wheel. 2,470,885, May 24.
Bursett, Clem, Seattle, Wash. Distribution of manifest sheets. 2,470,758, May 24.
Bussey, William H., Chicago, assignor to R. L. Kahn, Glencoe, Ill., as trustee. Electrical apparatus. 2,470,975, May 24.
Butler, Matthew B., assignee: *See*—
Lankovski, Anatoly, and Graves.
Buzzell, Francis A., Chicago, Ill. Insulating bushing. 2,470,886, May 24.
Caldwell, John A., Philadelphia County, W. H. Wannamaker, Jr., Flourtown, and G. W. Kuntuy, Mount Airy, Pa., assignors, by mesne assignments, to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electrical control instrument. 2,471,393, May 24.
Callaway Mills Company, assignee: *See*—
Ashill, Clarence M., Jr.
Campaigne, Ernest E., and W. M. Le Suer, Bloomington, assignors to Indiana University Foundation, Monroe County, Ind. 3-thenyl bromide salts. 2,471,090, May 24.
Campaigne, Ernest E., and W. M. Le Suer, Bloomington, assignors to Indiana University Foundation, Monroe County, Ind. 3-thenyl bromide. 2,471,091, May 24.

Campaigne, Ernest E., and W. M. Le Suer, Bloomington, assignors to Indiana University Foundation, Monroe County, Ind. Preparation of 3-thenaldehyde. 2,471,092, May 24.
Campaigne, Ernest E., and W. M. Le Suer, Bloomington, assignors to Indiana University Foundation, Monroe County, Ind. 3,3'-thenoin. 2,471,093, May 24.
Campbell, Charles H., Kent, Ohio. Refining reclaimed rubber with cooling of the rubber to facilitate separation of tailings. 2,471,392, May 24.
Capps, Alonzo V., Alamogordo, N. Mex. Wrench. 2,471,194, May 24.
Card, Charles S., assignor to The Brewer-Titchener Corporation, Cortland, N. Y. Clamp. 2,471,305, May 24.
Card, Charles S., assignor to The Brewer-Titchener Corporation, Cortland, N. Y. Clamp. 2,471,306, May 24.
Carlyle Sales Corporation, assignee: *See*—
Wallwork, Alfred.
Carnegie-Illinois Steel Corporation, assignee: *See*—
Jenkins, Wesley B.
Carpenter Steel Company, The, assignee: *See*—
Post, Carl B.
Post, Carl B., and Eberly.
Carr-Lowrey Glass Co., assignee: *See*—
Garwood, Charles B.
Carrier Corporation, assignee: *See*—
Beretneff, Alexis A.
Carruthers, E. H., Co., assignee: *See*—
Carruthers, Eben H.
Carruthers, Eben H., Ithaca, N. Y., assignor to E. H. Carruthers Co., Warrenton, Oreg. Apparatus for selectively packing products of variable weight. 2,470,916, May 24.
Carruthers, Eben H., assignor to E. H. Carruthers Co., Warrenton, Oreg. Apparatus for packing products of variable weight. 2,470,976, May 24.
Carter, Robert E., Mount Holly Springs, assignor to C. H. Masland & Sons, Carlisle, Pa. Pocket and making. 2,471,386, May 24.
Carter, William, Company, The, assignee: *See*—
Redmond, Harriet L.
Carvalho, Leslie R. N., assignor, by mesne assignments, to Crown Cork Specialty Corporation, Decatur, Ill. Method and apparatus for forming threaded caps. 2,471,307, May 24.
Casnati, Lola A., New York, N. Y. Sanitary holder for small articles. 2,471,308, May 24.
Cassano, Erminio, Framingham, Mass. Blank for shoe uppers. 2,471,366, May 24.
Castelli, Charles, Union City, assignor to Colombia Protektosite Co., Inc., Carlstadt, N. J. Clothespin. 2,471,141, May 24.
Castillow, Peyton, assignee: *See*—
Hendricks, Will S.
Canci, Joseph, and D. Krakauer, assignors to Kay Manufacturing Corporation, Brooklyn, N. Y. Machine for assembling springs. 2,470,812, May 24.
Cavaness, James D., Arlington, Tex. Lawn mower. 2,471,367, May 24.
Celanese Corporation of America, assignee: *See*—
Paffen, Fred W., and Cornelius.
Ceresa, Myron: *See*—
Jernstedt, George W., and Ceresa.
Chace, W. M., Company, assignee: *See*—
Alban, Clarence F.
Chaffee, Floyd O., South Gate, Calif. Injection device. 2,471,142, May 24.
Chandeysson, Pierre J., St. Louis, Mo. Dynamoelectric machine. 2,470,845, May 24.
Chandler, Harry L., Portland, Oreg. Sickbed waste receptacle holder. 2,471,309, May 24.
Chapman, Harold P., Columbus, assignor of one-half to E. F. Mangold, London, Ohio. Electrically actuated heater. 2,471,259, May 24.
Chapman, Harold P., Columbus, assignor of one-half to E. F. Mangold, London, Ohio. Electrical fluid heater. 2,471,260, May 24.
Charles, George K., Wincanton, England. Tape severing device. 2,471,310, May 24.
Chenicek, Joseph A., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Treating cracked gasoline to remove metals. 2,470,887, May 24.
Cheshire, Arthur, Cottingham, assignor to Richard Hodgson and Sons Limited, Beverley, England. Preserving vegetable tanned leather. 2,471,022, May 24.
Chicago Metal Hose Corporation, assignee: *See*—
Keller, Sidney, and Fentress.
Chidsey, Charles A., Jr., Detroit, Mich. Bag stand. 2,470,977, May 24.
Chiego, Bernard, Newark, N. J. Preparing gum-containing seeds for dehusking. 2,470,750, May 24.
Chiego, Bernard, Newark, N. J. Preparing gum-containing seeds for dehusking. 2,470,751, May 24.
Chisholm-Ryder Company, Incorporated, assignee: *See*—
Hesson, Charles M.
Christen, Victor H., Sierra Madre, Calif. Storage battery filling device support. 2,471,004, May 24.
Christensen, Aage, Chula Vista, Calif. Building wall of plastic filled sectional blocks. 2,470,917, May 24.
Christopher, Claude J., Los Angeles, Calif. Variable capacity hydraulic pump. 2,471,195, May 24.
Chromogen Incorporated, assignee: *See*—
Gasper, Bela.
Chrysler Corporation, assignee: *See*—
Wreth, Nathaniel.
Chung, Ling, New York, N. Y. Impregnating and decorating cementitious materials. 2,470,918, May 24.
Cierl, Dominick J., Hartford, Conn. Adjustable pattern for collars and lapels. 2,471,196, May 24.
Cincinnati Milling Machine Co., The, assignee: *See*—
Dall, Albert H., and Horlacher.
Cities Service Oil Company, assignee: *See*—
Morgan, John D., and Lowe.
Clark Bros. Co., Inc., assignee: *See*—
Trumpler, William E.
Clark Equipment Company, assignee: *See*—
Burrows, Robert J., and Williams.
Clark, Henry B., Elisabeth, N. J. Bracket for mounting rollers on overhead doors. 2,471,197, May 24.
Clark, Thomas S. H., Bensselaer, assignor, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y. Enrichment composition. 2,470,804, May 24.
Clay-Adams Company, Inc., assignee: *See*—
Ayre, James E.
Clayton, Andrew B., Silver Bay, assignor to The Singer Manufacturing Company, Elisabeth, N. J. Feeding mechanism for sewing machines. 2,470,750, May 24.
Cleveland, Crane & Engineering Company, The, assignee: *See*—
Wehr, William G.
Climax Molybdenum Company, assignee: *See*—
Lins, Arthur.
Clnett, Peabody and Co., Inc., assignee: *See*—
Pfeffer, Edward C., Jr.
Colt, Burton C., Jr., assignor to Tri-State Engineering Company, Washington, Pa. Combined pallet and crate structure. 2,471,095, May 24.
Colchester, Christopher D.: *See*—
Best, Frank P., Colchester, and Twatt.
Cole, Nelson E., assignor to Parish Pressed Steel Co., Reading, Pa. Frame structure for truck or trailer bodies or the like. 2,470,919, May 24.
Collard, John, Hammersmith, London, assignor to Electric & Musical Industries Limited, Hayes, Middlesex, England. Preventing or reducing the escape of high-frequency energy. 2,470,805, May 24.
Collins & Aikman Corporation, assignee: *See*—
Bird, Whitworth F.
Colorigh, Vincent L., Tulsa, Okla. Disappearing bolster for vehicles. 2,471,096, May 24.
Colson, Thomas, San Francisco, Calif. Electron counter. 2,470,920, May 24.
Columbia Protektosite Co., Inc., assignee: *See*—
Castelli, Charles.
Colvin, Nolan D., assignor to Deere & Company, Moline, Ill. Mower. 2,471,311, May 24.

Hope, Eric S.
Cook, Elmer W., New York, N. Y., and P. H. Moss, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Mildew-proofing. 2,471,201, May 24.
Cook, James G., J. T. Dickson, and A. R. Lowe, Blackley, Manchester, and J. R. Whinfield, Accrington, England, assignors to Imperial Chemical Industries Limited. Highly polymeric linear esters. 2,471,023, May 24.
Cooper, James H., assignor to H. Weatherford, Jr., Memphis, Tenn. Engine protective device. 2,471,887, May 24.
Cooper, Robert E., Fort Monroe, Va., assignor to Flexible Sewer Rod Equipment Co., Los Angeles, Calif. Flexible sewer rod coupling feeler. 2,471,060, May 24.
Corbliss, George A., Long Island City, N. Y. Electric ironing cord guide. 2,471,312, May 24.
Cormany, David B., Long Beach, Calif. Tubing rotator. 2,471,198, May 24.
Cornelius, Harry L.: *See*—
Paffen, Fred W., and Cornelius.
Cousins, Van M., Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Multiplying voltages. 2,471,202, May 24.
Coventry Climax Engines Limited, assignee: *See*—
Halhaway, Lawrence.
Coyne, Vincent C., and J. W. Stuart, New Brunswick, N. J. Parachute release for kites. 2,471,199, May 24.
Cramer, Roy A., Kansas City, Mo. Chair with tilting back and sntomatically shiftable seat. 2,471,024, May 24.
Crane Co., assignee: *See*—
Fredrickson, Edward A.
Kanter, Jerome J.
Cress, Jay J., Schenectady, N. Y., assignor to General Electric Company. Piezoelectric apparatus. 2,471,143, May 24.
Cron, Charles L.: *See*—
Rector, Laurence L., and Cron.

Crossman, Theodore C., Wilkinsburg, assignor to The American Brake Company, Swissvale, Pa. Brake rigging. 2,471,818, May 24.

Crouse-Hinds Company, assignee: *See*—
Parish, Willard E.

Crowley, John A., Jr.: *See*—
Simpson, Thomas P., Payne, and Crowley, Jr.

Crowley, Thomas C.: *See*—
Bjorksten, Johan, and Crowley.

Crown Cork Specialty Corporation, assignee: *See*—
Caralho, Leslie R. N.

Cullen, Charles C., assignee: *See*—
Kennedy, Arthur.

Curry, Paul, New Haven, Conn. Electrical communication system. 2,470,760, May 24.

Curtis, Grover C., Bryan, Tex. Gathering head for cotton harvesting machines. 2,471,814, May 24.

Dall, Albert H., and H. Horlacher, assignors to The Cincinnati Milling Machine Co., Cincinnati, Ohio. Pattern controlled machine tool. 2,471,097, May 24.

Danielsson, Borje K., Abrahamsberg, and L. A. Widing, assignors to Aktiebolaget Gotaverken, Goteborg, Sweden. Oil burner. 2,471,025, May 24.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism. 2,471,061, May 24.

Davies, Lynn E., Park Ridge, assignor to White Cap Company, Chicago, Ill. Rotary marking means for containers. 2,471,098, May 24.

Davis, Carl P., Jr., Knoxville, Tenn. Distance indicator. 2,470,807, May 24.

Davis, Eugene W., Meredosia, Ill. Fish scoring machine. 2,471,062, May 24.

Davis, John G.: *See*—
Almquist, Herman J., and Davis.

Davy, Edward D., Delmar, assignor to Sterling Drug Inc., New York, N. Y. Salt substitute. 2,471,144, May 24.

Deane, William, Ridgewood, N. J., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa. Composite switching device. 2,471,200, May 24.

Deardorff, Neva R., New York, N. Y. Body-supported infant's chamber pot. 2,471,201, May 24.

De Boisblanc, Deslonde R., and J. E. Bondurant, Bartlesville, Okla., assignors to Phillips Petroleum Company. Seismograph blaster time breaker circuit. 2,470,846, May 24.

Deere & Company, assignee: *See*—
Colvin, Nolan D.

Degner, Charles F., assignor of one-half to H. M. Unschuld, Chicago, Ill. Deep well pump. 2,470,885, May 24.

De Groote, Melvin, University City, and B. Keiser, Webster Groves, Mo., assignors to Petrolite Corporation, Ltd., Wilmington, Del. Breaking petroleum emulsions. 2,470,808, May 24.

Dehmel, Richard C., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Aircraft trainer for aerial gunners. 2,471,315, May 24.

Del Cueto, Raul, Papantla, Mexico. Device for heating, cooling, or radiating liquids. 2,470,806, May 24.

Delorme, Jean, Bron, and R. Bluma, Asnieres, assignors to Societe Anonyme des Manufactures des Glaces et Produits Chimiques de Saint-Gobain, Chauny & Cirey, Paris, France. Solvents and plasticizers for vinyl resins. 2,470,761, May 24.

Delphos Bending Company, The, assignee: *See*—
Deitler, Leslie C.

Demorest, Dana J.: *See*—
Nye, Ralph D., and Demorest.

Depew, Charles, Oakland, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ionic discharge device. 2,471,263, May 24.

Desaulniers, Hubert, Montreal, Quebec, Canada. Chance controlled hemispherical game piece. 2,471,202, May 24.

Dethlefs, Walter M., Santa Monica, and F. Minder, Los Angeles, Calif. Microprotractor. 2,471,099, May 24.

Detroit Engineering Laboratories, Inc., assignee: *See*—
Du Brie, Stanley R.

Devoe, Arthur R., assignor to The Bishop Company, North Attleboro, Mass. Nonmetal nose guard. 2,471,063, May 24.

Dickenson, Leo E., Washington, D. C. Folding machine. 2,470,762, May 24.

Dickson, James T.: *See*—
Cook, James G., Dickson, Lowe, and Whinfield.

Diedrich, Clayton H.: *See*—
White, Glen L., and Diedrich.

Diehl, Russell C., Baltimore, Md. Laminated wooden bowling pin. 2,471,316, May 24.

Dietmann, Paul W.: *See*—
Ekstrom, Gunnar, and Dietmann.

Distillation Products, Inc., assignee: *See*—
Hickman, Kenneth C. D.

Ditto, Incorporated, assignee: *See*—
Erickson, Andrew L.

Dodge, Ralph E., Clermont, Fla. Dispensing apparatus. 2,471,100, May 24.

Dodge, Ralph E., Takoma Park, Md. Batter dispenser. 2,471,399, May 24.

Doherty, William H., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio object location system. 2,471,264, May 24.

Dow, Alden B., Midland, Mich. Plastic window. 2,470,921, May 24.

Dow Chemical Company, The, assignee: *See*—
Dreisbach, Robert R., and Fletcher.
Hooker, George W., and Peterson.

Doyle, Dorris M., Springfield, Pa. Flux coated aluminum rod for gas welding. 2,470,763, May 24.

Dreisbach, Robert R., and F. W. Fletcher, assignors to The Dow Chemical Company, Midland, Mich. Parasiticidal compositions comprising alkyl-halo-naphthalenes. 2,471,265, May 24.

Drescher, Arthur B., assignor to Lone Star Steel Company, Daingerfield, Tex. Method and apparatus for separating magnetic from nonmagnetic materials. 2,470,886, May 24.

Du Brie, Stanley R., assignor to Detroit Engineering Laboratories, Inc., Detroit, Mich. Trailer caster. 2,470,978, May 24.

Dunbar, Thomas L., Watertown, N. Y. Treating waste sulfite liquor. 2,470,764, May 24.

Duncan, George R., Washington, Mo. Milking domestic farm animals and for temporarily storing milk and cooling it. 2,470,879, May 24.

Dunn, John R., South Groveland, Mass., assignor to Western Electric Company, Incorporated, New York, N. Y. Work distributing conveyer system. 2,470,922, May 24.

Dunston, James M., Jeffersonville, Ind. Bread cooling and proofing rack. 2,470,765, May 24.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Pavlic, Albert A.

Durning, James P., deceased, late of St. Albans, N. Y., by J. L. Durning, executrix, St. Albans, N. Y., assignor to International Cigar Machinery Company. Cigar machine. 2,470,766, May 24.

Durning, Jean L., executrix: *See*—
Durning, James P.

East Shore Machine Products Company, assignee: *See*—
Giza, Adolph.

Eberly, Warren S.: *See*—
Post, Carl B., and Eberly.

Eby, Ivan D., New York, N. Y. Device for determining the depth of liquids. 2,471,026, May 24.

Eddy, Arnold, Middletown, Conn., assignor to Trubenizing Process Corporation, New York, N. Y. Article of apparel and making same. 2,471,203, May 24.

Eisler, Charles, South Orange, N. J. Tube end forming machine. 2,470,923, May 24.

Eitel-McCullough, Inc., assignee: *See*—
Norton, Robert L.

Ekström, Gunnar, Stockholm, and P. W. Dietmann, Jonkoping, assignors to Arenco Aktiebolag, Stockholm, Sweden. Gunfire control training apparatus. 2,471,368, May 24.

Elants, Adriaan T., Brussels, Belgium. Obviating cylinder wear in engines and the like. 2,470,809, May 24.

Electric & Musical Industries Limited, assignee: *See*—
Collard, John.

Electrical Fono-Films Co. A. S., assignee: *See*—
Beer, Palle-Finn.

Electrical Industries, Inc., assignee: *See*—
Brewster, Oliver H.

Electrol Incorporated, assignee: *See*—
Ashton, Benjamin N.

Elliott, Richard M., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Computing sight. 2,471,204, May 24.

Ellis, Charles E., Mahwah, N. J. Polyphase alternating current dynamo. 2,470,767, May 24.

Ellis-Foster Company, assignee: *See*—
Robertson, John W., and Rust.
Rust, John B.

Emery, Alfred H.: *See*—
Aldeborgh, Erik H., and Emery.

Empire Furniture Manufacturing Company, assignee: *See*—
Shoenberg, Abraham J.

Emsco Derrick & Equipment Company, assignee: *See*—
Tremolada, Guglielmo E.

Engard, Albert L.: *See*—
Engard, John E. and A. L.

Engard, John E. and A. L., Haselton, Pa. Belt-applying tool. 2,470,810, May 24.

Engleman, Elmer F., Burbank, Calif. Towel clip. 2,470,811, May 24.

Epstein, Benjamin, assignee: *See*—
Schenck, Edward L.

Epstein, Leonard S., assignee: *See*—
Schenck, Edward L.

Epstein, Stanley W., assignee: *See*—
Schenck, Edward L.

Erickson, Andrew L., Cincinnati, Ohio, assignor to Ditto, Incorporated, Chicago, Ill. Unit strip assembly. 2,471,145, May 24.

Evans, Ambrose H., Hutchinson, Kans. Gun sight. 2,471,027, May 24.

Fagan, Thomas F., Columbia, Conn. Dental flask. 2,471,205, May 24.

Fairmont Railway Motors, Incorporated, assignee: *See*—
Meskimen, Leslie C.

Farr, Warren H., Grosse Pointe Farms, Mich., assignor to The Budd Company, Philadelphia, Pa. Plowshare. 2,471,366, May 24.

Fausek, Arthur J. and I. F., Clayton, Mo. Heat exchanger. 2,471,317, May 24.

Fausek, Irwing F.: *See*—
Fausek, Arthur J. and I. F.

Fawcett, Eric W. M., E. S. Narracott, and K. J. Rowland, Sunbury-on-Thames, assignors to Anglo-Iranian Oil Company Limited, London, England. Vinyl polymers plasticised with air-blown extracts of mineral oil fractions. 2,471,266, May 24.

Fawcett, Eric W. M., E. S. Narracott, and A. Millien, Sunbury-on-Thames, assignors to Anglo-Iranian Oil Company Limited, London, England. Vinyl polymers plasticised with sulfur treated extracts of mineral oil fractions. 2,471,267, May 24.

Federal Power Commission, United States of America as represented by the Chairman of the, assignee: *See*—
Thomas, Percy H.

Feinberg, Charles E., Detroit, Mich. Secondary combustion air distribution control for bridge wall furnaces. 2,471,101, May 24.

Felburg, Robert A., Newark, N. J. Rheostat with centrifugal operator. 2,470,768, May 24.

Fentress, David W.: *See*—
Keller, Sidney, and Fentress.

Fiene, Clara E., administratrix: *See*—
Fiene, Marcus E.

Fiene, Marcus E., deceased, Scotia, N. Y., by C. E. Fiene, administratrix, Erie, Pa., assignor to General Electric Company. Thermomotive modulating heat transfer system. 2,471,146, May 24.

Filtrol Corporation, assignee: *See*—
Secor, Robert B.

Fish, John J., assignor to Sun Chemical Corporation, New York, N. Y. Treatment of microcrystalline residues and products resulting therefrom. 2,471,102, May 24.

Fishman, Isidore F., assignee: *See*—
Massaro, Peter J.

Fitzsimmons, John T., and W. D. Schrope, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich. Ignition timer. 2,471,318, May 24.

Fletcher, Fred W.: *See*—
Dreisbach, Robert R., and Fletcher.

Fletcher, John F., Cleveland, Miss. Siren. 2,471,028, May 24.

Flexible Sewer Rod Equipment Co., assignee: *See*—
Cooper, Robert E.

Floraus, Howard A., Wallingford, assignor to South Chester Corporation, Chester, Pa. Fastening device. 2,470,924, May 24.

Florman, Irving, New York, N. Y. Flint holder. 2,471,206, May 24.

Foote, Daniel J.: *See*—
Soref, Harry E., and Foote.

Forkner, Ewell W., Cincinnati, Ohio. Portable welder. 2,471,029, May 24.

Forster, William H.: *See*—
Boothroyd, Wilson P., and Forster.

Foulke, Ted E., Lyndhurst, Ohio. Table attachment for beverage containers. 2,471,030, May 24.

Franklin Transformer Manufacturing Company, assignee: *See*—
Savidge, Clinton W.

Franks, David, and M. Shapiro, Washington, D. C. Watch movement holder. 2,471,103, May 24.

Fredrickson, Edward A., assignor to Crane Co., Chicago, Ill. Piston seal for flush valves. 2,470,925, May 24.

Freeman, Grover C., Fort Leavenworth, Kans. Blade sharpener. 2,471,207, May 24.

Gagnon, James, Olalla, Wash. Folding berry box. 2,471,147, May 24.

Gaines, Wilbur L., Great Neck, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Index pulse generating circuit. 2,471,268, May 24.

Gale, Marvin E., and F. W. Warner, Pittsfield, Mass., assignors to General Electric Company. Sprue cutter for transfer molding devices. 2,471,148, May 24.

Gardère, Henri, assignor to Compagnie General d'Electricite, Paris, France. Alternating-current signal transmitting system. 2,471,319, May 24.

Garwood, Charles B., Linthicum Heights, assignor to Carr-Lowrey Glass Co., Baltimore, Md. Making parisons. 2,471,369, May 24.

Gaspar, Bela, Hollywood, Calif., assignor to Chromogen Incorporated. Color photographic material and processes for producing same. 2,470,769, May 24.

Gaulke, Erich, New Bedford, Mass. Rigger's vise for splicing wire and like material. 2,471,289, May 24.

Gay, John E., Newborn, Ga. Portable drill brace. 2,471,208, May 24.

Gesdik, Laszlo, McKeesport, Pa. Protector for pipes. 2,471,209, May 24.

Gegauf, Fritz, assignor to Fritz Gegauf's Sohne Aktiengesellschaft, Steckborn, Switzerland. Mending of stockings in sewing machines. 2,471,370, May 24.

Gegauf's, Fritz Sohne Aktiengesellschaft, assignee: *See*—
Gegauf, Fritz.

General Baking Company, assignee: *See*—
Maull, Harry W., and Sauter.

General Controls Co., assignee: *See*—
Ray, William A.

General Electric Company, assignee: *See*—
Atchison, Leonard W.
Bartelink, Everhard H. B.
Crese, Jay J.
Fiene, Marcus E.
Gale, Marvin E., and Warner.
Goodale, Charles J., and Marvin.
Goss, Wesley R.
Keim, Donald B.
Langmuir, Robert V., and Peters, Jr.
Linville, Thomas M.
Matson, William N., and Jacobs.
Reich, William A.
Stimson, Allen G.
Von Hoorn, Fred G.
Welsh, Robert.
Wightman, Lawrance W.
Worth, Thomas F.

General Electric X-Ray Corporation, assignee: *See*—
Atlee, Zed J.

General Mills, Inc., assignee: *See*—
Wittcoff, Harold.

General Motors Corporation, assignee: *See*—
Fitzsimmons, John T., Schrope.

General Tire and Rubber Company, The, assignee: *See*—
Breth, Walter J.

Geometric Tool Company, The, assignee: *See*—
Strickland, Royce M.

Giesecke, Werner A., Danville, Ill. Electronic counter. 2,470,926, May 24.

Gilson, Robert M., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway braking apparatus. 2,471,320, May 24.

Giza, Adolph, assignor to East Shore Machine Products Company, Cleveland, Ohio. Rotary gear pump. 2,471,149, May 24.

Glittens, Sidney R., Philadelphia, Pa. Display card and package. 2,471,321, May 24.

Gladis, George P.: *See*—
Atkinson, Ralph H. and Gladis.

Gleasman, Vernon E., Elmira, N. Y. Hydraulic transmission. 2,471,031, May 24.

Glover, Leonard E., assignor to himself and Pitter Gauge & Precision Tool Co. Limited, Leatherhead, England. Micrometer gauge and the like. 2,471,322, May 24.

Glucklin, Edwin W., Brooklyn, N. Y. Brassiere and similar garment. 2,470,847, May 24.

Gohr, Edwin J., Summit, N. J., assignor to Standard Oil Development Company. Production of unsaturated hydrocarbons and hydrogen. 2,471,104, May 24.

Goldstein, Adolph O., Santa Cruz, Calif. Slicer for citrus fruit and the like. 2,470,813, May 24.

Goodale, Charles J., and H. B. Marvin, Schenectady, N. Y., assignors to General Electric Company. Accounting machine. 2,471,150, May 24.

Goodpasture, Charles H., Chicago, Ill. Holder for dispensing containers. 2,470,890, May 24.

Goodrich, B. F., Company, The, assignee: *See*—
Haas, Eugene G.
Loughborough, Dwight L.

Goss, Wesley R., Fort Wayne, Ind., assignor to General Electric Company. Adjustable speed dynamoelectric machine. 2,471,151, May 24.

Graham, Eugene, Jr.: *See*—
Althouse, William S., Jr., and Graham, Jr.

Graver, Philip S., Chicago, Ill., assignor to Graver Tank & Mfg. Co., Inc., East Chicago, Ind. Gas reservoir. 2,471,270, May 24.

Graver Tank & Mfg. Co., Inc., assignee: *See*—
Graver, Philip S.

Graves, Michael: *See*—
Lahovski, Anatoly, and Graves.

Gray, Oscar, and H. Lewis, Bloomington, Ind. Flashlight switch. 2,471,032, May 24.

Greeley, Philip H., Washington, D. C. Radio-frequency testing device. 2,471,033, May 24.

Green, Martin, Newark, N. J. Educational device. 2,471,271, May 24.

Griffin, Clyde C., Branford, Fla. Stock carrier. 2,471,152, May 24.

Griffin, Hartwell, Paxton, Mass. Bath brush. 2,471,210, May 24.

Griscombe Corporation, assignee: *See*—
Brownscombe, Philip J.

Gubner, Richard, Brooklyn, N. Y. Salicylate and succinate therapeutic preparations. 2,471,394, May 24.

Guest, George C., Winnipeg, Manitoba, Canada. Boat carrier for automobiles. 2,470,648, May 24.

Gulf Research & Development Company, assignee: *See*—
Hanson, William E.
Spindt, Roderick S., and Stevens.

Gustafsson, Gotthard V. A., Akeshov, and J. D. Malmqvist, Boliden, assignors to Bolidens Gruvaktiebolag, Stockholm, Sweden. Alternating current compensator circuit for measuring. 2,471,105, May 24.

Gutsche, Carl D.: *See*—
Johnson, William S., Peterson, and Gutsche.

Haas, Eugene G., Copley Township, Summit County, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Reducing the adhesion of ice to rubbery surfaces. 2,470,772, May 24.

Hadden, Stuart T., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Alkylation catalyzed by liquid hydrogen fluoride. 2,471,211, May 24.

Hain, Max, Pittsburgh, Pa. Electrical cable support or rack. 2,470,814, May 24.
Haley, Frank, Newburgh, N. Y. Combination button. 2,470,980, May 24.
Hale, William C., Jr., assignor to South Chester Corporation, Chester, Pa. Fastening means. 2,470,927, May 24.
Hall, Clarence E., Portland, Oreg. Valve clearance gauge. 2,471,106, May 24.
Hall, Ralph E.: *See*—
Wilcox, Marion J., and Hall.
Hall, Ralph E., East Chicago, Ind., and M. J. Wilcox, Harvey, Ill., assignors to Sinclair Refining Company, New York, N. Y. Fluidised catalytic conversion of hydrocarbons. 2,471,034, May 24.
Hall, Ralph E., East Chicago, Ind., and M. J. Wilcox, Harvey, Ill., assignors to Sinclair Refining Company, New York, N. Y. Stripping of spent catalyst in hydrocarbon conversion. 2,471,064, May 24.
Halstead, John F., Brooklyn, N. Y., assignor to International Cigar Machinery Company. Wrapper carrier operating mechanism. 2,471,389, May 24.
Halter, Allan C., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Speed responsive means. 2,470,928, May 24.
Hammers, Incorporated, assignee: *See*—
Hammers, William P.
Hammers, William P., assignor to Hammers, Incorporated, Detroit, Mich. Speed nut tool. 2,470,891, May 24.
Hanson, Estyle D., Baltimore, Md. Rotary turbine type fluid coupling. 2,471,212, May 24.
Hanson, William E., Gibsonia, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Recovery of by-product acids. 2,470,849, May 24.
Hardick, Frederik A., Enschede, Netherlands. Shuttle for narrow ware looms. 2,470,981, May 24.
Harrington, William J., assignor to Lukens Steel Company, Coatesville, Pa. Hoisting and lifting device. 2,471,323, May 24.
Harris, Frederic R., New York, N. Y. Water level indicator for floating dry docks. 2,470,850, May 24.
Harris, Frederic R., New York, N. Y. Floating dry dock. 2,471,065, May 24.
Hartford-Empire Company, assignee: *See*—
Lorens, Edward H.
Hartford National Bank and Trust Company, trustee, assignee: *See*—
Blok, Henri.
Hepp, Gerard.
Posthumus, Klaas.
Harvey, Henry S., Palm Beach, Fla., assignor to Independent Lock Company, Fitchburg, Mass. Communicating door lock. 2,470,770, May 24.
Harvey, Henry S., Palm Beach, Fla., assignor to Independent Lock Company, Fitchburg, Mass. Latch. 2,470,771, May 24.
Harvey, Roosevelt W. W., Somerville, Mass. Athletic apparatus. 2,470,815, May 24.
Harvey, Roosevelt W. W., Somerville, Mass. Exercising device. 2,470,816, May 24.
Haskins, Robert, Jr., Rutherfordton, N. C., assignor to The Sperry Corporation. Asymmetric scoraby and operation. 2,470,773, May 24.
Hassell, James R., South Dos Palos, Calif. Automatic water temperature control. 2,471,371, May 24.
Haswell, Walter T., Jr., United States Navy. Indicating device. 2,470,774, May 24.
Hathaway, Lawrence, Oswestry, assignor to Coventry Climax Engines Limited, Coventry, England. Water-cooling system for internal-combustion engines and the like. 2,470,982, May 24.
Hemminger, Charles E., Westfield, N. J., assignor to Standard Oil Development Company. Recovery of hydrocarbon oil. 2,471,107, May 24.
Hendricks, Homer D., Seattle, Wash. Flexible golf tee. 2,470,817, May 24.
Hendricks, Will S., assignor of one-half to P. Castillow, Wichita Falls, Tex. Support and guide for drill stems. 2,470,983, May 24.
Henning, George E., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for advancing nonmetallic plastic material. 2,471,324, May 24.
Hepp, Gerard, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Stabilised frequency modulator. 2,470,892, May 24.
Hepp, Gerard, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Circuit arrangement for modulating an electric signal. 2,470,893, May 24.
Hermanson, William A., Brookline, Mass. Soap powder packet. 2,470,851, May 24.
Hesson, Charles M., Hanover, Pa., assignor to Chisholm-Ryder Company, Incorporated, Niagara Falls, N. Y. Labeler. 2,471,066, May 24.
Hickman, Kenneth C. D., assignor to Distillation Products, Inc., Rochester, N. Y. Vacuum dehydration. 2,471,325, May 24.
Higgins, Eric E., Tewin Wood, England, assignor to Tewin Industries, Inc., New York, N. Y. Treatment of aqueous liquids. 2,471,213, May 24.
Hill, Boyd N., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Treatment of sulfur containing hydrocarbons. 2,471,106, May 24.
Hirsh, Philip E., Montclair, assignor to Lock Joint Pipe Company, East Orange, N. J. Pipe joint. 2,470,818, May 24.
Hitchcock, Stanley L., assignor to Tropical Plantations Limited, London, England. Magnetic work holder. 2,471,067, May 24.
Hodgson, Richard and Sons, Limited, assignee: *See*—
Cheshire, Arthur.
Hooker, George W., Sarnia, Ontario, Canada, and N. R. Peterson, assignors to The Dow Chemical Company, Midland, Mich. Water-soluble cellulose ether plasticised with a cyclomethylene sulfone. 2,471,272, May 24.
Hoover, Charles O., Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y. Process of treating petroleum oils with a copper soap and of producing the copper soap. 2,471,153, May 24.
Hope, Eric S., Elizabeth, N. J., assignor, by mesne assignments, to Conveyor & Machinery Manufacturers, Inc., New York, N. Y. Gathering machine distributor. 2,471,214, May 24.
Horlaescher, Herman: *See*—
Dall, Albert H., and Horlaescher.
Horn, Jacque E., New York, N. Y. Detachable seat cushion. 2,470,929, May 24.
Horning, Raymond H., and I. L. Wilcox, assignors to Oswego Falls Corporation, Fulton, N. Y. Container construction. 2,470,984, May 24.
Hoyt, William C., Sr., Aberdeen, Wash. Leaf separator for berry picking machines. 2,471,326, May 24.
Hughes, Edwin J., Jr.: *See*—
Salsberg, Louis, and Hughes, Jr.
Hughey, Howard G., Fanwood, N. J., assignor to Air Reduction Company, Incorporated. Apparatus for feeding powdered material. 2,470,819, May 24.
Hull, Harper H., Birmingham, Ala. Electric steering control. 2,470,820, May 24.
Humrichouse, Davis B.: *See*—
Humrichouse, Walter E. and D. B.
Humrichouse, Walter E. and D. B., assignors of twenty-two and one-half per cent to W. H. Smith, Sr., and twenty-two and one-half per cent to G. W. Abell, Baltimore, Md. Spark plug. 2,470,821, May 24.
Hunt, Ernest W., Crows Nest, near Sydney, New South Wales, assignor of one-half to H. P. J. Woodward, Wayerton, near Sydney, Australia. Angular and linear calculating instrument. 2,471,327, May 24.
Hunt, Hilland G., Natick, Mass. Pneumatically driven power unit. 2,471,109, May 24.
Hurd, Frank E., New York, N. Y. Apparatus for the desiccation of organic substances. 2,471,035, May 24.
I-T-E Circuit Breaker Company, assignee: *See*—
Deans, William.
Jensen, Otto.
Illeche, Arthur, Rye, N. Y. Gearing for driving a plurality of spindles. 2,470,985, May 24.
Imperial Chemical Industries Limited, assignee: *See*—
Arnold, Michael H., Miller, and Perry.
Cook, James G., Dickson, Lowe, and Whinfield.
Independent Lock Company, assignee: *See*—
Harvey, Henry S.
Indiana University Foundation, assignee: *See*—
Campaigne, Ernest E., and Le Suer.
Ingalls, John M.: *See*—
Miller, Carroll E., and Ingalls.
Institute of Paper Chemistry, The, assignee: *See*—
Knight, George D., and Rowland.
International Cigar Machinery Company, assignee: *See*—
Durning, James P.
Halstead, John F.
International Nickel Company, Inc., The, assignee: *See*—
Atkinson, Ralph H., and Gladis.
Irwin, Frank N., Jr., South Miami, Fla. Sealer. 2,470,852, May 24.
Jack & Heintz Precision Industries, Inc., assignee: *See*—
Luginbuhl, Emil.
Jackson, Donald, assignor to Pye Limited, Cambridge, England. Radio antenna. 2,471,215, May 24.
Jackson, James O., Crafton, Pa., assignor to Pittsburgh-Des Moines Company. Insulation for spherical tank shells and making the same. 2,470,986, May 24.
Jacobs, Stephen: *See*—
Matson, William N., and Jacobs.
Jankovich, Ivan, Kenosha, Wis. Pliers with detachable end jaws. 2,471,372, May 24.
Jasin, Raymond, assignee: *See*—
Jasinski, Walter.
Jasin, Robert, assignee: *See*—
Jasinski, Walter.
Jasinski, Anna, assignee: *See*—
Jasinski, Walter.
Jasinski, Walter, assignor of one-third to A. Jasinski, one-third to Robert Jasin, and one-third to Raymond Jasin, Grand Junction, Mich. Folding bed. 2,470,930, May 24.
Jenkins, John, La Grande, Oreg. Ladder for hanging paper. 2,471,110, May 24.

Jenkins, Wesley R., Whiting, Ind., assignor to Carnegie-Illinois Steel Corporation. Running rope lubricator. 2,471,036, May 24.
Jennings, Alvin A., Lebanon, assignor to Rice-Stix Dry Goods Company, St. Louis, Mo. Sewing machine. 2,470,831, May 24.
Jensen, Otto, Malvern, assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa. Low-voltage rectifier protection. 2,471,216, May 24.
Jernstedt, George W., and M. Ceresa, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electroplating nickel and cobalt with periodic reverse current. 2,470,775, May 24.
Jewell, Raymond L., assignor to American Sterilizer Company, Erie, Pa. Steriliser construction. 2,470,776, May 24.
Johnson, Arthur K., Hawthorne, and H. B. Suhr, assignors to American Potash & Chemical Corporation, Trona, Calif. Manufacturing coarse granular potassium chloride. 2,470,822, May 24.
Johnson, James P., Shaker Heights, Ohio. Rotary pump stator. 2,470,987, May 24.
Johnson, Philip A., Van Nuys, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind. Rotatable device. 2,471,217, May 24.
Johnson, William S., Madison, Wis., J. W. Petersen, Oakland, Calif., and C. D. Gutsche, St. Louis, Mo., assignors to Wisconsin Alumni Research Foundation, Madison, Wis. Preparing 10,11-dihydro-7-r-phenanthro-[2,1-d]isoxazoles, and products of such process. 2,470,777, May 24.
Johnstone, Warren W., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Production of polyolefinic hydrocarbons. 2,470,894, May 24.
Jones, Basil E., Flossmoor, assignor to The Pullman Company, Chicago, Ill. Berth arrangement. 2,470,853, May 24.
Jones, Homer T., Ord, Nebr. Water regulator for cattle tanks. 2,471,328, May 24.
Jones, Lovic O., Greenfield, Tenn. Bag holder and releaser. 2,471,218, May 24.
Joseph, Henry G., Cranston, R. I., assignor to Victor Ring Traveler Company. Ring traveler. 2,470,932, May 24.
Joyner, Archibald A., Merchantville, N. J., assignor to Radio Corporation of America. Pulse echo recognition system. 2,471,373, May 24.
Kahn, Robert L., assignee: *See*—
Bussey, William H.
Kail, J. H., assignee: *See*—
Leonard, Caswell L.
Kanter, Jerome J., Palos Park, assignor to Crane Co., Chicago, Ill. Heat treatment. 2,470,988, May 24.
Kay Manufacturing Corporation, assignee: *See*—
Gaudi, Joseph, and Krakauer.
Keim, Donald B., Bridgeport, Conn., assignor to General Electric Company. Supporting device for cathode-ray tubes. 2,471,154, May 24.
Keiper, Edwin H., assignor to Pennsylvania Crusher Company, Philadelphia, Pa. Reversible hammer mill with power-driven impactor surfaces. 2,471,068, May 24.
Kelser, Bernhard: *See*—
De Groote, Melvin, and Kelser.
Keller, Sidney, Park Ridge, and D. W. Fentress, Barrington, assignors to Chicago Metal Hose Corporation, Maywood, Ill. Flexible connector. 2,470,989, May 24.
Kellogg, M. W., Company, The, assignee: *See*—
McGrath, Henry G., Passino, and Rubin.
Kellogg Switchboard and Supply Company, assignee: *See*—
Bosh, James E.
Kem-Stone Products Company, Inc., assignee: *See*—
Livingstone, William.
Kennedy, Arthur, Wood-Ridge, N. J., assignor to A. F. Smuckler and C. C. Cullen, doing business as A. F. Smuckler & Company, New York, N. Y. Photoflash synchronizer with tripper-operated safety switch. 2,471,219, May 24.
Kennedy, Frank H., New York, N. Y. Making inflated articles. 2,470,990, May 24.
Keuffel, Adolf W., Essex Fells, assignor to Keuffel & Esser Company, Hoboken, N. J. Making measuring tapes. 2,471,329, May 24.
Keuffel, Adolf W., Essex Fells, assignor to Keuffel & Esser Company, Hoboken, N. J. Making measuring tapes. 2,471,395, May 24.
Keuffel & Esser Company, assignee: *See*—
Keuffel, Adolf W.
Kinrannon, Camilla M., Milwaukee, Wis. Landing net. 2,471,273, May 24.
Kindorf, Harry L., and Orlan C. Kindorf, San Francisco, Calif. Adjustable beam clamp. 2,470,991, May 24.
Kindorf, Harry L., and Orlan C. Kindorf, San Francisco, Calif. Beam clamp for conduit supports. 2,470,992, May 24.
Kindorf, Orlan C.: *See*—
Kindorf, Harry L., and Orlan C.
Klaeden, Frits: *See*—
Bierwirth, John A., and Klaeden.
Klingen, Leendert: *See*—
Woods, Harold A., Yates, Klingen, and Barton.
Knight, George D., and B. W. Rowland, assignors to The Institute of Paper Chemistry, Appleton, Wis. Continuously coating porous sheets. 2,471,330, May 24.
Knowles, Hugh S., River Forest, Ill., assignor to Zenith Radio Corporation. Flexible-surfaced bone conduction hearing aid unit. 2,470,934, May 24.
Koppers Company, Inc., assignee: *See*—
Stromquist, Russell C.
Kovac, Michael L., Garfield, N. J. Heating tool. 2,470,854, May 24.
Krakauer, Daniel: *See*—
Gaud, Joseph, and Krakauer.
Kramer, Marjorie, assignee: *See*—
Kramer, Melvin L.
Kramer, Melvin L., assignor to M. Kramer, Newark, N. J. Cabinet having combined doors and slidable shelf. 2,470,993, May 24.
Kremko, Daniel, and J. Podufaly, Detroit, Mich. Flag pole painting apparatus. 2,470,994, May 24.
Krumbhaar, William, New York, N. Y. Rosin maleic glycerine esters. 2,470,855, May 24.
Kuntny, Gregor W.: *See*—
Caldwell, John A., Wannamaker, Jr., and Kuntny.
Kusch, Polykarp, Bloomfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electron discharge device. 2,470,856, May 24.
La Bat, Edward F., San Pablo, Calif. Potato slicer. 2,470,934, May 24.
Lake Erie Chemical Company, assignee: *See*—
Manville, Charles J.
Landis & Gyr, A. G., assignee: *See*—
Vannini, Philipp.
Langmuir, Robert V., and P. H. Peters, Jr., Schenectady, N. Y., assignors to General Electric Company. Balanced variable reactance device. 2,471,165, May 24.
Lankovski, Anatoly, and M. Graves, Los Angeles, Calif., assignors to M. B. Butler, Chicago, Ill. Hydraulic system for self-loading trucks. 2,470,778, May 24.
Lankovski, Anatoly, and M. Graves, Los Angeles, Calif., assignors to M. B. Butler, Chicago, Ill. Scoop construction for self-loading trucks. 2,470,779, May 24.
Lathers, William C., Jr., Madison, Wis. Hoisting attachment for motor-driven vehicles, such as tractors. 2,470,857, May 24.
Law, Russell R., Princeton, N. J., assignor to Radio Corporation of America. Electron discharge device employing cavity resonators. 2,471,037, May 24.
Laxo, Ed, assignor to Atlas Imperial Diesel Engine Co., Oakland, Calif. Can extractor. 2,471,156, May 24.
Lear, Incorporated, assignee: *See*—
Lear, William P.
Lear, William P., North Hollywood, Calif., assignor, by mesne assignments, to Lear, Incorporated, Grand Rapids, Mich. Remote positioning and indicating system. 2,471,220, May 24.
Le Blond, R. K., Machine Tool Company, The, assignee: *See*—
Meyer, Walter R., and Siekmann.
Le Clair, Camille C. S., Acton, London, assignor to Tecalemit Limited, Brentford, England. Oil or liquid filter. 2,471,069, May 24.
Ledwith, Walter A., Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Diaphragm seal for gas turbines. 2,470,780, May 24.
Lee, Hershal J., Bremerton, Wash. Apron. 2,471,331, May 24.
Lemmel, Paul T., Madison, Wis., assignor to The Borden Company, New York, N. Y. Sealing empty cans. 2,471,332, May 24.
Leonard, Caswell L., assignor of one-half to J. H. Kail, Memphis, Tenn. Animal trap. 2,470,858, May 24.
Leroy, Robert P., Paris, France. Phase reversal telegraph system. 2,471,333, May 24.
Lesser, Henry J., Seattle, Wash. Fishline sinker. 2,470,995, May 24.
Le Suer, William M.: *See*—
Campaigne, Ernest E., and Le Suer.
Levin, Henry H., Newark, N. J. Paper cutter. 2,471,334, May 24.
Lewis, Howard: *See*—
Gray, Oscar, and Lewis.
Light, Donald W., Longmeadow, Mass., assignor to American Cyanamid Company, New York, N. Y. Aqueous emulsions of mixed phthalic glyceride and melamine-formaldehyde resins. 2,471,896, May 24.
Linde Air Products Company, The, assignee: *See*—
Meincke, Edward.
Lindstrom, George W., Westport, Conn. Electric foot-warming ottoman. 2,471,221, May 24.
Lingo, Shirley P., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Nitroalkyl sulfites and preparing them. 2,471,274, May 24.
Link, Karl P.: *See*—
Stahmann, Mark A., and Link.
Linville, Thomas M., Schenectady, N. Y., assignor to General Electric Company. Dynamoelectric machine. 2,471,157, May 24.
Linz, Arthur, assignor to Climax Molybdenum Company, New York, N. Y. Alloy addition agents. 2,470,985, May 24.
Livingstone, William, La Grange, Ill., assignor to Kem-Stone Products Company, Inc. Liquid treating apparatus. 2,471,158, May 24.

Lock Joint Pipe Company, assignee: *See*—
Hirsh, Philip B.

Lo Gerfo, Salvatore, Brooklyn, N. Y. Apparatus for chilling fluids. 2,470,986, May 24.

Loemer, Max, New York, N. Y. Automatic rope lock. 2,471,835, May 24.

Lone Star Steel Company, assignee: *See*—
Drescher, Arthur B.

Lorant, Lionel, Long Island City, N. Y. Regulated transformer. 2,471,224, May 24.

Lorber, Charles, Louisville, Ky. Self-quiz device. 2,471,223, May 24.

Lorens, Anton, Buffalo, N. Y. Reclining article of furniture. 2,470,781, May 24.

Lorenz, Edward H., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Apparatus for feeding batch to glass melting furnaces. 2,471,836, May 24.

Loughborough, Dwight L., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Means for preventing the accumulation of ice on aircraft surfaces and the like. 2,471,224, May 24.

Lowe, Arthur R.: *See*—
Cook, J. G., Dickson, Lowe, and Whinfield.

Lowe, Russel E.: *See*—
Morgan, John D., and Lowe.

Lozterman, Henry R., Chicago, Ill., assignor to Blaw-Knox Company, Pittsburgh, Pa. Furnace door. 2,471,275, May 24.

Luby, Henry, Denver, Colo. Automotive parts truck. 2,471,837, May 24.

Lach, Henry F., Portland, Oreg. Deer call. 2,470,823, May 24.

Luginbuhl, Emil, Bedford, assignor to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Work centering attachment for metal turning machines. 2,471,038, May 24.

Lukens Steel Company, assignee: *See*—
Harrington, William J.

Lundqvist, Axel G., Lulea, and N. H. Lundqvist, Kiruna, assignors to K. O. Alenius, Lulea, Sweden. Card index file. 2,470,824, May 24.

Lundqvist, Nils H.: *See*—
Lundqvist, Axel G., and N. H.

Lupton, McSherry, Winchester, Va. Grading machine bin. 2,471,225, May 24.

Lyte, Parts, Company, assignee: *See*—
Wintermute, Vern M.

Maccario, Emil C., Maplewood, N. J. Concrete curb block. 2,471,226, May 24.

MacDonald, Lester C., Hamilton, Ontario, Canada. Fastener for window screens and storm sashes. 2,471,159, May 24.

Magnetic Analysis Corporation, assignee: *See*—
Zuschlag, Theodore.

Malcom, Oleu, assignor to Reeves Pulley Company, Columbus, Ind. Electric motor preset control. 2,470,937, May 24.

Mallory, Marion, Detroit, Mich. Mechanism for utilizing the manifold suction of internal-combustion engines. 2,471,111, May 24.

Mallory, P. R., & Co., Inc., assignee: *See*—
Puerner, George O.

Malmqvist, Johan D.: *See*—
Gustafsson, Gotthard V. A., and Malmqvist.

Mangold, Ell F., assignee: *See*—
Chapman, Harold P.

Manville, Charles J., Pontiac, Mich., assignor to Lake Erie Chemical Company, Cleveland, Ohio. Magazine gun with integral breech bolt and hand grip. 2,471,276, May 24.

Marlowe, Elbert W., Chicago, Ill., and H. A. Wilcox, Los Alamos, N. Mex., assignors to The United States of America as represented by the United States Atomic Energy Commission. Impulse type power supply. 2,470,895, May 24.

Marshall, Bruce O., Jackson, Miss. Producing and testing specimens of paving mixtures. 2,471,227, May 24.

Martin, William E., Rewanee, Ill. Operating means for trailer goosenecks. 2,471,277, May 24.

Marvin, Harry B.: *See*—
Goodale, Charles J., and Marvin.

Masland, C. H., & Sons, assignee: *See*—
Carter, Robert E.

Maslonka, John G., assignee: *See*—
Bartels, Frank.

Masmore, Peter J., assignor to I. F. Fishman, New York, N. Y. Interchangeable eye lens frame. 2,471,338, May 24.

Master Lock Company, assignee: *See*—
Soref, Harry E., and Foote.

Mathes, Robert C., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrical contact protection network. 2,470,828, May 24.

Mathy, Eugene V., Bartlesville, Okla., assignor to Phillips Petroleum Company. Production of hydrocarbons. 2,471,228, May 24.

Matson, William N., and S. Jacobs, Fitchburg, Mass., assignors to General Electric Company. Combination balanced shutoff and throttling valve assembly. 2,471,160, May 24.

Maull, Harry W., Maplewood, and J. H. Sauter, Rutherford, N. J., assignors to General Baking Company, New York, N. Y. Dough handling machine. 2,471,112, May 24.

Mavity, Julian M., Hinsdale, assignor to Universal Oil Products Company, Chicago, Ill. Recovery of sulfonic acids from spent sulfonating agent. 2,470,896, May 24.

McAfee, Mark C., Wichita, Kans. Warm air space heater with air circulating blower. 2,470,935, May 24.

McAfee, Samuel H., Jr., Oakdale, Pa. Drill jack. 2,471,374, May 24.

McCarthy, Frederick J., and C. Schandler, New York, N. Y. Spark plug. 2,471,070, May 24.

McCardle, Herbert E., Groton, S. Dak. Mixing bottled natural gas with vegetative gas. 2,471,161, May 24.

McDonald, Edward L., Sydney, Nova Scotia, Canada. Thermometer with heat conductor. 2,471,229, May 24.

McDonald, Matilda M., Columbus, Ohio. Body protecting shield. 2,471,071, May 24.

McGrath, Henry G., Elizabeth, H. J. Passino, Englewood, and L. C. Rubin, West Caldwell, assignors to The M. W. Kellogg Company, Jersey City, N. J. Separation of organic compounds. 2,470,782, May 24.

McGrath, William L., Philadelphia, Pa., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Burner control system. 2,470,996, May 24.

McIntyre, Ailee H., assignee, trustee: *See*—
Tubbs, Irl L.

McKeever, Charles H., assignor to Rohm & Haas Company, Philadelphia, Pa. Residue carboxylic acid-alkylene diamine resins. 2,471,230, May 24.

McKensie, Robert, Glendale, Calif. Shoe spike. 2,470,997, May 24.

McMahon, William, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Fixed capacitor. 2,470,826, May 24.

McPherson, Robert H., Lynwood, Calif. Portable mast. 2,470,998, May 24.

Meacham, Larned A., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Gun sight control. 2,471,278, May 24.

Mead, Vincent A., United States Navy. Plane marker buoy. 2,470,783, May 24.

Meincke, Edward, Scotch Plains, N. J., assignor to The Linde Air Products Company. Thermochemical metal removal. 2,470,999, May 24.

Melchionna, Frank A., Cincinnati, Ohio. Sports shoe. 2,471,113, May 24.

Messing, Anton B., New York, N. Y. Comb. 2,471,279, May 24.

Merriam, Henry F., West Orange, N. J., assignor to Allied Chemical & Dye Corporation. Manufacture of sulfuric acid. 2,471,072, May 24.

Meskimen, Leslie C., Shawnee on Delaware, Pa., assignor to Fairmont Railway Motors, Incorporated, Fairmont, Minn. Mower. 2,471,073, May 24.

Messenger, Joseph E., Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Alumina gel pellets. 2,471,000, May 24.

Messrs. Hard Metal Tools Limited, assignee: *See*—
Westmoreland-White, Beryl.

Metcalfe, George E., Bridgeport, Conn. Polishing bonnet. 2,471,114, May 24.

Meyer, Walter R., and H. J. Siekmann, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Crankshaft chuck. 2,471,162, May 24.

Mikeska, Louis A., Westfield, N. J., assignor to Standard Oil Development Company. Lubricating oil. 2,471,115, May 24.

Miller, Benjamin, Andover, Mass. Bird retriever. 2,471,231, May 24.

Miller, Carroll E., and J. M. Ingalls, assignors to Cone Automatic Machine Company Inc., Windsor, Vt. Multiple spindle lathe. 2,471,074, May 24.

Miller, John H., Short Hills, assignor to Weston Electrical Instrument Corporation, Newark, N. J. Combined ohmmeter and illumination meter. 2,471,001, May 24.

Miller, Milo F., Kansas City, Mo. Electric striker system for chimes. 2,470,827, May 24.

Miller Spreader Corporation, assignee: *See*—
Andrews, Edward F.

Miller, William A., Port Jefferson, and E. R. Shenk, Brooklyn, N. Y., assignors to Radio Corporation of America. Radio detection and location system indicating azimuth and elevation. 2,470,939, May 24.

Millien, Albert: *See*—
Fawcett, Eric W. M., Narracott, and Millien.

Millington, John W., and W. H. Stewart, Beaumont, Tex., assignors to Sun Oil Company, Philadelphia, Pa. Tube testing apparatus. 2,470,828, May 24.

Minder, Fred: *See*—
Dethlefs, Walter M., and Minder.

Miner, W. H., Inc., assignee: *See*—
Dath, George E.

Minich, Arthur, Westfield, N. J., and M. Nowak, Brooklyn, N. Y., assignors to Nuodex Products Co., Inc., Elizabeth, N. J. Long-chain amine salts as fungicides and bactericides. 2,471,330, May 24.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Aska, Leonard B.
Bank, Albert E.
Caldwell, John A., Wannamaker, Jr., and Kuntzy.
McGrath, William L.
Taylor, Daniel G.
Wilson, John M.

Missouri Automatic Control Corporation, assignee: *See*—
Newman, Eric P.

Mitton, Robert R., Lemon Grove, Calif. Safety pressure detonator bomb. 2,471,163, May 24.

Mobar, Jack L., Long Beach, Calif. Electric switch. 2,471,040, May 24.

Möbl, Torben, Copenhagen, Denmark; vested in the Attorney General of the United States. Plowshare. 2,471,164, May 24.

Mohr, George F., Peoria, Ill. Animated display device. 2,471,002, May 24.

Moline, Desmond W., London, assignor to Molins Machine Company, Limited, Deptford, London, England. Firing mechanism for automatic guns having transversely movable breech blocks. 2,471,232, May 24.

Molins Machine Company, Limited, assignee: *See*—
Molins, Desmond W.

Monahan, William, Los Angeles, Calif. Folding lap table. 2,471,003, May 24.

Monowatt, Incorporated, assignee: *See*—
Benander, Clifford N, and G. B.

Monroe Auto Equipment Company, assignee: *See*—
White, Glen L., and Diedrich.

Monsanto Chemical Company, assignee: *See*—
Aber, Massimo.
Baer, Massimo.

Monson, Ephriam V., Salt Lake City, Utah. Mechanical horse. 2,471,233, May 24.

Monson, Louis T., Alhambra, Calif., assignor to Petrolite Corporation, Ltd., Wilmington, Del. Breaking oil-in-water emulsions. 2,470,829, May 24.

Monson, Louis T., Los Angeles County, Calif., assignor to Petrolite Corporation, Ltd., Wilmington, Del. Removing mud sheaths from oil wells. 2,470,830, May 24.

Monson, Louis T., Los Angeles County, Calif., assignor to Petrolite Corporation, Ltd., Wilmington, Del. Preventing and/or removing accumulations of solid matter from oil wells, flow lines, and pipe lines. 2,470,831, May 24.

Montclair Research Corporation, assignee: *See*—
Robertson, John W., and Rust.
Rust, John B.

Montgomery, Ernest E., Gering, Nebr. Sash holding device. 2,470,832, May 24.

Montrose-Oster, Louis E. W., Brussels-Boitsfort, Belgium, assignor of one-half to Pollopas Patents Limited, London, England. Electric remote selective control system. 2,471,075, May 24.

Moore, Earl E., assignee: *See*—
Bovee, Ranson Y.

Moore, John B., Brooklyn, N. Y., assignor to Radio Corporation of America. Printing telegraph system. 2,471,076, May 24.

Moore, Robert J., Berkeley, and R. A. Trimble, El Cerrito, assignors to Shell Development Company, San Francisco, Calif. Production of cyclic sulfides. 2,471,077, May 24.

Moore, Spencer O., Burbank, Calif. Hair drier. 2,470,833, May 24.

Morgan, John D., South Orange, and R. E. Lowe, East Orange, N. J., assignors to Cities Service Oil Company, New York, N. Y. Flushing composition for engine lubricating systems. 2,471,390, May 24.

Morris, Rupert C., Berkeley, A. V. Snider, Richmond, and E. T. Bishop, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Methylpentadiene-aralkenyl copolymers. 2,471,234, May 24.

Morrissey, Robert F., South Britain, Conn. Electrode holder. 2,471,340, May 24.

Moseley, Coy E., Arlington, Tex. Barbecue pit. 2,471,375, May 24.

Moseman, Max A., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Gamma iron oxide-alkali metal ferrate and preparation. 2,470,784, May 24.

Moseman, Max A., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Alpha iron oxide-alkali metal ferrate catalyst and preparation. 2,470,785, May 24.

Moseman, Max A., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Ferro-ferric oxide-alkali metal ferrate catalyst and its preparation. 2,470,786, May 24.

Mosher, Clarence H., Sacramento County, Calif. Pipe cleaner. 2,470,940, May 24.

Moss, Philip H.: *See*—
Cook, Elmer W., and Moss.

Moster, Robert, Rushville, Ind. Baby stroller-walker. 2,471,004, May 24.

Moyer, Samuel P., Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y. Froth flotation of apatite using calcium silicate. 2,471,341, May 24.

Nachman, Jack, Philadelphia, Pa. Fancy trimming stitch. 2,471,166, May 24.

Nader Engineering Company, assignee: *See*—
Roys, Carl S.

Narracott, Eric S.: *See*—
Fawcett, Eric W. M., Narracott, and Millian.
Fawcett, Eric W. M., Narracott, and Rowland.

National Fitch Corporation, assignee: *See*—
Norbom, Ragnar A.

Neff, Edward A., Chicago, Ill. Shock absorber webbing. 2,471,166, May 24.

Nelson, Arthur E., University City, Mo. Bracket. 2,471,342, May 24.

Neustadter, Irving, Brooklyn, N. Y. Lingual mold bar for dental molds. 2,471,344, May 24.

Newberger, Michael F., Cleveland, Ohio. Cigarette shield. 2,471,116, May 24.

Newman, Eric P., Clayton, Mo., assignor, by mesne assignments, to Missouri Automatic Control Corporation. Control system. 2,471,343, May 24.

Nick, George A., Sacramento, Calif. Animal skinning device. 2,471,235, May 24.

Niederhiser, Floyd E., Cleveland, Ohio. Hinged supported motor wrench. 2,470,897, May 24.

Noblitt-Sparks Industries, Inc.: *See*—
Booth, Earl C.

Norbom, Ragnar A., New York, N. Y., assignor to National Fitch Corporation. Shipping container. 2,471,280, May 24.

North American Aviation, Inc., assignee: *See*—
Patterson, Charles E.

Norton, Robert L., Belmont, assignor to Eitel-McCullough, Inc., San Bruno, Calif. Base structure for electron tubes. 2,471,005, May 24.

Noaker, Paul W., Yellow Springs, Ohio. System for determining the position or path of an object in space. 2,470,787, May 24.

Nowak, Milton: *See*—
Minich, Arthur, and Nowak.

Nuodex Products Co., Inc., assignee: *See*—
Minich, Arthur, and Nowak.

Nye, Ralph D., and D. J. Demorest, Columbus, Ohio. Obtaining concentrates of uranium and vanadium from their ores. 2,471,345, May 24.

O'Brien, Joseph F., Lebanon, and E. S. Boynton, East Orange, N. J., assignors to John B. Pierce Foundation, New York, N. Y. Severable electrical conduit section. 2,470,788, May 24.

Ogorzaly, Henry J., Summit, N. J., assignor to Standard Oil Development Company. Catalyst quality by magnetic separation. 2,471,076, May 24.

Olson, Holly M., assignor to Sealed Power Corporation, Muskegon, Mich. Pleton ring boring and beveling machine. 2,471,006, May 24.

Olson, Leonard E., and R. Wertzler, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y. Switching device. 2,471,281, May 24.

Oltman, Robert E., deceased: *See*—
Scott, George C., Oltman, and Peterson.

Orshansky, Elias, Jr., assignor to The Acrotorque Company, Stamford, Conn. Power transmission. 2,471,117, May 24.

Orthner, Ludwig, G. Balle, and H. Schild, Frankfurt-on-Main, M.-O. Schürmann, Dormagen, and K. Brodersen, and M. Quaedvlieg, Dessau, Germany; vested in the Attorney General of the United States. Manufacture of improved fibrous materials and the materials thus obtained. 2,471,039, May 24.

Orton, Kenneth L., St. Paul, Minn. Fish stringer. 2,470,941, May 24.

Oswego Falls Corporation, assignee: *See*—
Horning, Raymond H., and Wilcox.
Wilcox, Isaac L.

Oolmet, Emil R., Brockton, Mass. Shoe welt. 2,470,942, May 24.

Oxenrider, Ellis C., Chicago, Ill. Railroad-highway crossing construction. 2,471,167, May 24.

Paddock, Levi S., assignor to Swift & Company, Chicago, Ill. Treatment of livers. 2,471,282, May 24.

Paffen, Fred W., Great Neck, and H. L. Cornelius, New Gardens, N. Y., assignors to Celanese Corporation of America. Yarn package support. 2,470,835, May 24.

Page, Bruno, assignor, by mesne assignments, to William R. Warner & Co., Inc., New York, N. Y. Apparatus for clarifying fluids. 2,470,943, May 24.

Palmer, Frank D., Chicago, Ill., assignor to Frank D. Palmer, Inc. Slipproof bag. 2,470,789, May 24.

Palmer, Frank D., Inc., assignee: *See*—
Palmer, Frank D.

Parish Pressed Steel Co., assignee: *See*—
Cole, Nelson E.

Parish, Willard E., assignor to Crouse-Hinds Company, Syracuse, N. Y. Interlock mechanism for switch and receptacle units. 2,470,944, May 24.

Parker, Allen J., West Palm Beach, Fla. Cleaning device for fuses and fuse holders. 2,471,236, May 24.

Parker, Arnold G., Longueuil, Quebec, Canada. Aircraft control system. 2,471,283, May 24.

Parker, Irvine E., Transfer, and T. W. Brydon, Slippery Rock, Pa. Scrubbing machine for fire hose. 2,471,041, May 24.

Parrish, William C., Park Ridge, assignor to Stewart-Warner Corporation, Chicago, Ill. Heater. 2,470,880, May 24.

Paralinger, Joseph M., assignor of thirty per cent to M. H. Parsinger, Columbus, Ohio. Emergency generating system for automobiles. 2,470,898, May 24.

Parsinger, Max H., assignee: *See*—
Parsinger, Joseph M.

Passino, Herbert J.: *See*—
McGrath, Henry G., Passino, and Rubin.
Pasturezak, Harry S., East Moline, Ill., assignor of one-half to W. J. Bleasdale, South Bend, Ind. Separable fluid coupling. 2,471,237, May 24.
Pasanicki, Frank, Hamtramck, Mich. Coat hanger. 2,471,007, May 24.
Patent Management, Incorporated, assignee: *See*—
Allison, Ralph E.
Patterson, Charles E., Pacific Palisades, assignor to North American Aviation, Inc., Inglewood, Calif. Detachable engine mount and accessory coupling. 2,471,118, May 24.
Paul, Philip T., Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y. Di(orthoacylaminoaryl) disulfide softeners for rubbers. 2,470,945, May 24.
Paul, Philip T., Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y. 2,2'-dithio bis propionanilide softener for rubbers. 2,470,947, May 24.
Paul, Philip T., Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y. Di(orthoacylaminoaryl) disulfide softeners for rubbers. 2,470,948, May 24.
Paul, Philip T., Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y. Di(orthoacylaminoaryl) disulfide softeners for isoolefin-diolefin copolymers. 2,470,949, May 24.
Paul, Philip T., and L. B. Tewksbury, Jr., Naugatuck, Conn., assignors to United States Rubber Company, New York, N. Y. 2,2'-dithio bis (n-aryl carbamic ester) softeners for rubbers. 2,470,946, May 24.
Pavlic, Albert A., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Nonanoic acid. 2,470,859, May 24.
Payne, John W.: *See*—
Simpson, Thomas P., Payne, and Crowley.
Peck, Edward B., Elisabeth, and D. O. Tomkins, Summit, N. J., assignors to Standard Oil Development Company. Finished shale autothermic distillation. 2,471,119, May 24.
Peltier, Leslie C., assignor to The Delphos Bending Company, Delphos, Ohio. Infant's chair. 2,470,834, May 24.
Pelton, George E., Middleburg, assignor to I. S. Pelton, Round Hill, Va. Ribbon feeding and inking mechanism for typing machines. 2,471,238, May 24.
Pelton, Ida S., assignee: *See*—
Pelton, George E.
Pennsylvania Crusher Company, assignee: *See*—
Kelper, Edwin H.
Pepin, Nelson J., Lowell, Mass. Motor mounting attachment. 2,471,120, May 24.
Perri, Angelo, Groveland, assignor to Allied Shoe Machinery Corp., Haverhill, Mass. Sole-cementing machine. 2,471,397, May 24.
Perry, William E.: *See*—
Arnold, Michael H. M., and Perry.
Peter-Schmidt Corporation, The, assignee: *See*—
Schmidt, Francis J.
Peters, Brice G., Baltimore, Md. Apparatus for dehumidification. 2,471,376, May 24.
Peters, Philip H., Jr.: *See*—
Langmuir, Robert V., and Peters.
Petersen, Jack W.: *See*—
Johnson, William S., Petersen, and Gutsche.
Peterson, John T., administrator: *See*—
Scott, George C., Oltman, and Peterson.
Peterson, Norman R.: *See*—
Hooker, George W., and Peterson.
Peterson, Oscar R., Oakland, and R. A. Peterson, San Leandro, Calif. Brake mounting and control. 2,471,346, May 24.
Peterson, Robert A.: *See*—
Peterson, Oscar R., and R. A.
Petrolite Corporation, Ltd., assignee: *See*—
De Groote, Melvin, and Keiser.
Monson, Louis T.
Pfeffer, Edward C., Jr., assignor to Cluett, Peabody and Co., Inc., Troy, N. Y. Shirt collar construction. 2,470,950, May 24.
Philco Corporation, assignee: *See*—
Boothroyd, Wilson P., and Forster.
Bradley, William E.
Tompkins, Howard E.
Phillips Petroleum Company, assignee: *See*—
De Bosbiane, Destonde R., and Bondurant.
Mathy, Eugene Y.
Pickands Mather & Co., assignee: *See*—
Royster, Percy H.
Pickens, Roy A.: *See*—
Booth, Robert B., and Pickens.
Pierce, John B., Foundation, assignee: *See*—
O'Brien, Joseph P., and Boynton.
Piper, Roy A., Princeton, Ill. Load discharging apparatus for farm wagons. 2,470,835, May 24.
Pitter Gauge & Precision Tool Co. Limited, assignee: *See*—
Glover, Leonard E.
Pittsburgh-Des Moines Company, assignee: *See*—
Jackson, James O.
Podufaly, Joseph: *See*—
Kremko, Daniel, and Podufaly.
Polipas Patents Limited, assignee: *See*—
Montrose-Oster, Louis E. W.
Polson, Kenneth M., Williams, Ariz. Floor waxing device. 2,470,837, May 24.
Post, Carl B., Wyomissing, Pa., assignor to The Carpenter Steel Company. Austenitic steel having high hot hardness. 2,471,080, May 24.
Post, Carl B., Wyomissing, and W. S. Eberly, Temple, assignors to The Carpenter Steel Company, Reading, Pa. Glass sealing alloy. 2,471,079, May 24.
Posthumus, Klaas, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Device for converting a signal of variable amplitude into pulses of constant frequency and variable duration. 2,471,168, May 24.
Prentice, Thomas G., Detroit, Mich. Fishing lure. 2,470,881, May 24.
Presdorf, Robert D., Decatur, Ind. Safety hitch. 2,470,862, May 24.
Presswell, Richard W.: *See*—
Smith, Esmond W., and Presswell.
Pretty, George E., assignor to The Pretty-Scheffer Company, Coshocton, Ohio. Bath mat. 2,471,008, May 24.
Pretty-Scheffer Company, The, assignee: *See*—
Pretty, George E.
Price, Towson, Glen Ridge, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Manufacture of alloys. 2,470,790, May 24.
Pringle, Glenn D., Lansing, Mich. Rake cleaner. 2,470,863, May 24.
Puerner, George O., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Stator construction for switches. 2,470,931, May 24.
Pullman Company, The, assignee: *See*—
Jones, Basil E.
Pye Limited, assignee: *See*—
Jackson, Donald.
Quaedvlieg, Matthias: *See*—
Orthner, Ludwig, Balle Schild, Schürmann, Broderæn, and Quaedvlieg.
Radin Corporation of America, assignee: *See*—
Bartelson, Sten E.
Best, Frank P., Colchester, and Twatt.
Braden, Rene A.
Joyner, Archibald A.
Law, Russell R.
Miller, William A., and Shenk.
Moore, John B.
Smith, Lester C.
Snyder, Richard L., Jr.
Spencer, James A., and Thomas.
Wein, John F.
Ramsay, Erskine, Birmingham, Ala. Coal handling system. 2,471,042, May 24.
Randall, Waldo E., Cranston, R. I. Rotatable shelf. 2,470,749, May 24.
Ray, William A., North Hollywood, assignor to General Controls Co., Glendale, Calif. Thermoelectric control device. 2,470,864, May 24.
Rayburn, Vincent A., Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y. Conveyer. 2,471,347, May 24.
Rea, Wilton T., Manhasset, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Directive antenna system. 2,471,284, May 24.
Reason, Richard E., assignor to Taylor, Taylor & Hobson Limited, Leicester, England. Apparatus for measuring or indicating the roughnesses or undulations of surfaces. 2,471,009, May 24.
Rector, Laurence L., Fort Worth, and C. L. Cron, Houston, Tex. Sealing compositions containing chlorinated diphenyl and graphite. 2,471,010, May 24.
Redmond, Harriet L., Boston, assignor to The William Carter Company, Needham Heights, Mass. Garment. 2,471,348, May 24.
Reed, Barbara, assignee: *See*—
Reed, Frank D., Jr.
Reed, Frank D., Jr., assignor to Barbara Reed, Detroit, Mich. Bridle. 2,471,121, May 24.
Reeves Pulley Company, assignee: *See*—
Malcom, Glen.
Reich, William A., Schenectady, N. Y., assignor to General Electric Company. Improving the properties of precipitation hardenable castings. 2,470,791, May 24.
Reiss, Frank, Philadelphia, Pa. Necktie rack. 2,471,849, May 24.
Remy, Theron P., Los Angeles, Calif. Production of chlorinated synthetic rubbers. 2,470,962, May 24.
Revere Copper and Brass Incorporated, assignee: *See*—
Bunn, Edward S.
Reynolds, Artie Thomas, McAlester, Okla. Interchange mechanism between two power sources. 2,471,122, May 24.
Rice, David Y., Avon Lake, Ohio. Valve. 2,471,285, May 24.
Rice-Strix Dry Goods Company, assignee: *See*—
Jennings, Alvin A.
Richards, Norman H., West Springfield, Mass. Rake cleaner. 2,471,239, May 24.
Rider, Harry N., assignor to "Automatic" Sprinkler Company of America, Youngstown, Ohio. Heat actuated device. 2,471,240, May 24.
Rider, Harry N., assignor to "Automatic" Sprinkler Company of America, Youngstown, Ohio. Fluid valve and remote-control system. 2,471,241, May 24.

Rink, Leo S., Moline, Ill. Weeding device. 2,470,899, May 24.
Rink, Leo S., Moline, Ill. Weeder with weed stripper. 2,470,900, May 24.
Robertson, John W., Englewood, and J. B. Rust, East Hanover, assignors of one-half to Montclair Research Corporation, Montclair, N. J., and one-half to Ellis-Foster Company. Alkyd resin-oxidised butadiene polymer emulsion. 2,470,953, May 24.
Rockwell, Edward A., Cleveland, Ohio. Pneumatic hydraulic travel control apparatus. 2,470,954, May 24.
Rodefeld, William H., Richmond, Ind. Pickup hay wagon. 2,471,350, May 24.
Rohm & Haas Company, assignee: *See*—
Auten, Robert W.
McKeever, Charles H.
Romano, Charles, and F. Schmid, Philadelphia, Pa. Razor honing and stropping mechanism. 2,471,855, May 24.
Roodner, Sylvia, New York, N. Y. Undergarment. 2,470,901, May 24.
Rosengren, Swan N., Seattle, Wash. Toolhead retainer. 2,470,885, May 24.
Rosenwald, Robert H., Western Springs, assignor to Universal Oil Products Company, Chicago, Ill. Alkylation of phenols. 2,470,902, May 24.
Ross, Walter C. J., London England. Manufacture of derivatives of etiocholenic acid. 2,470,903, May 24.
Rouy, Auguste L. M. A., New York, N. Y. Caloric adjusting. 2,471,123, May 24.
Rowland, Ben W.: *See*—
Knight, George D., and Rowland.
Rowland, Kathleen J.: *See*—
Fawcett, Eric W. M., Narracott, and Rowland.
Roys, Carl S., West Chicago, Ill., assignor by mesne assignments, to Nader Engineering Company. Alternating current generator. 2,471,286, May 24.
Royster, Percy H., Bethesda, Md., assignor to Pickands Mather & Co., Cleveland, Ohio. Treating titaniferous iron ores. 2,471,242, May 24.
Rubin, Louis C.: *See*—
McGrath, Henry G., Passino, and Rubein.
Russell, Robert D., St. Petersburg, Fla. Dual hot-air heater unit for fireplaces. 2,471,351, May 24.
Rust, John B.: *See*—
Robertson, John W., and Rust.
Rust, John B., West Orange, N. J., assignor of one-half to Montclair Research Corporation, and one-half to Ellis-Foster Company. Aldehyde-polycyanoacetamido-compound condensation products and making same. 2,471,243, May 24.
Sabin, Ernest E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Roughing machine. 2,470,866, May 24.
Sachs, Abraham, Baltimore, Md. Machine for breaking in shoes. 2,470,867, May 24.
Safir, Otto, Beaconsfield, England. Construction of staircases. 2,471,352, May 24.
Sahyun, Melville, St. Johns, Mich., assignor to Sterling Drug Inc., New York, N. Y. Protein hydrolysate containing essential amino acids and preparation therefor. 2,470,955, May 24.
Salsbery, Louis, Newark, N. J., and E. J. Hughes, Jr., Larchmont, N. Y. Golf bag. 2,471,169, May 24.
Samuel Stamping and Enameling Company, assignee: *See*—
Zimbelman, George W.
Zimbelman, George W., and Shelton.
Sanders, Philip K., Mamaroneck, N. Y. Hose. 2,471,081, May 24.
Sauter, Joseph H.: *See*—
Maull, Harry W., and Sauter.
Savidge, Clinton W., assignor to Franklin Transformer Manufacturing Company, Minneapolis, Minn. Refrigerator unit. 2,470,956, May 24.
Schaefer, Frederic, Pittsburgh, Pa. Brake rigging with beam-retracting spring. 2,471,287, May 24.
Schandler, Charles: *See*—
McCarthy, Frederick I., and Schandler.
Schenck, Edward L., Hughesville, Pa., assignor of one-fourth to B. Epstein, one-fourth to L. S. Epstein, and one-fourth to S. W. Epstein, Norfolk, Va. Treating waste rubber, etc. 2,471,043, May 24.
Schermuly, Alfred J.: *See*—
Schermuly, Conrad D., A. J., and C.
Schermuly, Charles: *See*—
Schermuly, Conrad D., A. J., and C.
Schermuly, Conrad D., A. J., and C., Parkgate, Newdigate, England. Line-carrying rocket. 2,471,353, May 24.
Schiffrin, Moses J., New York, N. Y. Fur button or ornament. 2,470,868, May 24.
Schild, Heinz: *See*—
Orthner, Ludwig, Balle, Schild, Schürmann, Broderæn, and Quaedvlieg.
Schlesinger, Walter, Chicago, Ill., and P. Becher, Brooklyn, N. Y. Noncorrosive hydraulic fluids. 2,470,792, May 24.
Schmid, Frederick: *See*—
Romano, Charles, and Schmid.
Schmidt, Francis J., Wauwatosa, Wis., assignor to The Peter-Schmidt Corporation, Chicago, Ill. Collapsible bench. 2,470,869, May 24.
Scholten, Harley B., Sheboygan Falls, Wis. Coupling of the ball-and-socket type. 2,470,870, May 24.
Schrope, William D.: *See*—
Fitzsimmons, John T., and Schrope.
Schug, John V., Paragould, Ark. Cotton chopper and cultivator. 2,471,374, May 24.
Schulman, James H., Cambridge, assignor to Sylvania Electric Products Inc., Salem, Mass. Calcium cadmium silicate phosphor. 2,471,062, May 24.
Schuls, Frederick J., Rensselaer, assignor, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y. Labeling machine attachment. 2,471,288, May 24.
Schürmann, Max-Otto: *See*—
Orthner, Ludwig, Balle, Schild, Schürmann, Broderæn, and Quaedvlieg.
Schwalbach, Robert C.: *See*—
Schwantes, Gilbert C., and Schwalbach.
Schwantes, Gilbert C., and R. C. Schwalbach, Milwaukee, Wis. Headstock attachment for lathes. 2,470,871, May 24.
Scott, George C., Le Sueur, Minn., and R. E. Oltman, deceased, late of Le Sueur, Minn., by J. T. Peterson, administrator, Le Sueur, Minn. Treatment of vegetables. 2,471,170, May 24.
Scott & Williams, Incorporated, assignee: *See*—
Bristow, Paul W.
Scrivener, Arthur, Birmingham, England. Magnetic separator having means for wiping and scraping the carrier disk. 2,471,044, May 24.
Sealed Power Corporation, assignee: *See*—
Olson, Holly M.
Sears, Roebuck and Co., assignee: *See*—
Taylor, William H.
Secor, Robert B., South Gate, assignor to Filtrol Corporation, Los Angeles, Calif. Preparation of acid activated clay. 2,470,872, May 24.
Sedgwick, Robert K., assignor to American Steel Foundries, Chicago, Ill. Preferential operating valve. 2,471,289, May 24.
Selts, Walter K., Tampa, Fla. Airplane tire valve release mechanism. 2,470,873, May 24.
Self, John L., Forest Hill, La. Braking system for motorcars. 2,471,244, May 24.
Selvidge, Harner, Silver Spring, Md. Ultra high frequency antenna system. 2,471,045, May 24.
Shanley, William B., San Marino, Calif., assignor to Universal Oil Products Company, Chicago, Ill. Polymerisation of olefinic hydrocarbons. 2,470,904, May 24.
Shapiro, Arthur L., Wilmette, Ill. Battery charger and rectifier therefor. 2,471,011, May 24.
Shapiro, Morris: *See*—
Franks, David, and Shapiro.
Shell Development Company, assignee: *See*—
Morris, Rupert C., Snider, and Bishop.
Moore, Robert J., and Trimble.
Smith, Curtis W.
Woods, Harold A., Yates, Klingen, and Barton.
Shelton, Roy: *See*—
Zimbelman, George W., and Shelton.

Peddock, Levi S.

Sylvania Electric Products Inc., assignee: *See*—
Schulman, James H.

Tate, Robert W., Chicago, Ill. Hook. 2,470,878, May 24.

Taylor, Daniel G., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Airflow control apparatus for cabin pressurising and engine supercharging. 2,471,292, May 24.

Taylor, John R., Westmount, Quebec, assignor to R. K. Wurtele, Goderich, Ontario, Canada. Ammonia recovery in soda ash production. 2,471,013, May 24.

Taylor, Ralph, New York, N. Y. Dentifrice. 2,470,906, May 24.

Taylor, Taylor & Hobson Limited, assignee: *See*—
Reason, Richard E.

Taylor, William H., Lake Bluff, assignor to Sears, Roebuck and Co., Chicago, Ill. Fiberboard container for disk-shaped articles. 2,471,173, May 24.

Tecalemit Limited, assignee: *See*—
Le Clair, Camille C. S.

Telegraph Construction and Maintenance Company Limited, The, assignee: *See*—
Smith, Esmond W., and Presswell.

Terchick, Anthony W., assignee: *See*—
Terchick, Kathryn A.

Terchick, Kathryn A., assignor of one-half to A. W. Terchick, Venetia, Pa. Baby garment. 2,471,048, May 24.

Tewin Industries, Inc., assignee: *See*—
Higgins, Eric B.

Thermoid Company, assignee: *See*—
Allen, Dwight P., and Wise.

Thomas, Lewis A.: *See*—
Spencer, James A., and Thomas.

Thomas, Percy H., Washington, D. C., assignor to the United States of America as represented by the Chairman of the Federal Power Commission. Aerogenerator. 2,470,797, May 24.

Thorne, Cyril J., Los Angeles, Calif. Prosthetic device. 2,471,360, May 24.

Thornton, Arthur W., Pittsburgh, L. Stewart, McKeesport, and F. Susa, Pittsburgh, Pa. Apparatus for coating ingot molds. 2,471,049, May 24.

Tomkins, Douglass G.: *See*—
Peck, Edward B., and Tomkins.

Tompkins, Howard E., Media, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Magnetic transducer adapted to compensate for twisting of the record wire. 2,471,251, May 24.

Toulon, Pierre M. G., Neuilly-sur-Seine, France. Single-stage, high-gain amplifier. 2,471,252, May 24.

Toulon, Pierre M. G., Puteaux, France. Signal distributing system. 2,471,253, May 24.

Trebert, Henry L., Jr., Canandaigua, N. Y. Universal woodworking machine table. 2,471,014, May 24.

Trefs, Otto F., Philadelphia, Pa. Machinist's universal vise. 2,471,361, May 24.

Tremoiada, Guglielmo R., assignor to Emsco Derrick & Equipment Company, Los Angeles, Calif. Automatic wash pipe oiler for rotary swivels. 2,470,960, May 24.

Trimble, Robert A.: *See*—
Moore, Robert J., and Trimble.

Tri-State Engineering Company, assignee: *See*—
Colt, Burton C., Jr.

Tropical Plantations Limited, assignee: *See*—
Hitchock, Stanley L.

Trubenizing Process Corporation, assignee: *See*—
Eddy, Arnold.

Truesdell, Norman A., Scarboro Bluffs, Ontario, Canada. Antitheft lock for automobiles. 2,471,293, May 24.

Trumpler, William E., assignor to Clark Bros. Co., Inc., Olean, N. Y. Centrifugal compressor stability means. 2,471,174, May 24.

Tubbs, Irl L., Mount Vernon, assignor, by mesne assignments, to A. H. McIntyre, Cedar Rapids, Iowa, as trustee, and her successor trustees. Clevis pin. 2,471,175, May 24.

Turrettini, Fernand, Bellevue-Geneva, assignor to Societe Genevoise d'Instruments de Physique, Geneva, Switzerland. Device for the measurement of lengths. 2,471,050, May 24.

Tuttle, Arvin, Berkeley, Calif. Bending straight stripe into annular collars or flanges between a disk and oscillating rollers. 2,471,083, May 24.

Twatt, James: *See*—
Best, Frank P., Colchester, and Twatt.

Tway, Walter M., Maricopa County, Ariz. Wheel and tire dolly. 2,471,051, May 24.

Union Switch & Signal Company, The, assignee: *See*—
Gilson, Robert M.
Smith, Harry R.

United Aircraft Corporation, assignee: *See*—
Ledwith, Walter A.

United Shoe Machinery Corporation, assignee: *See*—
Elliott, Richard M.
Sabin, Ernest E.

United States Rubber Company, assignee: *See*—
Paul, Philip T.

Universal Oil Products Company, assignee: *See*—
Chenicek, Joseph A.
Johnstone, Warren W.
Mavity, Julian M.
Rosenwald, Robert H.
Shanley, William B.

Unschuld, Henry M., assignee: *See*—
Degner, Charles F.

Utility Appliance Corp., assignee: *See*—
Abbott, John H., and Anger.

Vannini, Philipp, assignor to Landis & Gyr, A. G., Zug, Switzerland. Card holder actuated time recorder. 2,470,961, May 24.

Vesterdal, Hans G., Elizabeth, N. J., assignor to Standard Oil Development Company. Hydrocarbon syntheals. 2,471,129, May 24.

Vesterdal, Hans G., Elizabeth, N. J., assignor to Standard Oil Development Company. Preparing an iron catalyst promoted with an alkali metal fluoborate. 2,471,130, May 24.

Victor Ring Traveler Company, assignee: *See*—
Joseph, Henry G.

Viles, Prentiss S., Goose Creek, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Catalytic conversion of hydrocarbon oil. 2,471,131, May 24.

Vin, René, Paris, assignor to Société Etablissements Poron, Troyes, (Aube) France. Feeding apparatus for yarn or the like. 2,471,302, May 24.

Vincent, Dan B., Inc., assignee: *See*—
Vincent, Daniel B.

Vincent, Daniel B., assignor to Dan B. Vincent, Inc., Tampa, Fla. Making food products. 2,471,363, May 24.

Von Hoorn, Fred G., Nichols, Conn., assignor to General Electric Company. Time lag fuse link. 2,471,176, May 24.

Von Hoorn, Fred G. Nichols, Conn., assignor to General Electric Company. Renewable fuse. 2,471,177, May 24.

Waara, David H., Detroit, assignor to Robert L. Brown, Ferndale, Mich. Molding clip. 2,471,254, May 24.

Wagner, Julius A.: *See*—
Bertalan, Edward, and Wagner.

Wallwork, Alfred, assignor to Carlyle Sales Corporation, Charlotte, N. C. Weaving textile containers. 2,471,380, May 24.

Walsh, Robert, Wilmington, Del., assignor to General Electric Company. Air cleaning axial flow blower. 2,471,178, May 24.

Wannsmaker, William H., Jr.: *See*—
Caldwell, John A., Wannsmaker, Jr., and Kuntny.

Warner, Frank W.: *See*—
Gale, Marvin E., and Warner.

Warner, William R., assignor: *See*—
Page, Bruno.

Watten, Jack, London, England. Enclosed shaft drive. 2,471,015, May 24.

Watts, Raymond, assignor to American Steel Foundries, Chicago, Ill. Shock absorber. 2,471,294, May 24.

Weatherford, Heiskell, Jr., assignee: *See*—
Cooper, James H.

Weber, Jonah C., Lamar, Colo. Hay stacker. 2,471,364, May 24.

Wehr, William G., North Madison, assignor to The Cleveland Crane & Engineering Company, Wickliffe, Ohio. Crane cab. 2,471,295, May 24.

Wein, John F., Indianapolis, Ind., assignor to Radio Corporation of America. Spring mounted brake. 2,471,062, May 24.

Weisenburg, Andrew, Overbrook Hills, Pa., assignor to Continental Can Company, Inc., New York, N. Y. Machine for applying spots to bottle caps. 2,471,255, May 24.

Wemp, Ernest E., Detroit, Mich. Hydrokinetic torque converter. 2,471,179, May 24.

Wertzler, Richard: *See*—
Olson, Leonard E., and Wertzler.

Wescott, Harvey M., South Westport, Mass. Figurine ball projector. 2,470,962, May 24.

Western Electric Company, Incorporated, assignee: *See*—
Bertalan, Edward, and Wagner.
Dunn, John R.
Henning, George E.
Rayburn, Vincent A.

Westinghouse Electric Corporation, assignee: *See*—
Jernstedt, George W., and Ceresa.
Kusch, Polykarp.
Price, Towson.

Westmoreland-White, Beryl, assignor to Messrs. Hard Metal Tools Limited, Coventry, England. Hard compositions for use in tools and making. 2,471,016, May 24.

Weston Electrical Instrument Corporation, assignee: *See*—
Miller, John H.

Weyl, Bernard A., Pittsburgh, Pa. Attachment of buttons to fabric. 2,470,963, May 24.

Whinfield, John R.: *See*—
Cook, James G., Dickson, Lowe, and Whinfield.

White Cap Company, assignee: *See*—
Davies, Lynn E.

White, Glen L., Grosse Pointe, and C. H. Diedrich, assignors to Monroe Auto Equipment Company, Monroe, Mich. Vehicle seat construction. 2,470,907, May 24.

White, William S., Denver, Colo. Intermittent flush valve. 2,470,798, May 24.

Wickman, A. C., Limited, assignee: *See*—
Wickman, Axel C.

Wickman, Axel C., assignor to A. C. Wickman Limited, Coventry, England. Producing a sintered abrasive body. 2,471,132, May 24.

Wicks, Gerald C., Buenos Aires, Argentina. Electric water heater. 2,471,133, May 24.

Wilding, Lars A.: *See*—
Danielsson, Borje K., and Wilding.

Wiggins, Glenn F., Palo Alto, Calif. Portable garment holder or hanger. 2,470,879, May 24.

Wightman, Lawrance W., Fort Wayne, Ind., assignor to General Electric Company. Mechanism for adjusting shaft end play. 2,471,180, May 24.

Wilcox, Howard A.: *See*—
Marlowe, Elbert W., and Wilcox.

Wilcox, Isaac L.: *See*—
Horning, Raymond H., and Wilcox.

Wilcox, Isaac L., assignor to Oswego Falls Corporation, Fulton, N. Y. Container. 2,471,017, May 24.

Wilcox, Marion J.: *See*—
Hall, Ralph E., and Wilcox.

Wilcox, Marion J., Harvey, Ill., and R. E. Hall, East Chicago, Ind., assignors to Sinclair Refining Company, New York, N. Y. Fluidized catalytic conversion of hydrocarbons. 2,471,084, May 24.

Wilcox, Marion J., Harvey, Ill., and R. E. Hall, East Chicago, Ind., assignors to Sinclair Refining Company, New York, N. Y. Fluid catalyst process for the conversion of hydrocarbons. 2,471,085, May 24.

Williams, Alfred O.: *See*—
Burrows, Robert J., and Williams.

Williams, Maynard A., assignee: *See*—
Smith, Herman A.

Wilson, John M., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Relay. 2,471,181, May 24.

Wintermute, Vern M., North Plainfield, assignor to Lyte Parts, Company, Plainfield, N. J. Radio antenna. 2,471,256, May 24.

Winthrop-Stearns Inc., assignee: *See*—
Clark, Thomas S. H.
Schulz, Frederick J.

Wisconsin Alumni Research Foundation, assignee: *See*—
Johnson, William S., Petersen, and Gutsche.
Stahmann, Mark A., and Link.

Wise, Royale: *See*—
Allen, Dwight P., and Wise.

Witteoff, Harold, Minneapolis, Minn., assignor to General Mills, Inc. Rosin acid esters. 2,470,964, May 24.

Woods, Harold A., W. J. Yates, and L. Klingen, Martinez, and R. C. Barton, Piedmont, assignors to Shell Development Company, San Francisco, Calif. Manufacture of grease. 2,470,965, May 24.

Woodward, Henry P. J., assignee: *See*—
Hunt, Ernest W.

Worth, Thomas F., Lynn, Mass., assignor to General Electric Company. Dynamoelectric machine. 2,471,182, May 24.

Wright, Richard O., Elizabeth, N. J., assignor to Standard Oil Development Company. Fractionation apparatus. 2,471,184, May 24.

Wurtele, Richard K., assignee: *See*—
Taylor, John R.

Wyeth, Nathaniel, Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Motor vehicle. 2,471,135, May 24.
Yates, Wallace J.: *See*—
Woods, Harold A., Yates, Klingen, and Barton.
Yurick, Francis J.: *See*—
Yurick, Joseph, and F. J.
Yurick, Joseph, and F. J., Shamokin, Pa. Safety device for blasting caps. 2,471,381, May 24.
Zenith Radio Corporation, assignee: *See*—
Knowles, Hugh S.
Zimbelman, George W., Signal Mountain, and R. Shelton, Red Bank, assignors to Samuel Stamping and Enameling Company, Chattanooga, Tenn. Sheet-metal gas burner. 2,470,880, May 24.
Zimbelman, George W., Signal Mountain, assignor to Samuel Stamping and Enameling Company, Chattanooga, Tenn. Porcelain-coated gas burner. 2,470,881, May 24.
Zuschlag, Theodore, West Englewood, N. J., assignor to Magnetic Analysis Corporation, Long Island City, N. Y. Magnetic testing with artificial standard. 2,470,839, May 24.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 24TH DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Motor vehicle stabilising means. C. C. Utz. Re. 23,116, May 24.
Plant regulant composition and method. J. F. Lontz. Re. 23,115, May 24.
Stop motion in circular looms, Thread operated. V. M. J. Ancet. Re. 23,114, May 24.

LIST OF PLANT INVENTIONS

Rose plant. R. L. Byrum. 838–9, May 24.
Rose plant. V. Sodano. 840, May 24.

LIST OF DESIGN INVENTIONS

Atomizer, Perfume. H. Anbender and W. J. Weinstein. 153,840, May 24.
Band-saw machine. T. Farrell. 153,867, May 24.
Base, Floor lamp. I. I. Gotliffe. 153,873, May 24.
Boat. V. K. Williamson. 153,910, May 24.
Boot, Ladder. W. P. Regan. 153,900, May 24.
Bowl, Lighting. H. J. Claspy. 153,856, May 24.
Bracelet or similar article. A. Katz. 153,879, May 24.
Bracket, Automobile lamp support. S. H. Lapidus. 153,883, May 24.
Bracket, Electric light wall. A. A. Johnson. 153,878, May 24.
Buckle member, Leather strap. L. Oppenheimer. 153,895, May 24.
Building. J. V. Avila. 153,841, May 24.
Bus. G. S. Lawson. 153,884, May 24.
Carrier, Bottle. J. K. Laier. 153,882, May 24.
Chair. W. N. Brasaneki. 153,850, May 24.
Chair. F. D. Hager. 153,876, May 24.
Chair, Child's foldable. G. E. Frush. 153,870, May 24.
Cup. A. T. Macaulay. 153,887, May 24.
Dispenser for powdered materials. J. F. De Sales. 153,861, May 24.
Dutch oven. A. D. Mortrude. 153,894, May 24.
Eyecup. S. T. Bonilla. 153,847, May 24.
Fabric, Textile. B. J. Greenbaum. 153,874, May 24.
Faucet unit, Double acting sink valve. M. Smolensky. 153,907, May 24.
Figure, Ball boat shelf. E. R. Bartolomeo. 153,843, May 24.
Fire extinguishing grenade and holder, Combined. A. Cisek. 153,854, May 24.
Fixture, Electric lighting. M. M. Dunbar. 153,864, May 24.
Fixture, Incandeacent lighting. C. C. Braun. 153,849, May 24.
Fixture, Light. J. L. Libby. 153,885, May 24.
Font of printing type. D. Peterson. 153,897, May 24.
Globe, Lighting. H. J. Claspy. 153,855, May 24.
Guard, Capping machine. M. S. Resina. 153,903, May 24.
Guard, Combined bumper and fog light housing. E. F. Rygasewics. 153,904, May 24.
Gun, Spray. S. E. Edelstone and A. L. Jenks. 153,865, May 24.
Handle, Toaster. J. O. Reinecke. 153,902, May 24.
Heater for food products. A. F. Stolitzka. 153,908, May 24.
Heater, Solid fuel burning room. D. H. Wyatt. 153,911, May 24.
Holder, Cosmetic. W. B. Crane. 153,859, May 24.
Housing, Speaker. R. F. Poorman. 153,899, May 24.
Housing, Temperature and humidity indicator. G. L. Becksirom. 153,846, May 24.
Knife and sciasors sharpener, Combination. C. W. Lynch. 153,886, May 24.
Lamp, Taxicab cruising. R. W. Garrett. 153,871–2, May 24.
Locomotive body. R. Patten. 153,896, May 24.
Molding machine, Injection. A. C. Carleon. 153,852, May 24.
Name plate, Burial vault. L. S. Bassley. 153,844, May 24.
Nut cracker. J. K. Martens. 153,888, May 24.
Opener, Letter. G. L. Beckstrom. 153,845, May 24.
Ornament or similar article, Automobile hood. W. H. Johnsen. 153,877, May 24.
Panel, Fence. N. J. Hays. 153,876, May 24.
Pen, Ball, or similar article. S. M. Sager. 153,905, May 24.
Pipe, Smoker's. F. F. Flint. 153,869, May 24.
Press, Hydraulic. H. V. Mills. 153,892, May 24.
Projector apparatus and carrying case therefor, Combined portable motion-picture. W. C. De Vry. 153,863, May 24.
Projector machine and carrying case therefor, Combined portable motion-picture. W. C. De Vry. 153,862, May 24.
Push-chair, Child's. H. R. Shaw. 153,906, May 24.
Radio receiver. G. H. Kress. 153,881, May 24.
Receptacle for fire extinguishing grenades. A. Cisek. 153,853, May 24.
Refrigeration unit, Self-contained. E. W. Ekstrand. 153,866, May 24.
Ring, Curtain or drapery festoon. M. J. Pollak. 153,898, May 24.
Ring or kindred article, Finger. J. B. Fishburne. 153,868, May 24.
Shoe or similar article. L. J. Martin. 153,889, May 24.
Shoe or similar article. J. Matrick. 153,890, May 24.
Shoeshine machine, Automatic. C. Bader. 153,842, May 24.
Spoon or other article of flatware. S. P. Kaufman. 153,880, May 24.
Stand, Combined telephone, and lamp. J. Dern and J. H. Harris. 153,860, May 24.
Stand for coffee maker. J. E. Comeau and H. C. Mitchell. 153,857, May 24.
Taxicab. L. Brodton. 153,851, May 24.
Toaster. J. O. Reinecke. 153,901, May 24.
Top for vehicle body. N. D. Conner. 153,858, May 24.
Tray and stand nestable unit, Service. W. E. Wats. 153,909, May 24.
Truck, Tank. T. G. Branham. 153,848, May 24.
Washing machine and wringer, Combined. J. Morgan. 153,893, May 24.
Writing instrument or the like. S. J. Meno. 153,891, May 24.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 24TH DAY OF MAY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accounting machine. C. J. Goodale and H. B. Marvin. 2,471,150, May 24.
Acid eaters, Rosin. H. Wittcoff. 2,470,964, May 24.
Acid, Manufacture of sulfuric. H. F. Marriam. 2,471,072, May 24.
Acid, Nonanoic. A. A. Pavlic. 2,470,859, May 24.
Acids, Preparation of aliphatic. R. S. Spindt and D. R. Stevens. 2,470,876, May 24.
Acids, Recovery of by-product. W. E. Hanson. 2,470,849, May 24.
Adjustable beam lamp. H. L. and O. C. Kindorf. 2,470,991, May 24.
Aerochemical device. F. Short. 2,470,793, May 24.
Aerogenerator. P. H. Thomas. 2,470,797, May 24.
Aircraft control system. A. G. Parker. 2,471,283, May 24.
Air distribution control for bridge wall furnaces, Secondary combustion. C. E. Feinberg. 2,471,101, May 24.
Airflow control apparatus for cabin pressurizing and engine supercharging. D. G. Taylor. 2,471,292, May 24.
Aldehyde - polycyanoacetamido - compound condensation products and making same. J. B. Rust. 2,471,243, May 24.
Alkyd resin-oxidised butadiene polymer emulsion. J. W. Robertson and J. B. Rust. 2,470,953, May 24.
Alkylation catalysed by liquid hydrogen fluoride. S. T. Hadden. 2,471,211, May 24.
Alkylation of phenols. R. H. Rosenwald. 2,470,902, May 24.
Alloy: *See*—
Glass sealing alloy.
Alloy addition agents. A. Lins. 2,470,935, May 24.
Alloys, Manufacture of. T. Price. 2,470,7b0, May 24.
Alloys, Zinc base. E. S. Bunn. 2,471,385, May 24.
Alpha iron oxide-alkali metal ferrate catalyst and preparation. M. A. Mosseman. 2,470,785, May 24.
Alternating current generator. C. S. Roys. 2,471,286, May 24.
Alumina gel pellets. J. E. Messenger. 2,471,000, May 24.
Amine salts as fungicides and bactericides, Long-chain. A. Minich and M. Nowak. 2,471,339, May 24.
Amino acid extraction. H. J. Almquist and J. G. Davis. 2,471,059, May 24.
Ammonia recovery in soda ash production. J. R. Taylor. 2,471,013, May 24.
Amplifier, Single-stage, high-gain. P. M. G. Toulon. 2,471,252, May 24.
Animal trap. C. L. Leonard. 2,470,858, May 24.
Antenna, Radio. D. Jackson. 2,471,215, May 24.
Antenna system, Directive. W. T. Rea. 2,471,284, May 24.
Antenna system, Ultra high frequency. H. Selvidge. 2,471,045, May 24.
Apparatus for advancing nonmetallic plastic material. G. E. Henning. 2,471,324, May 24.
Apparatus for chilling fluids. S. Lo Gerfo. 2,470,936, May 24.
Apparatus for clarifying fluids. B. Page. 2,470,943, May 24.
Apparatus for coating ingot molds. A. W. Thornton, L. Stewart, and F. Susa. 2,471,049, May 24.
Apparatus for coating pipe. R. C. Stromquist. 2,470,796, May 24.
Apparatus for dehumidification. B. G. Peters. 2,471,376, May 24.
Apparatus for drafting textile fibers. W. F. Bird. 2,471,066, May 24.
Apparatus for feeding batch to glass melting furnaces. E. H. Lorenz. 2,471,336, May 24.
Apparatus for feeding powdered material. H. G. Hughey. 2,470,819, May 24.
Apparatus for forming the ends of wood pieces. J. W. Swenson. 2,470,969, May 24.
Apparatus for measuring or indicating the roughnesses or undulations of surfaces. R. E. Reason. 2,471,009, May 24.
Apparatus for packing products of variable weight. E. H. Carruthers. 2,470,976, May 24.
Apparatus for selectively packing products of variable weight. E. H. Carruthers. 2,470,916, May 24.
Apparatus for the desiccation of organic substances. F. E. Hurd. 2,471,035, May 24.
Apparatus for use in obstetrics, Electrical. F. Benoit. 2,470,970, May 24.
Apron. H. J. Lee. 2,471,331, May 24.
Aqueous emulsions of mixed phthalic glyceride and melamine-formaldehyde resins. D. W. Light. 2,471,396, May 24.
Armature structure for electromagnetic apparatus. P. F. Beer. 2,471,365, May 24.
Article of apparel and making same. A. Eddy. 2,471,203, May 24.

Article of furniture, Reclining. A. Lorenz. 2,470,781, May 24.
Asymmetric scorsby and operation. R. Haskins, Jr. 2,470,773, May 24.
Athletic apparatus. R. W. W. Harvey. 2,470,815, May 24.
Attachment for beverage containers, Table. T. E. Foulke. 2,471,030, May 24.
Attachment for cans, Strainer and spout. F. Bartels. 2,471,189, May 24.
Attachment for lathes, Headstock. G. C. Schmanies and E. C. Schwalbach. 2,470,871, May 24.
Attachment for metal turning machines, Work centering. E. Luginbuhl. 2,471,038, May 24.
Attachment for motor-driven vehicles, such as tractors, Hoisting. W. C. Lathers, Jr. 2,470,857, May 24.
Attachment of buttons to fabric. B. A. Weyl. 2,470,963, May 24.
Audiometer for air and bone conducting receivers having a scale with a single zero hearing loss reference. R. E. Allison. 2,471,136, May 24.
Automatic rope lock. M. Lomner. 2,471,335, May 24.
Axial flow blower, Air cleaning. R. Walsh. 2,471,178, May 24.
Bag: *See*—
Golf bag.
Siftproof bag.
Bag stand. C. A. Chidsey, Jr. 2,470,977, May 24.
Balanced variable reactance device. R. V. Langmuir and P. H. Peters, Jr. 2,471,155, May 24.
Base structure for electron tubes. R. L. Norton. 2,471,005, May 24.
Bathtub, Collapsible. N. M. Boward. 2,471,302, May 24.
Battery charger and rectifier therefor. A. L. Shapiro. 2,471,011, May 24.
Bearing journal, Composite floating. K. W. Atwater. 2,471,187, May 24.
Beauty parlor rolling auxiliary chair. J. W. Adams. 2,471,163, May 24.
Bed, Folding. W. Jasinski. 2,470,930, May 24.
Belt-applying tool. J. R. and A. L. Engard. 2,470,810, May 24.
Bench, Collapsible. F. J. Schmidt. 2,470,869, May 24.
Bending straight strips into annular collars or flanges between a disk and oscillating rollers. A. Tuttle. 2,471,083, May 24.
Berth arrangement. B. E. Jones. 2,470,853, May 24.
Bin, Grading machine. M. Lupton. 2,471,225, May 24.
Blank for shoe uppers. E. Cassano. 2,471,366, May 24.
Blind stitching apparatus. S. J. Birginal. 2,470,914, May 24.
Block: *See*—
Concrete curb block.
Board: *See*—
Distribution board.
Bolster for vehicles, Disappearing. V. L. Colorigh. 2,471,096, May 24.
Bomb, Safety pressure detonator. R. E. Mitton. 2,471,163, May 24.
Borge gauge. E. H. Aldeborgh and A. H. Emery. 2,470,755, May 24.
Boring and beveling machine, Piston ring. H. M. Olson. 2,471,006, May 24.
Bottle-sterilising arrangement. O. H. Brewster. 2,471,303, May 24.
Box: *See*—
Folding berry box.
Brace, Portable drill. J. E. Gay. 2,471,208, May 24.
Bracket. A. E. Nelson. 2,471,342, May 24.
Bracket for mounting rollers on overhead doors. H. B. Clark. 2,471,197, May 24.
Brake: *See*—
Spring mounted brake.
Brake mounting and control. O. R. and R. A. Peterson. 2,471,346, May 24.
Brake rigging. T. C. Crossman. 2,471,313, May 24.
Brake rigging with beam-retracting spring. F. Schaefer. 2,471,287, May 24.
Braking apparatus, Railway. R. M. Gilson. 2,471,320, May 24.
Braking system for motorcars. J. L. Self. 2,471,244, May 24.
Brassière and similar garment. E. W. Gluckin. 2,470,847, May 24.
Bread cooling and proofing rack. J. M. Dunston. 2,470,765, May 24.
Bridle. F. D. Reed, Jr. 2,471,121, May 24.
Brush, Bath. H. Griffin. 2,471,210, May 24.
Buoy, Plane marker. V. A. Mead. 2,470,783, May 24.

Burner: *See*—
Oil burner.
Sheet-metal gas burner.
Porcelain-coated gas burner.
Burner control system. W. L. McGrath. 2,470,998, May 24.
Butter dispenser. R. E. Dodge. 2,471,309, May 24.
Button, Combination. F. Haley. 2,470,960, May 24.
Button or ornament, Fur. M. J. Schifrin. 2,470,868, May 24.
Cab, Crane. W. G. Webr. 2,471,295, May 24.
Cabinet having combined doors and slidable shelf. M. L. Kramer. 2,470,993, May 24.
Cable forming machine. E. Bertalan and J. A. Wagner. 2,471,299, May 24.
Calcium cadmium silicate phosphor. J. H. Schulman. 2,471,082, May 24.
Caloric adjusting. A. L. M. A. Rouy. 2,471,123, May 24.
Can and cover keeper, Garbage. R. G. Blank. 2,471,257, May 24.
Can extractor. E. Laxo. 2,471,156, May 24.
Capacitor, Fixed. W. McMahon. 2,470,826, May 24.
Capsulating method and apparatus. V. V. Stephenson. 2,471,358, May 24.
Card and package, Display. S. R. Gittens. 2,471,321, May 24.
Carrier: *See*—
Stack carrier.
Carrier for automobiles, Boat. G. C. Guest. 2,470,846, May 24.
Carrier operating mechanism, Wrapper. J. F. Halstead. 2,471,359, May 24.
Caster, Trailer. S. R. Du Bris. 2,470,978, May 24.
Catalyst process for the conversion of hydrocarbons, Fluid. M. J. Wilcox and R. E. Hall. 2,471,085, May 24.
Catalyst quality by magnetic separation. H. J. Ogorzaly. 2,471,078, May 24.
Catalysts from product streams, Removal of soluble. E. H. Amick, Jr. 2,471,064, May 24.
Catalytic conversion of hydrocarbons, Fluidized. M. J. Wilcox and R. E. Hall. 2,471,084, May 24.
Catalytic system, Continuous. T. P. Simpson, J. W. Payne, and J. A. Crowley, Jr. 2,471,398, May 24.
Cathode cup construction. E. J. Atlee. 2,471,298, May 24.
Caulking plug. E. W. N. Boosey. 2,471,301, May 24.
Cellulose ether plasticised with a cyclomethylene sulfone, Water-soluble. G. W. Hooker and N. R. Peterson. 2,471,272, May 24.
Cementing device, Well. W. S. Althouse, Jr., and E. Graham, Jr. 2,471,382–3, May 24.
Cementitious materials, Impregnating and decorating. L. Chunn. 2,470,918, May 24.
Chair: *See*—
Beauty parlor rolling auxiliary chair.
Infant's chair.
Chair with tilting back and automatically shiftable seat. R. A. Cramer. 2,471,024, May 24.
Chopper and cultivator, Cotton. J. V. Schug. 2,471,377, May 24.
Christmas tree stand. H. A. Smith. 2,471,124, May 24.
Chuck, Crankshaft. W. R. Meyer and H. J. Siekmann. 2,471,162, May 24.
Cigar machine. J. P. Dorning. 2,470,766, May 24.
Circuit: *See*—
Index pulse generating circuit.
Seismograph blaster time breaker circuit.
Receiver input circuit.
Circuit arrangement for modulating an electric signal. G. Hepp. 2,470,893, May 24.
Circuit for measuring, Alternating current compensator. G. V. A. Gustafsson and J. D. Malmqvist. 2,471,105, May 24.
Clamp: *See*—
Adjustable beam clamp.
Clamp. C. S. Card. 2,471,305–6, May 24.
Clamp for conduit supports, Beam. H. L. and O. C. Kindorf. 2,470,992, May 24.
Clasp, Bracelet. D. Block. 2,471,300, May 24.
Clay, Preparation of acid activated. R. B. Secor. 2,470,872, May 24.
Cleaner: *See*—
Pipe cleaner.
Rake cleaner.
Cleaning device for fuses and fuse holders. A. J. Parker. 2,471,236, May 24.
Clevis pin. I. L. Tubbe. 2,471,175, May 24.
Clip: *See*—
Molding clip.
Towel clip.
Clip for attaching molding to automobile bodies and fenders. J. Stadler. 2,471,247, May 24.
Clothespin. E. P. Ashcroft. 2,471,186, May 24.
Clothespin. C. Castelli. 2,471,141, May 24.
Coal handling system. E. Ramsay. 2,471,042, May 24.
Coat hanger. F. Pasznicki. 2,471,007, May 24.
Coating pipe. R. C. Stromquist. 2,470,956, May 24.
Coating porous sheets, Continuously. G. D. Knight and B. W. Rowland. 2,471,330, May 24.
Collar construction, Shirt. E. C. Pfeffer, Jr. 2,470,960, May 24.
Comb. A. B. Mensing. 2,471,279, May 24.
Combination tool. R. R. Boshaw. 2,471,101, May 24.
Combined ohmmeter and illumination meter. J. H. Miller. 2,471,001, May 24.
Communicating door lock. H. S. Harvey. 2,470,770, May 24.
Communication system, Electrical. P. Curry. 2,470,760, May 24.
Communication system, Radio. E. H. B. Bartelink. 2,471,138, May 24.
Compass, Beam. J. E. Brower. 2,471,193, May 24.
Compressor stability means, Centrifugal. W. E. Trampler. 2,471,174, May 24.
Computing sight. R. M. Elliott. 2,471,204, May 24.
Concrete curb block. E. C. Maccario. 2,471,226, May 24.
Conduit section, Severable electrical. J. F. O'Brien and E. S. Boynton. 2,470,788, May 24.
Connecting device. B. N. Ashton. 2,470,800, May 24.
Connector: *See*—
Flexible connector.
Container: *See*—
Shipping container.
Container. L. L. Wilcox. 2,471,017, May 24.
Container construction. R. H. Horning and I. L. Wilcox. 2,470,984, May 24.
Container for disk-shaped articles, Fiberboard. W. H. Taylor. 2,471,173, May 24.
Control arrangement for absorption refrigeration systems. A. A. Berestneff. 2,470,756, May 24.
Control device, Thermoelectric. W. A. Ray. 2,470,864, May 24.
Control for telephone coin collectors, Toll operator. G. A. Anderson. 2,471,087, May 24.
Control of textile fibers during drafting operations. W. F. Bird. 2,471,068, May 24.
Control system. E. P. Newman. 2,471,343, May 24.
Control system, Electric remote selective. L. E. W. Montrose-Oster. 2,471,075, May 24.
Conversion of hydrocarbon oil, Catalytic. P. S. Viles. 2,471,131, May 24.
Conversion of hydrocarbons, Fluidized catalytic. R. E. Hall and M. J. Wilcox. 2,471,034, May 24.
Converter and error detector, Code. J. A. Spencer and L. A. Thomas. 2,471,126, May 24.
Converter, Hydrokinetic torque. E. E. Wemp. 2,471,179, May 24.
Conveyer. V. A. Rayburn. 2,471,347, May 24.
Conveyer system, Work distributing. J. R. Dunn. 2,470,922, May 24.
Coolant for metal machining processes. A. J. Björkaten and T. C. Crowley. 2,470,913, May 24.
Coupling: *See*—
Rotary turbine type fluid coupling.
Separable fluid coupling.
Coupling feeler, Flexible sewer rod. R. E. Cooper. 2,471,060, May 24.
Coupling of the ball-and-socket type. H. B. Scholten. 2,470,870, May 24.
Crankcase oil heater. S. Boger. 2,470,972, May 24.
Crossing, construction, Railroad-highway. E. C. Oxenrider. 2,471,167, May 24.
Cushion, Detachable seat. J. E. Horn. 2,470,929, May 24.
Cutter: *See*—
Paper cutter.
Cutter for transfer molding devices, Sprue. M. E. Gale and F. W. Warner. 2,471,146, May 24.
Cyclic sulfides, Production of. R. J. Moore and R. A. Trimble. 2,471,077, May 24.
Deep well pump. C. F. Degner. 2,470,858, May 24.
Deer call. H. F. Luch. 2,470,823, May 24.
Dentifrice. R. Taylor. 2,470,906, May 24.
Derivatives of etiocholenic acid, Manufacture of. W. C. J. Ross. 2,470,903, May 24.
Device for converting a signal of variable amplitude into pulses of constant frequency and variable duration. K. Posthumus. 2,471,166, May 24.
Device for determining the depth of liquids. L. D. Eby. 2,471,026, May 24.
Device for heating, cooling, or radiating liquids. R. del Cueto. 2,470,806, May 24.
Device for the measurement of lengths. F. Turrettini. 2,471,050, May 24.
Die head, Self-opening. R. M. Strickland. 2,471,250, May 24.
Diols and ester derivatives thereof, Preparation of. C. W. Smith. 2,471,391, May 24.
Di(orthoacylaminoaryl) disulfide softeners for isoolefin-diolefin copolymers. P. T. Paul. 2,470,940, May 24.
Di(orthoacylaminoaryl) disulfide softeners for rubbers. P. T. Paul. 2,470,945, May 24.
Di(orthoacylaminoaryl) disulfide softeners for rubbers. P. T. Paul. 2,470,948, May 24.
Discharge device, Electron. P. Kusch. 2,470,856, May 24.
Discharge device, Ionic. C. Depew. 2,471,263, May 24.
Discharging apparatus for farm wagons, Load. R. A. Piper. 2,470,836, May 24.
Dispenser: *See*—
Butter dispenser.
Dispensing apparatus. C. M. Asbill, Jr. 2,471,055, May 24.
Dispensing apparatus. R. E. Dodge. 2,471,100, May 24.
Display device, Animated. G. F. Mohr. 2,471,002, May 24.
Distance indicater. C. F. Davis, Jr. 2,470,807, May 24.
Distribution board. S. Bromsield. 2,470,884, May 24.
Distributer, Gathering machine. E. S. Hope. 2,471,214, May 24.
Dolly, Wheel and tire. W. M. Tway. 2,471,061, May 24.

Door: *See*—
Furnace door.
Door hook. J. A. Bierwirth and F. Klaeden. 2,471,089, May 24.
Dough handling machine. H. W. Maull and J. H. Sauter. 2,471,112, May 24.
Drafting textile fibers, Method and apparatus for. W. F. Bird. 2,471,057, May 24.
Drier: *See*—
Hair drier.
Drill jack. S. H. McAfee, Jr. 2,471,374, May 24.
Dry dock, Floating. F. R. Harris. 2,471,065, May 24.
Dual purpose sleeve-spring spring jack. J. E. Bosh. 2,470,916, May 24.
Dynamoelectric machine. P. I. Chandeysson. 2,470,845, May 24.
Dynamoelectric machine. T. M. Linville. 2,471,157, May 24.
Dynamoelectric machine. T. F. Worth. 2,471,182, May 24.
Dynamoelectric machine, Adjustable speed. W. R. Goss. 2,471,151, May 24.
Educational device. M. Green. 2,471,271, May 24.
Electric switch. J. L. Mohar. 2,471,040, May 24.
Electric water heater. G. C. Wicks. 2,471,133, May 24.
Electrical apparatus. W. H. Busney. 2,470,976, May 24.
Electrical fluid heater. H. P. Chapman. 2,471,260, May 24.
Electrically actuated heater. H. P. Chapman. 2,471,259–60, May 24.
Electrode holder. E. F. Morrissey. 2,471,340, May 24.
Electron counter. T. Colson. 2,470,920, May 24.
Electron discharge device employing cavity resonators. R. R. Law. 2,471,087, May 24.
Electronic apparatus. L. C. Smith. 2,471,246, May 24.
Electronic counter. W. A. Gieseke. 2,470,926, May 24.
Electroplating nickel and cobalt with periodic reverse current. G. W. Hernstedt and M. Ceresa. 2,470,775, May 24.
Engine mount and accessory coupling, Detachable. C. E. Patterson. 2,471,118, May 24.
Engine protective device. J. H. Cooper. 2,471,387, May 24.
Enrichment composition. T. S. H. Clark. 2,470,804, May 24.
Exercising device. R. W. W. Harvey. 2,470,816, May 24.
Extractor: *See*—
Can extractor.
Fastener for window screens and storm sashes. L. C. MacDonald. 2,471,159, May 24.
Fastening device. H. A. Flogaus. 2,470,924, May 24.
Fastening means. W. C. Hale, Jr. 2,470,927, May 24.
Feeding apparatus for yarn or the like. R. Vin. 2,471,362, May 24.
Ferro-ferric oxide-alkali metal ferrate catalyst and its preparation. M. A. Mosesman. 2,470,786, May 24.
File, Card index. A. G. and N. H. Lundqvist. 2,470,824, May 24.
Filter: *See*—
Oil or liquid filter.
Fish scoring machine. E. W. Davis. 2,471,062, May 24.
Fishline sinker. B. J. Lesser. 2,470,995, May 24.
Fishing lure. T. G. Prentice. 2,470,861, May 24.
Flashlight switch. O. Gray and H. Lewis. 2,471,032, May 24.
Flask, Dental. T. F. Fagan. 2,471,205, May 24.
Flexible connector. S. Keller and D. W. Fentress. 2,470,989, May 24.
Flint holder. I. Florman. 2,471,206, May 24.
Fluidized shale autothermic distillation. E. B. Peck and D. G. Tomkins. 2,471,119, May 24.
Fluids, Noncorrosive hydraulic. W. Schleainger and P. Becher. 2,470,792, May 24.
Flushing composition for engine lubricating systems. J. D. Morgan and R. E. Lowe. 2,471,290, May 24.
Flux, Soft soldering. J. E. Strader. 2,470,957, May 24.
Folding berry box. J. Gagnon. 2,471,147, May 24.
Folding lap table. W. Monahan. 2,471,003, May 24.
Folding machine. M. D. Alber. 2,470,754, May 24.
Folding machine. L. E. Dickenson. 2,470,762, May 24.
Food products, Making. D. B. Vincent. 2,471,363, May 24.
Forming threaded caps, Method and apparatus for. L. R. N. Carvalho. 2,471,307, May 24.
Fractionation apparatus. R. O. Wright. 2,471,134, May 24.
Frame: *See*—
Interchangeable eye lens frame.
Friction shock absorbing mechanism. G. E. Dath. 2,471,061, May 24.
Froth flotation of apatite using calcium silicate. S. P. Moyer. 2,471,341, May 24.
Froth flotation of sulfide ores. R. B. Booth and R. A. Pickens. 2,471,384, May 24.
Fuel saving device. C. Spaw. 2,471,012, May 24.
Furnace door. H. R. Lozierman. 2,471,275, May 24.
Fuse link, Time lag. F. G. von Hoorn. 2,471,176, May 24.
Fuse, Renewable. F. G. van Hoorn. 2,471,177, May 24.
Game piece, Chance controlled hemispherical. H. Desaniers. 2,471,202, May 24.
Gamma iron oxide-alkali metal ferrate and preparation. M. A. Mosesman. 2,470,784, May 24.
Garment. H. L. Redmond. 2,471,348, May 24.
Garment, Baby. K. A. Terchick. 2,471,048, May 24.
Garment, Child's. C. Ackerman. 2,471,086, May 24.
Gauge: *See*— Valve clearance gauge.
Bore gauge.
Gauge and the like, Micrometer. L. E. Glover. 2,471,322, May 24.
Gearing for driving a plurality of spindles. A. Illsche. 2,470,985, May 24.
Generating system for automobiles, Emergency. J. M. Parsinger. 2,470,898, May 24.
Generator: *See*—
Alternating current generator.
Glass sealing alloy. C. B. Post and W. S. Eberly. 2,471,079, May 24.
Golf bag. L. Salsberg and E. J. Hughes, Jr. 2,471,169, May 24.
Golf tee, Flexible. H. D. Hendricks. 2,470,817, May 24.
Grease, Manufacture of. H. A. Woods, W. J. Yates, L. Klingen, and B. C. Barton. 2,470,965, May 24.
Guard for outboard motors, Propeller. H. A. Sidney. 2,470,874, May 24.
Guard, Nonmetal nose. A. E. Devoe. 2,471,063, May 24.
Guide, Electric ironing cord. G. A. Corbliss. 2,471,312, May 24.
Guide, Radio wave. W. E. Bradley. 2,471,021, May 24.
Gun sight. A. H. Evans. 2,471,027, May 24.
Gun sight control. L. A. Meacham. 2,471,278, May 24.
Gun with integral breech bolt and hand grip, Magazine. C. J. Manville. 2,471,276, May 24.
Hair drier. S. O. Moore. 2,470,833, May 24.
Hammer mill with power-driven impactor surfaces, Reversible. E. H. Keiper. 2,471,068, May 24.
Hanger: *See*—
Coat hanger.
Hard compositions for use in tools and making. B. Westmoreland-White. 2,471,016, May 24.
Hay stacker. J. C. Weber. 2,471,364, May 24.
Head for cotton harvesting machines, Gathering. G. C. Curtis. 2,471,314, May 24.

Hydrocarbons and hydrogen, Production of unsaturated. E. J. Gohr. 2,471,104, May 24.
Hydrocarbons, Production of. E. V. Mathy. 2,471,228, May 24.
Hydroxy organic acids, Separation of. W. E. Barch. 2,470,841, May 24.
Improved fibrous materials and the materials thus obtained, Manufacture of. L. Orthner, G. Balle, H. Schild, M.-O. Schürmann, K. Brodersen, and M. Quaedvlieg. 2,471,039, May 24.
Improving the properties of precipitation hardenable castings. W. A. Reich. 2,470,791, May 24.
Incandescent electric heater. J. I. Stein. 2,471,123, May 24.

Index pulse generating circuit. W. L. Gaines. 2,471,268, May 24.
Indicating device. W. T. Haswell, Jr. 2,470,774, May 24.
Indicator: *See*—
Distance indicator.
Indicator for floating dry docks, Water level. F. R. Harris. 2,470,850, May 24.
Infant's chair. L. C. Peltier. 2,470,834, May 24.
Inflated articles, Making. F. H. Kennedy. 2,470,990, May 24.
Injection device. F. O. Chaffee. 2,471,142, May 24.
In-line fluid pump. R. E. Snyder. 2,470,794, May 24.
Instrument, Angular and linear calculating. E. W. Hunt. 2,471,327, May 24.
Instrument, Electrical control. J. A. Caldwell, W. H. Wannamaker, Jr., and G. W. Kuntny. 2,471,393, May 24.
Insulating bushing. F. A. Bussell. 2,470,886, May 24.
Insulation for spherical tank shells and making the same. J. O. Jackson. 2,470,986, May 24.
Interchangeable eye lens frame. P. J. Massaro. 2,471,338, May 24.
Interlock mechanism for switch and receptacle units. W. E. Parish. 2,470,944, May 24.
Intermittent flush valve. W. S. White. 2,470,798, May 24.
Interpolymer of monovinylaromatic compounds, monocarboxylic olefinic acid and drying oil or acid. E. G. Bobalek. 2,470,757, May 24.
Interpolymer produced from polyhydric alcohol, polybasic acid, and interpolymer of monovinylaromatic compound, olefinic acid, and drying oil or oil fatty acid. E. G. Bobalek. 2,470,762, May 24.
Iron catalyst promoted with an alkali metal fluoborate, Preparing an. H. G. Vesterdal. 2,471,130, May 24.
Jack: *See*—
Drill jack.
Dual purpose sleeve-spring spring jack.
Jettison fuel tank. D. P. Allen and R. Wise. 2,471,296, May 24.
Joint: *See*—
Pipe joint.
Knitting machine. P. W. Bristow. 2,470,803, May 24.
Labeler. C. M. Hesson. 2,471,066, May 24.
Ladder for hanging paper. J. Jenkins. 2,471,110, May 24.
Laminated wooden bowling pin. R. C. Diehl. 2,471,316, May 24.
Latch. H. S. Harvey. 2,470,771, May 24.
Lathe, Multiple spindle. C. E. Miller and J. M. Ingalls. 2,471,074, May 24.
Lawn mower. J. D. Cavaness. 2,471,367, May 24.
Liquid treating apparatus. W. Livingstone. 2,471,158, May 24.
Liquids, Treatment of aqueous. E. B. Higgins. 2,471,213, May 24.
Livers, Treatment of. L. S. Paddock. 2,471,282, May 24.
Loader, Shifting shovel. R. E. Boulton. 2,471,192, May 24.
Location system, Radio object. W. H. Doherty. 2,471,264, May 24.
Lock: *See*— Communicating door lock.
Automatic rope lock.
Lock for automobiles, Antitheft. N. A. Truesdell. 2,471,293, May 24.
Loom beat-up mechanism. D. W. Shimwell. 2,471,354, May 24.
Lubricator: *See*—
Running rope lubricator.
Machine attachment, Labeling. F. J. Schulz. 2,471,288, May 24.
Machine for applying spots to bottle caps. A. Weisenburg. 2,471,255, May 24.
Machine for assembling springs. J. Gauci and D. Krakauer. 2,470,812, May 24.
Machine for breaking in shoes. A. Sachs. 2,470,867, May 24.
Machine for fire hose, Scrubbing. I. E. Parker and T. W. Brydon. 2,471,041, May 24.
Magnetic from nonmagnetic materials, Method and apparatus for separating. A. B. Drescher. 2,470,889, May 24.
Magnetic work holder. S. I. Hitchcock. 2,471,067, May 24.
Manifest sheets, Distribution of. C. Bursett. 2,470,758, May 24.
Map and key holder. N. D. Stanley, Sr. 2,471,127, May 24.
Marking means for containers, Rotary. L. E. Davies. 2,471,098, May 24.
Mast, Portable. R. H. McPherson. 2,470,998, May 24.
Mat, Bath. G. E. Pretty. 2,471,008, May 24.
Mattress, Bed. C. R. and A. G. Sohn. 2,471,125, May 24.
Mechanical horse. E. V. Monson. 2,471,233, May 24.
Mechanism between two power sources, Interchange. A. T. Reynolds. 2,471,122, May 24.
Mechanism for adjusting shaft end play. L. W. Wightman. 2,471,180, May 24.
Mechanism for automatic guns having transversely movable breech blocks, Firing. D. W. Molins. 2,471,232, May 24.
Mechanism for sewing machines, Feeding. A. B. Clayton. 2,470,759, May 24.
Mechanism for typing machines, Ribbon feeding and inking. G. E. Pelton. 2,471,238, May 24.
Mechanism for utilizing the manifold suction of internal-combustion engines. M. Mallory. 2,471,111, May 24.
Mending of stockings in sewing machines. F. Gegauf. 2,471,370, May 24.
Metal, Thermostatic laminated. C. F. Alban. 2,470,753, May 24.
Meter having overlapping sensitivity ranges and calculator rings surrounding the meter scale, Vest pocket exposure. A. G. Stimson. 2,471,171, May 24.
Method and apparatus for detecting variations in the appearance of an object or sample. T. Stuland. 2,470,877, May 24.
Methylpentadiene-arakenyl copolymers. R. C. Morris, A. V. Snider, and E. T. Bishop. 2,471,234, May 24.
Microcrystalline residues and products resulting therefrom, Treatment of. J. J. Fish. 2,471,102, May 24.
Microprotractor. W. M. Dethlefs and F. Minder. 2,471,099, May 24.
Microwave device. R. A. Braden. 2,470,802, May 24.
Mildew-proofing. E. W. Cook and P. H. Moss. 2,471,261, May 24.
Milking domestic farm animals and for temporarily storing milk and cooling it. G. R. Duncan. 2,470,979, May 24.
Mill for cutting feathers. T. Slick. 2,471,356, May 24.
Mixing bottled natural gas with vegetative gas. H. E. McCordic. 2,471,161, May 24.
Modulator, Stabilized frequency. G. Hepp. 2,470,892, May 24.
Mold bar for dental molds, Lingual. I. Neustadter. 2,471,344, May 24.
Mold for sliding clasp fasteners. J. Bolten, Jr. 2,471,258, May 24.
Molding clip. D. H. Waara. 2,471,254, May 24.
Molding machine, Continuous rotor. C. N. and G. B. Benander. 2,471,139, May 24.
Motor mounting attachment. N. J. Pepin. 2,471,120, May 24.
Motor preset control, Electric. G. Malcom. 2,470,937, May 24.
Motor vehicle. N. Wyeth. 2,471,135, May 24.
Motor wrench, Hinged supported. F. E. Niederhiser. 2,470,897, May 24.
Mounting and connector, Radio antenna. H. Z. Beaton. 2,471,020, May 24.
Mower. L. C. Meakimen. 2,471,073, May 24.
Mower. N. D. Colvin. 2,471,311, May 24.
Mud sheaths from oil wells, Removing. L. T. Monson. 2,470,830, May 24.
Navigation aiding apparatus. F. P. Best, C. D. Colchester, and J. Twait. 2,470,912, May 24.
Necktie and collar combination. R. Y. Bovee. 2,470,973, May 24.
Necktie rack. F. Reiss. 2,471,349, May 24.
Net, Landing. C. M. Kincannon. 2,471,273, May 24.
Network, Electrical contact protection. R. C. Mathes. 2,470,825, May 24.
Nipple and cap for baby nursing bottles. D. Stoller. 2,471,172, May 24.
Nitroalkyl sulfites and preparing them. S. P. Lingo. 2,471,274, May 24.
Obtaining concentrates of uranium and vanadium from their ores. R. D. Nye and D. J. Demorest. 2,471,345, May 24.
Obviating cylinder wear in engines and the like. A. T. Elants. 2,470,809, May 24.
Oil, Lubricating. L. A. Mikeska. 2,471,115, May 24.
Oil, Recovery of hydrocarbon. C. E. Hemminger. 2,471,107, May 24.
Oil borner. B. K. Danielsson and L. A. Widing. 2,471,025, May 24.
Oil-in-water emulsions, Breaking. L. T. Monson. 2,470,829, May 24.
Oil or liquid filter. C. C. S. Le Clair. 2,471,069, May 24.
Operating means for trailer goosenecks. W. E. Martin. 2,471,277, May 24.
Organic compounds, Separation of. H. G. McGrath, H. J. Passino, and L. C. Rubin. 2,470,782, May 24.
Ottoman, Electric foot-warming. G. W. Lindstrom. 2,471,221, May 24.
Packet, Soap powder. W. A. Hermanson. 2,470,851, May 24.
Padlock. H. E. Soref and D. J. Foote. 2,471,291, May 24.
Painting apparatus, Flag pole. D. Kremko and J. Podnfaly. 2,470,994, May 24.
Palladium articles, Production of. R. H. Atkinson and G. P. Gladie. 2,471,297, May 24.
Pallet and crate structure, Combined. B. C. Colt, Jr. 2,471,095, May 24.
Paper cutter. H. H. Levin. 2,471,334, May 24.
Parasiticidal compositions comprising alkyl-halo-naphthalenes. R. R. Dreisbach and F. W. Fletcher. 2,471,265, May 24.
Parisons, Making. C. B. Garwood. 2,471,369, May 24.
Pattern controlled machine tool. A. H. Dall and H. Horlacher. 2,471,097, May 24.
Pattern for collars and lapels, Adjustable. D. J. Cieri. 2,471,196, May 24.
Petroleum emulsions, Breaking. M. De Groote and B. Keiser. 2,470,808, May 24.

Photographic copying stand and apparatus, Combined. P. J. Brownscombe. 2,470,844, May 24.
Photographic material and producing same, Color. B. Gaspar. 2,470,769, May 24.
Photometric apparatus and spectrophotometer using polarized light and a multiple retardation plate. E. I. Stearns, Jr., and G. L. Buc. 2,471,249, May 24.
Photometric apparatus and spectrophotometer using polarized light and an optically active plate. E. I. Stearns, Jr., and G. L. Buc. 2,471,248, May 24.
Piezoelectric apparatus. J. J. Cress. 2,471,143, May 24.
Pin: *See*—
Clevis pin.
Laminated wooden bowling pin.
Plug: *See*—
Caulking plug. Spark plug.
Pipe cleaner. C. H. Mosher. 2,470,940, May 24.
Pipe connection and packing ring therefor. P. Boissou. 2,470,883, May 24.
Pipe joint. F. R. Hirsh. 2,470,818, May 24.
Pipe oiler for rotary swivels, Automatic wash. G. R. Tremolada. 2,470,960, May 24.
Pit, Barbecue. C. E. Moseley. 2,471,375, May 24.
Pitter, Cherry. C. N. and H. R. Springer. 2,470,905, May 24.
Pliers with detachable end jaws. I. Jankovich. 2,471,372, May 24.
Plowshare. W. H. Farr. 2,471,388, May 24.
Plowshare. T. Möhl. 2,471,104, May 24.
Pocket and making. R. E. Carter. 2,471,386, May 24.
Polishing bonnet. G. E. Mercalfe. 2,471,114, May 24.
Polymeric linear esters, Highly. J. G. Cook, J. T. Dickson, A. R. Lowe, and J. R. Whinfield. 2,471,023, May 24.
Polymerization of olefinic hydrocarbons. W. B. Shanley. 2,470,904, May 24.
Polymers of vinyl halides, Preparation of granular. M. Baer. 2,470,908–10, May 24.
Polyolefinic hydrocarbons, Production of. W. W. Johnstone. 2,470,894, May 24.
Polyphase alternating current dynamo. C. E. Ellis. 2,470,767, May 24.
Porcelain-coated gas burner. G. W. Zimbelman. 2,470,881, May 24.
Positioning and indicating system, Remote. W. P. Lear. 2,471,220, May 24.
Post driver. W. R. Boydstun. 2,470,974, May 24.
Pot, Body-supported infant's chamber. N. R. Deardorff. 2,471,201, May 24.
Potassium chloride, Manufacturing coarse granular. A. K. Johnson and H. B. Suhr. 2,470,822, May 24.
Power supply, Impulse type. E. W. Marlowe and H. A. Wilcox. 2,470,895, May 24.
Power supply system. H. M. Stoller. 2,470,838, May 24.
Power transmission. E. Orshansky, Jr. 2,471,117, May 24.
Power unit, Pneumatically driven. H. G. Hunt. 2,471,109, May 24.
Preferential operating valve. R. K. Sedgwick. 2,471,289, May 24.
Preserving vegetable tanned leather. A. Cheshire. 2,471,022, May 24.
Preventing and/or removing accumulations of solid matter from oil wells, flow lines, and pipe lines. L. T. Monson. 2,470,831, May 24.
Preventing or reducing the escape of high-frequency energy. J. Collard. 2,470,805, May 24.
Preventing the accumulation of ice on aircraft surfaces and the like. D. L. Lenzhborough. 2,471,224, May 24.
Producing a sintered abrasive body. A. C. Wickman. 2,471,132, May 24.
Products of vinyl halides, Preparation of granular polymerisation. M. Baer. 2,470,911, May 24.
Projector, Figurine ball. H. M. Wescott. 2,470,962, May 24.
Prosthetic device. C. J. Therne. 2,471,360, May 24.
Protector for pipes. L. Gazdik. 2,471,209, May 24.
Protein hydrolysate containing essential amino acids and preparation thereof. M. Sahyun. 2,470,955, May 24.
Pulse echo recognition system. A. A. Joyner. 2,471,373, May 24.
Pump: *See*—
Deep well pump. Variable capacity hydraulic pump.
In-line fluid pump.
Rotary gear pump.
Pump stator, Rotary. J. P. Johnson. 2,470,987, May 24.
Rack: *See*—
Bread cooling and proofing Neektie rack. rack.
Radio antenna. V. M. Wintermute. 2,471,256, May 24.
Radio detection and location system indicating azimuth and elevation. W. A. Miller and E. R. Shenk. 2,470,939, May 24.
Railway switch. H. R. Smith. 2,471,357, May 24.
Rake cleaner. G. D. Pringle. 2,470,863, May 24.
Rake cleaner. N. H. Richards. 2,471,239, May 24.
Receiver input circuit. H. Blok. 2,470,882, May 24.
Recorder, Card holder actuated time. P. Vannini. 2,470,961, May 24.
Resilient wheel. R. J. Burrows and A. O. Williams. 2,470,885, May 24.
Rectifier protection, Low-voltage. O. Jensen. 2,471,216, May 24.
Reducing the adhesion of ice to rubbery surfaces. E. G. Hans. 2,470,772, May 24.
Refrigerating system, Two-temperature. L. W. Atchison. 2,471,137, May 24.
Refrigerator unit. C. W. Savidge. 2,470,956, May 24.
Regulator for cattle tanks, Water. H. T. Jones. 2,471,328, May 24.
Relay. J. M. Wilson. 2,471,181, May 24.
Release for kites, Parachute. V. C. Coyne and J. W. Stuart. 2,471,199, May 24.
Repair device, Tire casing. N. Stevens. 2,471,359, May 24.
Repeater, Submarine cable. E. W. Smith and R. W. Presswell. 2,471,046, May 24.
Reservoir, Gas. P. S. Graver. 2,471,270, May 24.
Residue carboxylic acid-alkylene diamine resins. C. H. McKeever. 2,471,230, May 24.
Resins containing aminoalkoxy substituents, Urea. R. W. Auten. 2,471,188, May 24.
Retainer, Toolhead. S. N. Rosengren. 2,470,865, May 24.
Retriever, Bird. B. Miller. 2,471,231, May 24.
Rheostat control device. L. E. Aske. 2,470,908, May 24.
Rheostat with centrifugal operator. R. A. Felburg. 2,470,768, May 24.
Ring traveler. H. G. Joseph. 2,470,932, May 24.
Rocket, Line-carrying. C. D., A. J., and C. Schermuly. 2,471,353, May 24.
Rod and gas welding, Flux coated aluminum. D. M. Doyle. 2,470,763, May 24.
Rosin maleic glyceride esters. W. Krumbhaar. 2,470,855, May 24.
Rotary gear pump. A. Girz. 2,471,149, May 24.
Rotary turbine type fluid coupling. E. D. Hanson. 2,471,212, May 24.
Rotatable device. P. A. Johnson. 2,471,217, May 24.
Rotor. J. H. Abbott and J. W. Anger. 2,470,906, May 24.
Roughing machine. E. E. Sabin. 2,470,866, May 24.
Rubber with cooling of the rubber to facilitate separation of tailings, Refining reclaimed. C. H. Campbell. 2,471,392, May 24.
Rubbers, Production of chlorinated synthetic. T. P. Remy. 2,470,952, May 24.
Running rope lubricator. W. R. Jenkins. 2,471,036, May 24.
Safety device for blasting caps. J. and F. J. Yurick. 2,471,381, May 24.
Salicylato and succinate therapeutic preparations. R. Gubner. 2,471,304, May 24.
Salt substitute. E. D. Davy. 2,471,144, May 24.
Salts of amine methionic acid, Production of. M. H. M. Arnold and W. E. Perry. 2,471,018, May 24.
Sash holding device. E. E. Montgomery. 2,470,832, May 24.
Saxophone. H. Sommaruga. 2,471,290, May 24.
Scoop construction for self-loading trucks. A. Lankovski and M. Graves. 2,470,770, May 24.
Scraper, Cervical. J. E. Ayre. 2,471,088, May 24.
Seal for flush valves, Piston. E. A. Frederickson. 2,470,925, May 24.
Seal for gas turbines, Diaphragm. W. A. Ledwith. 2,470,780, May 24.
Sealer. F. N. Irwin, Jr. 2,470,852, May 24.
Sealing compositions containing chlorinated diphenyl and graphite. L. L. Rector and C. L. Cron. 2,471,010, May 24.
Sealing empty cans. P. T. Lemmel. 2,471,332, May 24.
Seat construction, Vehicle. G. L. White and C. H. Diedrich. 2,470,907, May 24.
Seeds for dehusking, Preparing gum-containing. B. Chiego. 2,470,750–1, May 24.
Seismograph blaster time breaker circuit. D. R. de Boisblanc and J. E. Bondurant. 2,470,846, May 24.
Self-quiz device. C. Lorber. 2,471,223, May 24.
Separable fluid coupling. H. S. Pasturczak. 2,471,237, May 24.
Separator for berry picking machines, Leaf. W. C. Hoyt, Sr. 2,471,326, May 24.
Separator having means for wiping and scraping the carrier disk, Magnetic. A. Scrivener. 2,471,044, May 24.
Severing device, Tape. G. K. Charles. 2,471,310, May 24.
Sewing machine. A. A. Jennings. 2,470,931, May 24.
Shaft drive, Enclosed. J. Watten. 2,471,015, May 24.
Sharpener, Blade. G. C. Freeman. 2,471,207, May 24.
Sheet-metal gas burner. G. W. Zimbelman and R. Shelton. 2,470,880, May 24.
Shelf, Rotatable. W. E. Randall. 2,470,749, May 24.
Shield, Body protecting. M. M. McDonald. 2,471,071, May 24.
Shield, Cigarette. M. P. Newberger. 2,471,116, May 24.
Shipping container. R. A. Norbom. 2,471,280, May 24.
Shock absorber. R. Watts. 2,471,294, May 24.
Shock absorber webbing. E. A. Neff. 2,471,166, May 24.
Shoe heel plate and skate fastening means. T. Ana. 2,470,840, May 24.
Shoe, Sports. F. A. Melchionna. 2,471,113, May 24.
Shoe welt. E. R. Guimet. 2,470,942, May 24.
Shuttle for narrow ware looms. F. A. Hardick. 2,470,981, May 24.
Sickbed waste receptacle holder. H. L. Chandler. 2,471,300, May 24.
Siftproof box. F. D. Palmer. 2,470,789, May 24.
Signal distributing system. P. M. G. Toulon. 2,471,253, May 24.
Singeing tool. M. E. Baker. 2,471,019, May 24.
Siren. J. F. Fletcher. 2,471,028, May 24.

Skinning device, Animal. G. A. Nick. 2,471,235, May 24.
Slicer, Potato. E. F. La Bat. 2,470,934, May 24.
Slicer for citrus fruit and the like. A. O. Goldstein. 2,470,813, May 24.
Socket, Lamp. S. E. Bartelson. 2,471,100, May 24.
Sole-cementing machine. A. Perri. 2,471,397, May 24.
Solvents and plasticizers for vinyl resins. J. Delormo and R. Bluma. 2,470,761, May 24.
Spark plug. W. E. and D. B. Humrichouse. 2,470,821, May 24.
Spark plug. F. I. McCarthy and C. Schaadler. 2,471,070, May 24.
Specimens of paving mixtures, Producing and testing. R. G. Marshall. 2,471,227, May 24.
Speed nut tool. W. P. Hammers. 2,470,891, May 24.
Speed responsive means. A. C. Haiter. 2,470,928, May 24.
Spike, Shoe. R. McKenzie. 2,470,997, May 24.
Spring mounted brake. J. F. Wein. 2,471,052, May 24.
Stack carrier. C. C. Griffin. 2,471,152, May 24.
Stacking machine, Can. J. E. Socke. 2,470,795, May 24.
Staircases, Construction of. O. Safir. 2,471,352, May 24.
Stand: *See*—
Bag stand. Christmas tree stand.
Starter for electric motors, Automatic. B. Antipovitch. 2,471,185, May 24.
Stator construction for switches. G. O. Puerner. 2,470,951, May 24.
Steel having high hot hardness, Austenitic. C. B. Post. 2,471,080, May 24.
Steering control, Electric. H. H. Hull. 2,470,820, May 24.
Sterilizer construction. R. L. Jewell. 2,470,770, May 24.
Stoker control, Hydraulic. A. E. Bisak. 2,470,969, May 24.
Storage battery filling device support. V. H. Christen. 2,471,094, May 24.
Storage tube. R. L. Snyder, Jr. 2,470,875, May 24.
Striker system for chimes, Electric. M. F. Miller. 2,470,827, May 24.
Stringer, Fish. K. L. Orton. 2,470,941, May 24.
Stripping of spent catalyst in hydrocarbon conversion. R. E. Hall, and M. J. Wilcox. 2,471,064, May 24.
Stroller-walker, Baby. R. Moster. 2,471,004, May 24.
Structure for truck or trailer bodies or the like, Frame. N. E. Cole. 2,470,919, May 24.
Sulfonic acids from spent sulfonating agent, Recovery of. J. M. Mavity. 2,470,806, May 24.
Sulfur containing hydrocarbons, Treatment of. B. N. Hill. 2,471,108, May 24.
Support: *See*—
Storage battery filling device support. Yarn package support.
Support and guide for drill stems. W. S. Hendricks. 2,470,983, May 24.
Support for ironing boards, Collapsible. E. C. Booth. 2,471,059, May 24.
Support or rack, Electrical cable. M. Hain. 2,470,814, May 24.
Supporting device for cathode-ray tubes. D. B. Kelm. 2,471,154, May 24.
Switch: *See*—
Electric switch. Railway switch.
Flashlight switch.
Switching device. L. E. Olson, and R. Wertzler. 2,471,281, May 24.
Switching device, Composite. W. Deans. 2,471,200, May 24.
Synchronizer with tripper-operated safety switch, Photoflash. A. Kennedy. 2,471,219, May 24.
Synthesis of 4-hydroxycoumarins. M. A. Stahmann, and K. P. Link. 2,471,047, May 24.
System for determining the position or path of an object in space. P. W. Nosker. 2,470,787, May 24.
Table: *See*—
Folding lap table.
Universal wood working machine table.
Table. A. J. Shoenberg. 2,471,245, May 24.
Table for tire building machines, Feed. W. J. Breth. 2,471,140, May 24.
Tank: *See*—
Jettison fuel tank.
Tapes, Making measuring. A. W. Keuffel. 2,471,329, May 24.
Tapes, Making measuring. A. W. Keuffel. 2,471,395, May 24.
Telegraph system, Phase reversal. R. P. Leroy. 2,471,383, May 24.
Telegraph system, Printing. J. B. Moore. 2,471,076, May 24.
Temperature control, Automatic water. J. R. Hassell. 2,471,371, May 24.
10,11-dihydro-7-r-phenanthro-[2,1-d] isoxazoles, and products of such process, Preparing. W. S. Johnson, J. W. Petersen, and C. D. Gutsche. 2,470,777, May 24.
Testing device, Radio-frequency. P. H. Greeley. 2,471,033, May 24.
Testing with artificial standard, Magnetic. T. Zuschlag. 2,470,839, May 24.
Thermochemical metal removal. E. Meincke. 2,470,990, May 24.
Thermometer with heat conductor. E. L. McDonald. 2,471,229, May 24.
3-thensidehyde, Preparation of. E. E. Campaigne, and W. M. Le Suer. 2,471,092, May 24.
3-thenyl bromide. E. E. Campaigne, and W. M. Le Suer. 2,471,091, May 24.
3-thenyl bromide salts. E. E. Campaigne, and W. M. Le Suer. 2,471,090, May 24.
3,3'-thenoin. E. E. Campaigne, and W. M. Le Suer. 2,471,093, May 24.
Timer, Ignition. J. T. Fitzsimmons, and W. D. Schrope. 2,471,315, May 24.
Tool: *See*—
Belt-applying tool. Singeing tool.
Combination tool. Speed nut tool.
Heating tool.
Pattern controlled machine tool.
Top, Solid convertible. G. E. Shilala. 2,471,378, May 24.
Towel clip. E. F. Engleman. 2,470,811, May 24.
Tractor tread. R. B. Boltman. 2,470,801, May 24.
Trainer for aerial gunners, Aircraft. R. C. Dehmel. 2,471,315, May 24.
Training apparatus, Gunfire control. G. Ekstrom and P. W. Dittmann. 2,471,368, May 24.
Transducer adapted to compensate for twisting of the record wire, Magnetic. H. E. Tompkins. 2,471,251, May 24.
Transformer, Regulated. L. Lorant. 2,471,222, May 24.
Transmission, Hydraulic. V. E. Gleasman. 2,471,031, May 24.
Transmitting system, Alternating-current signal. H. Gardère. 2,471,319, May 24.
Trap: *See*—
Animal trap.
Travel control apparatus, Pneumatic hydraulic. E. A. Rockwell. 2,470,851, May 24.
Treating cracked gasoline to remove metals. J. A. Chenicek. 2,470,887, May 24.
Treating petroleum oils with a copper soap and of producing the copper soap, Process of. C. O. Hoover. 2,471,153, May 24.
Treating titaniferous iron ores. P. H. Royster. 2,471,242, May 24.
Treating waste rubber, etc. E. L. Schenck. 2,471,048, May 24.
Treating waste sulfite liquor. T. L. Dunbar. 2,470,764, May 24.
Trimming stitch, Fancy. J. Nachman. 2,471,165, May 24.
Truck, Automotive parts. H. Luby. 2,471,337, May 24.
Tube: *See*—
Storage tube.
Tube end forming machine. C. Elsler. 2,470,923, May 24.
Tube testing apparatus. J. W. Millington, and W. H. Stewart. 2,470,828, May 24.

Valve clearance gauge. C. E. Hall. 2,471,106, May 24.
Valve release mechanism, Airplane tire. W. K. Seltz. 2,470,873, May 24.
Variable capacity hydraulic pump. C. J. Christopher. 2,471,195, May 24.
Vegetables, Treatment of. G. C. Scott, and R. E. Oltman. 2,471,170, May 24.
Vehicle: *See*—
Motor vehicle.
Ventilator. B. Ames. 2,470,799, May 24.
Vinyl polymers plasticized with air-blown extracts of mineral oil fractions. E. W. M. Fawcett, E. S. Narracott, and K. J. Rowland. 2,471,266, May 24.
Vinyl polymers plasticized with sulfur treated extracts of mineral oil fractions. E. W. M. Fawcett, E. S. Narracott, and A. Millien. 2,471,267, May 24.
Vise for splicing wire and like material, Rigger's. E. Gaulke. 2,471,269, May 24.
Vise, Machinist's universal. G. F. Trefs. 2,471,361, May 24.
Voltages, Multiplying. V. M. Cousins. 2,471,262, May 24.
Wagon, Dump. L. W. Smith. 2,471,370, May 24.
Wagon, Pickup hay. W. H. Rodefeld. 2,471,350, May 24.

Wall of plastic filled sectional blocks, Building. A. Christensen. 2,470,917, May 24.
Watch movement holder. D. Franks, and M. Shapiro. 2,471,103, May 24.
Water-cooling system for internal-combustion engines and the like. L. Hathaway. 2,470,982, May 24.
Waxing device, Floor. K. M. Polson. 2,470,837, May 24.
Weaving textile containers. A. Wallwork. 2,471,380, May 24.
Weeder with weed stripper. L. S. Rink. 2,470,900, May 24.
Weeding device. L. S. Rink. 2,470,899, May 24.
Welder, Portable. E. W. Forkner. 2,471,029, May 24.
Wheel: See—
Resilient wheel.
Wheel and steering apparatus for wagons, Front. C. L. Blackburn. 2,470,971, May 24.
Window, Plastic. A. B. Dow. 2,470,921, May 24.
Wrench. A. V. Capps. 2,471,194, May 24.
Yarn package support. F. W. Paffen, and H. L. Cornelius. 2,470,835, May 24.
Yeast treatment. D. K. Alexander. 2,470,967, May 24.

CLASSIFICATION OF PATENTS

ISSUED MAY 24, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE KENDALL

No. 5588. Decided March 1, 1949

[— F.2d —; 81 USPQ 207]

1. PATENTABILITY—INVENTION—CHANGE IN NUMBER OF PARTS.

Where the reference relied upon does not have object receiving means equal in number to the object holding means of the device as called for in the appealed claim, and where in the combination defined only one object holding means can be employed at a time, *Held* that this difference in the two devices does not constitute a patentable distinction.

2. WORDS AND PHRASES—"ROTATE."

Where the primary meaning of the word "rotate" is "to turn round an axis," and the meaning of "turn" is given as "to move around in circles or in a circle, or through an arc of a circle," *Held* that turning around an axis does not necessarily require, as the extent of the rotary movement a complete revolution.

3. CLAIMS—CONSTRUCTION—PENDING APPLICATION.

Where the issue is that of patentability over the prior art cited, the courts have uniformly ruled that the claims of a pending application will be given the broadest interpretation of which they are reasonably susceptible.

4. PATENTABILITY—INVENTION—COMPLETE VS. PARTIAL ROTATION.

Held that appellant has failed to convince the court that there is a patentable distinction between the complete and partial rotation of the structures involved.

5. SAME—PARTICULAR SUBJECT MATTER—CONVEYING MECHANISM.

Certain claims for a conveying and inverting mechanism used with a can washing machine *Held* properly rejected as failing to define invention over the prior art cited.

APPEAL from the Patent Office. Serial No. 498,709.

AFFIRMED.

Norman E. H. Deletzke for Kendall.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

O'CONNELL, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the action of the Primary Examiner in rejecting claims 4, 7, and 8 in appellant's application for a patent for alleged improvements in a device incorporated in a machine for washing cans, such as milk cans.

Appellant filed a petition requesting the Board to reconsider its decision. The Board considered the petition and the issues therein presented, but denied it with respect to making any change in the Board's original decision.

Seven claims were allowed, but the appealed claims were rejected as failing to define invention over each of the following three references: Ailing, 2,041,451, May 19, 1936; Wolf, 2,085,936, July 6, 1937; Rufus, 2,133,044, Oct. 11, 1938.

Claim 7, the most specific of the rejected claims, is regarded as illustrative. The claim has been correctly copied in the brief for appellant wherein those portions of the claim relied upon as distinguishing it from the disclosures of the prior art have been emphasized by appellant as follows:

7. A device of the class described comprising, in combination, a support frame, a first shaft rotatably mounted on said frame, an inverting cradle attached to and rotatable with said first shaft, said inverting cradle having object holding means, an object supply conveyor adapted to supply objects to be inverted to the holding means of said inverting cradle, *a second shaft rotatably mounted on said frame, a discharge cradle attached to and rotatable with said second shaft, said discharge cradle having object receiving and discharge means equal in number to the object holding means of said inverting cradle*, an object discharge conveyor adapted to receive discharged objects from said discharge cradle, means for rotating said first shaft, *means for synchronously rotating said second shaft with said first shaft*, said inverting cradle and said discharge cradle overlapping one another sufficiently to permit a partially uprighted object to be deposited from a holding means of said inverting cradle into a receiving and discharge means of said discharge cradle, *said object receiving and discharge means of said discharge cradle being adapted to remove objects from said inverting cradle and from the path of travel of the holding means thereof and deposit the removed and uprighted objects upon said discharge conveyor*, and means associated with said discharge conveyor for moving said objects forwardly upon said discharge conveyor.

Claims 4 and 8 are broader than claim 7. Claim 4 requires no separate discussion, but claim 8 provides for means for continuously rotating the inverter and receptacle receiver in synchronism.

Appellant's device is incorporated in a can washing machine and relates to a mechanism for receiving inverted milk cans from the can washing machine and uprighting and discharging such cans on a platform or conveyor for transfer to another operating station.

The subject matter of the appealed claims consists basically of two rotatably mounted members; a can inverting cradle adapted to receive inverted cans in tilted position, and an unloading and discharge cradle for unloading and discharging substantially uprighted cans from the inverting cradle. Those two members are so arranged and continuously rotated as to adapt the inverter member to receive an inverted can from the conveyor, upon the tipping of the can over the inclined loading station, or forward ends, and substantially uprighting the cans.

The cans are thus deposited on the discharger

Vol. 622 • No. 5 Tuesday, May 31, 1949 Price $17.50 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $17.50 per annum, including annual index, $21.00; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

member, which completes the uprighting of the can, and then discharges or deposits the can onto conveyor skids. The cans are thereafter moved forward along such skids by rollers, mounted at the extremities of the arms of the discharge cradle, as a result of the continued rotation of the discharge cradle.

The uprighted cans are transferred from such skids, and from the discharge end of the can washer, by pusher dogs onto discharge conveyor rollers. The dogs are connected through appropriate gearing and linkages to the drive of the inverting cradle and the discharge cradle, and function in timed relation therewith. Caps or covers are applied to the cans before they are discharged from the can washing machine, but the mechanism employed to perform that function is not involved in the claims on appeal.

The structural elements disclosed by each of the cited references relate to a device which differs from appellant's device in the specific structure of the rotatable receiver and can discharger, which is illustrated in the drawings and described in appellant's specification as an unloading and discharge cradle for unloading and discharging substantially uprighted cans from the inverting cradle.

The Solicitor for the Patent Office correctly takes the position that, since the issue involved in each of the rejections is the same, the discussion of those rejections may be confined to the disclosure of the patent to Rufus; that the other two references are merely cumulative; and that if the appealed claims are patentable over the patent to Rufus, they are patentable also over the remaining references.

The patent to Rufus discloses a can-uprighting and discharging mechanism employed in a can-washing machine, and more particularly a mechanism for turning over and discharging milk cans and the like. The device comprises, in combination, a support frame, a first shaft rotatably mounted on the frame, and an inverting cradle attached to and rotatable with the shaft. The inverting cradle has object holding means for holding two objects and an object supply conveyor from which milk cans to be inverted are supplied by an inclined discharge plate to the holding means of the inverting cradle. The plate is located at the end of the conveyor and permits the milk can to slide downwardly onto the arms of the turn-over member or cradle, which receives the end of the can which is to be uprighted. The turn-over member is driven by any suitable mechanism, such as turn-over shafts mounted on a frame for rotating the shafts synchronously. The turn-over mechanism is rotated intermittently by the driving mechanism of the inverting cradle so that the can is moved to a substantially upright position. After the can has thus been rotated by the cradle, the bottom portion of the can slides forward into the L-shaped can-receiving platform having spaced and discharge arms at the rear end of the platform. The platform member moves the can to an exactly upright position and pushes the can onto a conveyor chain. The platform member is moved by the operation of a pivot or second shaft rotatably mounted on the frame, by a link arm, and by simultaneously tilting the platform by a pivotally mounted arm which is connected to a crank arm mounted on a shaft.

[1] The discharge cradle disclosed in the patent to Rufus has but one object holding means and the inverting cradle has two object holding means. Therefore, the disclosure of the patent does not have object receiving means equal in number to the object holding means of the inverting cradle, as called for in claim 7. However, in view of the fact that in the combination defined, only one-object holding means can be employed at a time, this difference in the two devices does not, in our opinion, constitute a patentable distinction. The patent to Rufus discloses an object discharge conveyor which receives objects from the discharge cradle and drive chains for rotating the cradle shafts synchronously. The inverting and discharge cradles of the patent, which overlap, perform the specific function called for by claim 7.

The primary issue presented by appellant's arguments is based on the contention that the discharge cradle disclosed in the patent to Rufus does not have a rotary motion and is not rotatably mounted on the frame, because it cannot perform a complete revolution of 360° about the second shaft. On the contrary, appellant urges, the discharge cradle disclosed by the patent oscillates about two points, including the second shaft, and, therefore, the cradle is not rotatably mounted on the frame as called for by the claim.

The three rejected claims do not call for rotatable receiving and unloading means adapted to rotate through an arc of 360° about a single axis, as defined in a number of the allowed claims. Furthermore, the claims do not indicate that the continuous rotation in a fixed direction. None of the cited references discloses a can receiver and discharger which rotates through an arc of 360°, but each shows that such mechanism is moved in one direction, then in a different direction, so that a can may be received from the inverter cradle at the proper time.

[2] Each of the cited references discloses a continuously rotated cradle which receives an inverted can from a washing machine and rotates it through an arc of 330°. The Solicitor for the Patent Office correctly takes the position that "the fact that the rotation is expressly limited in some claims to movement through an arc of 360° necessarily implies that, in the absence of express language the rotation referred to in the claims may be through a smaller arc."

Webster's New International Dictionary, 1939, gives as the primary meaning of the word "rotate": "To turn, as a wheel, round an axis; to revolve." In the same dictionary, the meaning of the word "turn" is given as: "To move around in circles or in a circle, or through an arc of a circle * * *." The quoted meaning of the word "turn," according to the Solicitor's contention, is one of the most common, if not the most common given to the word, as illustrated by such everyday expressions as "to turn one's head"; "to turn a page"; "to turn upside down," etc. It is clear, therefore, that turning around an axis does not necessarily require, as the extent of the rotary movement, a complete revolution.

[3] Where the issue is that of patentability over the prior art cited, the courts have uniformly ruled that the claims of a pending application will be given the broadest interpretation of which they are reasonably susceptible. *In re Bryson D. Horton*, 19 CCPA (Patents) 871, 875, 54 F.2d 961, 12 USPQ 221, 418 O. G. 273; *In re Carr*, 54 App. D. C. 283, 323 O. G. 4. Accordingly, we find no error in the holding of the Board that the motion around the axis or pivot, in the instant case, does not have to be through an arc of 360° in order that it may be properly termed a motion of rotation. Moreover, appellant has failed to convince the court that there is a patentable distinction between the complete and partial rotation of the structures involved.

[4] Claims 4 and 8, for the reasons hereinbefore stated with respect to claim 7, do not appear to define invention over the prior art cited. In view of that conclusion, it is deemed unnecessary to discuss other points raised by the arguments of counsel, and the decision of the Board of Appeals is accordingly affirmed.

AFFIRMED.

U. S. Court of Customs and Patent Appeals

IN RE EVANS ET AL.

No. 5318. Decided March 7, 1949

[173 F.2d 373; 81 USPQ 157]

1. WORDS AND PHRASES—"SCORCHED RUBBER."
   Held that scorched rubber is prematurely or partially vulcanized rubber.
2. PATENTABILITY — METHOD — USING DIFFERENT MATERIALS.
   Held that there is no invention in applying to scorched rubber methods or compounds old to the art as useful in reclaiming vulcanized rubber.
3. SAME—PARTICULAR SUBJECT MATTER—METHOD FOR PLASTICIZING SCORCHED RUBBER STOCK.
   Certain claims to a method of plasticising scorched rubber stock *Held* properly rejected as unpatentable over the cited prior art.

APPEAL from the Patent Office. Serial No. 467,046.

AFFIRMED.

Clarence M. Fisher (*Roger T. McLean* of counsel) for Evans.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

JOHNSON, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting, as unpatentable over the prior art, claims 1 to 7, inclusive, which are all of the claims in appellants' application for a patent for a method for plasticizing scorched rubber stock.

Claims 1 and 3 are representative, and read as follows:

1. The method of plasticising scorched stock which comprises admixing therewith acidic material and a substantially non-accelerating, plasticising organic sulfur compound, permitting the resulting admixed material to stand and subsequently subjecting the same to a refining treatment.

3. The method of plasticising scorched stock which comprises mechanically working the same under oxidising conditions with admixed acid material and a plasticising sulfide having the formula RS_xR' where R and R' represent radicals selected from the class consisting of hydrocarbon radicals and hydrocarbon radicals substituted by a non-accelerating functional group and where x is an integer.

The references relied upon are: Shepard et al., 1,957,298, May 1, 1934; Seaman et al., 1,996,001, Mar. 26, 1935; Williams et al., 2,191,266, Feb. 20, 1940; Garvey, 2,193,624, Mar. 12, 1940; Castello, 2,211,592, Aug. 13, 1940.

Appellants state in their brief:

> The invention of the appealed claims provides a method for cool working of scorched rubber stock in the presence of an acidic material and a non-accelerating plasticising organic sulfur compound followed by standing and/or cooling to "age" the mixture and a final reworking refining step. The result is a reconverted product closely approximating the properties of properly mixed and compounded rubber. The process is characterized by the use of an organic sulfur compound, which is *not* an accelerator, under process conditions of *acidity* and low temperature. The process is further characterized by a period of standing i. e., cooling, to allow the added agents to become distributed before final refining. [Italics quoted.]

The plasticizing agents disclosed by appellants for use in their process are "non-accelerating and nitrogen-free sulfides and thio compounds of hydrocarbons and substituted hydrocarbons or hydrocarbon derivatives such as thiophenols or mercaptans, thio ethers or sulfides, etc." The acid materials disclosed by appellants for use in their process are "the higher fatty acids such as oleic and stearic acids," but the appellants state that rosin acids may also be used.

The Shepard et al. patent provides for a process of treating scorched rubber, and teaches that processes heretofore used in treating vulcanized rubber to obtain reclaimed rubber can be used to treat scorched rubber; also, that scorched rubber stocks "have been salvaged by the usual alkali or acid digestion processes or other so-called devulcanization methods of the reclaiming industry."

The Seaman et al. patent discloses the use of organic sulfides of the type employed by appellants for the softening or reclaiming of vulcanized rubber. It teaches that the vulcanized rubber may also be macerated and then treated directly with disulfides, and that this treatment may be accelerated by the use of elevated temperatures.

The Williams et al. patent provides for mixing the rubber with small amounts of acidic material and salts of thio acids. The salts include organic sulfides of the type described and claimed by appellants. The patent states that the compounds used will be effective at room temperature, although higher temperatures are preferred.

The Garvey patent shows a process for reclaiming vulcanized rubber by mixing the rubber with para thiocresol, one of the sulfur compounds used in appellants' process. It also shows other ingredients, including isuric acid, as being used, and that the composition is cured at 275° F. (185° C.).

The Castello patent shows a method of reclaiming vulcanized rubber in which the rubber is mixed with an organic sulfur compound and an organic acid, including stearic acid, "at low or medium mill temperatures."

The Examiner rejected all of the claims as unpatentable over Seaman et al., Williams et al., Garvey, or Castello, as well as Seaman et al., Garvey, or Castello in view of Shepard et al.

Claims 1, 3, 4, 5, 6, and 7 were further rejected as being broader than the invention alleged.

The Examiner additionally rejected claims 1, 2, 5, 6, and 7 as being too broad and indefinite; however, the Board in its decision held that the Examiner's rejection of those claims as too broad and indefinite as to "non-accelerating plasticizing organic sulfur compound" was based on the allegation that some of the compounds "may" be inoperative, and it did not affirm that rejection, citing *Ex parte Johnson*, 40 USPQ 576, and *Ex parte Rintleman*, 43 USPQ 283, which held that rejections on mere suspicion of inoperativeness are untenable.

It will be noted that appellants' process provides for mixing scorched rubber with a higher fatty acid and a suitable plasticizing agent. Numerous suitable plasticizing agents are mentioned, all of which are organic sulphur compounds, but excluding organic sulphur compounds containing nitrogen, which would be regarded as accelerators.

The Castello patent states:

> • • •. Organic materials which have the property of accelerating the vulcanisation of rubber are all peptising agents and the activity of the material as a peptising agent seems to be directly proportional to its accelerating activity.

That indicates the use of those compounds as accelerators.

We do not agree with the Board that the appellants' limitation of their plasticizers to non-accelerating organic sulphur compounds, in view of Castello's accelerating organic compounds, is "purely arbitrary." The Castello patent is chiefly of interest here, however, because of its teaching that a fatty acid (stearic acid) and organic sulphur compounds may be used in the reclamation of vulcanized rubber. Castello also teaches the use of relatively low temperatures (100° F.) in his reclaiming process.

The Garvey patent discloses the use of "a thiophenol" (the term being defined in the patent as being used in a generic sense to include aromatic mercaptans) as a reclaiming agent, together with a softener such as "oils" in the manufacture of reclaimed rubber. The Examiner held that "oils" customarily used in the art are "fatty oils consisting essentially of fatty acids." Appellants contend that the term "oils" as a part of the Garvey teaching is too nebulous to be used against them. However, we take notice of the fact that the chemical meaning of "oils" is as expressed at page 204, Karrer's Organic Chemistry, Elsevier Publishing Co. Inc., Third English Edition, Amsterdam, 1947:

> Fats and oils. The fats and oils are entirely glycerides, i. e. esters of the trihydric alcohol glycerol with *higher and middle fatty acids*. ° ° ° [Emphasis added.]

Therefore, it will be seen that Garvey's disclosure embraces certain of the very materials upon which appellants' method is based; viz., thiophenol, aromatic mercaptans, used in connection with fatty acids.

Appellants' basic contentions before us are: (1) that none of the patents cited teaches the equivalence of scorched rubber and vulcanized rubber as the subject matter of the reclaiming art directed to vulcanized rubber scrap; (2) that none of the patents cited incorporates the appellants' step of a waiting period following the preliminary mixing treatment of the stock, and preceding the refining of the product, which appellants' application asserts is advantageous in promoting the plasticizing action of the added fatty acid and plasticizer.

As to the first contention, appellants in their brief state: "The phenomenon of scorching may be considered a premature partial vulcanization but scorched stocks are in general distinguished in the rubber industry from vulcanized rubber." The Solicitor in his brief states, "Scorched rubber, therefore, is intermediate in its nature between raw rubber and completely vulcanized rubber, and is more closely related to each of these two than they are to each other." Appellants' application states: "During the mixing, calendering or tubing of rubber compounds, and particularly of compounds containing active accelerators, it sometimes happens that the heat generated or applied during the mixing, calendering or tubing operation is sufficient to start or cause vulcanization and to produce what is known as scorched stocks, which are unsuitable for use."

[1], [2] It is our view that scorched rubber is prematurely or partially vulcanized rubber, and there is no invention in applying to scorched rubber (prematurely or partially vulcanized rubber) methods or compounds old to the art as useful in reclaiming vulcanized rubber. We are of the opinion that the case of *In re Evans*, 35 CCPA (Patents) 776, 164 F.2d 621, 76 USPQ 115, 608 O. G. 5, is controlling on that issue, and we agree with the Board that it is not inventive to try the treatments of Garvey or Castello on scorched rubber.

With regard to the appellants' second contention, while it is true, as they state, that none of the references discloses an intermediate waiting step between the mixing and the refining steps, nevertheless we do not believe that appellants have distinguished their process from the others in a patentable way merely because of the introduction of the interval wherein the mixture is allowed to "stand."

Shepard et al. suggests the possible equivalence of vulcanized rubber reclamation and scorched rubber reclamation; Williams et al. teach the mixing of raw rubber with acidic material and organic sulfides (*In re Evans*, supra, extends this to the plasticizing of rubber generally); Seaman et al. teach the use of organic sulfides on vulcanized rubber to soften and reclaim it; Castello teaches the use of relatively low temperatures in reclaiming vulcanized rubber stock with a mixture of organic sulphur compounds (albeit accelerating) and an organic acid; and Garvey teaches the use of certain of the very softeners and plasticizers specified in appellants' application. In the face of all of this, will the appellants, in using what seems to be the fruits of those teachings, be heard to say that they are entitled to a patent because their application alone specifies a waiting period intermediate the processing of the scorched rubber stock? Where appellants have failed to establish clearly and conclusively a basis for the need of such a waiting period, its suggested desirability is not sufficient to distinguish the appellants' process as patentable over the prior art. As held by the Board, "no basis has been laid • • • for a need for waiting. Mere standing for an unspecified time is practically meaningless."

[3] For the foregoing reasons we agree with the finding of the tribunals of the Patent Office that all of the claims of appellants' application are unpatentable over the cited prior art. It is unnecessary for us to consider additional grounds of rejection. The decision of the Board of Appeals is affirmed.

AFFIRMED.

Cancellation Notices

Verne H. Carter, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Grace Bros. Brewing Co., Second and Wilson Sts., Santa Rosa, Calif., to effect the cancellation of trade-mark registration of Verne H. Carter, 3994 San Pablo Ave., Emeryville, Calif., No. 317,650, dated October 9, 1934, and the notice of such proceeding sent by registered mail to the said Verne H. Carter at the said address having been returned by the post office undelivered, notice is hereby given that unless said Verne H. Carter, his assigne or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

April 28, 1949.

Nathan Manis, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Perfect Negligee Co., 16 East 34th St., New York, N. Y., to effect the cancellation of trade-mark registration of Nathan Manis, c/o Marna Undergarment Co., 37 East 28th St., New York 16, N. Y., No. 502,764, dated October 5, 1948, and the notice of such proceeding sent by registered mail to the said Manis at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Nathan Manis, his assigne or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

May 9, 1949.

Interference Notices

Weldon M. Ward, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Portis Style Industries, Inc., 320 West Ohio St., Chicago, Ill., for registration of a trade-mark and Registration No. 285,034, issued December 10, 1929, to Weldon M. Ward, 18 East 27th St., New York, N. Y., and the notice of such declaration sent by registered mail to the said Ward at the said address having been returned by the post office undeliverable, notice is hereby given that unless Weldon M. Ward, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

May 9, 1949.

Levy, Forman & Co., Inc., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Powell & Campbell, Inc., 122 Duane St., New York, N. Y., for registration of a trade-mark and Registration No. 286,758, issued September 1, 1931, to Levy, Forman & Co., Inc., 710 Broadway, New York, N. Y. The assignment records of this Office show a transfer of title to this registration to Robert J. Levy, % Maurice Schwartz & Co., 1450 Broadway, New York, N. Y., who has been substituted for said Levy, Forman & Co., Inc. to defend the registration concerned. The notice of such declaration sent by registered mail to the said Robert J. Levy, at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Robert J. Levy, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

April 29, 1949.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

The following 28 patents, dealing principally with electrode systems, are offered for license on reasonable terms by the Philips Laboratories, Inc., 100 East Forty-Second St., New York, 17, N. Y.

Pat. 1,988,116. ELECTRODE SYSTEM. Patented Jan. 15, 1935. System formed by two electrodes of different materials separated by a thin intermediate layer of a third material. At least one of the electrodes is made up of a powdery substance and a binder such as copper iodide and iodine pressed on a metallic gauze framework. Zirconium and zirconium oxide may compose the second electrode. Group 36—19. Reg. No. 19,549.

Pat. 2,002,221. DRY RECTIFIER. Patented May 21, 1935. Dry rectifier cell consists of two layers of substances having different electron radiations and a very thin intermediate layer of a non-conductive substance such as lacquer sprayed on one of the outside layers. During operation of the rectifier the non-conductive substance remains cold and non-ionized. Thus a very compact rectifier is obtained in a simple manner, and a great number of cells may be built up entirely by successive sprays. Group 36—19. Reg. No. 19,550.

Pat. 2,041,569. ELECTRODE SYSTEM HAVING UNSYMMETRICAL CONDUCTIVITY. Patented May 19, 1936. A glass tube having metal contact caps at each end is provided with a silvered inner surface which constitutes a positive element. A conductor (which comprises a small spring) coated with common salt extends between the caps and includes a readily fusible wire section. Sufficient voltage is passed through the conductor to volatilise the salt so that it is deposited as a film on the silvered surface. A suitable vapor is then admitted to the tube to deposit an intermediate layer that will be adsorbed by the salt film. Current of greater intensity is then passed through the conductor to fuse the wire section and release the spring. The spring contacts the adsorbed layer connecting it with the cap. The tube is then exhausted and filled with an inert gas if desired, after which it is ready for use as a detector for radio signals, etc. Group 36—19—92. Reg. No. 19,551.

Pat. 2,109,879. ASYMMETRIC ELECTRODE SYSTEM. Patented Mar. 1, 1938. In the construction of an electrode system having unsymmetrical conductivity, successive layers of nickel and chromium are applied as an anti-corrosive coating to an aluminum base. To improve the adherence of a selenium electrode insulated with a polystyrene coating, carbon is applied as an intermediate layer. The system is completed by insertion of a supply conductor in a counter-electrode formed by a drop of Wood's metal directly over the insulating coating. Group 36—19. Reg. No. 19,552.

Pat. 2,137,316. ELECTRODE SYSTEM AND METHOD OF MAKING SAME. Patented Nov. 22, 1938. Electrode consists substantially of selenium and an insulating metal salt or oxide (not easily soluble in water) to retain its insulating properties under atmospheric conditions and a second electrode of conductive material insulated from the first electrode by a layer of salt or an oxide between the electrodes. Group 36—19. Reg. No. 19,553.

Pat. 2,137,428. ELECTRODE SYSTEM OF UNSYMMETRICAL CONDUCTIVITY. Patented Nov. 22, 1938. The conductivity of a selenium electrode is increased by incorporating conductive substances in finely divided condition. For example, collodion to which a drop of gold varnish has been applied as a second electrode, is utilised as a blocking layer on a selenium-coated iron disk. A connecting wire inserted in the varnish is secured when the varnish dries. Many modifications are shown. Group 36—19. Reg. No. 19,554.

Pat. 2,139,731. ASYMMETRIC ELECTRODE SYSTEM. Patented Dec. 13, 1938. A number of metal electrodes are separated by a layer of selenium and an insulating coating of artificial resin which incorporates powdered mica particles. Group 36—19. Reg. No. 19,555.

Pat. 2,156,660. ELECTRODE SYSTEM. Patented May 2, 1939. Electrode system for rectifying or controlling high or intermediate frequency electrical oscillations includes a positive iron electrode and a negative selenium electrode separated by a solid insulating coating of polystyrene. One of the electrodes has a contact end of small cross section which is embedded in insulating material. Group 36—19. Reg. No. 19,558.

Pat. 2,161,600. ELECTRODE SYSTEM FOR RECTIFYING OR CONTROLLING HIGH OR INTERMEDIATE FREQUENCY OSCILLATIONS. Patented June 6, 1939. Electro-positive electrode of a bismuth, tin, and tin alloy and a selenium electro-negative electrode are insulated by a coating of polystyrene. At least one of the capacity determining parts of the system is formed with the aid of a mass in liquid state in such a manner that the contact surface determining the electrostatic capacitance is limited. Group 36—19. Reg. No. 19,557.

Pat. 2,161,601. ELECTRODE SYSTEM. Patented June 6, 1939. Dry rectifier cell consists of a semi-conducting material such as cuprous sulphide applied to a copper carrier. An iron rod provided with a contact end of small diameter bears on the carrier, but is separated from the semi-conducting material by an interposed layer of insulating material such as silicon dioxide. Group 36—19. Reg. No. 19,558.

Pat. 2,162,613. ELECTRODE SYSTEM AND METHOD OF MAKING SAME. Patented June 13, 1939. Utilises a first electrode consisting of a mixture of selenium and a halide which is readily hydrolyzable with water to form a solid and stable insulating oxide; an intermediate blocking layer between the first electrode and a second electrode of different conductivity (iron or alloy). The blocking layer is formed by the metal oxide and the non-volatile halide present at the surface of the first electrode. Group 36—19. Reg. No. 19,559.

Pat. 2,173,249. ASYMMETRIC ELECTRODE SYSTEM. Patented Sept. 19, 1939. Conductivity of selenium is increased considerably by the addition of .05–1% bismuth iodide or the like. Group 36—19. Reg. No. 19,560.

Pat. 2,173,904. ELECTRODE SYSTEM OF UNSYMMETRICAL CONDUCTIVITY. Patented Sept. 26, 1939. Electrode system is formed by two layers of different emitting capacity such as silver or copper and selenium separated from each other by a layer of insulating material such as an artificial resin. Embedded within the insulating material is a grid of oxidized aluminum or the like provided with a supply conductor for applying potentials for the control of the electron current or for screening purposes. Group 36—19. Reg. No. 19,561.

Pat. 2,244,664. METHOD OF BUILDING UP STRATIFIED ELECTRODE SYSTEMS. Patented June 10, 1941. In manufacturing stratified electrode elements, a quantity of electrode and blocking layer material is applied to the center of a plate which is then rotated to distribute the material centrifugally. Several disks are then cut from the plate which may be used in combination with complementary electrodes. Group 36—19. Reg. No. 19,562.

Pat. 2,261,618. BLOCKING-LAYER ELECTRODE SYSTEM. Patented Nov. 4, 1941. This electrode system is characterized by an aluminum carrier plate having a selenium layer whose upper side carries a thin blocking layer. A rigid connection between the plate and contact carrier on the other side of the blocking layer is established by a shell which laterally embraces the whole electrode. The contact carrier is in the form of a disk, and an entry channel to the underlying electrode system is constituted by a central bore. Group 36—19. Reg. No. 19,563.

Pat. 2,264,464. METHOD OF MAKING ELECTRODE SYSTEMS. Patented Dec. 2, 1941. Method of making electrode systems by which the selenium acquires an advantageous value and improved electrical properties. Selenium is cooled during pressing from a temperature slightly below its melting point to a temperature between 180° and 140° C., preferably about 160° C., after which it is cooled down to room temperature without the use of pressure. Group 36—19. Reg. No. 19,564.

Pat. 2,288,341. BLOCKING LAYER ELECTRODE SYSTEM. Patented June 30, 1942. This electrode system is arranged so that the entire active surface is contacted by a cooling liquid. This dissipates the heat as rapidly as possible through the surface at which it is produced. As a further aid in obtaining the cooling result, spacing pieces are provided between the various cells. Group 36—19. Reg. No. 19,565.

Pat. 2,302,087. BLOCKING-LAYER RECTIFIER. Patented Nov. 17, 1942. This invention relates to a blocking-layer rectifier in which the electrode is mounted on a metallic carrier plate. Heat is dissipated by a separate cooling plate used in conducting contact with the metallic carrier plate. A spacer is centrally arranged between the cooling plate and the carrier plate so that a major part of the plates is exposed to a cooling fluid. Group 36—19. Reg. No. 19,566.

Pat. 2,303,522. METHOD OF MANUFACTURING BLOCKING-LAYER ELECTRODE SYSTEMS. Patented Dec. 1, 1942. Heat-treating selenium in stages and at increasing temperatures to convert it from a non-conducting amorphous form, to a poor-conducting crystalline form, to a final modification exhibiting good conductivity suitable for blocking-layer electrode systems. Group 36—19. Reg. No. 19,567.

Pat. 2,303,774. METHOD OF MAKING A STRATIFIED ELECTRODE SYSTEM. Patented Dec. 1, 1942. Manufacture of a blocking-layer rectifier having a semi-conducting electrode of selenium: Carbon in suspension is applied to part of the surface of a metal carrier and distributed as a thin layer by rotation of the carrier. A carbon layer is formed by volatilization after which molten selenium is applied and distributed in a similar manner over the carbon layer. Group 36—19. Reg. No. 19,568.

Pat. 2,303,801. BLOCKING-LAYER CELL. Patented Dec. 1, 1942. Cell comprises a supporting plate which carries an electrode and blocking-layer system including an outer layer of a metallic material having a low melting point. A thin substantially unstressed metal strip serves as a current conductor and has one end thermally connected to the material of the outer layer. Group 36—19. Reg. No. 19,569.

Pat. 2,310,002. METHOD OF MAKING BLOCKING LAYER ELECTRODE SYSTEMS. Patented Feb. 2, 1943. A method whereby a relatively thin coating of a powdered material may be firmly applied to a carrier for such purposes as the construction of cathode-ray tubes, photo-electric cells, etc. In making a cathode-ray tube, for example, a tungsten carrier is coated first with a silver film by electro-deposition, and then sprayed with zinc sulphide, after which it is heated to approximately 1050° C. The silver melts and a good mechanical connection is obtained between the zinc sulphide powder and the tungsten carrier. Group 36—19. Reg. No. 19,570.

Pat. 2,369,772. APPARATUS FOR RECTIFICATION AND VOLTAGE INCREASE. Patented Feb. 20, 1945. Voltage-multiplier rectifier assembly comprises cascade-connected, rod-shaped blocking-layer rectifier elements and condensers arranged in several groups. Each of the groups is in line with the other and includes a T-shaped arrangement of two rectifier elements and two condensers. The condensers are arranged below the transversely located rectifier element so that the remaining rectifier element is flanked on opposite sides. Group 36—19. Reg. No. 19,571.

Pat. 2,428,400. BLOCKING-LAYER CELLS COMPRISING ONE OR MORE GRIDS EMBEDDED IN THE BLOCKING LAYER. Patented Oct. 7, 1947. Cell construction includes at least one grid embedded in an interposed barrier layer between anode and cathode. The grid extends over an area materially smaller than that covered by the anode. To reach the grid, a metallic supply conductor extends through a cut-out in the anode. The conductor is spaced from the anode a distance which exceeds the distance between the grid and anode by an insulating shield. Group 36—19. Reg. No. 19,572.

Pat. 2,433,752. BLOCKING-LAYER CELL. Patented Dec. 30, 1947. A method for manufacturing blocking cells: A layer of semi-conductive material such as lead sulfide is placed between two spaced and concentrically arranged copper and magnesium conductor elements. To gain intimate contact, the conductors and semi-conductive layer are elongated until the required size is obtained. The result is a blocking-layer cell of great strength from which cells of desired current load may be cut. Group 36—19. Reg. No. 19,573.

Pat. 2,443,878. METHOD OF MANUFACTURING SELENIUM CELLS. Patented June 22, 1948. Good adhesion is obtained between a selenium layer electrode and a conductive electrode by forming a selenium layer on a base and then converting the selenium layer into a crystal modification by heating the whole at a temperature greater than 120° C., under vacuum. Group 36—19. Reg. No. 19,574.

Pat. 2,449,420. ELECTRODE SYSTEM. Patented Sept. 14, 1948. A supporting base carries a common selenium electrode on which a blocking layer is formed. A number of electrodes are insulated from each other by strips of the blocking layer and interconnected by zinc members and an insulating layer consisting of a zinc and selenium compound interposed between each of the zinc members and the blocking layer strips. Group 36—19. Reg. No. 19,575.

Pat. 2,456,758. BLOCKING-LAYER ELECTRODE SYSTEM. Patented Dec. 21, 1948. In this cell anode and cathode electrodes are separated by a blocking layer in which a selenium grid is embedded. The anode consists of a material such as cuprous iodide which will have a higher electron emissive capacity than that of the cathode which is made of copper. The selenium grid is coated with cuprous iodide on the side facing the anode and copper on the side that faces the cathode so that the electron emissive capacity is no greater than either of the electrodes. Group 36—19. Reg. No. 19,576.

Pat. 2,450,136. WRIST WATCH BAND. Patented Sept. 28, 1948. Bracelet for supporting a wrist watch is made of a completely wrapped spring metal band bent to partially encircle the wrist. Wrapping consists of strips of plastic material. The first layer of strips extend lengthwise and are turned over ends of metal band. Completely enclosing this layer is a second layer, of a continuous strip wrapped round and round the band. Between these transverse windings, loops of the longitudinal strips protrude at various points to engage the pins of a watch. Loops are provided to accommodate watches of different sizes. (Owner) Robert L. Hamilton, 2119 Second Ave., North, Birmingham, Ala. Groups 34—61; 39—81; 40. Reg. No. 19,577.

Pat. 2,454,778. ELECTRICAL CONTROL SYSTEM. Patented Nov. 30, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) This patent relates primarily to an automatic electrical control system for a Diesel-electric marine propulsion system. Generally described, the field circuit includes a variable resistance in series connection controlled by a number of solenoids. One solenoid is responsive to motor speed, a second to generated current, and a third which opposes the others. The third solenoid is adjustable to provide ampere-turns less or greater than the other two solenoids so that a constant speed may be automatically maintained regardless of changing motor and propeller torque, and a stable field excitation supplied at all current requirements. (Owner) Herman H. Curry, Box 187, Inverness, Fla. Group 36—19—41. Reg. No 19,578.

Pat. 2,460,730. CIGARETTE CONTAINER. Patented Feb. 1, 1949. Plastic cigarette container simulating a miniature statue of a woman has a rigid hoop type skirt which may be lowered to expose the cigarettes. When released, a coil spring will return skirt to normal position with its upper end abutting the flaring lower end of simulated clothing formed integrally with statue. The lower ends of cigarettes rest on a disk rigidly secured to the legs below the knees. The spring is disposed between the disk and a ring which is connected by radiating arms to a band inside the upper end of skirt. (Owner) David H. Bell, Route 7, Box 529-P, Overland 14, Mo. Groups 39—72; 39—81; 40. Reg. No. 19,579.

Pat. 2,278,768. POWER DRIVE FOR PIPE THREADING MACHINES. Patented Apr. 7, 1942. Speed reduction power drive mechanism for pipe threading machines may be part of the original equipment or supplied as an attachment for existing types of machines. It consists of a substantially triangular base plate having a train of speed reduction gears rotatably mounted on one side with a flexible power shaft for driving the gears. The plate is adapted to be rigidly secured to the outer end of the usual gear driven rotary stock of a pipe threading machine so that the plate will rotate with stock. When so mounted, the flexible shaft is disposed substantially axially of the axis of rotation of the stock with the train of gears extending radially outwardly in driving relation with the usual stock driving shaft of machine. When desired, a change from a high to a low speed reduction, or vice versa, may be readily effected without changing the base plate by replacing one train of gears with another train. (Owner) Percy L. Calvert, 210 East Washington, Salem, Oreg. Group 35—43. Reg. No. 19,580.

Pat. 2,457,309. CHANGEABLE DECORATIVE FABRIC. Patented Dec. 28, 1948. This patent shows a piece of fabric consisting of a series of geometrically shaped units connected so that a change in color or design, or both, may be rapidly accomplished by folding back certain parts. Any kind of fabric and any geometric shape may be utilized. In the patent two identical diamond-shaped pieces of fabric (one black and one white) are placed back to back with their points coinciding and connected along two edges. The other edges are left free to permit portions to be folded in either direction to expose either side. In assembling units to form a piece of fabric, single thickness portions of one unit are connected to an adjacent single thickness portion of a corresponding unit of the same size and shape. (Owner) Atha-Lane Joyce, Apt. 20, 2659 Connecticut Ave., Washington 8, D. C. Groups 22—11—44; 23—11—29—X1—32—33—39—91—92. Reg. No. 19,581.

Pat. 2,445,104. FUEL CARBURETING MEANS. Patented July 13, 1948. A device for mixing air and oil and feeding the mixture to a heating furnace, internal combustion engine, or the like. A pump mounted on a closure plate for an oil tank is operated by an electric motor. A disk in air intake tube of pump has a central opening closed by a slotted tube which is moved up and down by a cap at top of air intake tube to regulate the air intake. The pump also draws oil from the tank through a pipe connecting the oil tank and air intake tube and mixes it with the air and blows the mixture through a pipe connected to the burner in the furnace. Modifications given. (Owner) Nellie M. Satterfield, Box 8, Lexington, Ohio. Groups 33—63; 35—19. Reg. No. 19,582.

Pat. 2,460,552. KNIFE SHARPENER. Patented Feb. 1, 1949. Household knife sharpener consists of three long tubular stones normally carried in spaced-apart relation on the ends of the arms of a resilient U-shaped handle. Two of the stones are carried on the U-shaped end of one of the arms so that the other stone may be swung inwardly between them. The stones are rotatably and removably mounted on long rods screwed axially into the ends of the arms. The arms may be pressed together with one hand to angularly cross the stones so that two stones will engage one side of the upturned cutting edge of a knife and the other stone the opposite side. The blade will frictionally rotate the stones when drawn back and forth across them. Modification shown. (Owner) S. Tarapczynski, 327 13th St., Niagara Falls 5, N. Y. Groups 32—91; 33—59; 40. Reg. No. 19,583.

Pat. 2,438,613. PROTECTING APRON FOR IRONING BOARDS. Patented Jan. 11, 1949. An apron for protection of articles depending from ironing board consists of a skirt and a base section. Skirt, made of two pieces of fabric sewed together at front and encircling the supports of the ironing board, is held by a drawstring at top and by suitable fasteners to underside of board. Base section, also of two pieces sewed together at front, is stitched to bottom edge of skirt and lies on floor to protect articles. (Owner) Ethel S. Lyon, P. O. Box 1515, Williamsburg, Va. Group 23—86—93—95. Reg. No. 19,584.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING APRIL, 1949

The Virgin Islands Company **v. *W. A. Taylor & Company*, 171 Ms. D. 268, 81 USPQ 212 (Apr. 18, 1949), Cancellation Nos. 4728 and 4729. "Government House" is not inherently incapable of adoption and use as trade-mark because of governmental signification. Government corporation may not recoop registrations where it authorized exclusive distributor to register marks in his own name and at his own expense. Nonuse of mark is not shown where reduced sales continue and registrant has stock of goods in warehouse and in hands of wholesalers and retailers.**

DANIELS, *Assistant Commissioner:*

Petitioner appeals from the decision of the Examiner of Trade-Mark Interferences dismissing its petitions for cancellation of two registrations of trade-marks for rum, both registered under the Trade-Mark Act of February 20, 1905. The trade-mark disclosed in Registration No. 347,778, registered July 6, 1937, involved in cancellation No. 4729, consists of the words "GOVERNMENT HOUSE"; the trade-mark disclosed in Registration No. 350,837, registered October 5, 1937, involved in cancellation No. 4728, consists of a tropical land and sea scene, including a colonial mansion overlooking a harbor, together with the representation of a sail boat.

These cases have been submitted on the same record and briefs, and while certain considerations applying to the words may not apply to the pictorial trade-mark, at least to the same degree, they were disposed of by the Examiner of Interferences in a single decision and will be so considered on this appeal.

It is petitioner's contention in requesting these cancellations, pursuant to section 13 of the Trade-Mark Act of 1905, that respondent was not entitled to the use of the marks shown in the registrations at the time of its application for registration thereof, because:

"(a) by right of prior adoption and use of the marks and because of their inherent and acquired governmental signification, the Government, through petitioner, has at all times been the owner thereof, and

(b) the marks are not a proper subject matter for registration by a private party such as respondent * * *."

It is further contended by petitioner that the marks should be canceled in accordance with section 13, supra, in view of nonuse thereof by respondent.

Petitioner is a corporation chartered by the Colonial Council for St. Thomas and St. John of the Virgin Islands, on April 9, 1934. Its three shares of stocks are owned by the Secretary of the Interior, the Assistant Secretary of the Interior, and the Governor of the Virgin Islands, in trust for their successors in office, the beneficial interest in these shares being held for the Government of the United States.

It was organized by the officials above named, then in office, for the purpose of assisting in the economic rehabilitation of the Virgin Islands, which at the time were suffering from acute conditions of depression, and to relieve unemployment in the Islands which was then widespread. The corporate charter gives the petitioner broad powers to engage in all types of business and manufacturing, to purchase, sell, mortgage, lease, and otherwise deal in all kinds of real and personal property, and, in general, to carry on all other business which might be necessary, or desirable, to carry out its objectives. The charter provides that it may sue or be sued in its corporate name.

Shortly after its organization in April, 1934, petitioner entered into certain operating agreements with the United States of America, acting through the Secretary of the Interior, by the terms of which it undertook the management of certain estates and properties (including a distillery) in the Virgin Islands, which property had been purchased by the Government with funds supplied by the Federal Works Administration. Under the terms of these operating agreements, the records of receipts and expenditures of the corporation were to be maintained and audited as prescribed by the Auditor General and the Secretary of the Interior of the United States. Petitioner has continued to operate such property and to provide employment for the residents of the Virgin Islands. It has engaged in the raising of sugar cane on the properties turned over to its management under the operating agreements, and has manufactured rum, utilizing the cane raised through its agricultural activities. The raising of the cane provided extensive employment in the Islands, but has been an unprofitable endeavor, the rum operation being relied upon for the income necessary to carry on the other business of the corporation and to carry out its economic and social objectives. It has also engaged in certain other types of farming and certain other business activities not pertinent to this proceeding, and which constituted only a small portion of its activity. As stated by the witness Ickes, "it was a rum operation primarily." (Record P.39.)

When the property was taken over, some rum was on hand, and the distillery first produced rum under petitioner's management in the spring of 1935. By late 1936 a stock of rum sufficiently aged for the market had been built up, but only a few small sales in bulk and under the name "St. Croix Rum" had been made. To continue the distilling operation and to finance the business of petitioner and carry out its objectives, it was necessary to find a sales outlet or outlets for the rum. After investigation of potential markets, marketing methods, and negotiations looking toward prospective

outlets for the rum produced and to be produced, petitioner on October 8, 1936, entered into an agreement with respondent (petitioner's Exhibit 8) by the terms of which respondent was appointed "sole agent and distributor for the United States of America" to market and sell such rum. The contract was to continue in force for a period of one year with an automatic renewal for the period of two years, unless terminated by respondent. The rum was to be sold to respondent f. o. b. steamship at St. Croix, Virgin Islands, title passing to respondent at that point; transportation, freight, and other charges to be paid by respondent. Suitable provisions as to price, packaging, and other usual terms were included. It was specifically agreed that none of the advertising or labels of respondent "shall contain any reference to the United States Government or the Federal Government," unless first approved by the Secretary of the Interior. The contract included a specific paragraph as to trade-marks, as follows:

"11. TRADE-MARKS. The brand and trade-marks shall be the property of the importer (respondent) and may be registered by it in its name. If at the end of one year from the date hereof the importer does not renew this contract then the importer agrees to transfer and assign the trade-mark and any registration thereof to the shipper. If said contract is renewed for a period of two years and during the period this contract is in effect the importer shall liquidate its business or discontinue the importation or sale of alcohol liquor, then the shipper shall have the option to purchase the trade-mark either in its own name or in the name of its assignee or designee. In the event the shipper exercises the option to purchase said trade-mark the shipper shall pay the importer a price to be determined by the appraisal of two appraisers, one of whom shall be appointed by the shipper and the other by the importer, with power to such appraisers to appoint a third appraiser in case they cannot agree. The shipper for sixty days after such appraisal shall have been made and a copy delivered to the shipper shall have the option of purchasing said trade-mark and any registration thereof; such option to be expressed in writing, and on the payment of said appraisal amount within sixty days after October 8th, 1939, the importer shall deliver to the shipper an assignment in form sufficient to convey good title to said trade-mark and any registration thereof to the shipper, and also in form to record any assignment of registration of trade-mark in the United States Patent Office. Any assignment of trade-mark hereunder shall not include the name of W. A. Taylor & Company or Taylor. After any assignment of the trade-mark the importer may continue to sell any rum it has on hand without re-labelling in the event shipper does not purchase or cause the purchase of said rum on hand as hereinafter provided." [Petitioner's Exhibit 8.]

A number of modifications in this agreement (not pertinent to any questions here involved) occurred during the actual operation, and on November 30, 1936, the automatic extension of its term was changed from two years to five years. (Petitioner's Exhibit 9.) On March 30, 1940, the original agreement was terminated by consent and a new agreement for a term of five years (petitioner's Exhibit 16) was executed by the parties in place thereof. While there were certain changes in the provisions of the new contract, which have no bearing on any points here under consideration, the principal provisions and method of operation were the same. With respect to trade-marks, paragraph 11 was retained with the exception of the introductory sentences, which were changed and read as follows:

"11. Trade-Marks. The brand and trade-marks are and shall continue to be the property of the importer and may be registered and reregistered by it in its name. If during the period this contract is in effect the importer shall liquidate its business or discontinue the importation or sale of alcoholic liquor, then the shipper shall have the option to purchase the trade-mark either in its own name or in the name of its assignee or designee."

The first labels were delivered to the distillery to be used on bottles for shipment to the respondent on March 16, 1937, and the first sale of rum under such labels was made by petitioner on March 23, 1937. Thereafter, the parties operated under the agreement referred to until the expiration of the last mentioned contract (petitioner's Exhibit 16), which by its terms expired on March 30, 1945, and was not renewed.

The trade-marks shown in the registrations sought to be canceled were selected shortly after the execution of the first agreement between the parties on October 8, 1936 (petitioner's Exhibit 8, supra), both having been used together on all sales of the rum by respondent at all times. There is much testimony in the record as to the circumstances surrounding their adoption and the reasons therefor. Upon signing the contract both parties to the agreement were anxious to begin the actual sales of the rum, and various names were suggested, both through respondent's advertising staff and agency and petitioner's personnel, and Government officials who were interested in the petitioner's activities. That some name having a governmental connection was considered desirable is evident from the testimony and exhibits. This was not, however, the only basis of selection. The actual name "GOVERNMENT HOUSE" was suggested by the then Governor of the Virgin Islands, who stated that it had both a "governmental connotation" and a "West Indian and tropical connotation," it being explained that "governors and chief executives in the West Indies reside in Government houses rather than in executive mansions." As stated by the then Secretary of the Interior, in his testimony (Record page 30), the name was considered desirable as indicating "that it was a Government inspired product." In recommending its adoption, after various other marks had been considered and dropped, either because they were considered undesirable or were found to be unavailable, the then Governor Cramer stated:

"The merit of the name is that it has a definite governmental connotation and especially a West Indian and tropical connotation. As you know governors and chief executives in the West Indies reside in Government houses rather than in executive mansions. Although that fact may not be known to the rank and file of people in the United States, it is known to many of the vast horde which annually takes part in the mass tourist movement into the Caribbean. It would not be difficult to establish the meaning of the name by appropriate advertising throughout the country. The name seems to me to have dignity, which the other two names mentioned above cannot be said to have. Parenthetically I may add that the name is also a true statement of fact. At the present time, at least, VICO rum is the *vin de pays* which is served at Government House on all appropriate occasions." (Petitioner's Exhibit 28, dated January 8, 1937.)

In petitioner's Exhibit 3 commenting upon this recommendation it was stated:

"'Government House' has a further tropical connotation. In all colonial possessions there is a 'Government House.' It connotes dignity, good taste, good quality. It suggests that this brand is the kind which the Governor himself consumes. With a proper label, the idea of a mellow mansion steeped in tradition is further emphasized. The appended sample label prepared at my request can be improved upon."

It is clear that the representatives of the petitioner and the other interested Government officials, anxious to promote the commercial enterprise neces-

sary to carry out the economic and social objectives which inspired their interest, were active in proposing that these marks be adopted, and cooperated with respondent in connection therewith. Respondent, however, also participated, and was the one who was actually required to accept and adopt the mark in accordance with the contract. Respondent actually prepared the labels, paid the artist, and caused them to be manufactured.

In considering the petitioner's contentions as to ownership of the marks, it should be remembered that at the time the parties entered into their first agreement, petitioner had a substantial amount of rum on hand, but no channels for distributing it, except for the few bulk sales above referred to. Having no trade, it had no trade-marks, and until suitable provision for packaging and distributing the product was made, no good will could become associated with such rum. The respondent supplied this requirement. At the time of entering into the contracts above referred to, and at the time of the original use of these marks, it was obviously the intent of the parties that petitioner would manufacture the rum and that the marketing of the rum and all other commercial activities in connection therewith would be in the hands of the respondent. That it was contemplated at that time that the respondent was to be, and continue to be, the owner of the trade-marks to be adopted, in the absence of certain contingencies which did not arise, is entirely clear from paragraph 11 quoted above, and that this was the construction by the parties after their adoption, is confirmed by the language used in continuing that paragraph in the later agreement (petitioner's Exhibit 16) also quoted. Notwithstanding this, it is now contended that the trade-marks were not, and are not proper subject matter for ownership and registration by a private party in view of their inherent and acquired governmental signification, and that accordingly, respondent was not entitled to ownership of the marks at the time of filing the applications for their registration. This obviously applies with greater force to the registration of "GOVERNMENT HOUSE" than of the pictorial trade-mark, although petitioner contends that because of the fact that they have been used together at all times, that the significance is the same. For the purposes of this decision it is not considered necessary to determine whether or not there may be any differentiation between them.

"GOVERNMENT HOUSE" does not appear to be inherently incapable of adoption and use as a trade-mark because of its governmental signification as contended by petitioner. It does not, per se, appear to indicate origin or ownership by the United States Government, or any other Government. As pointed out by the Examiner of Interferences, there are numerous kinds of government, for example, state, municipal, colonial, foreign and provincial. Considering the marks in and of themselves, and without any explanatory matter, it is not believed that the use of these words as a trade-mark for any product would lead the purchasing public to suppose that the United States Government produced or sponsored the product. The Examiner of Interferences referred to the use of "White House" for grocery products, and "President" for suspenders, respectively involved in *Dwinell-Wright Company* v. *White House Milk Company, Inc.*, 132 F.2d 822, 56 USPQ 120; and *President Suspender Co.* v. *Macwilliam*, 238 Fed. 159. It seems clear that no one would regard grocery products or suspenders, bearing these marks, as emanating from the executive mansion, or sponsored by any President of the United States. The same comments would apply to numerous other marks, which, it is a matter of common knowledge, are in use for various products, for example, "Federal," "Senate," "Congress," "Congressional," "House of Lords," and similar notations. In view of the generality of the term and its "West Indian connotation," and other implications inherent in the words, above referred to, as well as the specific provisions against any reference to the United States or Federal Government which were carried out in the performance of the contract, "GOVERNMENT HOUSE" appears even further removed from any indication of origin with the Federal Government than the other terms above referred to. The comments of the Supreme Court in *Hamilton-Brown Shoe Company* v. *The Wolf Brothers & Company*, 240 U. S. 251, 1916 C. D. 281, with reference to the trade-mark "AMERICAN GIRL" also seems pertinent:

> "It does not signify that the shoes are manufactured in America, or intended to be sold or used in America, nor does it indicate the quality or characteristics of the shoes."

I accordingly agree with the Examiner of Interferences that there is no inherent governmental signification in the marks.

The petitioner contends that even assuming this lack of inherent governmental connotation, the marks have been used in such a manner that they have acquired "governmental signification" and that their use to denote any other origin would be a deception of the public and against public policy. It is true that both parties in adopting the marks referred to possible "governmental connotation thereof," and that respondent in particular desired to use direct reference to the Government in its advertising. (Petitioner's Exhibits 17 and 26.) It was, however, forbidden to do so by contract, and authorization to use any such reference was refused, and no such reference was made. The following statement or one of similar import appeared at the bottom of the bottle label:

> "Distilled directly and solely from cane juice by
> VIRGIN ISLANDS CO. ST. CROIX V. I.
> A Virgin Islands
> Government Corporation
> Sole Agents for U. S. A.—W. A. Taylor & Co., N. Y. C."
> (Petitioner's Exhibit 29)

For a period during the war a further statement that it was bottled in the United States by a concern designated by respondent appeared. (Respondent's Exhibit 2.) This in no way connects the product with the United States Government. The marks as selected, adopted, and used were therefore ones which were available to petitioner and which were used in a manner which clearly stated the actual facts, and which did not preclude their use as a trade-mark or render them improper subject matter for adoption by respondent. There is nothing in the marks themselves as used nor in the language used on the labels, which would indicate that the marks were unavailable to a private concern such as respondent, nor which would preclude petitioner's cooperating in such selection and use as a protection to the public because of any governmental signification. To find otherwise in view of the careful consideration given these marks by the parties, and the provisions of the contract as to their ownership and use, particularly in view of the precaution taken against reference to the United States Government, would be to find that not only the parties to this proceeding, but the Government Officials who cooperated in the selection of the mark and encouraged its use, and the authorities who approved the label intended or approved the perpetration of a fraud upon the public. Since, however, all parties were meticulously careful to state the actual facts, and the only reference was to "a Virgin Islands Government Corporation" no such conclusion can be reached unless respondent, by advertising, or other means aside from the use of the labels, has created such a false impression. Any such possible acquired governmental signification would probably have come into existence after adoption and registration, and therefore relate to the question of nonuse rather than of that of right to use at the time of application, but would apply to some extent to both questions.

The parties have submitted a large number of specimens of advertisements by which the sale of the product was promoted by respondent. The record indicates that copies of all of respondent's advertising was made available to petitioner's counsel, and that these specimens therefore present every type of advertising which was used. In none of this advertising is there any statement, nor, in my opinion, any suggestion, that the rum is manufactured or sold by the United States Government, or that the Government sponsored or participated in its sale. In the early advertising, particularly when the product was introduced into a new territory, reference was made to the activities of petitioner. The usual manner of setting this out was to include in the advertising a statement entitled "Here's the Story Behind this Rum." A typical example of this, taken from petitioner's Exhibit No. 75, reads as follows:

> "Here's the Story Behind this Rum
>
> Something had to be done. It was. The Federal emergency relief organization stepped in to put the Islands on a self supporting basis, formed the Virgin Islands Company. Idea was to stop the need for growing Federal subsidies and give work instead of charity. First thing was to help natives produce sugar more efficiently. Next was to produce rum. Private capital was invited to set up a large scale distillery—*cose invited for 3 years.* Private capital wasn't interested. Out of necessity, a distillery was bought, started operations in 1934. The idle of the Islands were called off relief rolls onto pay-rolls at honest work. The rum they've been making and aging is called *Government House*, as fine a rum as distilling science knows how to produce."

This frequently appeared in a box which was subordinate to the headlines featuring the rum, statements as to its quality, etc., pictures of the bottles and other laudatory material. While a conspicuous part of the advertisements, it is not the most prominent portion and is not given undue emphasis. While this wording varied in detail, it is the usual advertising statement which refers to the origin of the rum. There is also mention of petitioner as the manufacturer of the rum in some advertisements, which was usually much the same form as in the bottle label above referred to, i. e., a statement that it was distilled by the "Virgin Islands Co.," which was stated to be a "Virgin Islands Government Corporation." If the public were sufficiently interested in the details of this advertising material to read these statements, there was only one conclusion which could be drawn, and that was, that the product was that of the respondent which had been distilled by the petitioner. If the public did not read this, there is nothing in the advertising material submitted from which any information or inference could be drawn as to any connection with any Government or governmental agency. It could not be construed as indicating that it was a product of the United States Government.

It appears doubtful from the record that there was any reference to the petitioner's activities in the advertising except in the introductory advertising campaigns in various sections of the country and it seems clear that there was none after 1939, other than naming it as the distiller. "The Story Behind the Rum" and similar statements were apparently dropped. The petitioner emphasizes one style of presentation used in the later advertising which featured "The Government House Guard," represented in the copy presented by a fanciful figure of a "guard" in what appears to be a tropical uniform. It is not clear why this would claim or suggest any governmental origin, as certainly the character illustrated could not be confused with any actual, or fanciful representation of an individual dressed in any uniform of the United States armed services. To suggest any governmental connotation from this particular piece of advertising whimsy (which was used in connection with various wartime programs such as Guarding Against Misuse of Scarce Material, or Disclosure of Information), would be going beyond the realm of probability. It is therefore clear, in my opinion, that the marks in question neither possessed nor acquired "any governmental signification."

Nor can the fact that the petitioner is referred to on the labels change this conclusion. Petitioner is a corporation having all of the usual powers of a commercial corporation, chartered by the proper authorities of the Virgin Islands. While organized at the instance of certain governmental officials for aid in effecting economic relief and rehabilitation of the Virgin Islands, it is not a corporation organized by Congressional action as an agency of the Government. Nor, even if it were such a corporation, would it be entitled to special prerogatives,

or exemptions from the ordinary rule of trade-mark law, nor to other specific exemptions. *Reconstruction Finance Corporation* v. *J. G. Menihan Corp. et al.*, 312 U. S. 81, 48 USPQ 264.

The petitioner appears to suggest, in this connection, the fact that it, rather than respondent, manufactured the rum, precludes respondent from ownership of the marks. That trade-mark rights may be acquired by the sale of products manufactured by others, and that one who purchases goods manufactured by others to sell, may acquire trade-mark rights is well established. *A Bourjois & Co., Inc.* v. *Katzel*, 260 U. S. 686; *Charles La Lanne* v. *F. R. Arnold & Co.*, 17 CCPA 925, 39 F.2d 269; *Scandinavia Belting Co.* v. *Asbestos & Rubber Works of America, Inc.*, 257 Fed. 937; *M. B. Fahey Tobacco Co.* v. *Senior*, 247 Fed. 809 (partially reversed on other grounds, 252 Fed. 579). The respondent herein is not in the position of a distributor or agent who has been granted rights by a manufacturer, under existing trade-mark rights, and continues as agent or licensee to carry on a business under those marks for the benefit of his principal or with provision for reversion as in *Smith* v. *Dental Products Co., Inc., et al.*, Circuit Court of Appeals, Seventh Circuit, 140 F.2d 140, 60 USPQ 260, and *Lawrence-Williams Co.* v. *Societe Enfants Gumbault et cie*, 22 F.2d 512. While the agreements (petitioner's Exhibits 8 and 16) referred to respondent as an agent and distributor, there is no indication of any agency relationship in either contract or in any of the actions performed under the agreements. Petitioner as a manufacturer merely sold rum to respondent, title passing at the point of manufacture, and all freight, insurance, and other expense being borne by respondent. Upon title passing, the problem of disposal of the rum was entirely that of respondent. Petitioner neither participated in the advertising expense, nor undertook any risk of loss or of failure to resell the product, once title had passed to respondent. As specifically provided by the agreements, respondent was to be, and continue to be, the owner of any trade-marks affixed to the rum in the absence of a right to an assignment thereof in the event of the happening of certain contingencies, during the term of the agreements, which never came to pass. Even in the event of such contingencies the parties recognized the actual property right of respondent in the marks by providing that payment therefor would have been required in the event petitioner had become entitled to such an assignment. This is rather a case such as *Scandinavia Belting Co.* v. *Asbestos & Rubber Works of America, Inc.*, supra, and *Distillers Brands, Inc.* v. *The American Distilling Company*, District Court S. D. N. Y., 26 F.2d 988, 41 USPQ 136, in which the distributor was the actual owner, and no right to ownership existed on the part of the manufacturer, who actually made the goods. See also *President Suspender Co.* v. *Macwilliam*, supra.

Petitioner further contends that respondent was not entitled to ownership of the marks at the time it made applications for registrations therefor, since it is alleged that petitioner originally adopted and used the marks and never did or never could alienate title thereto. The first sales of the rum bearing the marks in question made after the labels and bottles were shipped to petitioner by respondent in March, 1937, were made by petitioner to a local liquor store in the Virgin Islands. This was, however, a casual sale of the product bearing labels furnished by respondent in accordance with the agreement between the parties. (Petitioner's Exhibit 8, supra.) That in this sale it was recognized by petitioner that respondent was the owner of the marks is evident since petitioner requested respondent's permission to make such sales, and they were consented to by respondent, both parties agreeing that this was a desirable action and in accordance with the general objectives of the agreement. (Respondent's Exhibits 6 and 7.) These sales happened to be the first actually made under the marks when labels were made available by respondent to be affixed to the goods since the liquor store referred to was a local establishment, while the rum for resale in the United States had to be shipped from the Islands. Such sales would, in any event, be of no consequence not only in view of the expressed intent of the contract, but of the handling of the entire operation. And had the petitioner by such sale acquired any rights, they were clearly transitory and temporary or passed to respondent in view of the contract and the subsequent action. *President Suspender Co.* v. *Macwilliam*, supra; *E. F. Prichard Company et al.* v. *Consumers Brewing Co.*, 136 F.2d 512, 58 USPQ 362. Petitioner argues that, having acquired rights by such adoption, it could not lose such rights nor alienate them, in view of lack of authority to dispose of Government property without the authorization of Congress. If, however, it had acquired any rights therein, it is not "the Government." It was established with full rights to engage in commercial activities, and had extremely broad powers to acquire and dispose of all property at all times and did sell much material without any special congressional authority. This contention is therefore without foundation. *Reconstruction Finance Corporation* v. *J. G. Menihan Corp. et al.*, supra. It therefore appears that the Examiner of Interferences was correct in ruling against the petitioner's contention that respondent was not entitled to the use of the marks at the time of its application for registration thereof, because of any prior adoption or use of the marks by petitioner, or because of any inherent or acquired governmental signification, and that the Government has not, at any time, been the owner thereof, and the petitioner's contention that the marks were not proper subject matter for registration by a private party such as respondent is not well founded.

Petitioner relies further upon the alleged nonuse of the marks by respondent following the expiration of the final contract between the parties in March of 1945 (petitioner's Exhibit 16.) In support of this contention petitioner relies, to some extent, upon

the alleged inability or impropriety of a private party, such as respondent, using such trade-marks in view of the alleged governmental connotation thereof, which has already been considered. As indicated in the general statement of facts above, respondent sold rum under these marks in large quantities during the term of the contracts between the parties, until the last contract (petitioner's Exhibit 16) expired and was not renewed. Prior to the expiration of that contract, petitioner refused to consider entering into a renewal of the contract or any new agreement with respondent, unless respondent surrendered all claim to the trade-marks. The reasons for such refusal are set out in a letter to respondent written by the managing director of petitioner on November 1, 1944, reading in part as follows:

"That name was proposed by the Governor of the Virgin Islands in his official capacity and adopted by the Secretary of the Interior and the President of the United States in their respective official capacities. W. A. Taylor & Company had no part in selecting, creating, inventing or adopting the name 'GOVERNMENT HOUSE.' It had no part in sketching the design on the label. Neither the fact that it employed an artist to fill in the background and details of the design sketched by the President, nor the fact that it registered the trade-mark or name save W. A. Taylor & Company any property interests thereto.

"That property interest is vested in the Government of the United States. The power to dispose of the Government's property right is vested in the Congress, and Congress has never authorized such disposal, nor has it ratified any purported disposal of the trade name by The Virgin Islands Company." (Respondent's Exhibit No. 11.)

The claim of ownership of the marks was apparently based upon a claim of selection of the marks by petitioner. Mere origination of a mark, without trade-mark use, gives rise to no rights. In view of the facts presented by this record, and the conclusions reached above, it must be concluded that the claims expressed in this letter, while undoubtedly advanced in good faith, were not well founded in law or in fact. The writer of the letter had not been connected with petitioner at the time of the original contract, nor of the selection of the marks. Prior to October, 1942, he had no connection with the operation under the contracts, and it must be assumed that he had been misinformed as to the exact facts or otherwise misunderstood them. Nevertheless, as a result of the contention expressed in that letter (respondent's Exhibit No. 11) negotiations for renewal of the contract were broken off and the contract expired. Shipments on respondent's orders for substantial quantities of rum which had been accepted by petitioner in the Virgin Islands were refused prior to the expiration thereof. Respondent had, however, a substantial quantity of "GOVERNMENT HOUSE" rum in stock. Following the expiration of the agreement, it continued to sell such rum, although on a reduced scale, and has continued to sell such rum up to the time of taking testimony herein.

Immediately following the expiration of the agreement petitioner entered into a sales agreement with another liquor distributor (Munson G. Shaw Co., Inc.), which has sold rum under labels identical with those previously used by respondent, except for the substitution of the name of the Shaw Company for that of respondent and in many markets both have been offered to wholesalers and retailers, and presumably to the public.

However, both testimony of respondent and petitioner indicates that respondent continued to sell such reduced quantities up to the time of filing the petitions for cancellation, which is the date that is controlling (*Old Monk Olive Oil Co.* v. *Southwestern Coca-Cola Bottling Co.*, 28 CCPA 1091, 118 F.2d 1015), and up to the time of taking testimony, and that a stock of the rum was on hand not only in the warehouses of the respondent but in the hands of wholesalers and retailers. Not only is this clearly not "nonuse" under any definition which can be applied to section 13 of the Trade-Mark Act of 1905, but a substantial part of such reduction in volume was a direct result of petitioner's failure to fill orders already accepted during the life of the agreement. Any contention of nonuse by the respondent is therefore clearly negatived by the facts adduced.

Certain other contentions, probably collateral to one or more of the foregoing are advanced by the petitioner including the suppositoin that respondent's alleged nonuse is necessarily permanent in view of the refusal of the proper authorities to approve labels which include the trade-marks in question. Following the termination of the contract, respondent presented certain new labels bearing the marks for approval which were refused by the Alcohol Tax Unit of the Bureau of Internal Revenue, upon the ground that the trade-marks were associated with rum originating from the Government. This cannot effect the contention of nonuse since, as already stated, the respondent has continued the sale of rum under these marks bearing labels previously approved. It is also contended by respondent that this ruling by the Alcohol Tax Unit is not final and may be reconsidered or appealed. Whether or not final, it cannot be controlling on the question and on the record here presented. A ruling by that agency would be entitled to the most respectful consideration, but it considered the marks here involved under a different law and for a different purpose than those here involved, and accordingly cannot control as against the facts clearly shown by the extensive record here presented.

Nor does the fact that the original labels submitted by respondent to the Federal Alcohol Administration in 1937, were at first refused approval change any of the foregoing conclusions. The only question raised at that time was with respect to the reference to petitioner as "a Virgin Island Government Corporation," and when the Federal Alcohol Administration was shown that this properly stated the facts, approval was promptly given. This had no relation to the trade-marks here involved, and it cannot be presumed that that agency permitted respondent to make use of improper or misleading trade-marks for many years.

In summary it may be stated that in spite of certain misunderstandings which have arisen, and certain recriminations which now appear in the briefs, both parties, in the adoption and use of the marks, pursuant to the agreements referred to, acted in

good faith, and the trade-marks have been presented to the public on a factual and accurate basis. While respondent's motives may be and have been primarily commercial, and petitioner's may be and have been primarily prompted by economic and welfare motives, during the major portion of the contract period, both parties cooperated fully and carried out these objectives successfully. In their contractual relationship and commercial dealings, including the termination of the contractual relationship the parties acted at arm's length, and the trade-mark rights must be determined upon the basis of legal rights. If this places a hardship on one or the other, as now suggested, it results from a situation which both parties permitted to arise with full knowledge and which was contemplated by both as indicated by specific contractual provisions. It must be found that respondent was at the time of application for the registrations, the owner of the trade-marks in question, and was entitled to registration thereof, and that it has not lost such rights by nonuse or otherwise.

Certain evidentiary matter has been discussed by both parties in their briefs, and each has referred to various authorities. It may be that certain of such contentions have not been specifically discussed in the foregoing in spite of its length. To the extent that they may not have been specifically mentioned, they have been considered and are considered to be substantially covered by the foregoing discussion or collateral to the subjects mentioned.

I accordingly agree with the conclusion of the Examiner of Interferences that petitioner has failed to establish that respondent was not entitled to the use of the marks sought to be canceled at the date of the application for the registration thereof, or that the marks are not used by respondent, the grounds for cancellation of a registration set out in section 13 of the Trade-Mark Act of 1905 under which this proceeding is brought.

The decision of the Examiner of Interferences is affirmed.

Ex parte Stauffer Chemical Company, 171 Ms. D. 181, 80 USPQ 180 (Jan. 27, 1949). An application for a concurrent use registration must be denied where applicant's date of first use is subsequent to the filing date of the registrant under the act of 1905.

DANIELS, *Assistant Commissioner:*

This is an appeal from the refusal of the Examiner of Trade-Marks to register to applicant the notation "D-TOXSUL" as a trade-mark for "insecticide" under the Trade-Mark Act of 1946. (Public Law 489, 79th Congress, Chapter 540, Approved July 5, 1946; 60 Stat. 427 [Chapter 22 of Title 15 of the U. S. Code.]) Registration was refused in view of a prior registration of the trade-mark "Toxol," Registration No. 159,882, registered October 10, 1922 (renewed), for insecticide, under the Trade-Mark Act of 1905.

Applicant appeals from such refusal and also from the refusal of the Examiner to institute concurrent use proceedings between the application and the prior registration cited, pursuant to section 2(*d*) of the Trade-Mark Act of 1946 (15 U. S. C. 1052).

While the notice of appeal sets up the refusal to register over the reference as one reason for appeal, no argument to overcome the Examiner's finding of similarity of the marks and identity of goods is presented in the brief submitted by applicant. The correctness of the Examiner's ruling on this point appears obvious and will not be further considered.

The application here involved was filed in the United States Patent Office on August 5, 1947. It was in conventional form claiming exclusive right to use without limitation as to territory and claiming use in commerce since April 5, 1945. Registration being refused in view of the reference above referred to, applicant attempted to differentiate therefrom. Upon a reiteration of such refusal which it was stated might be regarded as final, applicant filed a proposed amendment, apparently in accordance with Rule 8.2 and Rule 13.3 of the Rules of Practice in Trade-Mark Cases, setting up the use by the prior registrant as an exception to applicant's claim of exclusive use accompanied by a substitute declaration in conventional form referring to such exception, and requested institution of concurrent use proceedings. By this proposed amendment applicant claims rights to the entire country with the exception of the State of Ohio, apparently attempting to restrict the rights of the prior registrant to that state. Applicant was advised by the Examiner that the proposed amendment would not be entered

"because his date of first use is subsequent to the filing date of the cited registration, and he is, therefore, not entitled to have concurrent use proceedings instituted with registrant." See section 2(*d*) of the Trade-Mark Act of 1946.

Applicant summarizes the question for decision on this appeal as follows:

"The question presented for decision is whether concurrent use proceedings may be had with a registration under the act of 1905, the applicant having begun use of its mark subsequent to the date of the application which matured into the 1905 act registration."

Prior to the enactment of the Trade-Mark Act of 1946, the Patent Office was without authority to register the same or similar marks as applied to the same or similar goods to more than one party, even though the courts on occasion found that more than one person was entitled to concurrent use of the same or similar marks, on identical or closely related products in different geographical areas. It was, as contended by applicant, apparently to give the Patent Office authority to grant multiple registrations under such circumstances that the provisions of section 2(*d*) as to concurrent use were included in the Trade-Mark Act of 1946. This has been considered by various writers since the enactment of the new law. See, for example, 37 T. M. Rep. 251 (Concurrent Registration under the New Trade-Mark Act by Walter J. Halliday); Robert, Trade-Mark Manual, page 53; 38 T. M. Rep. 111 (Constructive Notice and Concurrent Registration by Walter J. Halliday); 38 T. M. Rep. 955 (Territorial Scope of the Trade-Mark Act of 1946 by Arthur A. March.)

Section 2(*d*) of the Trade-Mark Act of 1946 (15 U. S. C. 1052), so far as pertinent provides:

"That the Commissioner may register as concurrent registrations the same or similar marks in more than one registrant when they have become entitled to use such marks as a result of their concurrent lawful use thereof in commerce prior to any of the filing dates of the applications involved and the Commissioner or a court on appeal determines that confusion or mistake or deceit of purchasers is not likely to result from the continued use of said marks under conditions and limitations as to the mode or place of use or the goods in connection with which such registrations may be granted which conditions and limitations shall be prescribed in the grant of the concurrent registrations thereof; and concurrent registrations may be similarly granted by the Commissioner with such conditions and limitations when a court has finally determined that more than one person is entitled to use the same or similar marks in commerce. The Commissioner shall give not less than thirty days' written notice to all applicants, registrants, and users specified by any of the parties concerned of any application for concurrent registration and of the time and place of the hearings thereon. * * *."

That this is intended to permit concurrent use proceedings involving not only applications, but registrations, is apparent not only from the reference to "applicants, registrants, and users," but from the language of section 18 of the act which gives the Commissioner authority in contested proceedings, including specifically concurrent use proceedings, to "restrict the registration of a registered mark." While such a proceeding can be instituted only in connection with an application under the act of 1946, it appears clear from the language of the statute that it may involve not only a registration or pending application under that act, but also applications which may still be pending under the Trade-Mark Act of 1905 and registrations under that act. To be entitled to the institution of such proceeding, the applicant must, under the language of section 2(*d*) quoted above, have become entitled to the use of such a mark as a result of concurrent lawful use thereof in commerce "prior to any of the filing dates of the applications involved * * *." Applicant contends that its use was lawful since the prior registration under the Trade-Mark Act of 1905 did not constitute constructive notice, prior to the effective date of the act of 1946, and pursuant to section 22 thereof, and that therefore it is entitled to the institution of a concurrent use proceeding. The statute, however, requires not only that the concurrent use must have been lawful, but that it must have been prior to the filing date of the application involved. This specific statutory restriction on such proceedings makes no distinction between pending applications whether under the act of 1905 or 1946, nor between registrations, whether registered under the act of 1946 or the acts of 1905 or 1881.

If there were any doubt as to this meaning of the specific language of section 2(*d*) itself, it would appear to be resolved by reference to section 46(*b*) of the Trade-Mark Act of 1946, which provides:

"Registrations now existing under the Act of March 3, 1881, or the Act of February 20, 1905, shall continue in full force and effect * * *. Such registrations and the renewals thereof shall be subject to and shall be entitled to the benefits of the provisions of this act to the same extent and with the same force and effect as though registered on the principal register established by this act except as limited in sections 8, 12, 14 and 15 of this act."

Since section 2(*d*) is not one of the sections specified as inapplicable, it appears clear that the language used in section 2(*d*) must apply to registrations under the Trade-Mark Acts of 1905 and 1881. In fact, it must apply, since otherwise there would be no authority for the institution of a concurrent use proceeding involving a registration under the prior acts. If it is to apply, it must apply in its entirety and not with the exception of the particular clause relating to application dates.

Prior to the effective date of this act, the registration which applicant now seeks to involve in a concurrent use proceeding, would have been an absolute bar to the registration now sought and applicant could have had no right to registration, whatever might have been the facts as to its right of use within territorial limits. To have overcome such registration and obtain one of its own, applicant would have had to involve such registration in either a cancellation or interference proceeding, neither of which could ordinarily have been instituted in the absence of a showing of use prior to the filing date of the application which resulted in granting the prior registration. In repealing the acts of 1881 and 1905, but continuing registrations thereunder "in full force and effect" except as limited by the sections referred to (not here pertinent), it seems apparent that it was intended to make such registrations subject to the hazard of concurrent use proceedings and remove their effect as a complete bar to registration by lawful concurrent users. In making them so subject, however, it seems clear that such proceeding must be instituted only when an applicant can comply fully with the conditions imposed by the terms of the section, and that his use must have begun prior to the filing date of any other application involved and prior to the filing date of the application for registration of any registration sought to be involved, whether registered under the act of 1946, 1905 or 1881.

Reference has already been made to applicant's contention that the prior registration under the Trade-Mark Act of 1905 did not constitute constructive notice of that registrant's claim of right to its mark until the effective date of the Trade-Mark Act of 1946, pursuant to section 22 thereof. The question here involved, however, is not that of applicant's right to use the mark, but as to applicant's right to secure a limited registration thereof, and it is therefore not considered necessary, in view of the conclusions reached above, to attempt to determine the question of the effect of the registration under the act of 1905 as constructive notice.

Nor is it necessary to consider the various cases cited by applicant as authority for its claim that its use has been a lawful concurrent use. Of the eight cases so cited, *Hanover Star Milling Co.* v. *Metcalf*, 240 U. S. 403, 1916 C. D. 285, and *United Drug Co.* v. *Rectanus Co.*, 248 U. S. 90, 1918 C. D. 360, are considered most pertinent. It should be noted, however, that in each of these cases there was a widely separated use in distinct territory over a long period of years and that neither party had reason to know of use by the other. It should also be emphasized that no question of right to Federal registration was involved. It is probable that there have been other cases in which concurrent use has

been approved by court decisions, but they do not appear to be numerous. (See "Concurrent Registration under the New Trade-Mark Law," supra.) If, as contended by applicant, it was to permit the right of concurrent registration in cases such as those last cited, it must be evident that the provisions of section 2(*d*) were intended to provide for extraordinary situations and not as a procedure to be invoked as a matter of course, but only upon a showing of unusual conditions. They must have been intended as the exception rather than the rule.

Applicant further contends that the holding of the Examiner of Trade-Marks "directly contravenes section 49" of the Trade-Mark Act of 1946. Section 49 provides that nothing contained in the act "shall adversely affect the rights or the enforcement of rights in marks acquired in good faith * * *" prior to its effective date. This again refers to right to use rather than to registration, and since applicant would have had no right to registration prior to the effective date of the act this section has no bearing on applicant's present rights to registration. In fact, it may apply rather to the prior rights of registrant which would be adversely affected if applicant's contention were accepted.

The foregoing extended comments have been considered necessary in view of the questions raised by applicant's brief and of applicant's insistence of their importance. Additionally and without regard to the foregoing, applicant's request for institution of concurrent use proceedings must in any event be denied, in view of the fact that the papers presented do not include facts sufficient to justify such action. As already noted, this application as originally filed made no exception to applicant's claim of exclusive use and the proposed amendment including such exception was presented only after attempts had been made to distinguish from the prior registration. That registration had been in effect since October 10, 1922, without limitation. As a basis for requesting a registration concurrent therewith, applicant's proposed amendment states merely:

"The following exception to applicant's claim of exclusive use is specified:
"By the Glidden Co. located and doing business at Cleveland, Ohio, and using the mark 'TOXOL,' Registration No. 159,882, in connection with Insecticide, *the mark being applied to the containers for the goods* in the territory embracing the State of Ohio from March 16, 1922, to date." (Emphasis added.)

This falls short of the requirements of section 1(a), and Rules 8.2 and 18.3 of the Rules of Practice in Trade-Mark cases, as to the statements required in an application claiming concurrent use. Since it refers merely to the locality in which the prior registrant affixes the mark to its containers, it is not inconsistent with, and does not purport to negative the possibility of use by registrant elsewhere or that the products to which the mark is so affixed may be sold throughout the country. To request the institution of concurrent use proceedings, through which applicant might secure a concurrent registration and, necessarily, a limitation of the existing prior registration, which is entitled to the presumption of ownership and use since 1922, by such negative and general statements is, in and of itself, enough to require the Examiner's refusal to institute such proceedings. Concurrent use proceedings should serve a useful purpose, beneficial to those entitled thereto, but are not intended as a routine procedure to be used as a substitute for cancellation or interference proceedings, (when authorized), nor to permit the placing of the burden of a contested proceeding on a prior registrant in each instance where an applicant has been unable to succeed in distinguishing its mark from that of a prior registration. If they are to be instituted, the provisions of section 1(a) and 2(*d*) of the Trade-Mark Act of 1946 and Rules 8.2 and 18.3 of the Rules of Practice in Trade-Mark Cases must be fully complied with.

The decision of the Examiner of Trade-Marks is affirmed.

Ex parte Stauffer Chemical Company, 171 Ms. D. 181, 80 USPQ 180 (Jan. 27, 1949). Petition for rehearing denied, 171 Ms. D. 267, 81 USPQ 170 (Apr. 14, 1949).

DANIELS, *Assistant Commissioner:*

This petition requests reconsideration of my decision dated January 27, 1949, affirming the Examiner of Trade-Mark's action refusing registration of applicant's mark and refusing to institute concurrent use proceedings between this application for registration and a prior registration under the Trade-Mark Act of 1905.

The refusal to institute concurrent use proceedings was affirmed both on the merits and in view of the fact that the papers presented were informal. With this request for reconsideration applicant submits a proposed amendment which appears to correct the formal deficiencies and requests that the amendment be entered.

To enter this amendment would require remanding the case to the Examiner of Trade-Marks and since the application has been refused, and it has been ruled that no concurrent use proceeding will in any event be instituted, such action seems inappropriate at this time. Unless further proceedings in this matter would permit the institution of such proceedings, the question of the propriety of the entry of the proposed amendment is moot. It is, however, noted that the proposed amendment appears to cure the formal defects referred to, and it will be held for consideration of its entry should this become material.

With respect to reconsideration on the merits, the points raised by applicant on this petition were fully considered and disposed of in the original decision.

The petition is denied.

Ex parte Stauffer Chemical Company, 171 Ms. D. 285, 81 USPQ 255 (Apr. 22, 1949). The notation "FLEUR de SOUFRE" is a generic term and not registrable even under section 2(*f*) of the Trade-Mark Act of 1946.

DANIELS, *Assistant Commissioner:*

This is an appeal from the final refusal to register the notation "FLEUR de SOUFRE" as a trade-mark for sulphur under section 2(*f*) of the Trade-Mark Act of 1946. The refusal to register is based upon the ground that the term presented lacks trade-mark significance and is merely the generic name of the goods and incapable of distinguishing applicant's goods from the goods of others. "FLEUR de SOUFRE" is the French name for flowers of sulphur, which is a well-known and long-used name of a form of sulphur.

Applicant summarizes the question to be decided as follows:

"The question is whether the name of a certain specific form of sulphur, written in the French language, can be registered as a trade-mark for sulphur."

The Examiner has found that the marks otherwise not registrable are not made so because written in a foreign language, and this principle is apparently not seriously questioned. *Walgreen Co.* v. *Godefroy Manufacturing Co.*, 22 CCPA 818, 74 F.2d 127; *In re Northern Paper Mills*, 20 CCPA 1109, 64 F.2d 998. Applicant contends, however, that it has had exclusive use of the term for approximately forty-five years, and therefore is entitled to registration under section 2(*f*) of the 1946 act. This section (with certain exceptions not here pertinent) provides:

"* * * nothing herein shall prevent the registration of a mark used by the applicant which has become distinctive of the applicant's goods in commerce. The Commissioner may accept as prima facie evidence that the mark has become distinctive, as applied to the applicant's goods in commerce, proof of substantially exclusive and continuous use thereof as a mark by the applicant in commerce for the five years next preceding the date of the filing of the application for its registration."

The attempt to register the actual name of the product goes beyond the question involved in such cases as *Du Pont Cellophane Co., Inc.* v. *Waxed Products Co., Inc.*, 85 F.2d 75, 30 USPQ 332; *Kellogg Company* v. *National Biscuit Company*, 305 U. S. 111, 39 USPQ 296; *Bayer Co., Inc.* v. *United Drug Co.*, 272 Fed. 505, where the marks involved had either become known as the name of the product through long use as such, or were so highly descriptive as to lack trade-mark significance. A generic name, being completely incapable of distinguishing the goods of one manufacturer from those of another, cannot become distinctive and cannot serve as a trade-mark. *Spicer* v. *W. H. Bull Medicine Company*, 18 CCPA 1402, 49 F.2d 980; *In re Paris Medicine Co.*, 24 CCPA 854, 87 F.2d 484; *In re Bailey Meter Co.*, 26 CCPA 1136, 102 F.2d 843; *Berber-Colman Co.* v. *Overhead Door Corporation*, 20 CCPA 1118, 65 F.2d 147.

Applicant relies upon three cases in which it states that it was found that the users of a geographical name, a surname, and a generic name, respectively, had achieved rights which could be maintained against later users. These are *The American Waltham Watch Co.* v. *U. S. Watch Co.*, 173 Mass. 85; *Thaddeus Davids* v. *Davids Mfg. Co.*, 233 U. S. 461, 1914 C. D. 367; and *Armstrong Paint and Varnish Works* v. *Nu-Enamel Corporation*, 305 U. S. 315, 39 USPQ 402. The first two of these cases obviously do not deal with generic terms and it has frequently been held that geographical and personal names may acquire secondary meaning and become distinctive of particular goods. Marks such as these would clearly be the type which might, upon proper showing, be registered under section 2(*f*) of the act of 1946. The *Armstrong Paint and Varnish Works* v. *Nu-Enamel Corporation* case, supra, dealt with a mark which was undoubtedly highly descriptive, but which it was conceded had become distinctive of the goods. Clearly it was not merely a generic term or product name.

Applicant contends that the goods are an agricultural product sold to persons, few of whom would recognize either that the words were French, or the meaning of the words. While this would appear questionable in view of the fact that the equivalent English word is used throughout the labels including the name of the product and the quantity stated in "lbs." and "kilos," this is an assumption which cannot be accepted as to the literal equivalent of a name expressed in a well-known modern language. *In re Northern Paper Mills*, 20 CCPA 1109, 64 F.2d 998. The effect of such a registration as that here requested, and which would constitute prima facie, a showing of exclusive right to its use, in a French speaking community, or with respect to international trade in the product would be sufficient to indicate the impropriety of such a registration.

Much of applicant's argument is devoted to the degree of proof required to show that a mark has become distinctive by showing long exclusive use. In view of the conclusions above reached, this is immaterial. It may be noted, however, that while section 2(*f*) provides that the Commissioner may accept proof of five years' substantially exclusive and continuous use as prima facie evidence that the mark has become distinctive, he is not required to do so. In proper cases where a mark comprises a term which may have distinctive significance even though it be a surname, a geographical term or a descriptive term, the affidavit of exclusive use often should be accepted. If, however, the mark is considered highly descriptive, or predominantly geographical in significance, additional proof that it has actually become distinctive is necessary as required under section 2(*f*) of the act. The burden of proof is on the applicant to show that the mark has become distinctive, and, in some instances, where the mark is highly descriptive and it seems highly probable that it must have been used in the trade to some extent, or that its distinctiveness is otherwise open to doubt, such burden would be a heavy one. In such cases proof somewhat analogous to the proof required in proving secondary meaning or in unfair competition matters in the courts and including, for example, affidavits of disinterested persons familiar with markets and marketing customs, references to trade publications, etc., might well be required.

In an effort to show that the mark is distinctive, applicant has submitted an affidavit of one of its officers, which the Examiner refused to consider on

the ground that it was self-serving. In view of the conclusions heretofore reached, the character of such an affidavit is not material in this particular case, but it may be noted that any such affidavit of a party must to some extent be self-serving. This affidavit, if it were to be considered, would appear to me to be insufficient because it is lacking in sufficient probative force rather than because it may be self-serving. If the mark were capable of becoming distinctive, the affidavit would undoubtedly be considered insufficient and further proof would have been required. Since it is not material in any event in this case, no further review of the evidence submitted seems necessary.

The decision of the Examiner of Trade-Marks is affirmed.

In the following case, the opposition was sustained by DANIELS, *Assistant Commissioner*.

William R. Warner & Co., Inc. v. *Novocol Chemical Mfg. Co., Inc.*, 171 Ms. D. 264, 81 USPQ 169 (Apr. 14, 1949), Opposition No. 25,749. The notation "Therapules" as a trade-mark for "medicaments, namely, estrogenic substance and niketha-mide useful for supplying deficiency in hormones and for a restorative in case of shock, respectively," under the act of 1905 held unregistrable in view of opposer's ownership and prior registration of the trade-mark "THERAVITA" as a trade-mark for "a vitamin composition."

In the case below, the opposition was dismissed by DANIELS, *Assistant Commissioner*.

Permatex Corporation v. *Detrex Corporation*, 171 Ms. D. 290, 81 USPQ 257 (Apr. 27, 1949), Opposition No. 26,306. The notation "PER-EX," as a trade-mark for "a cleaning solvent for removing greases and for a solvent for degreasing metal parts and the like," held registrable over opposer's ownership and prior registrations of the trade-marks "PERMATEX TOON-OYL" and "PERMATEX" for lubricating oil and similar products and "ready-mixed adhesive shellac," respectively.

Cancellation was recommended in the case below by DANIELS, *Assistant Commissioner*.

The Viscol Company v. *Vacuum Oil Company (Socony-Vacuum Oil Company, Incorporated, Renewant)*, 171 Ms. D. 259, 81 USPQ 166 (Apr. 8, 1949), Cancellation No. 4973. The mark "SOLENE" for use as a trade-mark for "a mixture of petroleum oils used in the manufacture of sole leather" under act of 1905 ordered canceled in view of petitioner's ownership and prior registration of the mark "SOLEOL," as applied to a mineral oil compound used for waterproofing and treating sole leather or soles for shoes."

The following mark was held unregistrable on appeal from the Examiner of Trade-Marks by DANIELS, *Assistant Commissioner*.

Ex parte Stauffer Chemical Company, 171 Ms. D. 266, 81 USPQ 171 (Apr. 14, 1949). The notation "D-FUSUL," for use as a trade-mark for "a finely ground product prepared by fusion of sulfur . . ." under the act of 1946 held unregistrable in view of prior registration of the trade-mark "DIFUSO" for "insecticide" under the 1905 act. Request to institute concurrent use proceedings denied on the authority of *Ex parte Stauffer Chemical Company*, 80 USPQ 180, since the date of first use claimed by applicant was subsequent to the filing date of the prior registration.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 31, 1949

[VOL. 622. No. 5]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 2

RECEPTACLES

Ser. No. 502,058. BEACON PRODUCTS CORPORATION, Boston, Mass. Filed May 14, 1946.

BEACON

FOR TUMBLERS, DISHES, TRAYS, PITCHERS, REFRIGERATOR BOXES, SALT AND PEPPER SHAKERS, SUGAR BOWLS, AND CREAM PITCHERS MADE OF PLASTIC AND PLASTIC COMPOSITION.

Claims use since Jan. 1, 1943.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 506,771. GENE SALÉE, Hollywood, Calif. Filed Aug. 2, 1946.

Gene Salée

The mark as shown on the drawing is a facsimile of applicant's signature.

FOR COSMETICS—NAMELY, FACE POWDER, LIPSTICKS, FACE CREAMS, LOTIONS, COLOGNES, AND PERFUMES.

Claims use since Nov. 5, 1935.

Ser. No. 516,510. DONALD C. STOKES, doing business as Stokes Institute of Hair Technology, Newark, N. J. Filed Jan. 28, 1947.

DON'S

FOR LIQUID AND WAX BASE HAIR PREPARATIONS.

Claims use since Aug. 1, 1936.

Ser. No. 516,998. PRO-CAPA PRODUCTS INC., Brooklyn, N. Y. Filed Feb. 5, 1947.

JIFFY

FOR HAIR TONIC.

Claims use since Nov. 1, 1946.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 524,592. THE CELOTEX CORPORATION, Chicago, Ill. Filed June 21, 1947.

ACOUSTI LOCK BOARD

The words "Lock Board" are disclaimed apart from the mark.

FOR COMPOSITE WALL PANEL COMPRISING GYPSUM BOARD FACINGS LAMINATED WITH AN INTERPOSED, TOUGH REINFORCING SHEET IN PARTICULAR FOR APPLICATION TO STUDS OR THE LIKE TO PROVIDE A WALL SURFACE.

Claims use since Mar. 24, 1947.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 525,001. MACKINTOSH-HEMPHILL COMPANY, Pittsburgh, Pa. Filed June 27, 1947.

NACHEMPITE

FOR UNFINISHED CAST ALLOY STEEL FOUNDRY PRODUCTS SHAPED TO BE FINISHED AS MACHINE PARTS—NAMELY, AS CRUSHER JAWS FOR CRUSHING ORES, SLAGS, AND MINERALS; AS ROLLS FOR USE IN ROLLING MILLS; AS BALLS FOR USE IN BALL MILLS; AS THE HEADS, RINGS, PLATES, BOTTOMS, DISCS, RIMS, LINERS, IMPELLERS, AND SHELLS OF CRUSHING PULVERIZERS FOR PULVERIZING ORES, SLAGS, AND MINERALS; AS GEARS AND PINIONS; AS SPINDLES AND COUPLING BOXES FOR ROLLING MILLS; AS SHEAVES AND SPROCKETS; AS WORMS AND WORM WHEELS; AS THE TRACK-ENGAGING WHEELS OF TRAVELING CRANES; AS CAMS; AS HAMMER DIES; AS BEATERS

IN THE FORM OF SWINGING HAMMERS IN PULVERIZING APPARATUS FOR FRANGIBLE MATERIALS; AS PUG MILL KNIVES; AS PLOW POINTS AND SCRAPERS; AS TIPS AND TEETH FOR DREDGING BUCKETS AND SCOOPS; AS CHAIN CONVEYOR LINKS AND ROLLERS; AND AS PIG MACHINE ROLLERS.

Claims use since Jan. 30, 1932.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 497,580. ALBERT H. SURPRENANT, doing business as Surprenant Electrical Insulation Co., Boston, Mass., assignor to Surprenant Mfg. Co., Boston, Mass. Filed Mar. 2, 1946.

The words "Keyed Insulation" and the representation of the goods are disclaimed apart from the mark.

FOR ELECTRIC INSULATED WIRE—NAMELY, SPIRALLY STRIPED OR COLOR-CODED PLASTIC INSULATED WIRE.

Claims use since Sept. 15, 1945.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 499,218. ENTERPRISE INDUSTRIES, New York, N. Y., assignor, by mesne assignments, to Bridgeport Brass Company, Bridgeport, Conn., a corporation of Connecticut. Filed Mar. 29, 1946.

Applicant disclaims the notation "Registered Trade Mark."

FOR FILLED AND UNFILLED CANISTER-TYPE BOMBS FOR DISPENSING OR APPLYING INSECTICIDES, GERMICIDES, DEODORIZING AGENTS, ODOR NEUTRALIZERS, AND THE LIKE.

Claims use since Mar. 18, 1946.

Ser. No. 523,283. RUSSELL HARRINGTON CUTLERY COMPANY, Southbridge, Mass. Filed May 29, 1947.

RUSHARCO

FOR HAND EDGE CUTTING TOOLS—NAMELY, PUTTY KNIVES, SCRAPERS, BUTCHER'S KNIFE SHARPENING STEEL, AND TABLE SERVICE KNIVES.

Claims use since February 1936.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 523,694. OHIO STOVE COMPANY, Portsmouth, Ohio. Filed June 6, 1947.

The hatching is for the purpose of indicating the colors red and black.

FOR STOVES, RANGES, AND BARBECUE GRILLS FOR SOLID FUELS—NAMELY, COAL, WOOD, CHARCOAL, METACETALDEHYDE, AND PEAT.

Claims use since 1892 as to "Buckeye"; and since June 5, 1939, to the mark as a whole.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 508,440. PROGRESSIVE EDUCATORS, INC., Chicago, Ill. Filed Sept. 3, 1946.

Jr.
LANGUAGE AND ARTS

The words "Language and Arts" are disclaimed apart from the mark.

FOR MAGAZINES CONTAINING FICTION, POETRY, MUSICAL COMPOSITIONS, COMIC STRIPS, PUZZLES, AND OTHER ITEMS OF GENERAL INTEREST TO CHILDREN.

Claims use since Aug. 10, 1946.

CLASS 39

CLOTHING

Ser. No. 513,749. MANN OVERALL COMPANY, INC., El Paso, Tex. Filed Dec. 5, 1946.

TEX'N'JEAN

No claim is made to the word "Jean" apart from the mark as a whole.

FOR OVERALLS AND DENIM PANTS AND DENIM JACKETS.

Claims use since Nov. 1, 1945.

Ser. No. 521,671. JOSEPH MANISCOLA & COMPANY, New York, N. Y. Filed May 1, 1947.

Apart from its relationship to the trade-mark shown in the drawing, and only for the purpose of registration, the word "Justmade" is disclaimed. The lining on the drawing is not intended to be indicative of any color.

FOR BLOUSES, SUITS, DRESSES, AND JACKETS.

Claims use since Jan. 1, 1932.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 515,932. SAMUEL BONAT & BRO., New York, N. Y. Filed Jan. 18, 1947.

Bonat
GLAMOR CURL

The words "Bonat" and "Curl" are disclaimed apart from the mark as shown.

FOR CHEMICALLY TREATED PADS FOR MACHINELESS PERMANENT WAVING.

Claims use since Dec. 1, 1946.

Ser. No. 515,933. SAMUEL BONAT & BRO., New York, N. Y. Filed Jan. 18, 1947.

Bonat
SHOW CURL

The words "Bonat" and "Curl" are disclaimed apart from the mark.

FOR CHEMICALLY TREATED PADS FOR MACHINELESS PERMANENT WAVING.

Claims use since Dec. 1, 1946.

Ser. No. 524,439. AMERICAN OPTICAL COMPANY, Southbridge, Mass. Filed June 19, 1947.

AO

FOR DIAGNOSTIC INSTRUMENTS, CONSISTING OF ADAPTOMETERS, LARYNGOSCOPES, OPHTHALMOSCOPES, OTOSCOPES, RETINOSCOPES, TONGUE DEPRESSORS AND TRANSILLUMINATORS USED IN THE PRACTICE OF OPHTHALMOLOGY, OPTOMETRY AND MEDICINE AND SURGERY, GENERALLY; FOR TONOMETERS (MEASUREMENT OF INTRAOCULAR PRESSURE), COLOR PERCEPTION, MALINGERING (DETECTION OF SIMULATED BLINDNESS) AND MUSCLE TESTS; FOR CATARACT AND OPHTHALMIC LAMPS USED IN THE PRACTICE OF OPHTHALMOLOGY AND OPTOMETRY; FOR ARTIFICIAL EYES, AND RESPIRATORS.

Claims use on diagnostic instruments, color perception tests, malingering tests, muscle tests, and tonometers since February 1929; on cataract lamps since June 1940; on ophthalmic lamps since October 1946; on respirators since May 1938; and on artificial eyes since the latter part of March 1945.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 517,482. FLOYD A. HINES, doing business as Hines Peanut Company, Boykins, Va. Filed Feb. 14, 1947.

JUNIOR JUMBOS

The word "Jumbos" is disclaimed.

FOR UNSHELLED PEANUTS.

Claimed use since Nov. 1, 1946.

Ser. No. 522,478. PRATT-LOW PRESERVING CO., Santa Clara, Calif. Filed May 16, 1947.

Joanna

Applicant is the owner of Reg. No. 220,946.

FOR CANNED FRUITS AND VEGETABLES.

Claims use since June 1926.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.

As provided by section 21 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 529,685. OTTAWA SILICA COMPANY, Ottawa, Ill. Filed July 26, 1947. Under section 2f of the act of 1946.

EVEN MELT

Applicant claims ownership of Registration No. 220,182.
FOR SAND, AND MORE PARTICULARLY FOR SUCH SAND AS IS USED FOR THE MANUFACTURE OF GLASS.
Claims use since 1923.

CLASS 2

RECEPTACLES

Ser. No. 555,053. CLIMAX MANUFACTURING COMPANY, Castorland, N. Y. Filed Apr. 20, 1948.

CMC

Applicant claims ownership of Registration No. 186,148.
FOR FOLDING PAPER BOXES, INDUSTRIAL CARTONS, PAPER AND FIBRE DRUMS, AND CHEESE BOXES.
Claims use since Jan. 1, 1914.

Ser. No. 555,849. SUTTON MANUFACTURERS, INC., Miami, Fla. Filed Apr. 29, 1948.

S M I

FOR FUNERAL CASKETS.
Claims use since Jan. 1, 1948.

Ser. No. 556,246. COHOES ENVELOPE COMPANY, INC., Cohoes, N. Y. Filed May 5, 1948.

TRANSCRIPTION VELOPE

FOR PAPER MERCHANDISE ENVELOPES.
Claims use since Nov. 5, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 515,552. THE C. P. HALL COMPANY, Akron, Ohio. Original filed Jan. 10, 1947, under the act of 1905; amended to application under act of 1946, July 17, 1947.

Super inksol

No claim is made to the use of the word "Super" apart from the mark.
FOR INK REMOVER.
Claims use since Nov. 10, 1946.

Ser. No. 515,553. THE C. P. HALL COMPANY, Akron, Ohio. Original filed Jan. 10, 1947, under the act of 1905; amended to application under act of 1946, July 17, 1947.

inksol

FOR INK REMOVER.
Claims use since Apr 1, 1946.

Ser. No. 530,329. NATIONAL SANITARY SUPPLY ASSOCIATION, Chicago, Ill. Filed Aug. 2, 1947. CERTIFICATION MARK.

National SANITARY SUPPLY ASSOCIATION MEMBER

Applicant disclaims the words "Sanitary Sopply Association" and "Member" apart from the mark as shown.
FOR SANITARY AND JANITOR SUPPLIES—NAMELY, CLEANING COMPOUNDS AND CLEANING CHEMICALS; SOAPS; SOAP POWDERS; LIQUID SOAPS.
Claims use since July 5, 1945.

Ser. No. 531,453. E. F. DREW & CO., INC., New York, N. Y. Filed Aug. 13, 1947.

DREW WETSYN

Exclusive use of the word "Drew" apart from the mark as shown is disclaimed.
FOR DETERGENTS FOR GENERAL USE AND HAVING THE PROPERTIES OF LOWERING SURFACE TENSION, CAUSING COLLOIDAL DISPERSION OR DEFLOCCULATION, FORMING EMULSIONS OR SUSPENSIONS AND FOAMING.
Claims use since Mar. 10, 1943.

Ser. No. 531,472. HAWAIIAN PERFUME & SOAP CORPORATION, Hollywood, Calif. Filed Aug. 15, 1947.

Hawaiian Beauty

No claim is made to the word "Beauty" apart from the mark as shown.
FOR SOAPS.
Claims use since July 30, 1947.

Ser. No. 531,590. HARLEY-DAVIDSON MOTOR COMPANY, Milwaukee, Wis. Filed Aug. 16, 1947. Under section 2f of the act of 1946.

The words "Motor Cycles" are disclaimed apart from the mark as shown. Applicant claims ownership of Registration No. 271,164.
FOR ENAMEL POLISH AND CLEANER, AND CHROME POLISH AND CLEANER.
Claims use since 1934.

Ser. No. 537,974. BOYLE-MIDWAY INC., Jersey City, N. J. Filed Oct. 16, 1947. Under section 2f of the act of 1946.

Metlbrite

Applicant claims ownership of Registration No. 285,022.
FOR METAL POLISH.
Claims use since Jan. 15, 1927.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 517,222. ALLEN B. WRISLEY COMPANY, Chicago, Ill. Original filed Feb. 8, 1947, under the act of 1920; amended to application under act of 1946, Sept. 1, 1948.

FOR PERFUME.
Claims use since November 1944.

Ser. No. 522,224. MILLER'S PREPARATIONS CORP., Fort Worth, Tex. Original filed May 12, 1947, under the act of 1905; amended to application under act of 1946, Dec. 17, 1947.

KOOL'A'BRN

FOR SOLUTION FOR ALLEVIATING PAIN RESULTING FROM MINOR BURNS.
Claims use since Oct. 15, 1945.

Ser. No. 528,177. A. S. ALOE COMPANY, St. Louis, Mo. Filed July 9, 1947. Under section 2f of the act of 1946.

aloe

FOR CHLOROPHYL AIR FRESHENERS FOR DEODORIZING ROOMS, GALL BLADDER DYES, ALBUMIN TEST REAGENTS, ANTI-SHEEP HEMOLYSIN, ANALGESICS, ANTI-RUST TABLETS FOR INHIBITING RUST FORMATION IN SURGICAL STERILIZERS, ANTIGENS, ANTISEPTICS, ARGYROL TABLETS, INCENSE TYPE DEODORANTS FOR NEUTRALIZING ODORS IN ROOMS, BARIUM SULFATE, BARIUM MEAL, PELLETED MIXTURES OF BARIUM AND CALCIUM HYDROXIDE FOR USE AS A GAS ABSORBENT, BICHLORIDE OF MERCURY TABLETS, BLOOD TYPING SERUMS, BLOOD CHEMISTRY REAGENTS AND SOLUTIONS, BURN OINTMENTS, ANESTHESIA CAPSULES, BACTERIOLOGICAL STAINS, CHEMICAL REAGENTS FOR USE IN ANALYTICAL LABORATORIES, CHLOROFORM, CHOLESTERAL REAGENT, GERMICIDES, HAND CREAMS, MICROSCOPE IMMERSION OIL, GERMICIDAL TABLETS, X-RAY DEVELOPING SOLUTIONS, TABLETS CONSISTING OF A MIXTURE OF ALUMINUM SULFATE AND CALCIUM ACETATE FOR USE IN MAKING WET SURGICAL DRESSINGS, RUBBING ALCOHOL, ETHER, ETHYL CHLORIDE, ANESTHETICS, GLOVE POWDER, TANNIC ACID SOLUTION, URINE SUGAR DETERMINATION, PH INDICATORS, SEROLOGICAL INDICATORS, ELECTRO-CARDIOGRAPH POWDER, JELLY, X-RAY DEVELOPING POWDERS, SODA LIME, LYOPHIL, MERCURY, METRAZOL, LOCAL ANESTHETICS, NEOARSPHENAMINE, PHENOLIZED OIL FOR USE IN TREATMENT OF HEMORRHOIDS, FORMALIN PASTILS, PETROLEUM JELLY, PHENOLSULPHONPHTHALEIN, PHYSIOLOGICAL SALINE, X-RAY FIXING POWDER, PROCAINE ANESTHETICS, ROOM DEODORANTS FOR NEUTRALIZING AIR-BORNE ODORS, SALT TABLETS, SEROLOGICAL REAGENTS, SODIUM MONOIODOMETHANE SULFINATE, SILVER NITRATE, SODIUM CITRATE, ASPIRIN TABLETS, COAL TAR CREAM (AN OINTMENT FOR TREATMENT OF INDUSTRIAL DERMATITIS), DIAGNOSTIC ANTIGENS AND SERUMS FOR USE IN PERFORMING BIOLOGICAL LABORATORY TESTS, AND COMPOUNDED SOLUTIONS OF WET AGENTS AND SOLIDS FOR APPLICATION TO AND FACILITATING REMOVAL OF ADHESIVE TAPE FROM THE FLESH OR OTHER SURFACE TO WHICH SAME IS ADHERED.
Claims use since 1860.

Ser. No. 530,434. REEVES-GALLES, INC., New York, N. Y. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

SNOWHITE

Applicant claims ownership of Registration No. 281,517.
FOR MOTH PREVENTATIVE AND INSECTICIDE.
Claims use since Feb. 26, 1929.

Ser. No. 532,681. BRUNSWICK LABORATORIES, INC., Chicago, Ill. Filed Aug. 28, 1947.

ARTERELAX

FOR RED-COATED TABLET FOR HYPERTENSION.
Claims use since January 1917.

Ser. No. 533,022. HORTON & CONVERSE, Los Angeles, Calif. Filed Sept. 2, 1947. Under section 2f of the act of 1946.

GLUCAL

FOR PHARMACEUTICAL PREPARATION CONSISTING OF A STERILE TEN PERCENT SOLUTION OF CALCIUM SALTS OF GLUCONIC AND LEVULINIC ACIDS FOR INTRAMUSCULAR AND INTRAVENOUS INJECTION.
Claims use since May 1, 1936.

Ser. No. 533,104. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Sept. 2, 1947.

C. S. R.

FOR ALKALINE COMPOUND USED AS THE ELECTROLYTE IN THE ELECTROLYTIC, REVERSE CURRENT-CLEANING OF FERROUS METALS.
Claims use since August 1939.

Ser. No. 533,564. HAMPDEN COLOR AND CHEMICAL COMPANY, Springfield, Mass. Filed Sept. 5, 1947. Under section 2f of the act of 1946.

Hampden

Applicant claims ownership of Registration No. 298,667.
FOR ACIDS: ACETIC ACID, BORIC ACID, ELECTROLYTIC ACID, FORMIC ACID, MURIATIC ACID, NITRIC ACID, OLEIC ACID, OXALIC ACID, STEARIC ACID, SULPHURIC ACID, CHROMIC ACID, PHOSPHORIC ACID, TARTARIC ACID; ALKALIES: BICARBONATE OF SODA, BORAX (ALL GRADES), CAUSTIC POTASH, CAUSTIC SODA, SODA ASH; PHOSPHATES: DI AMMONIUM PHOSPHATE, DI SODIUM PHOSPHATE ANHYDROUS, MONO SODIUM PHOSPHATE, ANHYDROUS, TETRA SODIUM PYRO PHOSPHATE, TRI SODIUM PHOSPHATE, MODIFIED SODA, CAUSTIC ASH; SOLVENTS: ACETONE C. P., ALCOHOL (SOLVENT AND ANHYDROUS), AMYL ACETATE, BUTYL ACETATE, BUTYL ALCOHOL, DIACETONE ALCOHOL, DIETHYLENE GLYCOL, ETHYL ACETATE, 2-ETHYLBUTYL ALCOHOL, ETHYL ETHER, ETHYLENE DICHLORIDE, 2-ETHYL HEXYL ALCOHOL, HEPTANOL-3, ISOPROPANOL, METHANOL, METHYL ACETONE, METHYL AMYL ACETATE, METHYL AMYL ALCOHOL, MONOETHANOLAMINE, MORPHOLINE, PROPYLENE GLYCOL "NF," TRIETHANOLAMINE, TRICHLOROETHYLENE, CARBON TETRACHLORIDE, PERCHLORETHYLENE, BENZOL, TOLUOL, XYLOL, NAPHTHA (III FLASH); CASTOR OIL, WATER WHITE PINE OIL; MISCELLANEOUS CHEMICALS: ALUMINA, SULPHATE (IRON FREE), ALUM AMMONIA, ALUM POTASH, AMMONIA (ANHYDROUS), AMMONIA AQUA, AMMONIUM CHLORIDE, AMMONIUM SULPHATE, AMMONIUM SULPHOCYANATE, ARSENIC (WHITE), BARIUM CARBONATE, BARIUM CHLORIDE, BARIUM HYDROXIDE, BARIUM SULPHATE, BETA NAPHTHOL, BENTONITE, BLACK (CARBON GAS), CALCIUM CHLORIDE FLAKES, CALCIUM NITRATE, CARBON BISULPHIDE, LIQUID CHLORINE; COPPER CARBONATE, COPPER CHLORIDE, COPPER CYANIDE, COPPER SULPHATE, CUPRODINE, CYANIDE CHLORIDE MIXTURE, COAL TAR DISINFECTANT, PINE OIL DISINFECTANT, EPSOM SALT (MAGNESIUM SULPHATE), GLYCERINE (CP & HG), HYDROGEN PEROXIDE, IRON CHLORIDE SOLUTION, LEAD ACETATE, LITHARGE, LITHARGE BATTERY, MAGNESIUM CARBONATE, MAGNESIUM CHLORIDE FLAKE, MAGNESIUM FLUOSILICATE, MAGNESIUM SULPHATE, MANGANESE CHLORIDE, METHYL SALICYLATE, MICA, NAPHTHALENE, NAPHTHOL (A. S.), NICKEL CHLORIDE, NICKEL SALTS, PINE STEAM DISTILLED OIL, RED OIL (OLEIC ACID), TURKEY SULPHONATED OIL, ORTHODICHLOROBENZINE, PARADICHLOROBENZINE; ZINC ACETATE, ZINC CHLORIDE (GRANULAR), ZINC CYANIDE, ZINC SULPHATE (MONO-HYDRATE), ZINC SULPHATE; POTASSIUM BICHROMATE, CAUSTIC POTASH, POTASSIUM CYANIDE, MURIATE OF POTASH, POTASSIUM NITRATE, POTASSIUM PERMANGANATE, ROCHELLE SALTS, SALT (ANTIMONY 65%), SODIUM ACETATE, SODIUM ALUMINATE (CP DRY), SODIUM BICARBONATE, SODIUM BICHROMATE CRYSTALS, SODIUM BISULPHATE, SODIUM BISULPHITE (ANHYDROUS), SODIUM CHLORATE, SODIUM CYANIDE, SODIUM FLUORIDE, SODIUM FORMATE, SODIUM HYDROSULPHITE, SODIUM HYPOCHLORITE, SODIUM HYPOSULPHITE, SODIUM METASILICATE, SODIUM NITRATE, SODIUM NITRITE, SODIUM ORTHOSILICATE, SODIUM PERBORATE, SODIUM PHOSPHATE (DI), SODIUM PHOSPHATE (MONO), SODIUM PHOSPHATE (TRI), SODIUM PHOSPHATE (TETRA PYRO), SODIUM SILICATE, SODIUM SILICOFLUORIDE, SODIUM SULPHATE ANHYDROUS, SODIUM SULPHATE CRYSTALS, SODIUM SULPHIDE, SODIUM SULPHITE, SODIUM SULPHYDRATE (LIQUID), SAL SODA, SOLDERING FLUX; STEARATES: ALUMINUM, CALCIUM, MAGNESIUM, ZINC; SULPHUR FLOUR; TALCUM POWDER; CREAM OF TARTAR; FORMALDEHYDE.
Claims use since 1904.

Ser. No. 535,753. E. R. SQUIBB & SONS, New York, N. Y. Filed Sept. 25, 1947.

RUTORBIN

FOR TABLETS CONTAINING BOTH RUTIN AND ASCORBIC ACID, FOR USE IN CONNECTION WITH CAPILLARY FRAGILITY AND RELATED CONDITIONS.
Claims use since Aug. 29, 1947.

Ser. No. 538,684. VELODENT PRODUCTS MFG. CO., INC., New York, N. Y. Filed Oct. 22, 1947.

Velo

FOR RODENTICIDES AND INSECTICIDES.
Claims use since Oct. 14, 1947.

Ser. No. 546,995. INDUSTRIAL RESEARCH, INC., Phoenix, Ariz. Filed Jan. 14, 1948.

FLUSH-O-MATIC

The word "Flush" is disclaimed apart from the mark as shown.
FOR CHEMICAL COMPOUND FOR CLEANING AND FLUSHING LIQUID COOLING SYSTEMS OF AUTOMOBILES AND OTHER INTERNAL COMBUSTION ENGINES.
Claims use since Oct. 1, 1947.

Ser. No. 550,572. ALFRED I. AARONSON, doing business as The Pandex Company, Baltimore, Md. Filed Feb. 26, 1948.

Pandex

FOR MEDICATED CREAM.
Claims use since Dec. 7, 1947.

Ser. No. 552,166. DUMAS M. REDMOND, doing business as Mecco Sales Co., Brooklyn and New York, N. Y. Filed Mar. 17, 1948.

Applicant disclaims the exclusive right to the word "Foot" apart from the mark shown.
FOR FOOT LOTION.
Claims use since Sept. 1, 1947.

Ser. No. 552,167. ROBINSON-WAGNER CO., INC., New York, N. Y. Filed Mar. 17, 1948.

LANOGENE

FOR VISCOUS, OILY DISTILLATE OF LANOLIN, CONSISTING LARGELY OF ITS LIQUID ESTERS.
Claims use since Jan. 15, 1947.

Ser. No. 553,013. THE PARFUMS LILLY DACHE, LTD., New York, N. Y. Filed Mar. 25, 1948. Under section 2f of the act of 1946.

Lelly Daché

The name shown on the drawing is the name of a living individual—namely, Lilly Dache, the consent to the use and registration of her name being filed herein. Applicant claims ownership of Registration No. 337,747.
FOR PERFUME, TOILET WATER, EAU DE COLOGNE, FACE POWDER, SACHET POWDER, LOTIONS FOR THE SKIN AND HAIR, BRILLIANTINE, POWDER COMPACTS, ROUGE COMPACTS, LIPSTICK, ROUGE, TALCUM POWDER, DUSTING POWDER, FACE CREAMS, BATH SALTS, AND MANICURE PREPARATIONS, INCLUDING CUTICLE CREAM, CUTICLE OIL, LIQUID POLISH, AND POLISH SOLVENT.
Claims use since Sept. 6, 1935.

Ser. No. 554,364. CASEY-AIKENS PHARMACEUTICALS, Kansas City, Mo., assignor to Roy C. Aikens, doing business as Casey-Aikens Pharmaceuticals, Kansas City, Mo. Filed Apr. 12, 1948.

ZERODERMA

FOR FUNGICIDAL SOLUTION FOR THE RELIEF OF ATHLETE'S FOOT, HAND ITCH, AND COMMON IRRITATIONS.
Claims use since Feb. 24, 1948.

Ser. No. 554,847. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed Apr. 17, 1948.

LANODINE

FOR METALLIC SOAPS, AND HIGH MOLECULAR WEIGHT ALCOHOLS DERIVED FROM WOOL GREASE.
Claims use since Feb. 25, 1948.

Ser. No. 555,961. DR. SALSBURY'S LABORATORIES, Charles City, Iowa. Filed Apr. 30, 1948.

Ar-Sulfa

No claim is made herein to the word "Sulfa."
FOR PREPARATIONS FOR USE IN TREATING POULTRY, DOMESTIC ANIMALS AND FARM LIVESTOCK—NAMELY, ANTHELMINTICS, ANTIGENS, BACTERINS, CONDITIONERS, DISINFECTANTS, FUMIGANTS, HERBICIDES, INHALANTS, INSECTICIDES, OINTMENTS, RODENTICIDES, TONICS, VACCINES, AND PREPARATIONS FOR IRRIGATING AND WASHING EARS AND EXTERNAL MEMBRANES, FOR PREVENTING CANNIBALISM, FOR PREVENTING COCCIDIOSIS, AND FOR STIMULATING GROWTH.
Claims use since Nov. 19, 1947.

Ser. No. 556,426. LOLA DURHAM, Dayton, Ohio. Filed May 7, 1948.

LOLA

FOR PHARMACEUTICAL PRODUCT SUCH AS POMADE, HAIR DRESSING, AND SHAMPOO FOR EXTERNAL APPLICATION.
Claims use since Mar. 1, 1946.

Ser. No. 557,501. CLINICAL PRODUCTS LIMITED, Richmond, Surrey, England. Filed May 21, 1948.

POLYCREST

Applicant claims ownership of British Registration No. 666,182, dated Jan. 26, 1948.
FOR OINTMENT FOR HUMAN USE.

Ser. No. 558,036. ANNA C. KAITS, doing business as American Proprietaries, Philadelphia, Pa. Filed May 28, 1948.

JIFFY

FOR PREPARATIONS FOR THE TREATMENT OF THE SCALP AND HAIR.
Claims use since July 1926.

Ser. No. 558,734. THE E. L. PATCH COMPANY, Stoneham, Mass. Filed June 8, 1948.

SLOWTEN

FOR SEDATION TABLETS.
Claims use since Jan. 21, 1948.

Ser. No. 559,260. LEON TUHOLSKE, doing business as TX Company, Akron, Ohio. Filed June 15, 1948.

TX

FOR DERMATOLOGICAL PREPARATIONS FOR FUNGUS AND OTHER MINOR SKIN INFECTIONS.
Claims use since Aug. 1, 1946.

Ser. No. 559,967. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed June 22, 1948.

Syrethadon

FOR MEDICINAL PREPARATION FOR THE ALLEVIATION OF COUGHS.
Claims use since Mar. 24, 1948.

Ser. No. 560,023. INTERCHEMICAL CORPORATION, New York, N. Y. Filed June 23, 1948.

AQUAPRINT

FOR DYESTUFFS AND DYESTUFF PRINTING PASTES FOR TEXTILES.
Claims use since June 14, 1948.

Ser. No. 560,068. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed June 23, 1948.

Baciguent

FOR MEDICINAL PREPARATION FOR THE TREATMENT OF INFECTIOUS DISEASES COMPRISING AN OINTMENT CONTAINING AS AN ACTIVE INGREDIENT THE ANTIBIOTIC BACITRACIN.
Claims use since Apr. 6, 1948.

Ser. No. 561,239. IRENE L. HOLTS, doing business as Dell Products, Plainfield, N. J. Filed July 13, 1948.

nue

FOR ANTISEPTIC MOUTHWASH.
Claims use since Feb. 2, 1948.

Ser. No. 561,342. WILLIAM H. REGAN, doing business under the name of Cap-Cal-Ox Laboratory, Bergenfield, N. J. Filed July 14, 1948.

VOLCANO

FOR BLAND ANTISEPTIC, EMOLLIENT, AND POWERFUL SUPPURATIVE FOR THE TREATMENT OF BOILS, CARBUNCLES, FELONS, ABSCESSES, AND OTHER INFLAMED CONDITIONS ACCOMPANIED BY SECRETIONS OF PUS.
Claims use since July 1, 1921.

Ser. No. 561,827. HOFFMANN-LA ROCHE INC., Nutley, N. J. Filed July 21, 1948.

GANTRISIN

FOR CHEMO-THERAPEUTIC AGENT FOR TREATMENT OF INTERNAL BACTERIAL INFECTIONS.
Claims use since June 23, 1948.

Ser. No. 563,030. STANDARD OIL COMPANY OF CALIFORNIA, Wilmington, Del., and San Francisco, Calif. Filed Aug. 7, 1948.

CAL-OL

Applicant claims ownership of Registrations Nos. 108,183, 275,576, 276,589, 306,326, and 309,878.
FOR INSECTICIDAL CARRIERS AND SOLVENTS.
Claims use since April 1948.

Ser. No. 563,510. GEORGE J. WEBB, doing business as Webby Company, Brockton, Mass. Filed Aug. 16, 1948.

WEBCO

FOR CHEMICAL SOLUTION FOR USE IN BATTERIES.
Claims use since Dec. 1, 1947.

Ser. No. 563,507. BEACH SOAP COMPANY, Lawrence, Mass. Filed Aug. 17, 1948.

Fluorium

FOR WHITENING AND BRIGHTENING MATERIAL FOR USE IN WASHING TEXTILES.
Claims use since Apr. 27, 1948.

Ser. No. 563,895. HENRI BENDEL, INC., New York, N. Y. Filed Aug. 24, 1948. Under section 2f of the act of 1946.

Eau de Sachet

Applicant claims ownership of Registration No. 417,809.
FOR TOILET WATER.
Claims use since Apr. 24, 1941.

Ser. No. 563,896. HENRI BENDEL, INC., New York, N. Y. Filed Aug. 24, 1948. Under section 2f of the act of 1946.

white freezia

Applicant claims ownership of Registration No. 400,431.
FOR TOILET WATER, PERFUME, AND COLOGNE.
Claims use since Mar. 1, 1940.

Ser. No. 563,952. ANNA PACINI, doing business as Hollywood Cosmetics Co., Memphis, Tenn. Filed Aug. 24, 1948.

Rochester

FOR HAIR POMADE.
Claims use since July 6, 1948.

Ser. No. 564,846. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Sept. 16, 1948.

PROPATHRICIN

Applicant claims ownership of Registration No. 413,546.
FOR ANTIBACTERIAL PRESSOR AND VASO-CONSTRICTOR PREPARATION.
Claims use since Sept. 15, 1948.

Ser. No. 564,952. LEHN & FINK PRODUCTS CORPORATION, Bloomfield, N. J. Filed Sept. 10, 1948.

FLAMBOYANT

FOR LIPSTICKS.
Claims use since July 15, 1948.

Ser. No. 565,007. ROSETH CORPORATION, New York, N. Y., and Brooklyn, N. Y. Filed Sept. 11, 1948.

MOTHEX

Applicant claims ownership of Registration No. 330,348.
FOR MOTHPROOFING LIQUIDS, MOTH CAKES, AND MOTH CRYSTALS.
Claims use since 1925.

Ser. No. 565,116. CLARK & CLARK CO., Wenonah, N. J. Filed Sept. 14, 1948.

PEN-PHETAMINE

Applicant claims ownership of Registration No. 419,698.
FOR TABLETS FOR THE RELIEF OF DYSMENORRHEA AND NON-ORGANIC PAIN CONTAINING A SALT OF AMPHETAMINE, AN ANALGESIC, AND A SEDATIVE.
Claims use since June 1943.

Ser. No. 565,117. CLARK & CLARK CO., Wenonah, N. J. Filed Sept. 14, 1948.

PROFETAMINE

Applicant claims ownership of Registration No. 419,697.
FOR TABLETS, POWDERS, AND CHEWING GUM FOR USE AS A STIMULANT CONTAINING A SALT OF AMPHETAMINE.
Claims use since January 1942.

Ser. No. 565,158. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Sept. 15, 1948.

SUBDAMINE

FOR SEDATIVE PREPARATION.
Claims use since Sept. 2, 1948.

Ser. No. 565,159. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Sept. 15, 1948.

VARIMYCIN

FOR ANTIBIOTICS.
Claims use since Aug. 12, 1948.

Ser. No. 565,398. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Sept. 23, 1948.

CRAMOTHALIDINE

Applicant claims ownership of Registration No. 424,155.
FOR ANTIBACTERIAL PREPARATION.
Claims use since Sept. 21, 1948.

Ser. No. 575,514. ABBOTT LABORATORIES, North Chicago, Ill. Filed Mar. 16, 1949.

GLUCALBOTT

FOR PHARMACEUTICAL PREPARATION INTENDED FOR USE IN THE TREATMENT OF HYPOCALCEMIA.
Claims use since March 1941.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 545,717. H. COMOY & CO., LIMITED, London, England. Filed Dec. 30, 1947. Under section 2f of the act of 1946.

COMOY'S

FOR TOBACCO PIPES, CIGAR AND CIGARETTE HOLDERS, TOBACCO POUCHES, CIGAR AND CIGARETTE CASES AND BOXES, TOBACCO JARS AND ASH TRAYS.
Claims use since 1897.

Ser. No. 545,718. H. COMOY & CO., LIMITED, London, England. Filed Dec. 30, 1947.

Everyman

FOR TOBACCO PIPES, CIGAR AND CIGARETTE HOLDERS, TOBACCO POUCHES, CIGAR AND CIGARETTE CASES AND BOXES, TOBACCO JARS AND ASH TRAYS.
Claims use since 1925.

Ser. No. 545,719. H. COMOY & CO., LIMITED, London, England. Filed Dec. 30, 1947.

TROCADERO

FOR TOBACCO PIPES.
Claims use since 1936.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 564,809. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Sept. 8, 1948.

STRIPKOLEX

FOR DYNAMITE.
Claims use since July 23, 1948.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 555,328. WESTERN NEWSPAPER UNION, Dover, Del., and Omaha, Nebr. Filed Apr. 22, 1948.

BLACK DIAMOND

FOR PRINTING INKS, PARTICULARLY NEWS INKS.
Claims use since 1910.

Ser. No. 562,652. MILLER-COOPER INK COMPANY, Kansas City, Mo. Filed Aug. 2, 1948.

MOISET

FOR PRINTING INKS.
Claims use since May 1, 1947.

Ser. No. 562,653. MILO HARDING COMPANY, Los Angeles, Calif. Filed Aug. 2, 1948.

TEMPO

Applicant claims ownership of Registration No. 293,678.
FOR INK AND INK PADS FOR USE WITH DUPLICATING MACHINES.
Claims use since Dec. 1, 1929.

Ser. No. 563,111. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y. Filed Aug. 10, 1948.

Gilt Edge

Applicant claims ownership of Registration No. 292,752.
FOR CARBON PAPER AND TYPEWRITER RIBBONS.
Claims use since Oct. 6, 1931.

Ser. No. 563,740. INTERCHEMICAL CORPORATION, New York, N. Y. Filed Aug. 19, 1948.

Applicant claims ownership of Registration No. 500,752.
FOR TYPEWRITER RIBBON AND CARBON PAPER.
Claims use since June 25, 1947.

Ser. No. 564,254. GODFREY L. CABOT, INC., Boston, Mass. Filed Aug. 20, 1948.

ONYX

FOR CARBON BLACK WHEN USED AS A PIGMENT FOR INKS.
Claims use since May 21, 1948.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 527,453. STAVINEER CORPORATION, Chicago, Ill. Filed July 5, 1947. CERTIFICATION MARK.

STAVINEER

FOR PREFABRICATED BUILDING PANELS MADE UP OF A WALL BOARD BACKING, A LAYER OF CEMENTITIOUS MATERIAL ON SAID BACKING, AND COMPARATIVELY THIN REAL BRICK OR REAL STONE MEMBERS EMBEDDED IN SAID CEMENTITIOUS MATERIAL (SUCH BUILDING PANELS ARE USED FOR COVERING THE EXTERIOR OF EITHER OLD OR NEW BUILDINGS, AND TO A LESSER EXTENT THEY ARE USED INSIDE A BUILDING FOR SUCH PURPOSES AS FIREPLACES, ETC.).
Claims use since Apr. 8, 1947.

Ser. No. 544,690. ARMSTRONG CORK COMPANY, Lancaster, Pa. Filed Dec. 16, 1947.

Applicant claims ownership of Registration No. 387,622.
FOR ARCHITECTURAL WALL PANELS.
Claims use since June 3, 1939.

Ser. No. 545,577. CARR, ADAMS & COLLIER COMPANY, Dubuque, Iowa. Filed Dec. 27, 1947. Under section 2f of the act of 1946.

BILT WELL

Applicant claims ownership of Registrations Nos. 141,030 and 388,175.
FOR FABRICATED WOODWORK—VIZ, FIREPLACE MANTLES; STAIR WORK; STAIR PARTS, CASEMENTS AND FRAMES THEREFOR; WINDOW FRAMES; COMBINATION (STORM AND SCREEN) DOORS; ENTRANCES; DOORS AND FRAMES THEREFOR; GARAGE DOORS; GABLE SASH AND LOUVRES AND FRAMES THEREFOR; AND WINDOW AND DOOR SCREENS.
Claims use since March 1920.

Ser. No. 549,366. CURTIS COMPANIES INCORPORATED, Clinton, Iowa. Filed Nov. 17, 1947. Under section 2f of the act of 1946.

SILENTITE "Pre-Fit"

Applicant claims ownership of Registration No. 306,213.
FOR WINDOW FRAMES, WINDOWS, AND PARTS THEREOF.
Claims use since October 1931.

Ser. No. 553,213. ORANGEBURG MANUFACTURING CO., INC., Orangeburg, N. Y. Filed Mar. 27, 1948. Under section 2f of the act of 1946 as to "Orangeburg."

Applicant disclaims the words "Conduit" and "Pipe" apart from the mark as shown. Applicant claims ownership of Registrations Nos. 360,511, 360,774, and 69,165.
FOR CONDUIT, DUCTS, AND PIPES MADE OF FIBRE COMPOSITION, AND FITTINGS FOR THE SAME.
Claims use since Feb. 1, 1948, as shown; and since December 1893 to the word Orangeburg.

Ser. No. 554,249. NORTH AMERICAN CEMENT CORPORATION, New York, N. Y. Filed Apr. 9, 1948.

NORTH AMERICAN

Applicant claims ownership of Registration No. 228,242.
FOR PORTLAND CEMENT.
Claims use since 1933.

Ser. No. 555,601. GLOBE ROOFING PRODUCTS CO., INC., Whiting, Ind. Filed Apr. 26, 1948.

Thermo-Thatch

Applicant claims ownership of Registration No. 363,337.
FOR ASPHALT COMPOSITION SHINGLES, ROOFING, AND SIDING.
Claims use since Apr. 9, 1948.

Ser. No. 555,736. CORHART REFRACTORIES COMPANY, Louisville, Ky. Filed Apr. 28, 1948.

CORHART

Applicant claims ownership of Registration No. 246,879.
FOR REFRACTORY BLOCKS FOR FURNACES.
Claims use since Mar. 19, 1928.

Ser. No. 556,478. THE PHILIP CAREY MANUFACTURING COMPANY, Cincinnati, Ohio. Filed May 7, 1948. Under section 2f of the act of 1946.

CAREYLOK

Applicant claims ownership of Registrations Nos. 105,349 and 124,284.
FOR BITUMINOUS COMPOSITION SHINGLES.
Claims use since Aug. 2, 1926.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 529,972. THE DILL MANUFACTURING COMPANY, Cleveland, Ohio. Filed July 30, 1947. Under section 2f of the act of 1946.

LOK-SKRU

FOR TWO-PART THREADED BLIND RIVETS.
Claims use since July 1, 1938.

Ser. No. 539,225. SOUTHERN STATES IRON ROOFING COMPANY, Savannah, Ga. Filed Oct. 27, 1947. Under section 2f of the act of 1946.

EVERWEAR

Applicant claims ownership of Registration No. 383,941.
FOR TURPENTINE CUPS, APRONS, AND CUP COVERS ALL MADE OF METAL.
Claims use since October 1935.

Ser. No. 543,539. SOUTHWEST STEEL ROLLING MILLS, Los Angeles, Calif. Filed Dec. 5, 1947.

SSS

FOR METAL FENCE POSTS.
Claims use since Apr. 1, 1947.

Ser. No. 543,886. CECO STEEL PRODUCTS CORPORATION, Chicago, Ill. Filed Dec. 10, 1947.

CECO

Applicant claims ownership of Registrations Nos. 118,182, 405,471, and 406,906.
FOR METAL SCREEN CLOTH, HARDWARE CLOTH, WINDOW LIFTS, HINGES, AND ADJUSTERS, METAL FENCE POSTS, NAILS, AND METAL FENCING.
Claims use since 1927 on metal fence posts, nails, and metal fencing; and since 1935, on metal screen cloth, hardware cloth, window-lifts, hinges, and adjusters.

Ser. No. 544,101. JULIUS F. NEBIKER, doing business as Nebiker Products Company, Peoria, Ill. Filed Dec. 11, 1947.

ShuNebs

The word "Shu" is disclaimed.
FOR SHOE HANGERS.
Claims use since October 1947.

Ser. No. 545,086. CONTINENTAL STEEL CORPORATION, Kokomo, Ind. Filed Dec. 22, 1947.

Liberty

Applicant claims ownership of Registration No. 215,227.
FOR FENCING—VIZ., FARM AND POULTRY FENCE, AND ORNAMENTAL FENCE MADE OF WIRE AND IRON, AND GATES THEREFOR OF THE SAME MATERIALS.
Claims use since Jan. 22, 1924.

Ser. No. 545,087. CONTINENTAL STEEL CORPORATION, Kokomo, Ind. Filed Dec. 22, 1947.

CHAMPION

Applicant claims ownership of Registrations Nos. 215,228 and 265,100.
FOR BARBED WIRE.
Claims use since May 1, 1929.

Ser. No. 545,094. CONTINENTAL STEEL CORPORATION, Kokomo, Ind. Filed Dec. 22, 1947.

-FEL-ROF-

Applicant claims ownership of Registration No. 284,189.
FOR NAILS.
Claims use since Jan. 14, 1931.

Ser. No. 545,097. CONTINENTAL STEEL CORPORATION, Kokomo, Ind. Filed Dec. 22, 1947.

Flame Sealed

Applicant claims ownership of Registrations Nos. 301,389 and 301,931.
FOR BARBED WIRE AND WIRE FENCE.
Claims use since Oct. 27, 1932.

Ser. No. 546,011. NORTHWEST TUBE & METAL FABRICATORS, Portland, Oreg. Filed Jan. 26, 1948.

FLUMITE

FOR METALLIC IRRIGATION TUBES, SPRINKLER HEADS, AND IRRIGATION TUBE FITTINGS, PARTICULARLY FOR PORTABLE IRRIGATION SYSTEMS.
Claims use since January 1945.

Ser. No. 551,376. EVERLASTING VALVE COMPANY, Jersey City, N. J. Filed Mar. 6, 1948. Under section 2f of the act of 1946.

FLATPLUG

Applicant claims ownership of Registration No. 167,979.
FOR VALVES.
Claims use since Sept. 16, 1921.

Ser. No. 551,919. TALON, INC., Meadville, Pa. Filed Mar. 13, 1948.

WILZIP

FOR SLIDE FASTENERS.
Claims use since Feb. 26, 1948.

Ser. No. 552,137. THE FORD METER BOX COMPANY, INC., Wabash, Ind. Filed Mar. 17, 1948.

COPPERSETTER

FOR WATER METER COUPLINGS.
Claims use since September 1933.

Ser. No. 552,138. THE FORD METER BOX COMPANY, INC., Wabash, Ind. Filed Mar. 17, 1948.

COPPERHORN

FOR WATER METER COUPLINGS.
Claims use since Nov. 15, 1931.

Ser. No. 552,255. MONOGRAM MANUFACTURING COMPANY, West Los Angeles and Los Angeles, Calif. Filed Mar. 15, 1948.

Mono-Bol

FOR DRAWER AND DOOR HANDLES.
Claims use since Jan. 14, 1948.

Ser. No. 552,492. G. E. PRENTICE MANUFACTURING COMPANY, Kensington, Conn. Filed Mar. 19, 1948. Under section 2f of the act of 1946.

PRENTICE

Applicant claims ownership of Registration No. 294,601.
FOR SLIDE OPERATED FASTENERS.
Claims use since 1926.

Ser. No. 552,493. G. E. PRENTICE MANUFACTURING COMPANY, Kensington, Conn. Filed Mar. 19, 1948. Under section 2f of the act of 1946.

TU-WAY

Applicant claims ownership of Registration No. 329,504.
FOR SLIDE OPERATED FASTENERS.
Claims use since September 1934.

Ser. No. 553,731. MERIT ENTERPRISES, INC., Brooklyn, N. Y. Filed Apr. 2, 1948.

MERCURY

FOR ALUMINUM COOKING UTENSILS—NAMELY, PRESSURE COOKERS.
Claims use since Mar. 17, 1948.

Ser. No. 563,978. O. A. NORLUND COMPANY, INC., Williamsport, Pa. Filed Mar. 15, 1948.

DIAMOND

FOR ICE CREEPERS FOR USE IN CONNECTION WITH HUMAN FOOTWEAR, INCLUDING ICE CREEPERS FOR MEN, WOMEN, AND CHILDREN.
Claims use since 1905.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 551,547. ENGLISH METAL POWDER COMPANY LIMITED, London and West Drayton, England. Filed Mar. 9, 1948.

EMPCO

Applicant claims ownership of British Registrations No. 632,442, dated Nov. 1, 1944, and No. 632,443, dated Nov. 1, 1944.
FOR ALUMINUM IN POWDER OR PASTE FORM.

Ser. No. 556,676. AMERICAN TYPE FOUNDERS, INCORPORATED, Elizabeth, N. J. Filed Jan. 2, 1948. Under section 2f of the act of 1946.

KAUFMANN

Applicant claims ownership of Registration No. 273,274.
FOR PRINTING TYPE.
Claims use since September 1930.

CLASS 15

OILS AND GREASES

Ser. No. 507,223. HENRY HOWARD SESSIONS, doing business as Emblem Oil Company, North Long Beach, Calif. Original filed Aug. 10, 1946, under the act of 1905; amended to application under act of 1946, Mar. 22, 1948.

EMSEL

FOR DIESEL MOTOR FUELS AND DIESEL MOTOR OILS.
Claims use since May 28, 1946.

Ser. No. 548,036. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo. Filed Jan. 26, 1948. Under section 2f of the act of 1946.

WEARWELL

Applicant claims ownership of Registration No. 380,758.
FOR MOTOR OIL.
Claims use since Nov. 1, 1938.

Ser. No. 551,550. ESSO STANDARD OIL COMPANY, Wilmington, Del., and New York, N. Y. Filed Mar. 9, 1948. Under section 2f of the act of 1946.

SLIPKOTE

Applicant claims ownership of Registration No. 406,501.
FOR LUBRICATING GREASE.
Claims use since Mar. 3, 1939.

Ser. No. 552,799. THE PURE OIL COMPANY, Chicago, Ill. Filed Mar. 23, 1948.

PUROSOL

Applicant claims ownership of Registrations Nos. 278,158, 280,466, and 396,571.
FOR SOLUBLE OIL FOR USE AS CUTTING OIL.
Claims use since June 1, 1930.

Ser. No. 553,616. THE HODSON CORPORATION, Chicago, Ill. Filed Apr. 1, 1948.

Applicant claims ownership of Registration No. 334,493.
FOR LUBRICATING OILS AND GREASES.
Claims use since December 1935.

Ser. No. 555,020. SINCLAIR REFINING COMPANY, New York, N. Y. Filed Apr. 19, 1948.

CERCAX

FOR MINERAL WAX.
Claims use since Mar. 25, 1944.

Ser. No. 555,141. MABEL K. BAKER, doing business as Colonial Candle Co. of Cape Cod, Barnstable, Mass. Filed Apr. 21, 1948.

No claim is made to the word "Handipt" apart from the mark, and no claim is made to the representation of the candle shown apart from the mark.
FOR CANDLES.
Claims use since June 15, 1912.

Ser. No. 536,852. UNION OIL COMPANY OF CALIFORNIA, Los Angeles, Calif. Filed Apr. 29, 1948.

DARVAL

FOR LUBRICATING OILS.
Claims use since Jan. 23, 1948.

Ser. No. 557,004. BABSON BROS. CO., Chicago, Ill. Filed May 14, 1948.

Surge

FOR LUBRICATING OIL AND PARTICULARLY FOR VACUUM PUMPS AND PULSATORS USED WITH MILKING MACHINES.
Claims use since Aug. 23, 1936.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 533,357. PHELAN-FAUST PAINT MFG. CO., St. Louis, Mo. Filed Sept. 4, 1947. Under section 2f of the act of 1946.

Faustone

FOR INTERIOR FLAT WALL PAINT.
Claims use since Jan. 5, 1911.

Ser. No. 536,337. BAKER PAINT & VARNISH CO., Jersey City, N. J. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

STAIZON

Applicant claims ownership of Registration No. 159,605.
FOR MIXED PAINTS, VARNISHES, AND ENAMEL COATINGS.
Claims use since December 1916.

Ser. No. 550,113. BINNEY & SMITH COMPANY, New York, N. Y. Filed Feb. 19, 1948.

COVARNISHBLAK

Applicant claims ownership of Registrations Nos. 430,195 and 432,982.
FOR PREPARATION OF CARBON BLACK, RESIN, AND SOLVENT FOR COLORING PAINTS AND PROTECTIVE COATINGS.
Claims use since Nov. 6, 1947.

Ser. No. 552,730. ALSTON-LUCAS PAINT CO., Lyons, Ill. Filed Mar. 23, 1948.

BRYNOX

FOR PAINT, PARTICULARLY ADAPTED TO BE APPLIED TO EXTERIOR METAL SURFACES.
Claims use since September 1940.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 525,430. TAYLOR BROTHERS, INC., Winston-Salem, N. C. Original filed July 1, 1947, under the act of 1905; amended to application under act of 1946, Mar. 13, 1948. Under section 2f of the act of 1946.

BOHANNON'S

CABIN HOME

FOR PLUG, TWIST, AND SMOKING TOBACCO.
Claims use since Jan. 1, 1900.

Ser. No. 545,903. A. SENSENBRENNER SONS, Los Angeles, Calif. Filed Dec. 31, 1947.

The portrait of a lady which appears on the drawing is fanciful. Applicant claims ownership of Registrations Nos. 317,622 and 276,498.
FOR CIGARS.
Claims use since Nov. 12, 1887.

Ser. No. 547,490. A. SENSENBRENNER SONS, Los Angeles, Calif. Filed Jan. 19, 1948.

The portrait of a lady which appears on the drawing is fanciful. Applicant claims ownership of Registrations Nos. 317,622, 276,498, 396,981, 276,494, 317,621, 276,497, and 502,083.
FOR CIGARS.
Claims use since Nov. 12, 1887.

Ser. No. 547,491. A. SENSENBRENNER SONS, Los Angeles, Calif. Filed Jan. 19, 1948.

The portrait of a man which appears on the drawing is fanciful. Applicant claims ownership of Registration No. 430,296.
FOR CIGARS.
Claims use since 1910.

CLASS 19

VEHICLES

Ser. No. 507,822. LAHER SPRING AND TIRE CORPORATION, Oakland, Calif. Original filed Aug. 13, 1946, under the act of 1905; amended to application under act of 1946, Nov. 4, 1947. Under section 2f of the act of 1946.

LAHER

Applicant claims ownership of Registration No. 206,777.
FOR AUTOMOTIVE EQUIPMENT AND ACCESSORIES—NAMELY, LEAF SPRINGS.
Claims use since June 1, 1923.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 547,060. THE THOMAS & BETTS CO., Elizabeth, N. J. Filed Jan. 14, 1948. Under section 2f of the act of 1946.

TITE-BITE

FOR ARMOURED CABLE AND NON-METALLIC FLEXIBLE CONDUIT FITTINGS—NAMELY, CONNECTORS OF THE STRAIGHT AND ANGLED TYPE, COUPLINGS, COUPLING CONNECTORS, COMBINATION COUPLINGS.
Claims use since March 1929.

Ser. No. 548,874. IRVINGTON VARNISH & INSULATOR COMPANY, Irvington, N. J. Filed Jan. 30, 1948.

IVI-BIND

The word "Bind" is disclaimed.
FOR ELECTRICAL INSULATION MATERIAL—NAMELY, VARNISHED CAMBRIC SHEETING AND TAPE COATED ON THE BACK WITH A PRESSURE SENSITIVE ADHESIVE SUBSTANCE.
Claims use since Aug. 22, 1935.

Ser. No. 548,918. BULLDOG ELECTRIC PRODUCTS COMPANY, Detroit, Mich. Filed Feb. 6, 1948.

Fusenters

FOR ELECTRICAL PANELBOARDS.
Claims use since Sept. 1, 1925.

Ser. No. 553,352. WILBUR B. DRIVER COMPANY, Newark, N. J. Filed Mar. 30, 1948.

WBD

FOR ROUND AND FLAT WIRE, RIBBON, AND STRIP FORMED OF NON-FERROUS ALLOYS FOR ELECTRICAL RESISTANCE USE.
Claims use since July 1946.

Ser. No. 553,761. WESTERN AUTO SUPPLY COMPANY, Kansas City, Mo. Filed Apr. 2, 1948.

PLA-MOR

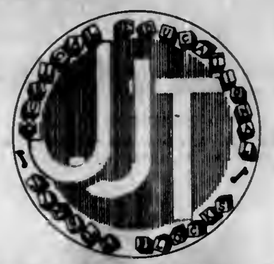
Applicant claims ownership of Registration No. 340,344.
FOR RADIO RECEIVING SETS AND RADIO TUBES.
Claims use since May 1, 1935.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 527,778. THE WORTHINGTON BALL COMPANY, Elyria, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

TUFFBALL



Applicant claims ownership of Registration No. 351,716.
FOR GOLF BALLS.
Claims use since Nov. 7, 1935.

Ser. No. 551,319. STANLEY SAVAGE, doing business as Savage Metal Products, Seattle, Wash. Filed Mar. 5, 1948.

SAVAGE

FOR FISHING TACKLE—NAMELY, FISHING REEL HOLDERS AND CONNECTION JOINTS FOR SECTIONS OF FISH POLES.
Claims use since July 15, 1946.

Ser. No. 551,636. JINGLE JOY TOYS, INC., Orlando, Fla. Filed Mar. 10, 1948.

The drawing is lined for shading only. The words "Musical Educational Jingle Blocks" are disclaimed apart from the mark.
FOR TOY BLOCKS.
Claims use since Nov. 15, 1947.

Ser. No. 554,834. STOWE-WOODWARD, INC., Newton Upper Falls and Newton, Mass. Filed Apr. 16, 1948.

TENSITE

FOR BILLIARD TABLE CUSHIONS.
Claims use since 1937.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 516,955. CHESHIRE MAILING MACHINES, INC., Chicago, Ill. Original filed Feb. 5, 1947, under the act of 1905; amended to application under act of 1946, Sept. 11, 1947. Under section 2f of the act of 1946.

CHESHIRE

FOR MECHANICALLY AND ELECTRICALLY OPERATED ADDRESSING AND MAILING MACHINES.
Claims use since January 1922.

Ser. No. 517,619. JOHN D. COCHIN, doing business as J. D. Cochin Manufacturing Co., South San Francisco, Calif. Original filed Feb. 17, 1947, under the act of 1905; amended to application under act of 1946, Jan. 19, 1948.

The drawing is lined for the color red. Applicant disclaims the representation of the automobile, the words "Manufacturing Co." and the phrase "Another Cochin Product" apart from the mark as shown.
FOR AUTOMOTIVE SERVICE EQUIPMENT—NAMELY, AUTOMOBILE LIFTS OF THE HYDRAULIC AND HYDRAULIC-PNEUMATIC TYPE, AIR COMPRESSORS AND HOSE WELLS FOR AIR AND WATER HOSE OF THE CHARACTER USED IN GARAGES AND AUTOMOBILE SERVICE STATIONS.
Claims use since Jan. 2, 1936.

Ser. No. 524,450. FRICK COMPANY, INC., Waynesboro, Pa. Original filed June 19, 1947, under the act of 1905; amended to application under act of 1946, Nov. 25, 1947.

ECLIPSE

FOR FARM MACHINERY—NAMELY, THRESHING MACHINERY, SAW-MILLS, PORTABLE AND STATIONARY STEAM-ENGINES, TRACTION-ENGINES, AND TRACTORS.
Claims use since 1876.

Ser. No. 526,529. DIAMOND CHAIN COMPANY, INC., Indianapolis, Ind. Filed July 5, 1947.

Applicant claims ownership of Registration No. 238,166.
FOR POWER TRANSMISSION CHAINS AND PARTS THEREOF, INCLUDING BUT NOT LIMITED TO BICYCLE CHAINS AND MOTORCYCLE CHAINS, SPROCKETS AND SPROCKET WHEELS FOR USE WITH POWER TRANSMISSION CHAINS, CONVEYOR CHAINS AND PARTS THEREOF, AND CHAIN TYPE FLEXIBLE SHAFT-COUPLINGS AND PARTS THEREOF.
Claims use since Apr. 18, 1896.

Ser. No. 533,184. MANZEL, INC., Buffalo, N. Y. Filed Sept. 3, 1947. Under section 2f of the act of 1946.

Manzel

FOR FORCE FEED LUBRICATOR PUMPS, CHEMICAL FEEDERS, WHEEL PULLERS, PISTON RING COMPRESSORS, PISTON RING GROOVE CLEANERS, POWER GREASE GUNS, HAND GREASE GUNS, AUTOMOTIVE AXLE STANDS, AIR COMPRESSORS, TORQUE WRENCHES, AUTOMOTIVE HAND TOOLS SUCH AS WRENCHES, PLIERS, HAMMERS, MALLETS, SCREW DRIVERS, CAR WASHING MACHINES, AND HYDRAULIC JACKS.
Claims use since Jan. 1, 1900.

Ser. No. 533,724. GENERAL FLUID MACHINERY CO., INC., Huntsville, Ala. Filed Sept. 8, 1947.

GFM

FOR HYDRAULIC JACKS.
Claims use since July 1, 1946.

Ser. No. 536,737. K. I. WILLIS CORPORATION, Moline, Ill. Filed Oct. 3, 1947. Under section 2f of the act of 1946.

OK

FOR ELEVATOR CUPS.
Claims use since Dec. 5, 1921.

Ser. No. 539,869. GREENLEE BROS. & CO., Rockford, Ill. Filed Nov. 1, 1947. Under section 2f of the act of 1946.

GREENLEE

Applicant claims ownership of Registrations Nos. 224,193 and 224,194.
FOR METAL WORKING MACHINERY—NAMELY, AUTOMATIC SCREW MACHINES, MULTIPLE SPINDLE DRILLING AND TAPPING MACHINES, AND LINE

PROCESSING MACHINES PERFORMING DRILLING, TAPPING, BROACHING, MILLING, BORING, FACING, CHAMFERING, REAMING AND LIKE OPERATIONS; WOODWORKING MACHINERY—NAMELY, PLANERS, SHAPERS, MORTISERS, BORERS, SAWS, AND TENONERS; WOODWORKING TOOLS—NAMELY, CHISELS AND GOUGES, MACHINE BITS, ROUTING BITS, DRILLS, COUNTERSINKS, PLUG CUTTERS, AUGER BITS, EXPANSIVE BITS, DRAWKNIVES, AUTOMATIC PUSH DRILLS, SPIRAL SCREW DRIVERS, TURNING TOOLS; AND OTHER TOOLS—NAMELY, HYDRAULIC AND HAND PIPE BENDERS, TUBING BENDERS, HYDRAULIC PIPE PUSHERS, KNOCKOUT PUNCHES AND CUTTERS, JOIST BORERS, ELECTRICIANS' BITS, CABLE PULLERS, AND BELL HANGERS' DRILLS.

Claims use since September 1892.

Ser. No. 539,870. GREENLEE BROS. & Co., Rockford, Ill. Filed Nov. 1, 1947. Under section 2f of the act of 1946 as to "Greenlee."

GREENLEE

Applicant claims ownership of Registrations Nos. 224,193 and 224,194.

FOR METAL WORKING MACHINERY—NAMELY, AUTOMATIC SCREW MACHINES, MULTIPLE SPINDLE DRILLING AND TAPPING MACHINES, AND LINE PROCESSING MACHINES PERFORMING DRILLING, TAPPING, BROACHING, MILLING, BORING, FACING, CHAMFERING, REAMING, AND LIKE OPERATIONS; WOODWORKING MACHINERY—NAMELY, PLANERS, SHAPERS, MORTISERS, BORERS, SAWS, AND TENONERS; WOODWORKING TOOLS—NAMELY, CHISELS AND GOUGES, MACHINE BITS, ROUTING BITS, DRILLS, COUNTERSINKS, PLUG CUTTERS, AUGER BITS, EXPANSIVE BITS, DRAWKNIVES, AUTOMATIC PUSH DRILLS, SPIRAL SCREW DRIVERS, TURNING TOOLS; AND OTHER TOOLS—NAMELY, HYDRAULIC AND HAND PIPE BENDERS, TUBING BENDERS, HYDRAULIC PIPE PUSHERS, KNOCKOUT PUNCHES, AND CUTTERS, JOIST BORERS, ELECTRICIANS' BITS, CABLE PULLERS, AND BELL HANGERS' DRILLS.

Claims use since 1892 as to the name "Greenlee"; and since June 1945 as to the mark shown.

Ser. No. 541,485. AMERICAN BRAKE SHOE COMPANY, New York, N. Y. Filed Nov. 18, 1947.

MISSABE

FOR POWER-OPERATED EXCAVATING DIPPERS AND PARTS THEREOF.

Claims use since 1911.

Ser. No. 542,598. LAMSON & GOODNOW MANUFACTURING COMPANY, Shelburne Falls, Mass. Filed Nov. 28, 1947. Under section 2f of the act of 1946.

MOHAWK

Applicant claims ownership of Registration No. 163,818.

FOR KNIVES FOR DOMESTIC USE—NAMELY, ARTISTS' KNIVES, ASPARAGUS-KNIVES, BUTCHER-KNIVES, BANANA-KNIVES, BREAD-KNIVES, BONING-KNIVES, BUTTER-KNIVES, BEET-KNIVES, BOWIE-KNIVES, BOLO-KNIVES, BAKERS'-KNIVES, CLAM-KNIVES, CHEESE-KNIVES, CIGAR-KNIVES, CANE-KNIVES, COTTON-KNIVES, CARVING-KNIVES, COOKS' KNIVES, DRUGGISTS' KNIVES, FISH-KNIVES, FRUIT-KNIVES, HACK-KNIVES, HUNTING-KNIVES, INK-KNIVES, LEMON-KNIVES, MIXING-KNIVES, MACHETES, ORANGE-KNIVES, OIL-CLOTH KNIVES, OYSTER-KNIVES, PARING-KNIVES, PAINTERS' KNIVES, PAPER-KNIVES, PILL-KNIVES, PIE-KNIVES, PUTTY-KNIVES, RUBBER-KNIVES, SAILMAKERS' KNIVES, SPRUCE-KNIVES, SKINNING-KNIVES, STICKING-KNIVES, STEAK-KNIVES, SLICING-KNIVES, SABATIER-KNIVES, SHOE-KNIVES, SPATULAS, TABLE-KNIVES, TOBACCO-KNIVES, THREAD-KNIVES, VIENNA KNIVES—CARVING-FORKS, POT-FORKS, ROAST-FORKS, TABLE-FORKS, BUTCHER-STEELS, TABLE-STEELS, AND CARVER-STEELS.

Claims use since 1923.

Ser. No. 544,840. ATLAS SUPPLY COMPANY, Newark, N. J. Filed Dec. 19, 1947.

Royal

FOR OUTBOARD MOTORS.

Claims use since June 24, 1947.

Ser. No. 544,879. MATHIAS KLEIN & SONS, Chicago, Ill. Filed Dec. 10, 1947. Under section 2f of the act of 1946.

CHICAGO

FOR GRIPS FOR MESSENGER, GUY STRAND, AND CONDUCTOR CABLES.

Claims use since Jan. 2, 1907.

Ser. No. 545,006. ROGER LEHMAN, doing business as Lehman Manufacturing Company, Newark, N. J. Filed Dec. 20, 1947.

ECON POWER

The word "Power" and representation of the gear are disclaimed.

FOR INTERNAL COMBUSTION ENGINES.

Claims use since Apr. 1, 1947.

Ser. No. 545,960. C. CRETORS & Co., Chicago, Ill. Filed Jan. 2, 1948. Under section 2f of the act of 1946.

CRETORS

Applicant claims ownership of Registration No. 247,799.

FOR POP CORN MACHINES.

Claims use since June 1, 1885.

Original filed Dec. 20, 1945, under the act of 1905; amended to application under act of 1946, Mar. 1, 1948, Serial No. 493,634. Published Jan. 25, 1949. Class 31.

510,165. HEAT EXCHANGERS FOR HEATING WATER WITH STEAM OR HOT WATER, ETC. BELL & GOSSETT COMPANY, Morton Grove, Ill.

Original filed Dec. 27, 1945, under the act of 1905; amended to application under act of 1946, Aug. 16, 1947, Serial No. 493,911. Published Jan. 18, 1949. Class 34.

510,166. INSTRUMENTS AND CONTROLS RESPONSIVE TO CHANGES IN PHYSICAL CONDITIONS—NAMELY, ELECTRO-THERMOSTATIC GAS VALVES, ETC. WHITE-RODGERS ELECTRIC COMPANY, St. Louis, Mo.

Original filed Feb. 7, 1946, under the act of 1905; amended to application under act of 1946, Nov. 7, 1947, Serial No. 496,187. Published Feb. 15, 1949. Class 26.

510,167. ARTIFICIAL FISH LURES. JAMES E. CLARK, St. Petersburg, Fla.

Original filed Apr. 8, 1946, under the act of 1905; amended to application under act of 1946, Sept. 18, 1947, Serial No. 499,823. Published Jan. 25, 1949. Class 22.

510,168. MIXTURE OF PORTLAND CEMENT AND OTHER MATERIALS USED IN MAKING CONSTRUCTION BLOCKS, AND FOR OTHER PURPOSES—NAMELY, INSULATING MATERIAL, AS PLASTER, AS A MORTAR, AND AS A MOISTURE REPELLANT. HIGGINS INDUSTRIES, INC., New Orleans, La., assignor to Higgins Resources, Inc., New Orleans, La., a corporation of Louisiana.

Original filed Apr. 22, 1946, under the act of 1905; amended to application under act of 1946, May 7, 1948, Serial No. 500,857. Published Jan. 18, 1949. Class 12.

510,169. TOBACCO POUCHES, CIGAR, CIGARETTE, AND PIPE CASES, AND LEATHER-COVERED HUMIDORS IN THE NATURE OF A HUMIDIFIER FOR TOBACCO PRODUCTS. ROGERS IMPORTS INC., New York, N. Y.

Original filed May 24, 1946, under the act of 1905; amended to application under act of 1946, Dec. 29, 1947, Serial No. 502,717. Published Jan. 25, 1949. Class 8.

510,170. PLASTIC MEMBERS FORMED BY EXTRUSION IN THE FORM OF RIGID OR SEMI-RIGID SHEETS, ETC. AMERICAN EXTRUDED PRODUCTS CO., Hollywood, Calif.

Original filed June 10, 1946, under the act of 1905; amended to application under act of 1946, Oct. 17, 1947, Serial No. 503,543. Published Feb. 22, 1949. Class 1.

510,171. COSMETICS—NAMELY, TALCUM POWDER, BABY POWDER, SACHET POWDER, DEODORANT CREAM, ETC. MORTON MANUFACTURING CORPORATION, also doing business as Blair of Virginia, Lynchburg, Va.

Original filed July 1, 1946, under the act of 1905; amended to application under act of 1946, July 27, 1948, Serial No. 504,921. Published Feb. 8, 1949. Class 6.

510,172. DOMESTIC COAL, GAS, AND OIL FIRED HEATING FURNACES, HEATING BOILERS, AND AIR CONDITIONERS—NAMELY, STEAM, HOT WATER, AND FORCED AIR HEATING SYSTEMS INCLUDING AIR FILTERS AND HUMIDIFIERS. THATCHER FURNACE COMPANY, Garwood, N. J.

Original filed July 10, 1946, under the act of 1905; amended to application under act of 1946, Feb. 4, 1948, Serial No. 505,367. Published Jan. 18, 1949. Class 34.

510,173. GAS CONVERSION BURNER FOR ORDINARY HOUSE HEATING FURNACES ORIGINALLY DESIGNED FOR BURNING SOLID FUEL, AND PARTS THEREOF. NORMAN PRODUCTS COMPANY, Columbus, Ohio.

Original filed Sept. 12, 1946, under the act of 1905; amended to application under act of 1946, Sept. 25, 1947, Serial No. 508,915. Published Jan. 18, 1949. Class 34.

510,174. GRANULAR SOAP. OVERTON CHEMICAL COMPANY, Sumner, Iowa.

Original filed Oct. 16, 1946, under the act of 1905; amended to application under act of 1946, Mar. 6, 1948, Serial No. 510,973. Published Jan. 11, 1949. Class 4.

510,175. MECHANICAL TOYS—NAMELY, POWER CRANES, POWER SHOVELS, SHOVEL DERRICKS, AND CLAM SHELL DERRICKS. BRENNER MANUFACTURING COMPANY, St. Louis, Mo.

Original filed Nov. 1, 1946, under the act of 1905; amended to application under act of 1946, Sept. 20, 1947, Serial No. 511,859. Published Jan. 11, 1949. Class 22.

510,176. OPHTHALMIC LENSES FOR OPTICAL PURPOSES. THE WHITE-HAINES OPTICAL COMPANY, Columbus, Ohio.

Original filed Nov. 19, 1946, under the act of 1905; amended to application under act of 1946, July 5, 1947, Serial No. 512,885. Published Feb. 15, 1949. Class 26.

510,177. COMMERCIAL REFRIGERATORS—NAMELY, DISPLAY AND STORAGE CASES, REFRIGERATED SERVICE BARS, REACH-IN REFRIGERATORS, DAIRY REFRIGERATORS, FROZEN FOOD REFRIGERATORS, AND FLORAL REFRIGERATORS. THE WARREN COMPANY, INC., Atlanta, Ga.

Original filed Nov. 26, 1946, under the act of 1905; amended to application under act of 1946, Sept. 3, 1947, Serial No. 513,283. Published Jan. 25, 1949. Class 31.

510,178. COMMERCIAL REFRIGERATORS—NAMELY, DISPLAY AND STORAGE CASES, REFRIGERATED SERVICE BARS, REACH-IN REFRIGERATORS, DAIRY REFRIGERATORS, FROZEN FOOD REFRIGERATORS, AND FLORAL REFRIGERATORS. THE WARREN COMPANY, INC., Atlanta, Ga.

Original filed Nov. 29, 1946, under the act of 1905; amended to application under act of 1946, Sept. 3, 1947, Serial No. 513,483. Published Jan. 25, 1949. Class 31.

510,179. COMMERCIAL REFRIGERATORS—NAMELY, DISPLAY AND STORAGE CASES, REFRIGERATED SERVICE BARS, REACH-IN REFRIGERATORS, DAIRY REFRIGERATORS, FROZEN FOOD REFRIGERATORS, AND FLORAL REFRIGERATORS. THE WARREN COMPANY, INC., Atlanta, Ga.

Original filed Dec. 5, 1946, under the act of 1905; amended to application under act of 1946, Sept. 3, 1947, Serial No. 513,789. Published Jan. 25, 1949. Class 31.

510,180. HEAD WARMERS FORMED OF FABRIC OR THE LIKE AND ADAPTED TO BE WORN WHILE SLEEPING. EDWARD C. HEMPHILL, doing business as Carnan Company, San Francisco, Calif.

Original filed Dec. 18, 1946, under the act of 1905; amended to application under act of 1946, Feb. 4, 1948, Serial No. 514,473. Published Jan. 18, 1949. Class 39.

510,181. GAS WATER HEATERS. SOUTHWESTERN HEATER CORPORATION, Hillsboro, Tex.

Original filed Jan. 14, 1947, under the act of 1905; amended to application under act of 1946, Dec. 1, 1947, Serial No. 515,724. Published Jan. 18, 1949. Class 34.

510,182. METALLIC AND NON-METALLIC PISTON RINGS AND ROD PACKING. DOUBLE SEAL RING COMPANY, Fort Worth, Tex.

Original filed Jan. 18, 1947, under the act of 1905; amended to application under act of 1946, July 16, 1948, Serial No. 515,944. Published Feb. 8, 1949. Class 35.

510,183. CONCENTRATED SOAP. SUGAR BEET PRODUCTS COMPANY, INC., Saginaw W. S., Mich.

Original filed Jan. 20, 1947, under the act of 1905; amended to application under act of 1946, Dec. 15, 1947, Serial No. 516,585. Published Feb. 15, 1949. Class 4.

510,184. COMMERCIAL REFRIGERATORS. TYLER FIXTURE CORPORATION, Niles, Mich.

Original filed Feb. 3, 1947, under the act of 1905; amended to application under act of 1946, Aug. 22, 1947, Serial No. 516,875. Published Jan. 11, 1949. Class 3.

510,185. ROLLED AND EXTRUDED NON-FERROUS TUBING. AMPCO METAL, INC., Milwaukee, Wis.

Original filed Feb. 13, 1947, under the act of 1905; amended to application under act of 1946, July 5, 1947, Serial No. 517,895. Published Jan. 25, 1949. Class 13.

510,186. PROPELLERS FOR TOY POWER DRIVEN AIRPLANES. ROBERT J. ROBERTS, doing business as Bob Roberts, Gary, Ind.

Original filed Mar. 17, 1947, under the act of 1905; amended to application under act of 1946, Nov. 14, 1947, Serial No. 519,138. Published Feb. 1, 1949. Class 22.

510,187. STERLING SILVER COSTUME JEWELRY. LANG JEWELRY COMPANY, Providence, R. I.

Original filed Apr. 2, 1947, under the act of 1905; amended to application under act of 1946, Mar. 16, 1948, Serial No. 520,044. Published Feb. 8, 1949. Class 28.

510,188. WINE. PADRE VINEYARD COMPANY, Los Angeles and Cucamonga, Calif.

Original filed Apr. 7, 1947, under the act of 1905; amended to application under act of 1946, Nov. 17, 1947, Serial No. 520,294. Published Jan. 11, 1949. Class 47.

510,189. THERMALLY INSULATED METAL PIPE. ALBERT A. DURANT, Honolulu, Territory of Hawaii.

Original filed Apr. 15, 1947, under the act of 1905; amended to application under act of 1946, Oct. 20, 1947, Serial No. 520,688. Published Feb. 1, 1949. Class 13.

510,190. COOKING RANGES—FOR GAS, OIL, COAL, AND WOOD. SOUTHERN STOVE WORKS, INC., Richmond, Va.
Original filed Apr. 22, 1947, under the act of 1905; amended to application under act of 1946, Dec. 16, 1947, Serial No. 521,157. Published Feb. 1, 1949. Class 34.

510,191. CHEMICAL PREPARATION OF ACIDIC REACTION APPLIED TO METALS IN SURFACE FINISHING PROCESSES. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa.
Original filed Apr. 28, 1947, under the act of 1905; amended to application under act of 1946, Mar. 4, 1948, Serial No. 521,423. Published Feb. 1, 1949. Class 6.

510,192. BALLS OF SYNTHETIC RUBBER OR OTHER RESILIENT MATERIAL FOR USE ON FLOUR SIFTING SCREENS AS SCREEN CLEANING DEVICES. R. J. S. CARTER, Minneapolis, Minn.
Original filed Apr. 30, 1947, under the act of 1905; amended to application under act of 1946, July 9, 1947, Serial No. 521,521. Published Jan. 18, 1949. Class 4.

510,193. SYNTHETIC DETERGENTS OF THE ALKYL ARYL SULFONATE TYPE FOR GENERAL CLEANSING PURPOSES. PACIFIC COAST BORAX COMPANY, Los Angeles, Calif.
Original filed May 3, 1947, under the act of 1905; amended to application under act of 1946, Sept. 16, 1947, Serial No. 521,819. Published May 18, 1948. Class 4.

510,194. STRAIN GAGES AND ELECTRO-MECHANICAL MEASURING APPARATUS IN WHICH STATIC AND DYNAMIC PHENOMENA ARE TRANSMITTED BY STRAIN GAGES. ARNOLD U. HUGGENBERGER, Zurich, Switzerland.
Original filed May 6, 1947, under the act of 1905; amended to application under act of 1946, July 5, 1947, Serial No. 521,976. Published Feb. 15, 1949. Class 26.

510,195. STRAIN GAGES AND ELECTRO-MECHANICAL MEASURING APPARATUS IN WHICH STATIC AND DYNAMIC PHENOMENA ARE TRANSMITTED BY STRAIN GAGES. ARNOLD U. HUGGENBERGER, Zurich, Switzerland.
Original filed May 6, 1947, under the act of 1905; amended to application under the act of 1946, July 5, 1947, Serial No. 521,977. Published Feb. 15, 1949. Class 26.

510,196. ALL KINDS OF CREAMS AND OILS FOR BEAUTIFYING THE SKIN. LANCÔME S. A., Paris, France.
Original filed May 9, 1947, under the act of 1905; amended to application under act of 1946, Sept. 18, 1947, Serial No. 522,143. Published Feb. 22, 1949. Class 6.

510,197. ALL KINDS OF BEAUTY CREAMS AND OILS FOR THE SKIN, INCLUDING NOURISHING AND SOOTHING CREAMS, OILS, AND LOTIONS FOR THE SKIN. LANCÔME S. A., Paris, France.
Original filed May 9, 1947, under the act of 1905; amended to application under act of 1946, Sept. 18, 1947, Serial No. 522,146. Published Feb. 8, 1949. Class 6.

510,198. PHOTOGRAPHIC DEVELOPER. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo.
Original filed May 16, 1947, under the act of 1905; amended to application under act of 1946, July 5, 1947, Serial No. 522,519. Published Jan. 25, 1949. Class 6.

510,199. AMMONIUM THIOSULFATE FIXING BATH COMPOSITIONS TO BE USED IN THE DEVELOPMENT OF PAPER PRINTS, FILMS, AND PLATES. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo.
Original filed May 16, 1947, under the act of 1905; amended to application under act of 1946, July 5, 1947, Serial No. 522,524. Published Feb. 15, 1949. Class 6.

510,200. SURFACE ACTIVE AGENT FOR ADDITION TO BLEACHING AND CLEANING PREPARATIONS FOR THE PURPOSE OF DECREASING SURFACE TENSION, INTERFACIAL TENSION, AND TO PROMOTE PENETRATION OF AQUEOUS SOLUTIONS. PACIFIC CHEMICAL COMPANY, Los Angeles, Calif.
Original filed June 12, 1947, under the act of 1905; amended to application under act of 1946, Dec. 18, 1947, Serial No. 524,077. Published Feb. 1, 1949. Class 6.

510,201. OPTICAL GOODS—NAMELY, SPECTACLES, GOGGLES, LENSES, SUN GLASSES, EYE SHADES, FRAMES, MOUNTINGS, AND PARTS THEREOF. CHARLES FOSTER & CO., New York, N. Y., assignor to Charles Foster & Co., Inc., New York, N. Y., a corporation of New York.
Original filed June 27, 1947, under the act of 1905; amended to application under act of 1946, Aug. 16, 1947, Serial No. 524,968. Published Feb. 15, 1949. Class 26.

510,202. STEEL WINDOWS AND DOORS, REINFORCING COMMODITIES—NAMELY, REINFORCING STEEL BARS, ETC. SOULE STEEL COMPANY, San Francisco and Los Angeles, Calif., Portland, Oreg., and Houston, Tex.
Filed July 5, 1947, Serial No. 527,479. Published Jan. 11, 1949. Class 12.

510,203. STOVE PIPE CONNECTOR. JACKES-EVANS MANUFACTURING COMPANY, St. Louis, Mo.
Filed July 5, 1947, Serial No. 527,701. Published Feb. 1, 1949. Class 34.

510,204. STRINGS FOR TENNIS, BADMINTON, AND SQUASH RACKETS. ARMOUR AND COMPANY, Chicago, Ill.
Filed July 5, 1947, Serial No. 527,767. Published Jan. 18, 1949. Class 22.

510,205. GOLF BALLS. THE WORTHINGTON BALL COMPANY, Elyria, Ohio.
Filed July 5, 1947, Serial No. 527,858. Published Jan. 11, 1949. Class 22.

510,206. STRINGS FOR TENNIS, BADMINTON, AND SQUASH RACKETS. ARMOUR AND COMPANY, Chicago, Ill.
Filed July 5, 1947, Serial No. 527,870. Published Jan. 18, 1949. Class 22.

510,207. SUDSING CLEANER, CLEANSER, AND DETERGENT. THE HEWITT SOAP COMPANY, INC., Dayton, Ohio.
Filed July 5, 1947, Serial No. 528,042. Published Jan. 18, 1949. Class 4.

510,208. QUICK-ACTING, SELF-LOCKING FASTENERS AND FASTENER PARTS AND ACCESSORIES—NAMELY, FASTENER STUDS, FASTENER SPRINGS, FASTENER GROMMETS, AND FASTENER RECEPTACLES. DUO FASTENER CO., INC., West Islip, N. Y.
Filed July 9, 1947, Serial No. 528,197. Published Feb. 15, 1949. Class 13.

510,209. GAS FIRED UNITS FOR CENTRAL HEATING OF RESIDENTIAL STRUCTURES. MECHANICAL HOME SYSTEMS, INCORPORATED, Chicago, Ill.
Filed July 9, 1947, Serial No. 528,216. Published Jan. 18, 1949. Class 34.

510,210. STEAM HEATING APPARATUS COMPRISING CONTROL EQUIPMENT, VALVES, STRAINERS, PUMPS, UNIT HEATERS, CONVECTORS, FITTINGS, HEATING ELEMENTS, AND AIR CONDITIONER, ETC. C. A. DUNHAM COMPANY, Chicago, Ill.
Filed July 10, 1947, Serial No. 528,264. Published Feb. 1, 1949. Class 34.

510,211. LIGHTWEIGHT METALLIC STRUCTURAL SHAPES AND JOIST HANGERS FOR GENERAL USE IN BUILDING CONSTRUCTION. JONES & LAUGHLIN STEEL CORPORATION, Pittsburgh, Pa.
Filed July 12, 1947, Serial No. 528,479. Published Feb. 8, 1949. Class 12.

510,212. STRINGS FOR BEADS. ARMOUR AND COMPANY, Chicago, Ill.
Filed July 16, 1947, Serial No. 528,669. Published Feb. 22, 1949. Class 28.

510,213. STRINGS FOR BEADS. ARMOUR AND COMPANY, Chicago, Ill.
Filed July 16, 1947, Serial No. 528,673. Published Feb. 22, 1949. Class 28.

510,214. TEMPERATURE REGULATING APPARATUS ACTUATED BY A THERMOSTAT WHICH IS A PART OF IT, FOR CONTROLLING THE ADMISSION OF COMBUSTION AIR TO THE COMBUSTION CHAMBER OF A HEATING APPARATUS. CALORIC STOVE CORPORATION, Philadelphia, Pa.
Filed July 16, 1947, Serial No. 528,690. Published Feb. 8, 1949. Class 26.

510,215. OIL FILTERS USED AS ACCESSORIES FOR INTERNAL COMBUSTION ENGINES. DE LUXE PRODUCTS CORPORATION, La Porte, Ind.
Filed July 17, 1947, Serial No. 528,775. Published Jan. 11, 1949. Class 31.

510,216. LEATHER FOR SHOE SOLES. J. GREENBAUM TANNING CO., Chicago, Ill.
Filed July 21, 1947, Serial No. 529,054. Published Feb. 1, 1949. Class 1.

510,217. WATER SOLVENT, DEHYDRATING AGENT, RUST INHIBITOR, CORROSION INHIBITOR, AND ANTIFREEZE AGENT. WINKENWERDER & LADD, INC., Chicago, Ill.
Filed July 23, 1947, Serial No. 529,328. Published Feb. 8, 1949. Class 6.

510,218. COTTON AND RAYON FIBRES. JOSEPH BANCROFT & SONS CO., Rockford, Wilmington, Del.
Filed July 24, 1947, Serial No. 529,347. Published Feb. 1, 1949. Class 1.

510,219. TOY COMPRISING A CIRCULAR ELEMENT OR DISK HAVING MEANS FOR SAILING IT THROUGH THE AIR. L. K. B. MANUFACTURING CO., Minneapolis, Minn.
Filed July 24, 1947, Serial No. 529,392. Published Jan. 11, 1949. Class 22.

510,220. DOLLS. ALMA LE BLANC, sometimes doing business as Lenna Lee's Tiny Town Dolls, San Francisco, Calif.
Filed July 24, 1947, Serial No. 529,394. Published Jan. 11, 1949. Class 22.

510,221. WELL SCREENS. HOWARD SMITH CO., Houston, Tex.
Filed July 24, 1947, Serial No. 529,413. Published Feb. 1, 1949. Class 13.

510,222. SYNTHETIC RESINOUS PLASTIC COMPOSITION IN SHEET FORM USED FOR VARIOUS MANUFACTURING PURPOSES IN THE ARTS. THE HARVIO COMPANY, Boston, Mass.
Filed July 25, 1947, Serial No. 529,461. Published Feb. 1, 1949. Class 1.

510,223. LOTION FOR THE HAIR. A. C. HYND CORP., Tipp City, Ohio.
Filed July 26, 1947, Serial No. 529,649. Published Feb. 1, 1949. Class 6.

510,224. LOTION FOR THE HAIR. A. C. HYND CORP., Tipp City, Ohio.
Filed July 26, 1947, Serial No. 529,650. Published Feb. 1, 1949. Class 6.

510,225. METALLIC SHUTTERS—NAMELY, VENETIAN BLINDS MOUNTED EXTERNALLY ON OPENINGS OF BUILDINGS, SUCH AS WINDOWS, DOORS, AND PORCHES. TASCO CORPORATION, doing business as Outside Venetian Blind Company, Dallas, Tex., assignor to J. E. Bush, Dallas, Tex., doing business as Outside Venetian Blind Company.
Filed July 28, 1947, Serial No. 529,828. Published Feb. 1, 1949. Class 12.

510,226. JEWELRY FOR PERSONAL WEAR—NAMELY, EXPANSION, CHARM AND IDENTIFICATION BRACELETS, ETC. PAKULA AND COMPANY, Chicago, Ill.
Filed July 29, 1947, Serial No. 529,924. Published Feb. 8, 1949. Class 28.

510,227. MAGNESIA-SILICA GEL CATALYST USED IN THE CATALYTIC CRACKING OF HYDROCARBONS. THE DAVISON CHEMICAL CORPORATION, Baltimore, Md.
Filed July 30, 1947, Serial No. 529,969. Published Jan. 18, 1949. Class 6.

510,228. GEL CATALYST IN SPHEROIDAL FORM USED IN THE CATALYTIC CRACKING OF HYDROCARBONS. THE DAVISON CHEMICAL CORPORATION, Baltimore, Md.
Filed July 30, 1947, Serial No. 529,970. Published Jan. 18, 1949. Class 6.

510,229. CASEMENT WINDOW ADJUSTERS, WINDOW CATCHES, HAND RAIL BRACKETS, CUPBOARD AND TRANSOM CATCHES, ETC. THE H. B. IVES COMPANY, New Haven, Conn.
Filed July 30, 1947, Serial No. 530,004. Published Feb. 1, 1949. Class 13.

510,230. SENSITIZED PHOTOGRAPHIC PAPER. CHARLES BRUNING COMPANY, INC., New York, N. Y.
Filed Aug. 1, 1947, Serial No. 530,165. Published Feb. 8, 1949. Class 26.

510,231. AUTOMATIC HUMIDIFIERS, AND AUTOMATIC AIR RELIEF VALVES, SUCH AS FOR USE WITH STEAM AND HOT WATER RADIATORS. MAID-O'-MIST, INC., Chicago, Ill.
Filed Aug. 1, 1947, Serial No. 530,228. Published Jan. 18, 1949. Class 34.

510,232. DECORATIVE WALL FINISH OR CALCIMINE IN THE NATURE OF A PAINT. M. EWING FOX CO., INC., New York, N. Y.
Filed Aug. 2, 1947, Serial No. 530,302. Published Jan. 11, 1949. Class 16.

FOR PROCESSED GALVANIZED FERROUS METAL SHEETS.
Claims use since Jan. 1, 1941.

Reg. No. 439,694. Registered July 13, 1948. LANSDOWNE STEEL & IRON COMPANY, Morton, Pa., a corporation of Pennsylvania. Republished by registrant.

LANSCO

FOR METAL FORGINGS.
Claims use since September 1927.

CLASS 15

OILS AND GREASES

Reg. No. 301,513. Registered Mar. 7, 1933. SHELL OIL COMPANY, San Francisco, Calif. Republished by Shell Oil Company, Incorporated, San Francisco, Calif., a corporation of Virginia.

Silver SHELL

FOR LUBRICATING OILS.
Claims use since Oct. 13, 1932.

Reg. No. 324,610. Registered May 21, 1935. SHELL OIL COMPANY, San Francisco, Calif. Republished by Shell Oil Company, Incorporated, San Francisco, Calif., a corporation of Virginia.

SHELL DIESELINE

FOR LIQUID FUEL FOR COMPRESSION IGNITION MOTORS.
Claims use since Dec. 10, 1934.

Reg. No. 332,292. Registered Feb. 11, 1936. SHELL OIL COMPANY, San Francisco, Calif. Republished by Shell Oil Company, Incorporated, San Francisco, Calif., a corporation of Virginia.

GOLDEN SHELL

FOR LUBRICATING OIL.
Claims use since August 1914.

Reg. No. 383,815. Registered Dec. 24, 1940. SHELL OIL COMPANY, INCORPORATED, San Francisco, Calif., a corporation of Virginia. Republished by registrant.

SHELLECTRIC

FOR LUBRICATING OIL AND TRANSFORMER OIL, I. E., OIL USED WITH OIL IMMERSED TRANSFORMERS.
Claims use since May 23, 1940.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 67,886. Registered Feb. 25, 1908. THE CLEVELAND VARNISH COMPANY, Cleveland, Ohio. Republished by John Lucas & Company, Incorporated, Philadelphia, Pa., a corporation of Maryland.

PERMANERE

FOR VARNISHES, JAPANS, VARNISH-OILS, LACQUERS, ENAMELS, AND PAINTS.
Claims use since 1880.

Reg. No. 213,941. Registered June 8, 1926. JOHN LUCAS & COMPANY INCORPORATED, Philadelphia, Pa. Republished by John Lucas & Company, Incorporated, Philadelphia, Pa., a corporation of Maryland.

VELVO-TONE

FOR VARNISHES, STAINS, AND FINISHES.
Claims use since March 1910.

Reg. No. 221,440. Registered Nov. 30, 1926. JAMES B. SIPE & CO., Pittsburgh, Pa., a corporation of Delaware. Republished by registrant.

FLATOIL

The word "Flatoil" is disclaimed apart from the mark as shown.
FOR LIQUID CONTAINING OIL FOR USE IN MIXING PAINTS.
Claims use since October 1916.

Reg. No. 256,526. Registered May 21, 1929. THE FOY PAINT COMPANY, Cincinnati, Ohio. Republished by The Foy Paint Company, Inc., Cincinnati, Ohio, a corporation of Ohio.

PERMADURA

FOR READY-MIXED PAINTS, STAINS, ENAMELS, AND VARNISHES IN WHITE AND DIFFERENT COLORS IN READY-MIXED FORM.
Claims use since Aug. 15, 1912.

Reg. No. 305,819. Registered Aug. 22, 1933. HALL HARDWARE COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

SUPERMIX

All the wording except "Supermix" is disclaimed apart from the mark as shown.

FOR DRY, PASTE, AND READY-MIXED PAINTS AND VARNISHES.

Claims use since Jan. 21, 1932.

Reg. No. 316,965. Registered Sept. 11, 1934. INTERNATIONAL PAINT COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

International

FOR READY MIXED PAINTS, DRY PAINTS, PASTE PAINTS, COLORS IN OIL, VARNISHES, ANTI-CORROSIVE PAINTS, ANTI-FOULING PAINTS, PAINT ENAMELS, PAINT AND VARNISH REMOVER, COPPER PAINTS, SHELLACS, AND DRIERS.

Claims use since on or about the month of September 1926.

CLASS 19

VEHICLES

Reg. No. 247,992. Registered Oct. 9, 1928. BOEING AIRPLANE COMPANY, Seattle, Wash. Republished by Boeing Airplane Company, Seattle, Wash., a corporation of Delaware.

BOEING

FOR AIRPLANES AND STRUCTURAL PARTS.

Claims use since Oct. 17, 1926.

Reg. No. 248,512. Registered Oct. 23, 1928. HOUDE ENGINEERING CORPORATION, Buffalo, N. Y. Republished by Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan.

HOUDAILLE

FOR AUTOMOBILE ACCESSORIES—NAMELY, SHOCK ABSORBERS.

Claims use since November 1918.

Reg. No. 248,513. Registered Oct. 23, 1928. HOUDE ENGINEERING CORPORATION, Buffalo, N. Y. Republished by Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan.

HOO-DYE

FOR AUTOMOBILE ACCESSORIES—NAMELY, SHOCK ABSORBERS.

Claims use since about September 1930.

Reg. No. 439,448. Registered June 29, 1948. IRVING SIMON, doing business as Alltex Products Company, New York, N. Y. Republished by registrant.

NATIONAL

FOR VEHICULAR BRAKE BLOCKS.

Claims use since on or about May 1, 1935.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 322,066. Registered Feb. 26, 1935. CONDENSER CORPORATION OF AMERICA, Jersey City, N. J., a corporation of New York. Republished by registrant, present address South Plainfield, N. J.

"MIKE"

FOR ELECTROSTATIC CONDENSERS.

Claims use since January 1932.

Reg. No. 368,825. Registered July 4, 1939. SIGNAL ENGINEERING & MFG. CO., New York, N. Y., a corporation of Massachusetts. Republished by registrant.

Wheelock STANDARDS

The word "Standards" is disclaimed apart from the mark as shown.

FOR ELECTRIC SIGNALLING APPARATUS, COMPRISING BELLS, RELAYS, HORNS, CIRCUIT CONTROLLING DEVICES, FIRE ALARM APPARATUS, AND TELEPHONE SIGNAL CALL CODE SETTING DEVICES AND SIGNAL CODE TRANSMITTING DEVICES.

Claims use since Jan. 1, 1937.

Reg. No. 431,183. Registered July 15, 1947. PHOTOSWITCH INCORPORATED, Cambridge, Mass., a corporation of Massachusetts. Republished by registrant.

P

The lining on the drawing is a part of the design of the mark and is not intended to represent color.

FOR ELECTRICAL SIGNAL AMPLIFYING AND/OR RELAYING APPARATUS OPERATED BY PHENOMENA DETECTED PHOTO-ELECTRICALLY OR BY MEANS OF OTHER VARIABLE IMPEDANCE ELEMENTS SUCH AS ELECTRICAL PROBE ELEMENTS IN CONTACT WITH OR DISPOSED TO COME INTO CONTACT WITH AN AGENCY TO BE CONTROLLED; ELECTRICAL PROBE ELEMENTS AND SIMILAR APPARATUS FOR USE WITH SUCH RELAYING AND/OR SIGNAL AMPLIFYING APPARATUS AND ELECTRICALLY OPERATED ILLUMINATION SOURCES FOR USE WITH SAID SIGNAL AMPLIFYING AND/OR RELAY APPARATUS WHEN PHOTOELECTRICALLY OPERATED, THE FOREGOING APPARATUS BEING USED FOR CONTROLLING THE CONDITION OF A CONTROLLED CIRCUIT IN ACCORDANCE WITH THE CONDITION OF A DETECTED PHENOMENON AFFECTING THE OPERATING MEANS; ELECTRICAL TIME METERING DEVICES FOR PROVIDING AN ELECTRICAL SIGNAL OR SIGNALS OF A PREDETERMINED TIME DURATION OR DURATIONS SINGLY OR IN A PREDETERMINED SEQUENCE IN RESPONSE TO A CHANGE IN THE CONDITION OF THE INPUT CIRCUIT THEREOF, SAID TIME METERING DEVICES BEING INTENDED FOR USE ALONE OR IN COOPERATION WITH SAID FOREGOING RELAYING AND/OR AMPLIFYING APPARATUS; AND ELECTRICAL EQUIPMENT HOUSINGS AND PARTS AND ACCESSORIES FOR THE FOREGOING APPARATUS AND DEVICES.

Claims use since June 15, 1939.

Reg. No. 437,320. Registered Mar. 16, 1948. ALBERT & J. M. ANDERSON MANUFACTURING COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant.

EITHEREND

FOR ELECTRICAL CONNECTORS BOTH SINGLE POLE AND MULTI-POLE, AND HOUSINGS AND CASINGS THEREFOR.

Claims use since on or about Aug. 1, 1935.

Reg. No. 438,127. Registered Apr. 6, 1948. RADIRON CORPORATION, Miamisburg, Ohio, a corporation of Ohio. Republished by registrant.

ROSEBUD

FOR ELECTRIC TOASTERS.

Claims use since Jan. 21, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 252,134. Registered Jan. 22, 1929. S. L. ALLEN & CO., INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR COASTING SLEDS.

Claims use since December 1905.

Reg. No. 400,657. Registered Mar. 23, 1943. SARGO COMPANY, New York, N. Y., a firm. Republished by registrant.

The descriptive word "Ball" and the representation of a ball and checker are disclaimed apart from the mark as shown.

FOR GAME COMPRISING A BOARD AND MOVABLE PLAYING PIECES.

Claims use since Oct. 1, 1942.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 63,609. Registered July 2, 1907. LINK-BELT COMPANY, Chicago, Ill., Philadelphia, Pa., and Indianapolis, Ind., a corporation of Illinois. Republished by registrant, present address Chicago, Ill.

LINK BELT

FOR ENDLESS CHAIN CONVEYING MACHINERY, ENDLESS CHAIN ELEVATING MACHINERY, ENDLESS CHAIN COAL HANDLING MACHINERY, SHEAVES, PULLEYS, AND BEARINGS.

Claims use since 1880.

Reg. No. 65,366. Registered Sept. 24, 1907. SMITH CANNERY MACHINES COMPANY, Seattle, Wash., a corporation of Washington. Republished by registrant.

IRON CHINK

FOR FISH-DRESSING MACHINES.

Claims use since September 1903.

Reg. No. 70,860. Registered Oct. 13, 1908. HENRY DISSTON & SONS, INCORPORATED, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

BEAVER

FOR SAWS.

Claims use since July 1905.

Reg. No. 71,983. Registered Dec. 29, 1908. HENRY DISSTON & SONS, INCORPORATED, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

MONARCH

FOR SAW SETS.
Claims use since 1896.

Reg. No. 107,494. Registered Dec. 7, 1915. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FLINT-RIM

FOR CAST-METAL MACHINERY-WHEELS.
Claims use since middle of May 1908.

Reg. No. 206,187. Registered Nov. 24, 1925. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HEXTOP

FOR GREASE CUPS.
Claims use since about July 1, 1925.

Reg. No. 237,280. Registered Jan. 3, 1928. UNITED HOISTING CO., INC., New York, N. Y., a corporation of New York. Republished by registrant, present address Englewood, N. J.

THE PULSE OF THE JOB

FOR HOISTS AND CONCRETE MIXERS.
Claims use since about Mar. 1, 1922.

Reg. No. 261,120. Registered Sept. 3, 1929. NORDBERG MANUFACTURING COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

SYMONS CONE CRUSHER

The use of the name "Symons" and the words "Cone Crusher" and the representation of a cone are disclaimed apart from the mark as shown.

FOR CRUSHING MACHINERY FOR USE IN CRUSHING COAL OR STONE, CEMENT AND GRAVEL, AND PARTICULARLY ADAPTABLE FOR USE IN MINING, CEMENT MANUFACTURE, AND ROCK AND GRAVEL WORK.
Claims use since before Dec. 12, 1928.

Reg. No. 262,949. Registered Oct. 29, 1929. INCLINATOR COMPANY OF AMERICA, Harrisburg, Pa., a corporation of Pennsylvania. Republished by registrant.

INCLIN-ATOR

FOR ELEVATORS AND PARTS OF ELEVATORS.
Claims use since June 29, 1925.

Reg. No. 268,302. Registered Mar. 11, 1930. INDUSTRIAL SUPPLY COMPANY, INC., Salt Lake City, Utah, a corporation of Utah. Republished by registrant.

D-PEND-ON

FOR PORTABLE HAND FIRE EXTINGUISHERS, SAWS, KNIVES, FILES, TWIST DRILLS, REAMERS, LATHES, DRILL AND PLANER CHUCKS, TAPS, AND DIES, AND GRINDING WHEELS EXCLUSIVE OF THE GRINDING STONES.
Claims use since June 1, 1928.

Reg. No. 279,454. Registered Jan. 13, 1931. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

AUTOVEYOR

FOR CONVEYORS, TROLLEY CONVEYORS, CONVEYOR SYSTEMS, AND PARTS THEREOF.
Claims use since about June 1, 1930.

Reg. No. 283,646. Registered June 2, 1931. CRESCENT TOOL COMPANY, Jamestown, N. Y., a corporation of New York. Republished by registrant.

CRESTOLOY

FOR HAND TOOLS—NAMELY, WRENCHES, PLIERS, SNIPS, NAIL-PULLERS, SCRATCH AWLS, SCREW DRIVERS, PUNCHES, DRILLS, CHISELS, AND ELECTRICIAN'S CONNECTORS.
Claims use since on or about Sept. 27, 1930.

Reg. No. 299,305. Registered Nov. 29, 1932. CRESCENT TOOL COMPANY, Jamestown, N. Y., a corporation of New York. Republished by registrant.

CRESCENT

FOR WRENCHES AND PARTS, PLIERS, SNIPS, HACK SAW FRAMES AND BLADES, SCREW DRIVERS, TOOL KITS FOR HAND TOOLS SUCH, FOR EXAMPLE, AS A WRENCH, PLIERS, SCREW DRIVER, AND THE LIKE, AND SCRATCH AWLS.
Claims use since 1907.

Reg. No. 303,158. Registered May 16, 1933. CRANE CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

CRANE

FOR AUTOMATIC WATER SYSTEMS, COMPRISING SHALLOW WELL AND DEEP WELL PUMPS AND RECIPROCATING, PLUNGER, TURBINE, ROTARY, CENTRIFUGAL, AND VACUUM PUMPS, ALL MADE OF IRON, BRASS, GLASS, MARBLE, WOOD, OR EARTHENWARE.
Claims use since March 1926.

Reg. No. 322,473. Registered Mar. 5, 1935. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

P.I.V.

FOR VARIABLE SPEED TRANSMISSIONS OR GEARS.
Claims use since about Sept. 10, 1930.

Reg. No. 322,475. Registered Mar. 5, 1935. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

V.R.D.

FOR VARIABLE SPEED TRANSMISSIONS OR GEARS.
Claims use since about Mar. 1, 1934.

Reg. No. 336,862. Registered July 21, 1936. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CIRCULINE

FOR MACHINERY, APPARATUS AND PARTS THEREOF FOR TREATING AND HANDLING SEWAGE AND SLUDGE.
Claims use since Dec. 1, 1935.

Reg. No. 345,412. Registered Apr. 27, 1937. GEO. J. MEYER MANUFACTURING CO., Cudahy, Wis., a corporation of Wisconsin. Republished by registrant.

Cataract

FOR MACHINES TO PASTEURIZE OR COOK FOOD OR BEVERAGES.
Claims use since Apr. 25, 1936.

Reg. oN. 345,614. Registered May 4, 1937. GEO. J. MEYER MANUFACTURING CO., Cudahy, Wis., a corporation of Wisconsin. Republished by registrant.

Dumore

FOR MACHINES TO FILL BOTTLES AND CANS, OR MACHINES TO PASTEURIZE FOOD, MACHINES TO RINSE CONTAINERS PRIOR TO FILLING, AND OTHER MACHINES USED TO PRESERVE FOODS AND BEVERAGES.
Claims use since Jan. 1, 1928.

Reg. No. 420,713. Registered Apr. 30, 1946. LINK-BELT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ROTO-LOUVRE

FOR ROTARY HORIZONTAL DRUM TYPE DRYERS AND COOLERS THROUGH WHICH FLOWABLE SOLIDS AND TREATMENT GASES ARE PASSED IN HEAT EXCHANGE RELATION.
Claims use since Apr. 12, 1937.

Reg. No. 439,374. Registered June 22, 1948. THE OILGEAR COMPANY, Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

CYCLEMATIC

FOR VERTICAL BROACHING MACHINES.
Claims use since Sept. 17, 1946.

Reg. No. 439,393. Registered June 22, 1948. B. JADOW, INC., New York, N. Y., a corporation of New York. Republished by registrant.

Vigor

FOR JEWELERS' AND WATCHMAKERS' TWEEZERS, PLIERS, SCREWDRIVERS, SAWS, AND HAND CONSTRUCTING AND DISASSEMBLING TOOLS AND INSTRUMENTS—NAMELY, FRICTION PRESSING TOOLS, GLASS CUTTING TOOL, GRAVERS FOR WATCHMAKERS AND JEWELERS, HAIR SPRINGS COLLET REMOVING TOOL, JEWEL SETTING TOOL, PIVOTING TOOL, POISING TOOL, WINDING TOOL FOR MOVEMENT, AND FOR WATCHES AND WATCH PARTS.
Claims use since March 1928.

Reg. No. 439,709. Registered July 13, 1948. PREMIER APPLIANCE CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

FIRE WARDEN

The word "Fire" and the representation of the goods are disclaimed apart from the mark as shown.

FOR MECHANICAL FIRE ALARM BELL RINGING DEVICES.

Claims use since on or about November 1946.

CLASS 25

LOCKS AND SAFES

Reg. No. 430,722. Registered June 24, 1947. THE EAGLE LOCK COMPANY, Terryville, Conn., and Chicago, Ill., a corporation of Connecticut. Republished by registrant.

EAGLE

FOR CABINET LOCKS—NAMELY, WARDROBE, DOOR, AND CUPBOARD LOCKS; NIGHT LATCHES, SUITCASE AND TRUNK LOCKS, COMBINATION LOCKS, PADLOCKS, DESK LOCKS, KEYS FOR SUCH LOCKS, AND SUITCASE CATCHES.

Claims use since Jan. 1, 1945.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Reg. No. 207,686. Registered Jan. 5, 1926. WILSON-MAULDEN CO., INC., New York, N. Y. Republished by Wilson Mechanical Instrument Company, Inc., New York, N. Y., a corporation of New York.

BRALE

FOR HARDNESS TESTER PENETRATORS.

Claims use on or since May 14, 1925.

Reg. No. 234,624. Registered Nov. 1, 1927. AUTOMATIC TICKET REGISTER CORPORATION, New York, N. Y. Republished by General Register Corporation, Long Island City, N. Y., a corporation of New York.

Cancellograph

FOR TICKET PRINTING, REGISTERING, AND ISSUING MACHINES.

Claims use since June 29, 1927.

Reg. No. 438,747. Registered May 11, 1948. SANBORN COMPANY, Cambridge, Mass.; a corporation of Massachusetts. Republished by registrant.

PERMAPAPER

FOR HEAT-SENSITIVE RECORDING PAPER.

Claims use since Nov. 9, 1946.

CLASS 27

HOROLOGICAL INSTRUMENTS

Reg. No. 270,508. Registered May 6, 1930. FORSTNER CHAIN CORPORATION, Irvington, N. J., a corporation of New Jersey. Republished by registrant.

FORSTNERS

FOR WATCHES, CLOCKS, AND PARTS THEREOF.

Claims use since Dec. 16, 1929.

Reg. No. 359,291. Registered Aug. 9, 1938. FORSTNER CHAIN CORPORATION, Irvington, N. J., a corporation of New Jersey. Republished by registrant.

KOMFIT

FOR WATCHES AND WATCH CASES.

Claims use since Sept. 10, 1937.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Reg. No. 97,079. Registered May 19, 1914. WM. A. ROGERS, LIMITED, New York and Niagara Falls, N. Y. Republished by Oneida Ltd., Oneida, N. Y., a corporation of New York.

1881 ROGERS

FOR SILVER-PLATED FLAT AND HOLLOW WARE AND CUTLERY.

Claims use since July 1901.

Reg. No. 144,768. Registered July 19, 1921. FORSTNER CHAIN CORPORATION, Irvington, N. J., a corporation of New Jersey. Republished by registrant.

FOR CHAINS FOR PERSONAL ADORNMENT WHICH ARE MADE OF OR PLATED WITH PRECIOUS METAL.

Claims use since Dec. 1, 1920.

Reg. No. 170,715. Registered July 24, 1923. FORSTNER CHAIN CORPORATION, Irvington, N. J., a corporation of New Jersey. Republished by registrant.

UNION

FOR CHAINS FOR PERSONAL ADORNMENT WHICH ARE MADE OF OR PLATED WITH PRECIOUS METAL.

Claims use since Sept. 1, 1920.

Reg. No. 250,844. Registered Dec. 18, 1928. FULMER & GIBBONS, Philadelphia, Pa. Republished by Fulmer & Gibbons, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

FOR BRACELETS, BROOCHES, BAR PINS, SCARF-PINS, AND RINGS MADE OF PRECIOUS METALS.

Claims use since Feb. 1, 1913.

Reg. No. 356,133. Registered Apr. 12, 1938. FORSTNER CHAIN CORPORATION, Irvington, N. J., a corporation of New Jersey. Republished by registrant.

KOMFIT

FOR WRIST WATCH BRACELETS, WATCH CHAINS, CUFF LINKS, KEY CHAINS, TIE HOLDERS, SHIRT STUDS MADE OF OR PLATED WITH PRECIOUS METAL.

Claims use since September 1937.

Reg. No. 398,027. Registered Oct. 6, 1942. FORSTNER CHAIN CORPORATION, Irvington, N. J., a corporation of New Jersey. Republished by registrant.

F. C. C.

FOR WRIST WATCH BRACELETS, WATCH CHAINS, CUFF LINKS, KEY CHAINS, TIE HOLDERS, SHIRT STUDS, AND ORNAMENTS MADE OF OR PLATED WITH PRECIOUS METAL.

Claims use since 1920.

Reg. No. 435,950. Registered Jan. 20, 1948. BOND DIAMOND COMPANY, New York, N. Y. Republished by Schuman & Donchi, Inc., Newark, N. J., a corporation of New Jersey.

BOND

FOR DIAMONDS AND DIAMOND RINGS.

Claims use since Aug. 4, 1944.

Reg. No. 439,620. Registered July 6, 1948. HOME DECORATORS, INC., Newark, N. Y., a corporation of New York. Republished by registrant.

STATELY

FOR STERLING SILVER FLAT TABLEWARE.

Claims use since May 5, 1947.

Reg. No. 439,621. Registered July 6, 1948. ONEIDA LTD., Sherrill and Oneida, N. Y., a corporation of New York. Republished by registrant, present address Oneida, N. Y.

PACIFIC

FOR SILVERPLATED FLAT TABLEWARE.

Claims use since 1921.

Reg. No. 439,622. Registered July 6, 1948. ONEIDA LTD., Sherrill and Oneida, N. Y., a corporation of New York. Republished by registrant, present address Oneida, N. Y.

Paramount

FOR SILVERPLATED FLAT TABLEWARE.

Claims use since 1933.

Reg. No. 439,623. Registered July 6, 1948. ONEIDA LTD., Sherrill and Oneida, N. Y., a corporation of New York. Republished by registrant, present address Oneida, N. Y.

PARK LANE

FOR SILVERPLATED FLAT TABLEWARE.

Claims use since 1936.

CLASS 29

BROOMS, BRUSHES, AND DUSTERS

Reg. No. 438,262. Registered Apr. 18, 1948. ARMSTRONG GROCERY COMPANY, Sharon, Pa., a corporation of Pennsylvania. Republished by registrant.

Baby Rose

FOR BROOMS.

Claims use since 1946.

Reg. No. 439,334. Registered June 22, 1948. THE OSBORN MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

MASTER

FOR BRUSH STRIP.

Claims use since 1939.

CLASS 31

FILTERS AND REFRIGERATORS

Reg. No. 377,413. Registered May 7, 1940. HONAN-CRANE, INC., Lebanon, Ind. Republished by Honan-Crane Corporation, Lebanon, Ind., a corporation of Indiana.

<CRANITE>

The drawing is lined for red.

FOR DIATOMACEOUS EARTH FOR FILTERING PURPOSES.

Claims use since Apr. 11, 1938.

Reg. No. 439,167. Registered June 8, 1948. THE CELLULO COMPANY, Sandusky, Ohio, a corporation of Ohio. Republished by registrant.

CELLULO

FOR FILTERING APPARATUS FOR CLARIFYING AND STERILIZING LIQUIDS OF ALL KINDS, AND ASBESTOS FILTER PADS.
Claims use since Apr. 23, 1920.

CLASS 32

FURNITURE AND UPHOLSTERY

Reg. No. 282,926. Registered May 5, 1931. JAMESTOWN LOUNGE COMPANY, Jamestown, N. Y., a corporation of New York. Republished by registrant.

FEUDAL OAK

The word "Oak" is disclaimed apart from the mark as shown.
FOR LIVING-ROOM, DINING-ROOM, BEDROOM, AND OFFICE FURNITURE.
Claims use since July 31, 1930.

Reg. No. 363,431. Registered Dec. 27, 1938. CAMDEN FURNITURE COMPANY, Camden, Ark., a corporation of Arkansas. Republished by registrant.

THE BETTER FINISH
CAMVENEER

The words "The Better Finish" are disclaimed apart from the mark as shown.
FOR FURNITURE MADE WHOLLY OR PARTLY OF WOOD AND COMPRISING WOODEN BEDS, DRESSING TABLES, CHESTS OF DRAWERS, DRESSING TABLE BENCHES, VANITY TABLES, DRESSERS, CHIFFOROBES, AND NIGHT STANDS.
Claims use since Jan. 21, 1938.

Reg. No. 369,928. Registered Aug. 8, 1939. SUPERIOR FELT & BEDDING COMPANY, Chicago, Ill. Republished by The Englander Company, Inc., Chicago, Ill., a corporation of Delaware.

SANI-SLEEP

SCIENTIFICALLY HYGIENIZED

The words "Scientifically Hygienized" are disclaimed apart from the mark as shown.
FOR MATTRESSES.
Claims use since Sept. 10, 1935.

Reg. No. 417,420. Registered Oct. 30, 1945. CAMDEN FURNITURE COMPANY, Camden, Ark., a corporation of Arkansas. Republished by registrant.

PLASTIPLY

FOR HOUSEHOLD FURNITURE MADE PARTIALLY OR WHOLLY OF PLASTICS—NAMELY, BEDS, DRESSERS, TABLES, DRESSING TABLES, VANITY TABLES, VANITIES, CHESTS OF DRAWERS, BENCHES, CHIFFOROBES, NIGHT STANDS, BUFFETS, CHAIRS, CORNER, BRACKET, AND WALL SHELVES OF THE SUSPENSION TYPE, WALL BRACKETS, DESKS, CABINETS, CLOTHES CABINETS, END TABLES, DINING TABLES AND DINING ROOM CABINETS, CHINA CABINETS AND SERVING TABLES.
Claims use since Apr. 21, 1944.

Reg. No. 438,762. Registered May 11, 1948. TURNER MFG. COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Fashion Plate

The word "Plate" is disclaimed apart from the mark as shown.
FOR WALL MIRRORS.
Claims use since Dec. 13, 1946.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Reg. No. 81,312. Registered Mar. 21, 1911. THE TURNER BRASS WORKS, Sycamore and Chicago, Ill., a corporation of Illinois. Republished by registrant, present address Sycamore, Ill.

TRADE
Double Jet
MARK

FOR GASOLENE-OPERATED TORCHES, BLOWPIPES AND HEATERS, CRUCIBLE-FURNACES, BURNING-KILNS, TINNERS', PLUMBERS', AND CANNERS' FURNACES, LINEMEN'S COMBINATION-FURNACES, BRAZING-FORGES, BLACKSMITHS' FORGES, ILLUMINATING-TORCHES, RAILWAY-JOINT HEATERS, ENAMELING-OVENS, BANDSAW-BRAZING OUTFITS, PORCELAIN-FURNACES, BUNSEN LIGHTS, KEROSENE-OPERATED BRAZERS, AND ALCOHOL-OPERATED BLOWPIPES.
Claims use since the beginning of the year 1894.

Reg. No. 85,526. Registered Feb. 20, 1912. THE TURNER BRASS WORKS, Sycamore and Chicago, Ill., a corporation of Illinois. Republished by registrant, present address Sycamore, Ill.

TRADE MARK
HOT BLAST

FOR GASOLENE-OPERATED TORCHES HAVING A TANK SUITABLE FOR CONTAINING GASOLENE OR ALCOHOL UNDER PRESSURE AND A BURNER HAVING TWO GAS-JETS, ONE OF WHICH IS PROJECTED INTO THE OTHER TO FORM ONE FLAME.
Claims use since the beginning of the year 1894.

Reg. No. 284,823. Registered July 7, 1931. CRANE CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

CRANE

FOR HEATING MATERIALS—NAMELY, BOILERS, RADIATORS, AND WATER HEATERS USING EITHER SOLIDS, LIQUIDS, OR VAPORS AS THE HEATING MEDIUM OR FUEL.
Claims use since May 1, 1925.

Reg. No. 439,300. Registered June 15, 1948. J. L. GILLEN COMPANY, Dowagaic, Mich., a corporation of Michigan. Republished by registrant.

The name "Gillen" is disclaimed apart from the mark as shown. The drawing is lined for black and red.
FOR HOT WATER HEATERS AND FURNACES OPERATED BY FUEL OIL.
Claims use since on or about Dec. 16, 1946.

CLASS 35

FOR WINES.
Claims use since June 18, 1936.

Reg. No. 401,027. Registered Apr. 20, 1943 BIACHGLIA BROTHERS WINE CO., Fresno and Reedley, Calif., a corporation of California. Republished by registrant, present address Fresno, Calif.

WINEDALE

FOR WINES.
Claims use since Dec. 13, 1939.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 42,717. Registered May 31, 1904. DULUTH BREWING & MALTING CO., Duluth, Minn. Republished by Fitger Brewing Company, Duluth, Minn., a corporation of Minnesota.

REX

FOR LAGER-BEER, ALE, PORTER, AND MALT EXTRACT.
Claims use since Aug. 5, 1902.

Reg. No. 307,557. Registered Oct. 31, 1933. THE FITGER COMPANY, Duluth, Minn. Republished by Fitger Brewing Company, Duluth, Minn., a corporation of Minnesota.

FOR MALT BEVERAGES WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since Aug. 5, 1902.

Reg. No. 309,101. Registered Jan. 2, 1934. THE FITGER COMPANY, Duluth, Minn., now by change of name Fitger Brewing Company. Republished by Fitger Brewing Company, Duluth, Minn., a corporation of Minnesota.

The drawing is lined to indicate the color red.
FOR MALT BEVERAGES WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since 1904.

Reg. No. 437,231. Registered Mar. 9, 1948. FITGER BREWING COMPANY, Duluth, Minn., a corporation of Minnesota. Republished by registrant.

Nordlager

FOR BEER.
Claims use since Aug. 1, 1937.

Reg. No. 439,469. Registered June 29, 1948. ROCHESTER BREWING COMPANY, INC., Rochester, N. Y., a corporation of New York. Republished by registrant.

All wording except "Topper" is disclaimed apart from the mark as shown. The drawing is lined for yellow and brown.
FOR BEER AND ALE.
Claims use since May 13, 1946.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 116,378. Registered Apr. 24, 1917. THE TRIBETTH & GARLAND STORE, Chicago, Ill. Republished by Hillman's, Inc., Chicago, Ill., a corporation of Illinois.

STOP & SHOP

FOR BRANDY, BLENDED WHISKEY, AND STRAIGHT WHISKEY, COCKTAILS, CORDIALS, RUM, GIN, AND VERMUTH.
Claims use since Sept. 15, 1913.

Reg. No. 312,752. Registered May 8, 1934. NEW ENGLAND DISTILLERS, INC., Clinton and Boston, Mass., a corporation of Massachusetts. Republished by registrant, present address Boston, Mass.

The words "London Dry" are disclaimed apart from the mark as shown.
FOR GIN.
Claims use since Dec. 4, 1933.

Reg. No. 321,960. Registered Feb. 19, 1935. NEW ENGLAND DISTILLERS, INC., Clinton, Mass., a corporation of Massachusetts. Republished by registrant, present address Boston, Mass.

EVERETT SPRING

FOR RUM.
Claims use since July 12, 1934.

Reg. No. 339,967. Registered Oct. 27, 1936. H. NAGELE'S MARKET, Manhasset, N. Y., a firm. Republished by registrant.

Stonehill

FOR GIN, WHISKEY, BRANDY, RUM, BOTTLED COCKTAILS, AND ALCOHOLIC CORDIALS.
Claims use since June 18, 1936.

Reg. No. 438,926. Registered May 18, 1948. RESEARCH CHEMICAL COMPANY, Seattle, Wash., a corporation of Washington. Republished by registrant.

The word "Mix" is disclaimed apart from the mark as shown.
FOR LEMON CONCENTRATE FOR BAR MIXES.
Claims use since July 1, 1946.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 385,365. Registered Feb. 25, 1941. FREDERIC BLANK & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

fabron

FOR FABRIC BASE WALL COVERINGS.
Claims use since Sept. 7, 1940.

Reg. No. 392,754. Registered Jan. 13, 1942. FREDERIC BLANK & CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

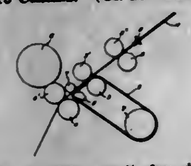
detron

FOR COVERINGS IN THE NATURE OF TREATED FABRICS ADAPTED TO BE SECURED ADHESIVELY TO WALLS (FABRIC BASE WALL COVERINGS).
Claims use since Apr. 25, 1941.

Reg. No. 400,060. Registered Feb. 16, 1943. SEA ISLAND MILLS, INCORPORATED, New York, N. Y., a corporation of New York. Republished by registrant.

The words "Water Proof Plus Water-Repellent" and "Cloth" are disclaimed apart from the mark as shown.
FOR WATER REPELLENT AND WATERPROOF FABRICS—NAMELY, FABRICS HAVING A COATING OF VINYL ACETATE, PYROXYLIN, OR OTHER WATERPROOFING MATERIAL.
Claims use since July 10, 1941.

REISSUES



MAY 31, 1949

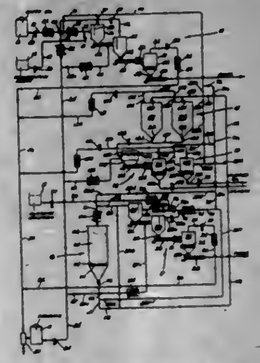
23,117
TEXTILE MACHINE UNIT FOR DRAFTING FIBERS

Frank H. Carman, Washington, D. C., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

Original No. 2,287,786, dated June 30, 1942, Serial No. 305,429, November 21, 1939. Application for reissue March 16, 1943, Serial No. 479,677

15 Claims. (Cl. 19—131)

8. A textile machine unit for drafting fibers having a fiber contacting surface layer consisting of a vulcanized resilient composition including a vulcanizing agent such as sulphur comprising as an essential constituent a synthetic rubber composed of acrylic nitrile and butadiene copolymer.



23,118
PROCESS FOR REFINING ANIMAL AND VEGETABLE OILS

Frederick J. Ewing, Arcadia, Calif., assignor, by mesne assignments, to Benjamin Clayton, Houston, Tex., doing business as Refining, Unincorporated

Original No. 2,288,441, dated June 30, 1942, Serial No. 274,649, May 19, 1939. Application for reissue September 17, 1948, Serial No. 49,761

19 Claims. (Cl. 260—428.5)

1. The process of removing gummy materials from crude fatty material containing the same which comprises the steps of mixing said crude fatty material with liquefied normally gaseous hydrocarbon to dissolve the fatty material and precipitate gummy material, and separating said precipitated gummy material from said fatty material, said steps being carried on in the

presence of said hydrocarbon and under sufficient pressure to maintain said hydrocarbon in liquid form.

23,119
OIL-SOLUBLE DRIER METAL SALT COMPOSITIONS

Alfred Fischer, Bronx, N. Y., assignor to Nuodex Products Co., Inc., Elizabeth, N. J., a corporation of New York

No Drawing. Original No. 2,456,824, dated December 21, 1948, Serial No. 682,586, July 10, 1946. Application for reissue January 25, 1949, Serial No. 72,741

6 Claims. (Cl. 106—310)

1. A composition of matter consisting essentially of an oil-soluble drier metal salt and a lesser amount of an alkyl acid phosphate wherein the alkyl group embodies not more than 8 carbon atoms.

PLANT PATENTS

GRANTED MAY 31, 1949

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

341
ROSE PLANT

Josephine D. Brownell, Little Compton, R. I.

Application April 22, 1946, Serial No. 663,868

1 Claim. (Cl. 47—61)

The rose plant variety substantially as shown and described, characterized by its resistance to winter injury, its intensity and continuity of florescence, its long keeping character of the color of its petals and the form of its petals and the form of the flower, variable within certain definite limits, its color as described all in association with its habit of branching from bloom stems and from the base and blooming in hybrid tea manner, and its degree of freedom from premature defoliation by black-spot during the growing season.

342
ROSE PLANT

Josephine D. Brownell, Little Compton, R. I.

Application April 22, 1946, Serial No. 663,869

1 Claim. (Cl. 47—61)

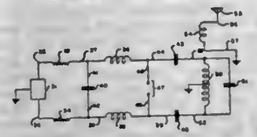
The hardy hybrid *Rosa wichuraiana* hybrid tea, rose plant variety substantially as herein disclosed, characterized by its resistance to winter injury, its mild pleasing fragrance, with leaflets of a brilliant green with form and color of bloom and plant substantially as described and shown, and with petals that recurl outward in a unique degree of tightness and form, of unique form of growth and very great degree of inflorescence and continuity thereof.

843
ROSE PLANT
Josephine D. Brownell, Little Compton, R. I.
Application April 22, 1946, Serial No. 663,873
1 Claim. (Cl. 47—61)

The variety of rose plant substantially as shown and described, characterized by its resistance to winter injury, its intensity and continuity of florescence, its pleasing fragrance, the color of its flower, the long keeping character of the color of its petals, their notably velvety luster and the form of its petals and the form of the flower, variable within certain definite limits, its character of long holding that form, all in association with its habit of branching from bloom stems and from the base and blooming in the hybrid tea manner and its freedom from defoliation by black-spot during the growing season.

844
ROSE PLANT
Roy L. Byrum, Richmond, Ind., assignor to Joseph H. Hill Company, Richmond, Ind., a corporation of Indiana
Application October 3, 1947, Serial No. 777,713
1 Claim. (Cl. 47—61)

A new and distinct variety of hybrid tea rose plant, characterized as to novelty by its habit of growth; its extra large size flowers of deep brilliant red; and qualities especially suitable for greenhouse purposes, substantially as shown and described.

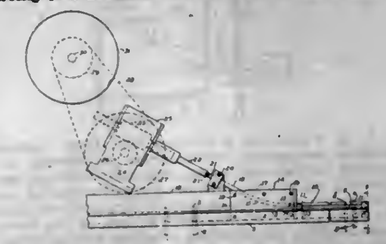


PATENTS

GRANTED MAY 31, 1949

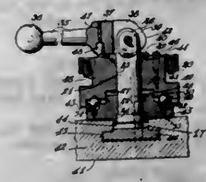
2,471,400
PREPARATION OF 1-NAPHTHYLAMINE-2-SULFONIC ACID
Robert Carland Conn, Bound Brook, and Robert Herbert Weiss, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 21, 1947, Serial No. 756,339
3 Claims. (Cl. 260—508)

1. In the preparation of sodium 1-naphthylamine-2-sulfonate from sodium naphthionate, the improvement which comprises heating sodium napthionate in an inert, neutral, water-immiscible, volatile, organic solvent having a boiling point not exceeding 150° C., to temperatures between 190° and 250° C., under pressure, the said solvent being selected from the class consisting of benzene, and the alkyl and halogen substituted benzenes having a boiling point not exceeding 150° C.



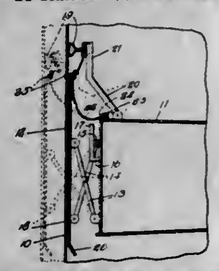
2,471,401
NEUTRODYNING FOR SHORT WAVES
Georges Ahier and Emile Touraton, Paris, France, assignors to International Standard Electric Corp., New York, N. Y., a corporation of Delaware
Application March 20, 1947, Serial No. 735,908
In France June 18, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires June 18, 1965
7 Claims. (Cl. 250—17)

1. A radio transmitter of the class described employing a spark gap, a series resonant primary circuit connected to said spark gap, a parallel resonant secondary circuit, and electrostatic coupling means for coupling said primary to said secondary.



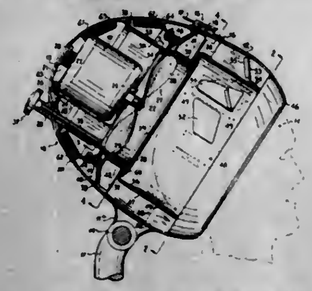
2,471,402
PISTON RING GAP-ALIGNING DEVICE
Albert H. Bates, Rockford, Ill.
Application April 30, 1945, Serial No. 591,141
13 Claims. (Cl. 193—43)

4. A ring gap aligning device for use in the manufacture of split piston rings and the like comprising, in combination, an elongated slide bar for slidable suspension support of a plurality of rings by their gap portions while disposed face to face, said slide bar having a vertical portion projecting upwardly between the gap portions to guide the rings in their sliding movement and maintain the gaps aligned, a rotary aligning shaft supported above and close to the top of said vertical portion and in the same vertical plane therewith, and power operable means for turning said shaft including a flexible shaft extending upwardly at an acute angle from one end of said aligning shaft, said flexible shaft being of a diameter small enough to pass readily



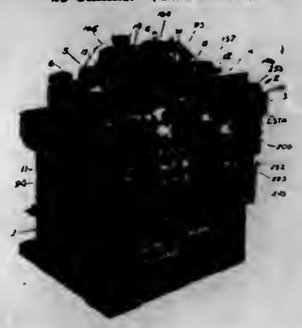
through the gaps in the rings, whereby the aligned rings will not be obstructed by said flexible shaft in their sliding movement along said slide bar.

2,471,403
TURRET-TYPE TOOL POST
Gordon J. Benes, Chicago, Ill., assignor to Enco Mfg. Co., Chicago, Ill.
Application February 14, 1944, Serial No. 522,334
3 Claims. (Cl. 29—48)



1. A tool-holding turret for lathes and like machines comprising a base attachable on the tool support of the machine, a post rising from the center of the base, a tool-holding headpiece mounted on the base, said headpiece being vertically perforated for the passage and upward projection of said post and rotatable about the same, an arm carried by the projecting part of the post in a horizontal position and having means to clamp the headpiece to the base when the arm is moved to vertical position, other means in part carried by the arm and in part by the headpiece to rotate the same when the arm is turned in a substantially horizontal plane about the post, said arm being pivoted to said projecting part by straddling the same, said clamping means being cams formed endwise on the straddling portions, the headpiece having a depression around the post defined by an inclined annular wall, and a removable wear-absorbing conical ring on the headpiece around the post and seating in said depression, said cams bearing down on the ring when the arm is moved as stated to depress the headpiece.

2,471,404
SEAL FOR FLOATING ROOFS
Irving E. Boberg, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application November 23, 1945, Serial No. 630,469
14 Claims. (Cl. 220—26)



1. In a seal for a floating roof tank, sealing means comprising a hanger bar hingedly attached to the edge of the floating roof and extending upwardly, a shoe hingedly carried by the upper end of said hanger bar and adapted substantially to fit against the shell of the tank, a positioning bar hingedly attached to the hanger bar a a point substantially midway between the ends of the hanger bar and the positioning bar with one end of the positioning bar contacting the side of the roof and being permissibly movable thereagainst and the other end movably contacting the shoe, means for holding said ends of the positioning bar in said contacting relationship, and a secondary seal attached to the top end of the shoe and adapted to contact the shell of the tank, said secondary seal being carried by a second hanger bar hingedly attached to the floating roof and extending upwardly toward the shell of the tank.

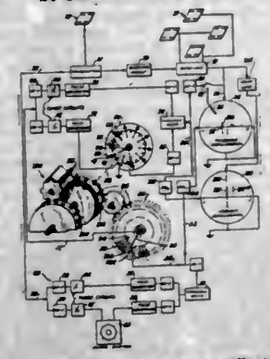
2,471,405
HAIR DRIER
Ralph K. Boyer, Cleveland, Ohio, assignor to Designers for Industry, Inc., Cleveland, Ohio, a corporation of Ohio
Application July 10, 1947, Serial No. 760,049
18 Claims. (Cl. 34—100)

1. In a hair drier of the character described, a housing having inner and outer shells defining substantially coaxial passages, said housing having a front opening adapted to receive a portion of a head of hair to be treated and said passages communicating adjacent said front opening and also communicating at a point spaced from said front opening so as to provide a path for circulating air within the housing for contact with said hair, the said outer shell having spaced openings therethrough, air flow creating means including a rotor having air impelling portions operable to produce air circulation in the respective coaxial passages, and an adjustable flow controlling means intermediate said shells for controlling the second-mentioned communication between said passages, the said air flow controlling means including a portion for channeling the flow of air from at least one of the openings in the outer shell to one of said passages and the flow of air through the other of said passages to a different one of said openings in the outer shell.

2,471,406
GRINDING MACHINE
Guenther Brinkmann, Detroit, Mich., assignor to Ex-Cell-O Corporation, Detroit, Mich., a corporation of Michigan
Application September 28, 1944, Serial No. 556,114
23 Claims. (Cl. 51—105)

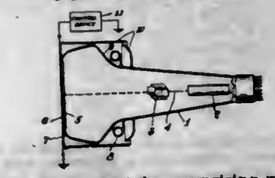
1. In a machine tool, in combination with a base and a machine element slidably mounted on said base, spaced positive stops for limiting respectively the forward and rear limit positions of said element, an elongated intermediate stop member slidably disposed for engagement at one end with the forward limit stop, an intermediate abutment member mounted on said element and arranged for engagement at opposite ends respectively with said rear limit stop and the other end of said intermediate stop member, said intermediate stop member comprising a nonrotatable sleeve nut having an abutment plate at one end and an adjusting screw threaded into the other end of said nut and having an abutment shoulder at said other end for engagement with said forward limit stop, means extending through said forward limit stop in driving engagement with said screw for adjusting the latter, whereby to vary the overall length of said intermediate stop member to vary the permissable range of movement of said element.

2,471,407
CHUCK
Josef Budig, Elmont, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application April 17, 1945, Serial No. 588,758
4 Claims. (Cl. 279—33)



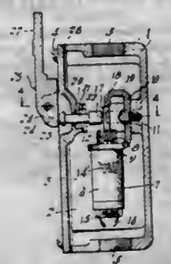
1. A flared article chuck assembly comprising three resiliently mounted rollers each roller be-

ing attached to a sleeve pivotally mounted on a supporting block which has a hollow pinion shaft depending therefrom and a pinion gear keyed to said pinion shaft, there being a ring gear common to all of the pinions, and means for simultaneously operating all of the rollers to swing them out of and into position with regard



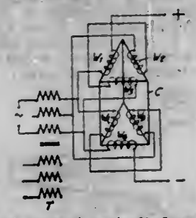
to the flange of a flared article, said means comprising a worm which cooperates with a gear attached to one of the pinions whereby when the worm is rotated it rotates the gear and pinion attached thereto and through the ring gear the other two rollers are swung at the same time and to the same degree to thereby center said flared article.

2,471,408
RADIO OBSTACLE DETECTION APPARATUS
Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, a corporation of Delaware
Application October 5, 1942, Serial No. 461,307
20 Claims. (Cl. 343—13)



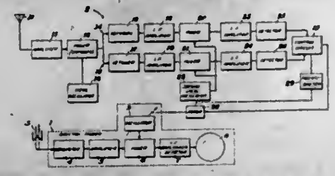
3. A method of producing and effecting movement of a reference indicator along the trace line of an oscillograph, comprising generating two series of pulses, one of said series of pulses being at a given frequency and the second of said series being at a frequency slightly different from said given frequency so that the pulses of the two series beat a given number of pulses apart along one of said series thereby producing an indicator pulse of greater amplitude than the pulses of either series, clipping off the energy of the pulses below the amplitude of the pulses of said series to segregate the peak portion of the indicator pulse, applying the indicator pulse thus segregated to the oscillograph for indicator indication at the trace line thereof, and effecting movement of the indicator pulse by retarding one of said series of pulses.

2,471,409
INDICATING TUBE SYSTEM
Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application September 13, 1945, Serial No. 615,934
4 Claims. (Cl. 250—164)



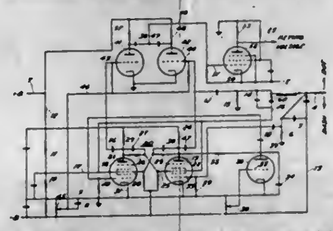
1. A cathode ray tube comprising means producing an electron beam, beam-deflecting means, a transparent surface in the path of said beam, a layer of magnetic particles distributed on said surface normally rendering said surface opaque, and a source of light behind said surface, said particles being conditioned to move in response to the impingement of the beam upon said layer to permit said layer to allow the transmission of light through selected portions of said layer.

2,471,410
BREAKABLE PLATE SWITCH CONTROLLING MECHANISM
Clarence Noel Cahusac, Newark, N. J., assignor to C-O-Two Fire Equipment Co., Newark, N. J., a corporation of Delaware
Application March 27, 1946, Serial No. 657,412
4 Claims. (Cl. 177—372)



1. A control mechanism comprising a housing forming an enclosure for electric switch means, resilient means normally urging the switch from one circuit affecting position to another, holding means to restrain the operation of the switch, breakable means supported by the housing and wholly positioned therein and enclosed thereby, the breakable means operatively connected to the holding means to restrain the operation of the switch, and a breaking member carried in an apertured wall of the housing, the breaking member having an actuating portion extending outwardly from the housing and a breaking portion wholly enclosed within the housing to be actuated to rupture the breakable member, the housing preventing the escape of flying particles of the breakable member upon its rupture.

2,471,411
REACTOR
Per Harry Elias Claesson, Jakobsberg, Sweden
Application January 16, 1945, Serial No. 573,098
In Sweden September 17, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 17, 1963
6 Claims. (Cl. 171—242)

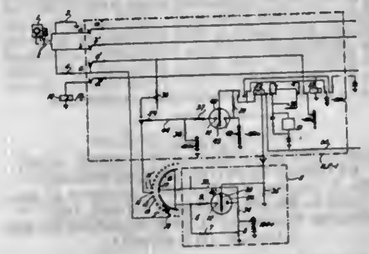


1. A direct current controlled reactor for multiphase current, comprising a saturable core composed of sections forming two closed paths of flux situated in two planes in combination with a plurality of legs connecting respective junctions of adjoining sections of one path with corresponding junctions of the other path, the number of sections being the same for each path, whereby there are formed a plurality of quadrangles each including a pair of legs and a section of each path, a plurality of alternating current phase windings each arranged on one side of a respective quadrangle whereby an alternating flux is induced in said sections and legs, and a plurality of direct current windings arranged on respective sections of at least one of said paths in such a manner that the unidirectional fluxes produced thereby add in the direction of said path but substantially cancel in each of said legs.

2,471,412
FREQUENCY CONTROLLED DIRECTION FINDER
Trevor H. Clark, Boonton, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 10, 1945, Serial No. 621,577
1 Claim. (Cl. 343—113)

In combination, a direction finding receiver for the reception of signals, whose carrier frequency is being varied having an antenna array, a goniometer supplied from said array, a converter stage for said receiver including an oscillator having motor controlled frequency adjusting means, a direction indicating means deriving signal energy from said converter; a control receiver including a converter stage and a local fixed frequency oscillator therefor providing sum and difference side band energy output of the received signal energy and said local oscillator energy frequencies, two channels connected to be supplied from said last named converter stage, one of said channels being tuned to pass the side band of the sum and the other channel the side band of the difference, said channels having asymmetrical resonance characteristics, symmetrical signal translating means for said channels means, a balanced control circuit for said channels, and motor means for controlling the tuning of said first named oscillator controlled from said control circuit.

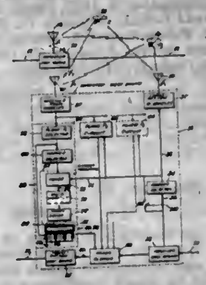
2,471,413
PULSE CODE-SIGNALING SYSTEM
Claud E. Cleeton, Washington, D. C.
Application May 15, 1940, Serial No. 335,315
14 Claims. (Cl. 178—68)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A pulse code-signaling system, comprising a locked electronic relay including two vacuum tubes each having at least two grids, an anode and a cathode; a respective anode resistor connecting each said anode to a common positive supply, a resistor and a capacitor connected in parallel between each said anode and a grid of the other tube whereby when either tube is conducting the potential drop across the respective anode resistor holds the other tube non-conducting, a storage capacitor connected in parallel with one said tube to be charged when said one tube is non-conducting and the other is conducting, a discharge device connected in parallel with said storage capacitor held non-conducting until said storage capacitor reaches a predetermined potential and then becomes conducting to discharge said storage capacitor, means to apply to another grid of said other tube a negative potential when said storage capacitor discharges to render said other tube non-conducting and thereby render said one tube conducting, a first capacitor connected to charge from said supply, a key movable in one direction to discharge said first capacitor, means connecting another grid of said one tube to said first capacitor to apply a negative pulse to said other grid to render said one tube non-conducting when said first capacitor is discharged; two amplifying tubes each having a cathode, a grid and an anode, means to apply a blocking bias to said amplifying tubes, means connecting each said amplifying tube to a respective said relay tube anode whereby when a relay tube is changed from conducting to non-conducting condition a positive pulse is applied to the respectively connected amplifying tube grid to unblock momentarily such tube, a keying tube biased to be conducting, means connected to both amplifying tubes and to said keying tube to apply to said keying tube a pulse to block momentarily said keying tube when either amplifying tube conducts, means to derive a positive keying pulse from said keying tube when blocked, a second capacitor connected to charge from said source, means to connect said second capacitor to said key to discharge said second capacitor when said key is moved in another direction, and means to apply a positive pulse to the grid of one of said amplifying tubes to unblock momentarily such amplifying tube when said second capacitor is discharged, whereby a pair of keying pulses is set up when said key is moved in said one direction and a single pulse when said key is moved in said other direction.

2,471,414
CONDITIONING MINERALS FOR FILM CONCENTRATION
John Dasher, Galveston, Tex., and James E. Norman, Malvern, Ark.
No Drawing. Application January 11, 1945, Serial No. 572,441
3 Claims. (Cl. 209—9)

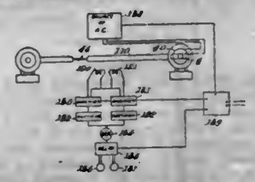
1. The process of concentrating a cassiterite mineral mixture which comprises, forming a thick pulp containing the minerals to be separated, elevating the temperature of the pulp to substantially 50° centigrade, agitating the heated pulp in the presence of a higher fatty acid collector reagent, adding unheated liquid to the hot pulp, and thereafter selectively separating the filmed mineral from the gangue.



2,471,415
TELEPHONE CALLING LINE IDENTIFICATION SYSTEM
Gerald Deakin, New York, N. Y., William Hatton, South Orange, N. J., and Lucien A. B. Cabes, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 30, 1943, Serial No. 485,262
In France May 22, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires May 22, 1960
25 Claims. (Cl. 179—18)

1. In a telecommunication system, a plurality of lines, a discharge device, a switching mechanism, means for operating said mechanism for successively connecting said lines to the discharge device, means operative upon the connection of the device with the calling line for actuating said discharge device, means controlled by the device for stopping said mechanism, and means independent of said switching device for maintaining said discharge device operated.

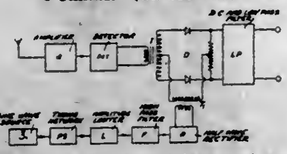
2,471,416
RADIO COMMUNICATING SYSTEM
Edmond M. Deloraine, Paris, France, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 28, 1946, Serial No. 657,710
6 Claims. (Cl. 250—6)



1. A communication system for mobile stations moving along a route comprising: a main station for transmitting a multichannel electromagnetic pulse wave having given reserved pulse channel positions for the insertion of pulses from said mobile stations, means for transmitting said wave along said route including a chain of repeaters for transmitting at least selected channel pulses of said wave to vehicles along said route and receiving pulse waves including signal modulated pulses from said mobile stations, said repeaters including means operative under the control of said selected channel pulses and said pulse waves from said mobile stations for inserting the signal modulated pulse waves from said mobile stations

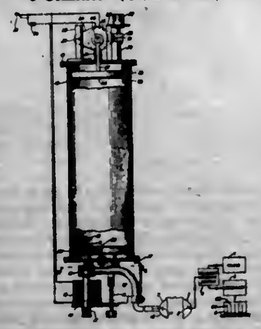
in said given reserved positions on the original pulse wave transmitted from said main station, and means for returning the resulting multichannel signal modulated pulse wave to said main station.

2. The system of claim 1 wherein said main station includes means for producing marker pulses interleaved at regular intervals along said multi-channel pulse waves and said repeaters include means for transmitting to said mobile stations said marker pulses from at least one of said multichannel pulse waves for automatically measuring the distance between said mobile stations and said repeaters.



2,471,417
DEVICE FOR LOCATING FAULTS IN CABLES
Howard S. Dimmick and Felton S. Jenkins, Philadelphia, Pa.
Application December 22, 1943, Serial No. 515,306
4 Claims. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A system for locating faults in a cable comprising, a source of potential varying with time, means for applying said potential between the separate conductors of the cable, fault locating means including two pick-up coils assembled on a non-magnetic ring-shaped core surrounding the cable and spaced along the periphery of the ring so that the angle between the magnetic axes is substantially a right angle, means for moving the cable relative to and in inductive relation to the pick-up coils, separate amplifying means con-

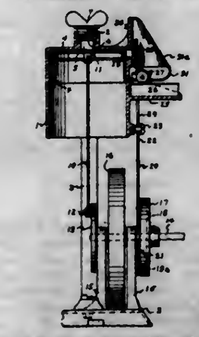


nected to the output of each coil, rectifying means connected to the output of each amplifying means and indicating means responsive to the sum of the outputs of the rectifying means.

2,471,418
INTERFERENCE REDUCING RADIO IMPULSE RECEIVER
Charles William Earp, London W. C. 2, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application September 9, 1942, Serial No. 457,786
In Great Britain January 17, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires January 17, 1961
4 Claims. (Cl. 250—20)

1. System for the demodulation of a carrier wave present in the form of pulses occurring at a given rate of repetition, said pulses being modulated in respect to one of their characteristics for the conveyance of intelligence, comprising means for detecting the received carrier wave in respect to said pulses, a source for providing a comparison wave having substantially the same repetition frequency and phase as the pulses of said carrier wave, a second detector circuit for said signal conveying pulses, means for differentially modulating said signal pulses by the pulses of said comparison wave, whereby a resultant pulse wave is obtained having an improved signal to noise ratio and having said given repetition frequency, and means for filtering out said repetition frequency for application to a utilization circuit.

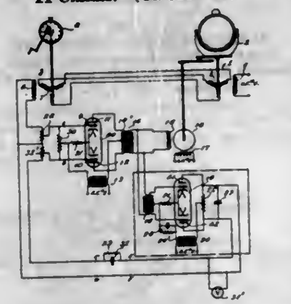
2,471,419
TUNABLE RESONANT CAVITY WITH ADJUSTABLE WALLS
William A. Edson, New York, N. Y., and Walter F. Kannenberg, Lyndhurst, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 7, 1944, Serial No. 543,830
5 Claims. (Cl. 178—44)



4. A cylindrical resonance chamber having two plane interior walls at opposite ends of the chamber, one of said walls being mounted on the chamber for motion in a direction perpendicular to its plane into positions such as to maintain its interior surface parallel to its original position, the opposite plane wall having a pivotal mounting with respect to said chamber, and means for adjusting the plane of said opposite wall into parallelism with the first wall.

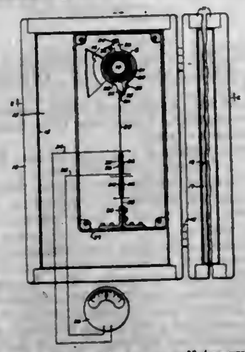
2,471,420
COLLAPSIBLE STEAM TABLE
Lauren N. Elkin, United States Army, Oakland, Calif.
Application May 24, 1945, Serial No. 595,621
6 Claims. (Cl. 126—33)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A portable knockdown steam table comprising a rectangular steam chest of sheet metal; a plurality of spaced studs at the bottom of said steam chest; detachable legs apertured to interfit with said studs; a pair of flat sheet metal members so constructed and arranged as to form the end walls of a combustion chamber when said steam table is assembled; a rectangular supporting member for a fire unit, said supporting member being adapted to form the bottom of said combustion chamber when said steam chamber is assembled; and shield means hingedly connected to opposite bottom edges of said steam chest and adapted to lie flat against said steam chest when said steam table is knocked down and to depend downwardly from said steam chest so as to form front and rear walls of said combustion chamber when said steam table is assembled, the shield means forming said front wall being so constructed and arranged as to permit access to said fire unit when said steam table is assembled.



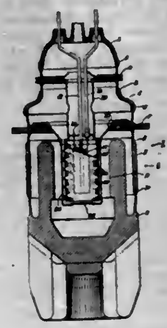
2,471,421
ATMOSPHERIC PRESSURE ENGINE WITH LATERAL SUPPORT FOR BURNERS
Orville Z. Frazier, Elkhart, Ind., assignor of one-half to Harold Andresen, Elkhart, Ind.
Application September 11, 1945, Serial No. 615,676
3 Claims. (Cl. 60—34)

1. In an engine, the combination with a cylinder having an inlet port, a burner in exterior



proximity to said port, a support for said burner laterally carried by the cylinder, a valve member exteriorly slidable on the cylinder to control said port, and an actuator for the valve member apertured to accommodate said support.

2,471,422
POSITION AND SPEED CONTROL SYSTEM
William F. Frost, Williston Park, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application July 9, 1943, Serial No. 494,010
11 Claims. (Cl. 318—30)



1. In a speed control for motors, the combination with an electric motor, means for supplying E. M. F. thereto in periodic pulses of a magnitude and phase variable with the desired speed and direction, an amplifier connected to the winding of the motor in which a counter E. M. F. is generated substantially proportional to its speed, means for rendering said amplifier effective only between said pulse periods, and a feed-back from the output of said amplifier to modify said first means.

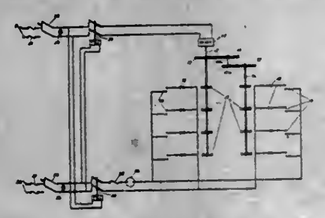
2,471,423
TESTER FOR BEARINGS
Henry Gisser, Philadelphia, Pa.
Application October 30, 1946, Serial No. 706,790
3 Claims. (Cl. 73—9)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A device for testing a small torque occurring at a low speed in an antifriction bearing, including, a casing in which the operative parts of the device are housed, a motor having a shaft for rotating the bearing, an elongated flexible spring having one end fixed in said housing and having its opposite end free and positioned adjacent said shaft so as to be engaged by a head carried by the bearing undergoing test which is mounted on the shaft, a strain responsive unit fastened to said spring so that flexure of the spring varies the resistance of the strain responsive unit, and an electric indicating circuit connected under the control of said strain responsive unit so as to indicate the variation of the resistance of said strain responsive unit.

2,471,424
ELECTRON DISCHARGE DEVICE
John J. Glauber, West Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application October 9, 1944, Serial No. 557,880
17 Claims. (Cl. 250—27.5)

6. An electron discharge device comprising a pair of adjacent electrode structures, one of said structures having a plurality of surfaces, one of said surfaces being more susceptible to injury by arcing thereto than the other of said surfaces, and means reinforcing the other structure, and providing a shorter arcing path between said other structure and the less susceptible surface than between the other structure and the more susceptible surface.

2,471,425
DEVICE FOR CONTROLLING THE RELEASE OF HIGH-PRESSURE FLUID MEDIUMS
Harry C. Grant, Jr., New York, N. Y., and Arthur E. Reichard, North Arlington, N. J., assignors to Specialties Development Corporation, Bloomfield, N. J., a corporation of New Jersey
Application January 13, 1944, Serial No. 518,070
19 Claims. (Cl. 74—479)

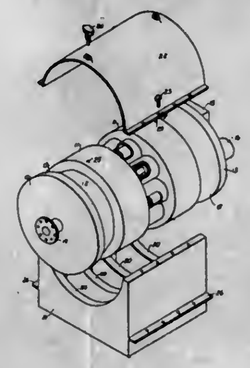


1. In a device of the class described, the combination of a substantially cylindrical casing member having an open end and an annular end face adjacent the open end, a conduit member having a segmental annular base portion secured to said face and having a segmental cylindrical wall portion provided with a tubular conduit portion; and a cover member for said casing having a cylindrical wall provided with an opening for receiving said wall of said conduit

member and having an annular outwardly extending flange adapted to be attached to said

face, said flange having an opening for receiving the base portion of said conduit member.

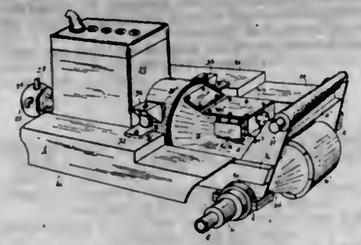
2,471,426
TIME CYCLING DEVICE
Richard H. Grant, Brooklyn, N. Y.
Application October 26, 1945, Serial No. 624,913
2 Claims. (Cl. 161—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A time cycling system for laboratory tests comprising a synchronous motor, a plurality of timing switches adapted to be actuated by said motor, a pair of power input circuits one adapted to drive said motor and the other connected to said timing switches, an output circuit connected to said switches and provided with terminals for connecting apparatus under test, and two relays, each of said relays being energized from a respective one of said input circuits and having contacts arranged to open the other of said input circuits upon deenergization of said respective one of said input circuits.

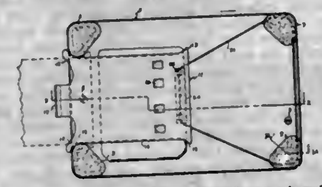
2,471,427
INTERFERENCE REDUCING AMPLITUDE MODULATION DETECTOR
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application April 16, 1943, Serial No. 483,366
20 Claims. (Cl. 250—20)

8. A system for minimizing the effects of distortion of the signal envelopes of amplitude modulated carrier waves comprising a first means to translate the undulations of the amplitude modulated wave into trapezoidal wave form the slope of the side edges of the wave cycles of which correspond proportionately to the amplitude of the corresponding undulations of the carrier wave as they normally occur in absence of interference, means to apply a carrier wave to said first means, and a second means for translating the trapezoidal wave form into pulses which vary in amplitude according to the slopes of the side edges of the wave cycles, said pulses defining signal envelopes substantially identical to the signal envelopes of the carrier wave as it was initially modulated.



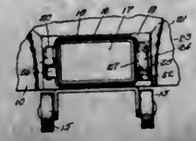
2,471,428
BARREL ENGINE MOUNTING
Edwin S. Hall, Farmington, Conn.
Application August 27, 1945, Serial No. 612,838
6 Claims. (Cl. 121—194)

2. An engine mounting for a barrel engine comprising a box for an oil sump with half-journal bearings formed therein, said engine rotatable bodily in said half-journal bearings, a cover removably fastened to said box and forming therewith a closure about said engine, and means for preventing the rotation of said engine in said mounting when said cover is in place.



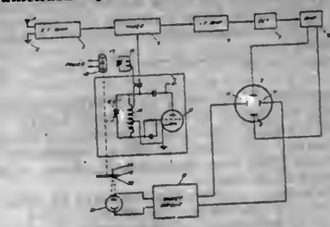
2,471,429
MOUNTING FOR THE DRIVING AND OPERATING MECHANISMS OF INDUSTRIAL TRUCKS
Paul E. Hawkins, Lakewood, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a corporation of Ohio
Application October 4, 1944, Serial No. 557,172
5 Claims. (Cl. 180—54)

1. In a vehicle of the class described, the combination of a chassis, wheels for supporting one end of said chassis, said chassis being provided at its opposite end with spaced collars, a housing having laterally extending tubular members rigidly connected thereto and rotatably fitting said collars and extending therethrough, wheels rotatably mounted on the outer end portions of said tubular members, a differential in said housing drivingly connected to said last mentioned wheels, a unitary power mechanism for driving the last mentioned pair of wheels through said differential, said mechanism consisting of a power plant and a transmission enclosed in a housing, said last mentioned housing being rigidly connected to the front wall of said power plant and said first mentioned housing, and yieldable supporting means



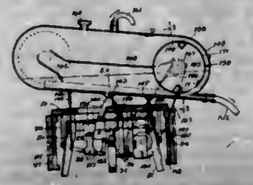
between said mechanism and said chassis, whereby the vibrations of said mechanism about the axis of said driven wheels relative to said chassis are dampened.

2,471,430
TELEPHONE NUMBER LISTING ATTACHMENT
Glenn A. Higbee, Detroit, Mich.
Application January 19, 1945, Serial No. 573,500
19 Claims. (Cl. 40—10.5)



2. In combination with a telephone stand having a plurality of spaced underlying supporting feet, a slide fitted between and guided by two of said feet, stops on said slide engageable with the two last-mentioned feet to limit retraction of the slide, and an extensible resilient connection from the rear end portion of the slide to the stand, yieldably assisting retraction of the slide and coacting with said stops to mount the slide on the stand.

2,471,431
VACUUM CLEANER BAG ATTACHMENT
Frank S. Howard, Chicago, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application November 6, 1946, Serial No. 708,158
9 Claims. (Cl. 285—143)



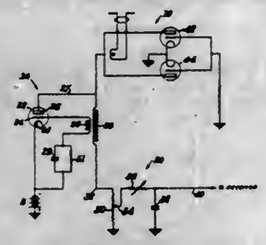
1. In a vacuum cleaner including an exhaust port for dirt-laden air and a removable filter into which said air is exhausted, means for attaching the filter to the port comprising a socket adjacent one side of the port having an opening extending laterally of the longitudinal axis of the port, an annular member attached to the margin of an opening in the filter and arranged to cooperate with said port, an extended portion on one side of the annular member for engagement with said socket, and means for removably attaching the opposite side of the annular member to the vacuum cleaner.

2,471,432
WAVEMETER TO CALIBRATE PANORAMIC RECEIVERS
Lewis F. Jagri, Dayton, Ohio
Application August 11, 1944, Serial No. 549,083
14 Claims. (Cl. 250—39)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a tunable receiver including a tunable self-oscillating circuit to determine the response frequency of said receiver, and an indicator coupled to the output of said receiver for translating a signal to which said receiver is tuned; the combination therewith of means for accurately indicating the frequency of said signal comprising a power-absorbing circuit coupled to said self-oscillating circuit and tunable over the same frequency range as said self-oscillating circuit, said power-absorbing circuit being calibrated in frequency, the degree of coupling between said circuits being such that the amplitude of the output of said self-oscillating circuit is materially reduced when both circuits are tuned to the same frequency.

2,471,433
CLOTHES-WASHING MACHINE
Leo M. Kahn, New York, N. Y.
Application April 16, 1943, Serial No. 483,230
3 Claims. (Cl. 68—23)

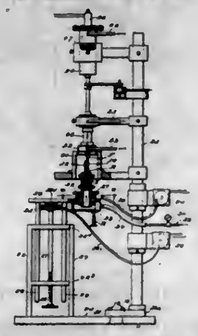
3. In a laundry machine, in combination, a support, an elongated tank rockably mounted on said support, means in said support connected to said tank for rocking said tank, a drum disposed in said tank for rolling movement from one end of the tank to the other as the tank is rocked, means at each end of said tank for limiting the movement of said drum therewithin, means for locking said drum at one end of said tank, and means forming a driving connection between said tank rocking means and said drum for rotating said drum when it is in said locked position.



2,471,434
DRY SALAD DRESSING
Mary H. Kimball, Chastain G. Harrel, and Robert O. Brown, Minneapolis, Minn., assignors to Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware
No Drawing. Application February 18, 1946 Serial No. 648,559
3 Claims. (Cl. 99—144)

1. A dry powdered salad dressing capable of being held in storage for long periods of time without substantial deterioration and capable of being mixed with an aqueous solution to produce a wet salad dressing and consisting of a powdered dried shortening, powdered egg yolk, and powdered condiments, the dried powdered shortening being in particle form and the particles consisting of fat globules encysted in gelatinized flour and sugar.

2,471,435
INGREDIENT FOR PREPARED FOOD MIXES AND PROCESS OF PREPARING SAME
Mary H. Kimball, Chastain G. Harrel, and Robert O. Brown, Minneapolis, Minn., assignors to Pillsbury Mills, Inc., Minneapolis, Minn., a corporation of Delaware
No Drawing. Application February 18, 1946 Serial No. 648,560
6 Claims. (Cl. 99—144)

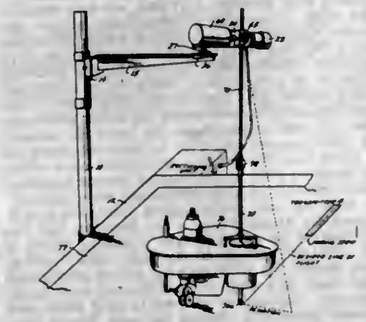


1. As an ingredient for prepared mixes, dry particles consisting of fat globules and egg fractions encysted within a gelatinized starchy substance and sugar.

2,471,436
TRANSMITTER-RECEIVER SYSTEM
Emile Labin, New York, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application January 4, 1943, Serial No. 471,228
1 Claim. (Cl. 250—13)

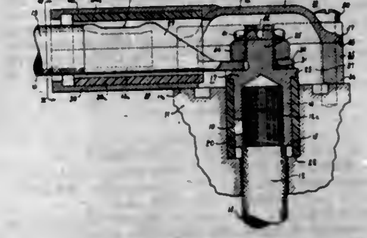
A radio-transmitter-receiver system, comprising a transmitter, an associated receiver, an impulse generator including a thermionic device having a plate, a grid and a cathode, an oscillatory circuit including an inductance connecting said grid and cathode, a circuit for supplying negative blocking pulses to said receiver, including timing elements, an inductance element coupled to said first named inductance for receiving energy therefrom having one end connected to said plate and to said transmitter and the other end to said blocking pulse supplying circuit, whereby corresponding positive pulses are supplied to said transmitter and negative ones to said pulse supplying circuit, said negative pulses being supplied ahead of the corresponding positive ones to block the receiver.

2,471,437
METHOD AND APPARATUS FOR PRODUCING SAPPHIRE HOLLOW ARTICLES
Raymond Holmes Lester, Pittsburgh, Pa., and Melvin Croxall Cannon, Aurora, Ill., assignors to Elgin National Watch Company, Elgin, Ill., a corporation of Illinois
Application April 19, 1945, Serial No. 589,250
5 Claims. (Cl. 49—1)



4. An apparatus for making an annular article of refractory material, which comprises a base, a member rotatably supported on said base and having a refractory portion and means whereby to rotate the same about an axis, a blast burner supported on said base and positioned to deliver a jet in the direction substantially parallel to said axis with said jet impacting the member at a limited region eccentric to said axis, means associated with the blast burner for supplying the same with combustible gas and particles of refractory whereby the jet is a high temperature flame and contains molten particles of the refractory which are deposited upon said refractory portion at said limited region for producing the annular article as the member rotates, said member having an axial aperture, and means whereby to deliver a gas into said aperture so that the gas flows in the direction substantially opposite to the direction of movement of said molten particles in the jet and through the member and the article as the latter is deposited.

2,471,438
PROCESS OF MAKING A FURFURYL ALCOHOL RESIN
Purnal L. McWhorter, Jr., Odessa, Del., assignor to Haveg Corporation, Newark, Del., a corporation of Delaware
No Drawing. Application March 2, 1946, Serial No. 651,673
9 Claims. (Cl. 260—67)



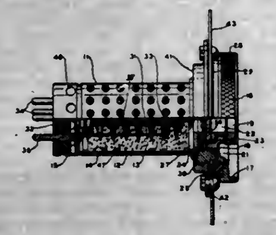
1. In the process of producing an initial, resinous condensation product in which a furfuryl alcohol-containing material selected from the group consisting of furfuryl alcohol and mixtures of furfuryl alcohol and not more than 15% furfural is condensed by acid and heat, the steps which comprise adding a portion of the acid to said furfuryl alcohol-containing material heated to a temperature not appreciably less than 85° C. and below the boiling point of the furfuryl alcohol-containing material, said material being buffer-free and of insufficient acidity to cause liberation of appreciable exothermic heat at said temperature; controlling the amount of acid added and the temperature of the reaction mixture to initiate and continue the condensation of said furfuryl alcohol-containing material with the accompanying liberation of exothermic heat and to establish a boiling point of the reaction mixture below 160° C. by said exothermic heat; reacting the mixture in a boiling condition below 160° C.; and adding the remainder of said acid to continue the reaction mixture in a boiling condition below 160° C. to obtain the initial, resinous condensation product.

2,471,439
DEVICE FOR SIMULATING RUNWAY LOCALIZER AND GLIDE PATH BEAMS FOR TRAINING PURPOSES
Grant C. Melvin, Springfield, Peter C. Jones and Stanley B. White, Dayton, Ohio
Application November 14, 1945, Serial No. 628,646
7 Claims. (Cl. 35—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. A blind landing training device for simulating localizer radio beam reception and for simulating flight at a predetermined rate of descent for use in conjunction with a pilot training unit having an altimeter system for simulating altitude changes and a recorder adapted to traverse a radio beam chart at a predetermined rate proportional to simulated horizontal trainer speed, comprising, a first mechanical linkage system adapted to be actuated by said altimeter system, a second mechanical linkage system adapted to be actuated by motion of said recorder, electrical means actuated by said linkage systems to effect respective voltages proportional to respective degrees of actuation wherein equal degrees of actuation effect equal voltages, means associated with said electrical means including an indicator for comparing said voltages to provide an index of rate of descent with respect to said recorder motion, each linkage system having a member actuatably engaging respective electrical means, said members being arranged to move in synchronization during simulated flight at said predetermined rate of descent and predetermined recorder motion whereby said electrical means are actuated at the same rate to effect equal voltages for providing an on-course indication of said indicator, including additional electrical means actuated by said second mechanical linkage system, said first mentioned electrical means comprising a distance-to-station variocoupler and said additional electrical means comprising a localizer variocoupler, means for mounting the rotational axes of the primaries of said variocouplers perpendicular to each other, said member of said second mechanical linkage system comprising a rod coupled to said recorder and adapted to rotate said primaries in response to motion of said recorder, whereby the comparative degrees of rotation of said primaries is proportional to the components of recorder traverse in directions perpendicular to respective axes, and an electrical circuit including a localizer indicator associated with said localizer variocoupler, and wherein said mounting means comprises a bracket adapted to be secured in fixed position with respect to said radio beam chart and adapted to support said distance-to-station variocoupler, a second bracket rotatably integral with the primary of said last named variocoupler and adapted to rotate said primary, said localizer variocoupler being secured to said latter bracket, a rotatable member secured to said latter bracket and adapted to rotate in a plane perpendicular to the axis of the primary of said localizer variocoupler and being secured to said primary for rotation thereof, said rod being guided for reciprocal motion with respect to said rotatable member whereby angular motion of said rod with respect to the axes of said primaries effects rotation thereof.

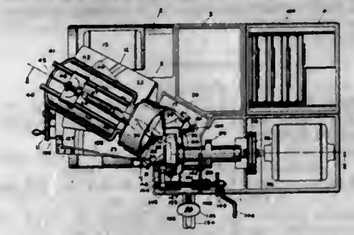
2,471,440
ELECTRICAL CONNECTOR DEVICE
George M. Mierley, Havertown, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 31, 1947, Serial No. 795,083
1 Claim. (Cl. 174—59)

The combination with a casing structure having an opening adapted to contain an inner cable section and associated with an adjacent outer cable section adapted to be disposed along the surface of said casing substantially normal to said inner cable section, of an electrical connector of the character described comprising an insulating bushing fitted into said opening, a binding post member having a sleeve portion received in said bushing and secured over the end of said inner cable, said binding post member having a collar portion abutting said end of said insulator bushing and an outwardly projecting screw-threaded stud portion, a lug secured to the end of said outer cable section and having an off-set terminal portion apertured to receive said stud portion of the binding post member and engageable with said collar portion, locking nut means for detachably securing said lug to said binding post member, a split insulating bushing for protecting said lug portion, a housing carried on said casing structure having a body portion for enclosing said binding post member and a channel portion adapted to underlie the adjacent end of said outer cable, section, a cover section adapted to close said housing section and including a channel portion cooperative with the first-named channel portion for retaining said split bushing



and said lug, and a plurality of fastening means cooperative with said housing and casing structure, said fastening means being equally spaced to facilitate mounting of said housing to accommodate said outer cable section in the most convenient angular position relative to the axis of said binding post.

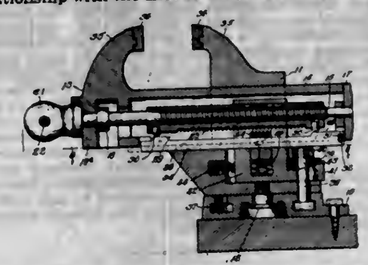
2,471,441
COMBINATION LIPSTICK AND ROUGE CONTAINER
Alfreda Bowman Moore, Chicago, Ill.
Application December 14, 1945, Serial No. 634,939
1 Claim. (Cl. 132—79)



A combination lipstick and rouge container comprising a base, a tubular housing extending upwardly from said base, a lipstick vertically positioned in said tubular housing and adapted to move vertically within said tubular housing for use as it projects out the top thereof, an elongated tubular sleeve cover adapted to telescope said tubular housing, a cup press fitted in the top end of said sleeve cover, a rouge pad in said cup, and a removable cap for the top end of the sleeve cover and the rouge pad, whereby the cap may be removed from the sleeve cover to permit use of the rouge and/or the sleeve cover may be removed from the tubular housing to permit use of the lipstick.

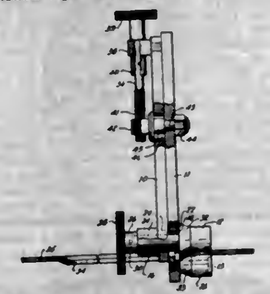
2,471,442
DESICCATOR CARTRIDGE
Frederick P. Morf, Little Silver, N. J.
Application May 18, 1945, Serial No. 594,466
2 Claims. (Cl. 183—4.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A desiccator unit cartridge comprising a perforated cylindrical outer body closed at one end, a cylindrical screen within said outer body and in contact with the latter throughout its length, an inner coaxial cylindrical screen spaced from said first named screen to provide therebetween an annular space for hygroscopic material, electrical heating means in said annular space for reactivating the hygroscopic material, a flanged head at the other end of said body, said flanged head including means for attaching said cartridge to a body to be desiccated.



2,471,443
DRILL GRINDER
Gordon Munro, Bremerton, Wash.
Application October 10, 1945, Serial No. 621,643
12 Claims. (Cl. 51—55)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a drill grinder, a frame, an arm mounted on said frame for substantially planar oscillatory movement, a grinding wheel rotatably mounted on said arm and having a grinding face in a plane substantially parallel to the plane of oscillation of said arm, a lower base supported on said frame for longitudinal adjustment with respect to said grinding wheel, an upper base supported on said lower base for angular adjustment with respect thereto, a yoke mounted on said lower base for pivotal movement on a vertically disposed axis, drill holding means mounted on said yoke for pivotal movement on a horizontally disposed axis and adapted to secure a drill for rotation about its axis in position for the point thereof to contact said grinding wheel, a shaft rotatably mounted in said drill holding means, means for transmitting rotary movement of said shaft to a drill secured in said drill holding means, cam means secured to said shaft and rotatable therewith, means on said upper base with which said cam means is cooperable to swing said yoke about its vertically disposed axis of pivoting and said drill holding means about its horizontally disposed axis of pivoting upon rotation of said shaft, a drive shaft rotatably mounted on said frame, means for transmitting rotary movement of said drive shaft to said first named shaft, and means operatively connecting said drive shaft to said arm to impart oscillatory movement to said arm upon rotation of the drive shaft.

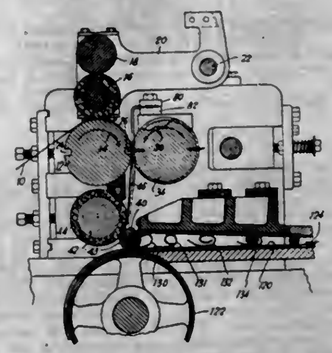


2,471,444
BASE LOCK FOR VISES
Ray M. Nelson, Rock Island, Ill., assignor to Birtman Electric Company
Application May 2, 1945, Serial No. 591,548
10 Claims. (Cl. 81—28)

10. A vise comprising a base, a body portion rotatably mounted on the base, a fixed jaw structure forming a part of said body portion, a movable jaw structure movable within said body portion, a rotatable bolt in said movable jaw structure, a nut in which the bolt turns for clamping the two jaws of the vise together, serrations on said nut, a wedge member attached to the base, a second wedge member movably mounted in the body portion for cooperation with the first wedge member, said first wedge member being rotatable with the body portion of the vise when the two wedge members are out of wedging contact, and a ratchet in said second member movable into and out of contact with the nut and having serrations thereon for cooperation with the serrations provided on the nut whereby the movable second wedge member is moved into wedging relationship with the first as the jaws are tightened

by rotation of the bolt, said movement being caused by movement of the nut along the bolt.

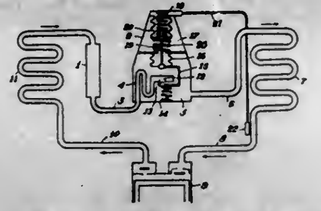
2,471,445
SHEET METAL BENDING TOOL
Thomas J. Nicholas, Boise, Idaho
Application December 28, 1944, Serial No. 570,150
4 Claims. (Cl. 81—15)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A light portable hand-operated tool for bending the edge portion of sheet metal at a slant from the main part thereof, said tool consisting of a pair of supporting members connected to be adjustable longitudinally on each other, a pair of bending members each including cam means thereon, one bending member on each of said supporting members and at least one thereof being rotary, adjusting means including an element on one supporting member and a bolt with an operating knob on the other supporting member and having threaded engagement with said element, for adjusting said supporting members and thereby forcing the bending members upon the sheet metal and enable gradual bending of the edge portion, and hand-engaged and actuated means connected with said rotary bending member to cause it to roll over the sheet metal in performing the edge bending operation.

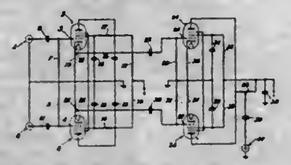
2,471,446
MEANS AND METHOD OF TREATING BARIUM SULFATE WITH CARBONATES
James E. Norman, Birmingham, Ala.
No Drawing. Application June 25, 1946, Serial No. 679,275
5 Claims. (Cl. 252—8.5)

1. In the method of producing barium sulphate for a drilling mud admix from a concentrate containing metallic sulfide as an impurity, the steps of selectively filming the concentrate by a filming agent, subjecting the filmed concentrate to a froth flotation to obtain a flotation product, heating the flotation product to remove the filming agent, and adding barium carbonate to react with the sulfurous and sulfuric acid impurities formed by heating so as to render such impurities innocuous in the drilling mud.



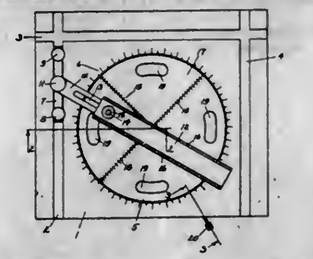
2,471,447
WEB FEEDING AND CUTTING MACHINE
Hiram A. Perkins, deceased, late of Rochester, N. Y., by Stuart L. Perkins, Rochester, N. Y., and Madeleine P. Hathaway, Essex County, N. J., executors, assignors to Setter Bros. Inc., Cattaraugus, N. Y., a corporation of New York
Application September 2, 1944, Serial No. 552,424
3 Claims. (Cl. 164—84.5)

1. In a machine for forming rod-like articles by tightly convoluting web sections, means including web tensioning and tearing crimping rolls normally initiating the convolution of severed web sections, the crimping rolls feeding successively severed web sections to the convoluting zone, normally continuously rotating web severing rolls continuously feeding the uncut and unsevered web toward the crimping rolls, one of the severing rolls having several cutter sections closely spaced from each other along the length of the roll and distributed across the entire width of the web, said sections projecting outwardly of the circumference of their supporting roll and being axially aligned along the roll, the other severing roll being recessed inwardly from its circumference to receive said cutter sections when the web is cut, the roll carrying the cutter sections having circumferential grooves arranged at positions in registry with the spaces between the successive cutter sections, small diameter spring rods acting as web guides with each rod extending substantially tangentially from the infeed side of the web severing rolls through the part of a groove in the web severing zone and thence to a position of close proximity to the infeed position of the crimping rolls, said rods being fixed at positions near their upstream ends and having their opposite ends biased toward one of the crimping rolls, there being one of said rods for each of said circumferential grooves which are of a radial depth greater than the rod diameter, and means rotating the crimping rolls at a surface speed sufficiently greater than that of the severing rolls to tension the web across the recessed section of



said severing roll just prior to and during the web cutting action and to create enough pull on the web to tear the web at its uncut parts of the positions of said guide rods.

2,471,448
BUILT-IN HEAT EXCHANGER IN EXPANSION VALVE STRUCTURE
Edmond D. V. Platon, Paris, VII, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 24, 1943, Serial No. 480,413
In France March 18, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires March 18, 1961
6 Claims. (Cl. 62—115)

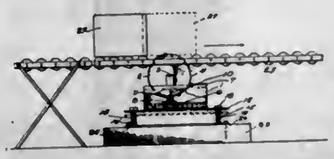


1. A method of refrigerating with a vaporizable refrigerating liquid in a refrigerating system having an evaporator, which comprises compressing the refrigerant to form a high pressure liquid, precooling the high pressure liquid in a first zone by conducting it therethrough in heat exchange relationship with low pressure liquid refrigerant in a second zone, expanding the high pressure liquid from said first zone into said second zone, after it has been precooled, to form low pressure fluid, conducting such low pressure fluid to the evaporator, and preventing the expansion of the high pressure liquid refrigerant whenever liquid refrigerant is leaving the evaporator.

2,471,449
MIXER CIRCUIT USING CATHODE FOLLOWER FEED-IN STAGES
Ralph B. Reade, Larchmont, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application December 8, 1945, Serial No. 633,835
1 Claim. (Cl. 178—44)

An electrical circuit for producing an output voltage which is proportional to the algebraic sum of corresponding instantaneous values of a plurality of signals over a wide band of frequencies, comprising a plurality of low-gain linear cathode follower amplifiers incorporating negative feedback and having low impedance output circuits, means for applying said signal to said linear amplifiers, means coupled to each of said linear amplifiers for preventing intermodulation therebetween, said last-mentioned means comprising a plate decoupling resistance connected in series with the plate voltage supply of said linear amplifiers and a by-pass condenser shunted across the series between said supply and said resistance; a plurality of low-gain negative feedback amplifiers having a common plate load across which the output signal voltages may be developed, means coupling said negative feedback amplifiers to said low gain linear amplifiers, voltage tapping arrangements coupled to each of said low-gain amplifiers across the cathode follower resistances thereof for controlling the gain thereof, means coupled to said negative feedback amplifiers for preventing intermodulation therebetween, and output means coupled to said common plate load and conducting the linearly mixed output signals therefrom.

2,471,450
VECTOR SOLVER
John J. Reza, Vallejo, Calif.
Application May 16, 1945, Serial No. 594,135
3 Claims. (Cl. 33—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a device of the character described, a base plate having at least one slot and a substantially circular central opening in the upper face thereof and having an angular scale surrounding said central opening, a substantially circular disc fitted into said opening and being freely rotatable therein about the center of said angular scale and having at least one radial linear scale on the upper face thereof, whereby said linear scale may be rotated to any desired angle with respect to said angular scale, braking means to prevent undesired rotation of said disc, a guided element slidably mounted in said slot, an arm pivotally mounted on said guided element, and a member having a second linear scale slidably mounted on said arm, whereby the origin of said second linear scale may be placed over any point on said first linear scale and at any desired angle thereto.

2,471,451
SOLDERING FLUX
William H. Rinkenbach, Dover, and Arthur J. Clear, Rockaway, N. J.
No Drawing. Application June 22, 1945, Serial No. 601,053
2 Claims. (Cl. 148—25)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A non-corrosive soldering flux consisting essentially of 48 to 52 parts of rosin, 14 to 16 parts of stearic acid, and 33 to 37 parts of petroleum jelly, all parts being by weight, said flux being substantially free of chemical compounds which cause corrosion of metals.

2,471,452
ROLLER PRINTER FOR CONVEYERS
Shy Rosen, United States Army, Washington, D. C.
Application September 7, 1945, Serial No. 615,060
4 Claims. (Cl. 101—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

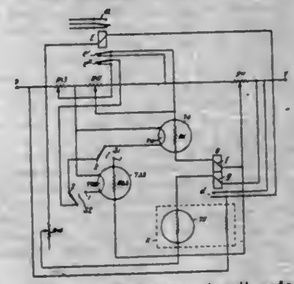
1. A portable automatic imprinting device for imprinting the bottom of an object moving over a conveyer spaced from the ground, said imprinting device being adapted to be moved into cooperative relation selectively either with a conveyer section recessed to permit said imprinting device to protrude through said conveyer section, or with two substantially parallel conveyer sections laterally spaced from each other to permit said imprinting device to protrude between said conveyer sections; said imprinting device comprising: a ground-engaging support unconnected to said conveyer, an imprinting fluid reservoir, yieldable means securing said reservoir to said ground-engaging support and urging said reservoir upwardly, a horizontal shaft across said reservoir above the imprinting fluid level, a printing roller on said shaft, and means responsive to rotation of said printing roller for transferring imprinting fluid from said reservoir to said printing roller; whereby said printing roller is positively urged upwardly above the load-conveying surface of said conveyer into printing contact with said object to be imprinted.

2,471,453
PREPARATION OF TERPENE PHENOLS
Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 7, 1944, Serial No. 562,378
2 Claims. (Cl. 260—62)

1. A process of preparing a terpene-substituted phenol which comprises reacting a menthene and a phenol in the presence of substantially anhydrous hydrogen fluoride and of a solvent, inert under the reaction conditions, at a temperature of about 0° C. to about 90° C., said phenol containing at least one unsubstituted position in the ring, and being present in the reaction mixture in the ratio of from about 0.75 to about 2 moles per mole of menthene.

2,471,454
PROCESS FOR CATALYTIC CONDENSATION OF PHENOLS WITH MONOCYCLIC DIHYDROTERPENES
Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 7, 1944, Serial No. 562,379
6 Claims. (Cl. 260—619)

3. The process of reacting a menthene with a phenol in the presence of boron trifluoride.



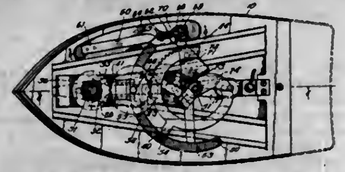
2,471,455
PREPARATION OF TERPENE PHENOLS
Alfred L. Rummelsburg, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 7, 1944, Serial No. 562,380
3 Claims. (Cl. 260—62)

1. The process of preparing a terpene-substituted phenol which comprises reacting about equal parts by weight of (*a*) a terpene mixture containing about 45% dipentene, about 40% terpinolene, and similar monocyclic terpenes and about 15% cymene and menthane and (*b*) a phenolic material selected from the group consisting of phenol and commercial cresols for about 1 to 8 hours at a temperature within the range of about 10° C. and about 30° C. in the presence of boron trifluoride as a catalyst.

2,471,456
WOOL SHRINKPROOFING BATHS CONTAINING A CHLOROPRENE POLYMER
John B. Rust, Montclair, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey
No Drawing. Application March 26, 1946, Serial No. 657,335
5 Claims. (Cl. 260—29.7)

1. A bath for treating wool to give shrinkproofing with substantially normal hand which comprises an aqueous substantially stable emulsion containing a synthetic chloroprene polymer of 100% polymerization, in an amount to give from 1 to 25% by weight of polymer deposition on the wool, a non-cationic emulsifying agent and at least 25% by weight of the polymer present of a water-soluble neutral salt of an alkali metal conditioning electrolyte, the pH of the bath being below 7.

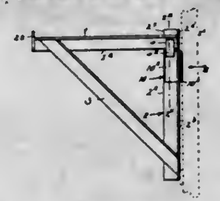
2,471,457
TIME AND THERMOSTATICALLY CONTROLLED SWITCHING ARRANGEMENT
Stanley Carden Shepard, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application July 17, 1944, Serial No. 545,329
In Great Britain July 30, 1943
8 Claims. (Cl. 236—15)



1. An electric switching circuit adapted to switch periodically from one condition to another, including a source of electromotive force, a relay capable of being periodically operated and released for establishing connections for one condition when operated and for the other condition when released, a thermistor connected to said source to supply current to said relay to

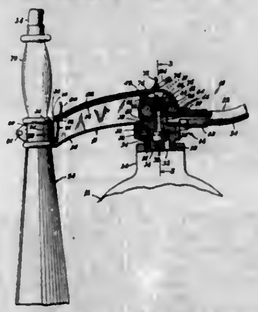
actuate the relay, adjustable means for controlling the heating of the thermistor, adjustable means for controlling the cooling of the thermistor, means for alternately connecting said two last-named means to affect the thermistor upon actuation of the relay, and a second thermistor connected to control the duration of the periods during which the relay remains operated and remains released in accordance with the temperature at the location of the second thermistor.

2. An electric thermostatic control switching said two last-named means to affect the circuit for controlling temperature within a confined space by compressing a heating source, a source of electromotive force, a relay capable of being periodically operated and released to switch the heating source on and off, a thermistor connected to said electromotive source to supply current to said relay to actuate the relay, adjustable means for controlling the heating of the thermistor, adjustable means for controlling the cooling of the thermistor, means for alternately connecting thermistor upon actuation of the relay, means for compensating for variations in the performance of the circuit consequent on changes in the temperature of the space surrounding the thermistor, and a second thermistor connected to control the duration of the periods during which the relay remains operated and released in accordance with the temperature of said space.



2,471,458
TEMPERATURE INDICATOR MEANS FOR SADIRONS
Charles H. Sparklin, Chicago, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application May 15, 1944, Serial No. 535,646
3 Claims. (Cl. 73—343)

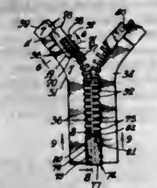
1. In a temperature indicator for a sadiron having a sole plate, a temperature-responsive flat strip having one end thereof affixed to the upper surface of the sole plate and arranged flat against said sole plate, said strip extending at an acute angle from the sole plate with the other end of said strip being twisted approximately 90°, a bracket mounted on the sole plate adjacent the twisted end of said strip, a bell crank having a pair of arms and mounted on the bracket for rotation about a horizontal axis that is located adjacent the base of said arms, one arm of said bell crank slidably engaging said upwardly extending end of said strip and the other arm of the bell crank extending generally upwardly, a gear sector operably connected to said upwardly extending arm of the bell crank, and indicating means operably connected to and actuated by said gear sector.



2,471,459
SCAFFOLDING BRACKET
George E. Stich, Jacksonville, Fla.
Application February 14, 1946, Serial No. 647,512
4 Claims. (Cl. 248—235)

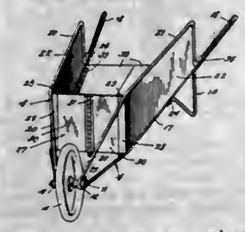
1. A scaffold bracket comprising a vertical column composed of a channel angular in cross section one side of which comprises a back, the other an outwardly extending flange, a load carrying arm extending outwardly from the upper end of the column and secured to the flange, said back having a longitudinal slot located with its upper edge below the load arm, and a member for at-

tachment to a permanent support having an outwardly extending flange slotted from its top downwardly and adapted to interlock with the back column flange by engagement therewith between the load arm and the top of the slot in said column back.



2,471,460
FIRE EXTINGUISHER
John H. Stroop, New York, N. Y., assignor to Specialties Development Corporation, Bloomfield, N. J., a corporation of New Jersey
Application December 6, 1944, Serial No. 566,813
10 Claims. (Cl. 169—31)

1. In combination in a fire extinguisher, a container for a fluid medium under pressure, a discharge valve head on said container, actuating means for the valve of said head, a carrying handle for said container, a discharge horn, flexible conduit connecting means between said head and said horn, and means cooperating between said handle and said horn for releasably mounting said horn directly on said handle.



2,471,461
ENDPIECE FOR SLIDE FASTENER CLOSURES
Albert Süsskind, Lugano-Cassarate, Switzerland
Application January 8, 1944, Serial No. 517,519½
In Germany October 24, 1935
9 Claims. (Cl. 24—205.11)

1. A "zipper" end piece comprising a substantially U-shaped body of thin sheet material adapted to be attached by mere finger pressure without need for a tool, longitudinal abutments integral with said body adapted to abut against a foot surface of fastener elements of a "zipper" and transversal abutments also integral with said body adapted to abut against a broadside surface of said elements in such a manner as to prevent, by said abutting, longitudinal as well as transversal displacement of the end piece, at least one of

said transversal abutments having such a distance from the respective end of the "zipper" as to abut, in applied condition of the end piece, against at least the second element of the "zipper."

2,471,462
FOLDABLE WHEELBARROW
John J. Toth, Bridgeport, Conn.
Application May 10, 1946, Serial No. 668,899
12 Claims. (Cl. 280—36)

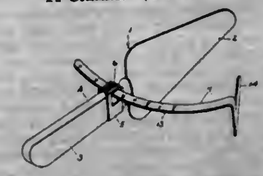
1. In a folding wheelbarrow, a wheel and axle; a pair of bearings mounted on the axle on opposite sides of the wheel, each of said bearings having a circumferential groove on its outer surface; a pair of side frames, each including at its front end a bearing-encircling portion loosely engaging the groove on the bearing to maintain engagement of the latter with the side frame but enabling pivotal movement of said frames about the bearings in convergent and divergent directions, in an axial plane of the wheel; and means interconnecting said frames for maintaining them equidistant from the plane of the wheel and for preventing angular displacement of one frame relative to the other about the axis of the wheel.

2,471,463
PLASTICIZING AGENTS COMPRISING DIALKYL PHENYLPHOSPHONATES AND COMPOSITIONS CONTAINING THE SAME
Arthur Dock Fon Toy, Chicago, Ill., assignor to Victor Chemical Works, a corporation of Illinois
No Drawing. Application January 24, 1946, Serial No. 643,212
12 Claims. (Cl. 260—30.6)

1. A plasticizing agent consisting essentially of dialkyl phenylphosphonate containing from 4 to 8 carbon atoms in the alkyl groups.

3. A composition comprising an organic plastic of the group consisting of a copolymer of a major proportion of vinyl chloride and a minor proportion of vinyl acetate, nitrocellulose, and ethyl cellulose and containing a plasticizing proportion of a dialkyl phenylphosphonate containing from 4 to 8 carbon atoms in the alkyl group.

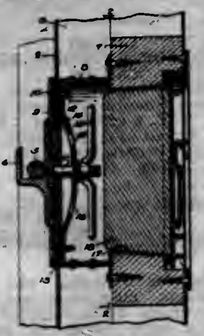
2,471,464
METHOD OF PREPARING PARA NITROPHENYL DIETHYL THIONOPHOSPHATE
Arthur Dock Fon Toy, Chicago, and Thomas M. Beck, Homewood, Ill., assignors to Victor Chemical Works, a corporation of Illinois
No Drawing. Application December 22, 1947, Serial No. 793,310
8 Claims. (Cl. 260—461)



1. The method of preparing para nitrophenyl diethyl thionophosphate which comprises reacting diethyl thiono chlorophosphate with substantially anhydrous sodium para nitrophenolate in the presence of an aliphatic tertiary amine catalyst.

2,471,465
REPEATER FOR SUBMARINE ELECTRIC CABLES
Marc van Hasselt, London, England, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 14, 1947, Serial No. 721,893
In Great Britain January 29, 1946
1 Claim. (Cl. 174—74)

A housing for receiving and protecting against moisture under deep sea conditions electrical apparatus to be included in a submarine coaxial cable system, that comprises: a pressure-resistant watertight flexible metal tube defining a chamber for receiving said apparatus; a pair of hollow substantially conical metal plugs, having a maximum diameter substantially equal to the diameter of the flexible tube and each having a hollow tubular shank on the base thereof receivable in an open end portion of said flexible tube, the internal portions of said plugs and shanks being adequately large to receive the external conductor of the coaxial cable without physical or electrical contact therewith; a coaxial cable end portion in each of said plugs extending through the shank thereof; water-impervious electrical insulation in said internal portions of the plugs and shanks, filling the space surrounding the coaxial cable ends; a close-fitting copper sheath surrounding the flexible metal tube and sealed to base portions of the plugs in the ends thereof; a water-impervious continuous adherent coating of polythene overlying said copper sheath, the conical plugs and a portion of the coaxial cable external conductor extending from the plugs; and outer armoring around the entire assemblage.

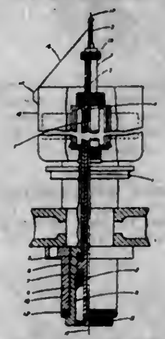


2,471,466
CAKE AND PIE KNIFE
Samuel A. Weinberg, Wollaston, Mass.
Application November 5, 1947, Serial No. 784,287
11 Claims. (Cl. 30—114)

1. In combination with a cake knife, means

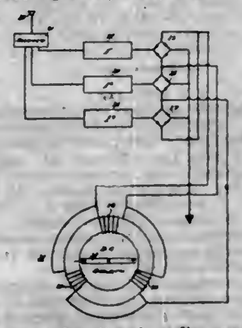
adjustably attached thereto having an adjustable arcuate bar with a marking arm projecting radially therefrom, and means including the handle of the knife for locking said arcuate bar in its desired position.

2,471,467
ESCAPE DEVICE
Le Roy L. Werner, Washington, D. C.
Application April 4, 1945, Serial No. 586,617
4 Claims. (Cl. 292—340)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. An escape device for containers comprising a body portion and a door, said container provided with an elongated passage extending to the interior and exterior thereof, an imperforate panel, a latch element fixed to the exterior face of the panel, said panel being mounted exteriorly of the container and closing the outer end of said passage, a plate within the passage, and means also within the passage and cooperating with the plate for drawing said panel and plate into clamping relationship with the container.

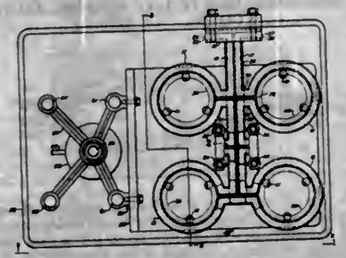
2,471,468
REPEATERED SUBMARINE SIGNALING CABLE
William Kirby Weston, London, England, assignor to International Standard Electric Corporation, New York, N. Y.
Application October 22, 1946, Serial No. 704,967
In Great Britain June 18, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires June 18, 1965
3 Claims. (Cl. 174—70)



1. In a repeatered coaxial submarine signalling cable of the kind in which the outer conductor of the cable is effectively in contact with the water in which the cable is submerged and a repeater is so constructed and arranged as to form part of the finished cable and to be laid with it, the repeater being surrounded by a water repellent dielectric joined to the dielectric of the submarine cable, the improvements that comprise a conducting lead embedded in the dielectric spiralled around the central conductor of the cable and electrically connected to the outer conductor of the cable and to the repeater.

2,471,469
WIRE LAPPING OR LIKE MACHINE
Wilfred John Lee Wildbore and James McConnochie Keenan, London, England, assignors, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 3, 1945, Serial No. 626,563
In Great Britain September 28, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires September 28, 1964
4 Claims. (Cl. 57—18)

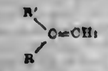
1. In a lapping head, a hollow-head driving spindle, a rotary head thereon, a second spindle co-axially mounted within said first spindle and extending therethrough, a spreader mounted on said second spindle, means for coupling said spindles together for rotation, and means for adjusting the position of said spreader from below said rotary head while the latter is rotating.



2,471,470
RADIO RANGE SYSTEM
Harry Wilkie, Dayton, and Francis L. Moseley, Osborn, Ohio
Continuation of application Serial No. 466,559½, November 23, 1942. This application February 1, 1943, Serial No. 474,332
5 Claims. (Cl. 343—107)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

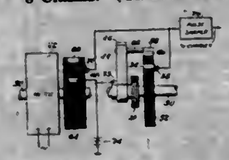
5. An omni-directional radio range system, comprising a radiating system of equi-angularly spaced radiating units; a source of carrier frequency; means for modulating the carrier source

to derive a plurality of dissimilar energy wave impulses; means for transmitting those respective impulses sequentially to the respective radiating units during successive equal time intervals thereby to establish a rotating radiation field with directional characteristics; means for receiving and segregating the wave impulses, rectifying them, and setting up in the same sequence, adjacent direct mutual magnetic fields equi-angularly spaced; and means for indicating the location of the resultant magnetic axis of the mutual field.



2,471,471
APPARATUS FOR SIMULTANEOUSLY INDUCTIVELY HEATING A PLURALITY OF ARTICLES
Alden O. Wood, Parma, Ohio, assignor to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application March 9, 1945, Serial No. 581,854
7 Claims. (Cl. 219—13)

1. In apparatus of the class described, a multiple inductor comprising a pair of substantially parallel conductors defining a plane, each conductor comprising an inductor loop in series therewith, axes of the loops being in generally parallel spaced positions and perpendicular to the plane of the conductors, the loops being on generally opposite sides of the pair of conductors and being disposed to substantially encircle metallic articles lying in generally parallel positions, the pair of conductors having a common return circuit conductor lying generally parallel to the said pair of conductors but remote from the articles to be heated, and means for supplying inducing current to the pair of conductors to flow in parallel therethrough to heat simultaneously two of the said articles being encircled by the aforesaid loops.



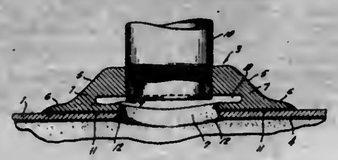
2,471,472
METHOD OF FORMING PHOSPHONIC AND THIOPHOSPHONIC ACID CHLORIDES
Willard H. Woodstock, Flossmoor, Ill., assignor to Victor Chemical Works, a corporation of Illinois
No Drawing. Application April 28, 1945, Serial No. 590,956
6 Claims. (Cl. 260—543)

1. The method which comprises reacting an addition product of PCl_3 and a mono-olefin of the formula

wherein R and R' are a pair of radicals selected from pairs of radicals consisting of: alkyl and alkyl, alkyl and aryl, aryl and aryl, aryl and hydrogen, and aryl and chlorine, with an acid anhydride of the class consisting of P_2O_5 and P_2S_5, in an inert solvent medium, heating the reaction mixture to drive off hydrogen chloride formed, and separating the solvent and by-product phosphorus chloride compounds from the unsaturated phosphorus compound.

2,471,473
TRANSMISSION SYSTEM
Norman H. Young, Jr., Jackson Heights, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Original application November 1, 1943, Serial No. 508,617, now Patent No. 2,407,336, dated September 10, 1946. Divided and this application March 19, 1945, Serial No. 583,538
8 Claims. (Cl. 177—380)

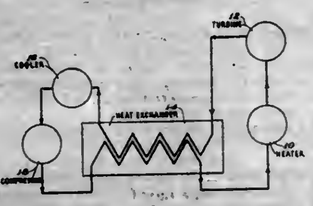
1. An intelligence transmission system comprising means generating a series of synchronizing pulses of a predetermined frequency, means generating a series of sets of intelligence-signifying pulses of the same frequency as said synchronizing pulses, the pulses for each intelligence-signifying character occurring between successive synchronizing pulses, and the pulses of each set being distinguished from the pulses of another set by a different time spacing from the synchronizing pulses, and controllable means for varying said time spacing at will.



2,471,474
METHOD FOR CLARIFYING AND PURIFYING VEGETABLE BEVERAGES
Ralph T. Alba and James S. Wallerstein, New York, N. Y., assignors, by mesne assignments, to Wallerstein Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application February 10, 1945, Serial No. 577,330
15 Claims. (Cl. 99—52)

1. The method of improving fermented beverages of mildly acid nature derived from cereals and normally containing undesirable organic components of proteinaceous nature which are soluble in mildly acid medium but are capable of causing turbidity on changes of temperature, which comprises mixing with the beverage a solution of a lignin obtained by the alkaline cooking of ligneous plant material and insoluble in dilute acid medium, said solution having a pH value of approximately 9.5 to 12, adding to the mixture a solution of gelatin, whereby said organic components are precipitated along with a lignin-gelatin complex, adjusting the pH of the beverage to its original value by the addition of lactic acid, and separating the supernatant from the precipitated material.

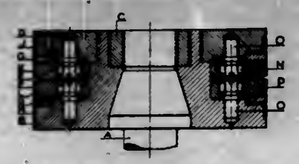
2,471,475
HOT-WATER TANK CONNECTION
Orrin E. Andrus, Altadena, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application February 18, 1947, Serial No. 727,538
6 Claims. (Cl. 285—49)



1. A connection for an opening in a hot water storage tank or the like lined with a protective

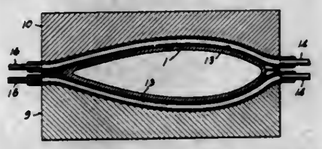
coating on the inside of the tank wall to protect the tank from corrosion, which comprises a tubular spud on the outside of the tank wall of corrosion resistant metal disposed at said opening and bonded to the outside of the tank around said opening, said spud comprising a base portion overlapping the outside of the tank wall radially outwardly from the opening therein for

a substantial distance and joined to a relatively thicker body portion by a neck of substantially lesser cross-section circumferentially than said base and body portion to provide the base with inner and outer flanges of tapered thickness and prevent the building up of stresses at the joint between the spud and shell injurious to the protective lining of the tank.



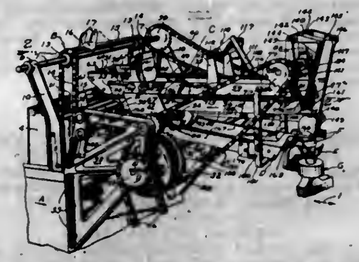
2,471,476
PROCESS AND APPARATUS FOR TRANSMITTING ENERGY
Anthony F. Benning, Woodstown, and Frederick B. Downing, Carney's Point, N. J., assignors to Kinetic Chemicals, Inc., Wilmington, Del., a corporation of Delaware
Application January 20, 1945, Serial No. 573,765
4 Claims. (Cl. 60—36)

1. The process of protectively conducting octafluorocyclobutane at temperatures of from about 250° C. to about 400° C. which comprises enclosing the octafluorocyclobutane in a conductor in which at least the surfaces in contact with the octafluorocyclobutane are made of a metal of the group consisting of nickel and an alloy whose composition is essentially nickel 79.5%, chromium 13%, copper 0.2%, iron 6.5%, silicon 0.25%, manganese 0.25% and carbon 0.08%.



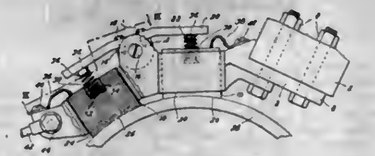
2,471,477
PISTON PACKING
Henri Bonnaud, Viroflay, France, assignor to L'Air Liquide, Societe Anonyme pour l'Etude et l'Expletation des Procedes Georges Claude, Paris, France
Application November 26, 1946, Serial No. 712,320
In France March 8, 1946
8 Claims. (Cl. 309—4)

1. A device for clamping flexible packings on a piston, in which the whole of the packings is divided in groups, clamping means for each group of packings independent of the ones for the other



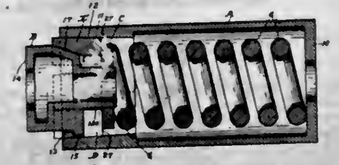
group of packings, said clamping means including studs and nuts enclosed inside the piston.

2,471,478
FLEXIBLE ELECTRODE FOR WELDING
Karl K. Brueckner, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application June 14, 1947, Serial No. 754,613
7 Claims. (Cl. 219—4)



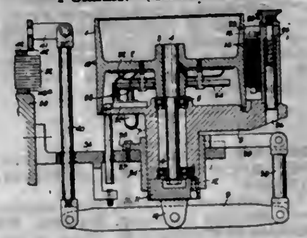
1. An electrode for the electric welding of metal articles, comprising a flexible electrically conductive member, hydraulic means to force said member into intimate contact with the article to be welded for uniform heating of the article by electric current carried thereto by said member to accomplish a uniform welding of articles.

2,471,479
PEAR ORIENTING AND FEEDING APPARATUS
Burton C. Coons, San Jose, Calif., assignor to Food Machinery and Chemical Corporation, a corporation of Delaware
Application December 5, 1944, Serial No. 566,693
17 Claims. (Cl. 198—33)



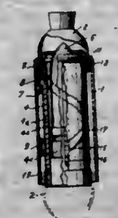
2. An apparatus for orienting pears and feeding them into the feed receptacle of a pear handling machine comprising a trough having a discharge end arranged above said feed receptacle when the latter is in pear receiving position, means for feeding pears one at a time into the trough, means in the trough for moving the pears to the discharge end thereof, means for engaging the pears as they are moved by the moving means and cooperating therewith to turn said pears into a position with their stem ends facing in a predetermined general direction, means movable toward and away from the discharge end of the trough for centering said pears in said trough and for controlling the discharge of the positioned pears therefrom, and means movable from the discharge end of said trough toward said feed receptacle for transferring the positioned pears from the trough to the feed receptacle.

2,471,480
MOTOR BRUSH HOLDER
Martin Culkosky, Gary, Ind.
Application October 30, 1945, Serial No. 625,577
3 Claims. (Cl. 171—324)



1. A motor brush holder for holding the brushes against the slip ring of the motor comprising a body member attached to the motor frame, said member having a pair of spaced apart brush receiving openings therein, a pivot member attached to said body member between said openings, an arm mounted on said pivot member with a part thereof extending over each of said openings, a spring between each end of said arm and the adjacent brush for forcing the brush against the slip ring, and means for centering each of said springs over the center of the respective brushes.

2,471,481
FRICTION SHOCK ABSORBING MECHANISM
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application May 30, 1945, Serial No. 596,782
9 Claims. (Cl. 267—9)



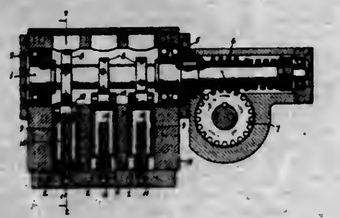
1. In a friction shock absorbing mechanism, the combination with a friction casing; of a friction clutch slidingly telescoped within said casing, said clutch including a plurality of friction shoes having sliding frictional engagement with the interior of said casing, and a pressure transmitting member adapted to receive the actuating force and engaging the forward end portions of said shoes; a spring follower engaging the rear end portions of said shoes, one of said shoes having wedging engagement with said spring follower only, and the remaining shoes having wedging engagement with said pressure transmitting member only; and spring resistance means yieldingly opposing movement of said spring follower inwardly of the casing.

2,471,482
MEANS FOR CREASING LININGS FOR BOOKS AND FOR ANALOGOUS PURPOSES
Lionel John Bryant Rushent French, London, England, assignor to The Book Machinery Company Limited, London, England, a British company
Application November 1, 1946, Serial No. 707,242
In Great Britain December 6, 1945
4 Claims. (Cl. 154—41)

1. In apparatus for feeding foldable sheet material such as linen or paper to articles to which the sheet material is united and for producing in the sheet material creases extending lengthwise of the direction of feed of the material, a freely rotatable cylinder with a plurality of circumferential grooves and adapted to be rotated by the traction of the sheet material over its periphery, a plurality of freely rotatable rollers parallel with the cylinder, peripheral fins on the rollers engaged in said grooves to produce said creases, a support for said rollers partly surrounding the cylinder means supporting each roller readily displaceably relatively to said support and means combined therewith adapted to be manipulated to retract the rollers selectively from the predetermined creasing position and to return the rollers to such predetermined position.

2,471,483
LIPSTICK CASE
Sophie Frydlender, Paris, France, assignor to Lancome Societe Anonyme, Paris, France, a corporation of France
Application May 15, 1945, Serial No. 593,805
In France January 29, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 29, 1964
2 Claims. (Cl. 206—56)

1. In a lip stick case, a body open at its upper end through which a lip stick housed within the case can be projected; a cap for closing said open upper end of said body and having a lower edge portion of generally annular cross section having an uninterrupted smooth inner surface; a bottom member housed within said body and being rotatable therein for effecting projecting



of the lip stick through the open upper end of said body, the outer surface of said bottom member being uninterruptedly smooth and complemental to said inner surface of said cap, and there being a clearance around said bottom member and the inside of said body, said cap lower edge portion being of a size to be extended freely within said body by being moved axially with respect to said case and to fit over and closely and frictionally embrace said bottom member outer surface irrespective of the relative angular positions of said bottom member and said cap with reference to the axis of said case, to thereby effect a frictional rotation-transmitting driving connection between said cap and said bottom member.

2,471,484

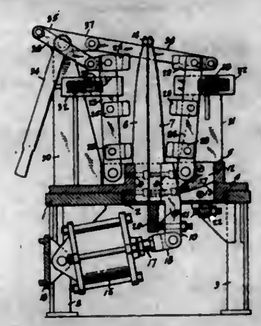
PISTON AND CYLINDER CONSTRUCTION FOR RECIPROCATING HYDRAULIC MOTORS

Louis E. Godfriaux, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a corporation of Wisconsin

Application September 20, 1944, Serial No. 554,883
3 Claims. (Cl. 121—120)

3. In a fluid motor of the class described, a vertically disposed cylinder of substantial length, a head at the lower end of said cylinder, a piston near the top of said cylinder and closing the same, a central tube extending upward from said head through which motive liquid is supplied to and exhausted from said cylinder near the top thereof, a piston skirt extending downward from the crown of said piston between the tube and cylinder wall and of a thickness to provide a substantial displacement of liquid at the lower end of the cylinder during the downward stroke of said piston, and to provide an annular passage around said tube for the passage of said displaced liquid upwardly against the piston crown to scavenge air bubbles which may collect in the upper end of the cylinder and flow the same outwardly through said tube.

2,471,485



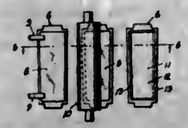
MANDREL WITH MEANS FOR CLAMPING AND SPREADING TUBES

Frederick A. Gruetjen, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York

Application October 23, 1943, Serial No. 507,365
8 Claims. (Cl. 153—39)

3. In apparatus of the class described, a pair of mandrels adapted to receive a tubular metal blank, relatively movable supports for said mandrels, a holding bar for each mandrel pivoted at one end to each of said supports and having clamping means for engaging a blank along substantially the length thereof to clamp the blank to the respective mandrels, and means for securing said holding bars in clamping position.

6. In an apparatus for spreading metal articles of substantial length and substantially circular section to an oblong section, a support, a pair of mandrels mounted on said support and disposed back-to-back and adapted to receive said article, said mandrels engaging and rocking on each other at one end and being adapted to move radially outwardly relative to each other at the other end, means securing said mandrels together at the engaging ends thereof to hold them in alignment during spreading, and motor operated power means mounted on said support connected to one of said mandrels at said outwardly movable end to rock the same upon the other mandrel at the opposite secured end and effect spreading of said article encircling the same.

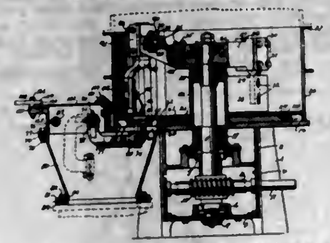


2,471,486

METHOD OF CONSTRUCTING PROPELLER FOIL PLATES

Frederick A. Gruetjen, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York

Application October 23, 1943, Serial No. 507,366
4 Claims. (Cl. 29—156.8)



1. In the forming of foil plates for large hollow steel propeller blades and the like, the cross taper rolling of a blank of substantially uniform thickness to provide a partially formed blank of tapered thickness from end to end, cross pre-contour rolling of the tapered blank to provide a relatively thin central portion surrounded by thick edge portions free from tears and surface defects from longitudinal flow of the metal, longitudinally rolling the pre-contoured blank to final dimensions, trimming the blank, and finally coining and die pressing the blank to embody the pitch twist of the blade and an air foil shape of a corresponding surface of the blade with substantially straight thick edge portions adapted for flash welding to abutting edges of adjacent blade parts.

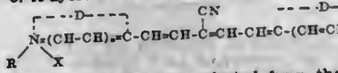
2,471,487

MIXER

Axel G. Granath, Chicago, Ill., assignor to Herbert S. Simpson, Evanston, Ill.

Application August 20, 1945, Serial No. 611,494
2 Claims. (Cl. 259—44)

1. In a muller including a crib having a muller element movable over the crib bottom, means for controlling the discharge of the crib contents comprising an opening in said bottom, a discharge hopper depending from the crib bottom and around said opening, a closure for said opening and movable in said hopper into tight engagement with the edge of the opening, and lever means in the hopper for supporting and moving said closure and being pivotally supported remote from said opening and to one side of said crib bottom so as to be clear of the discharge path of the crib contents when the same is being discharged from the crib, said lever means upon actuation to open said opening swinging said closure bodily to one side of the crib bottom and clear out of said discharge path so as to be remotely supported by the lever means independent of the crib bottom.



2,471,488

CYANINE DYESTUFFS

John David Kendall and Frank Peter Doyle, Ilford, England, assignors to Ilford Limited, Ilford, England, a British company

No Drawing. Application January 21, 1948, Serial No. 3,561. In Great Britain January 24, 1947
7 Claims. (Cl. 260—240)

3. A dyestuff of the general formula:

wherein D is a residue selected from the class consisting of 5-membered and 6-membered heterocyclic nitrogen nuclei, R is a group selected from the class consisting of alkyl and aralkyl groups, X is an acid radicle and n is selected from the class consisting of 0 and 1.

2,471,489

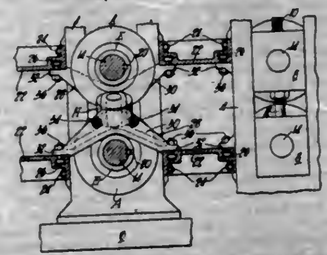
METHOD OF AND APPARATUS FOR INSPECTING AND ASSORTING METAL DISKS AND THE LIKE

Fred H. Lucas, Winnetka, Ill., and Gerald E. Rhodes, Gary, Ind., assignors to Carnegie-Illinois Steel Corporation, a corporation of New Jersey, and American Bridge Company, a corporation of New Jersey

Application September 7, 1944, Serial No. 553,072
11 Claims. (Cl. 209—82)

1. The herein described method of assorting punched metal discs and the like, consisting in conveying unassorted discs flatwise, separating the discs into groups in accordance with the configuration of the faces thereof upon which they are supported during their flatwise travel, inverting the discs of one of said groups, erecting and rolling the discs in edgewise position, gauging the discs for concentricity by determining the variation in the angularity of the edges of the discs during their edgewise travel, and assorting said discs in accordance with said variation.

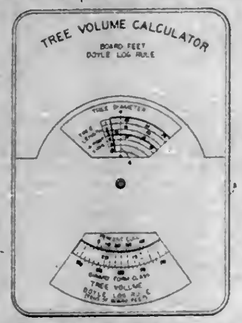
6. In apparatus for assorting discs having truncated conical edges, a concentricity gauge including a track for rolling conveyance of the discs upon their edges, a contact guide member adapted to be contacted by the upper portion of the discs supported by the track, a track contact member spaced from the track, an electrical circuit including the contact guide member and track contact member and adapted to be closed through engagement of a disc therebetween, and means responsive to said circuit for segregating such disc from the other discs passing through said gauge.



2,471,490

APPARATUS FOR MAKING STRUCTURAL SHAPES

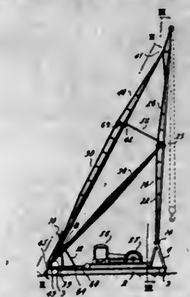
David L. Mercer, Gary, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey



Application August 10, 1945, Serial No. 609,987
4 Claims. (Cl. 153—28)

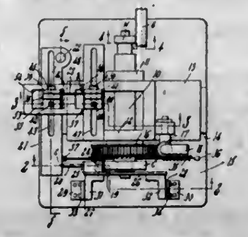
2. A roll stand comprising a pair of housings, a pair of roll shafts journaled in said housings and extending therebetween, a pair of roll segments mounted on each of said shafts and aligned with the segments on the other shaft, each of said segments having a face portion which is parallel to the face portion of the oppositely disposed segment on the other shaft and an oblique end face which extends toward its respective shaft oppositely disposed to the oblique face of the opposing segment, said oblique faces diverging to form a V-shaped opening between the outer ends of the oppositely disposed roll segments, an idler roll disposed at either end of said pair of segments with a working face substantially normal to one of said oblique faces and

means for mounting said idler rolls intermediate said roll shafts to cooperate with either the oblique face of the upper or lower roll segment to bend the outer flange portion of a workpiece upwardly or downwardly to form angles, channels or Z's as desired.



2,471,491
TREE VOLUME CALCULATOR
Clement Mesavage, New Orleans, La.; dedicated to the free use of the People in the territory of the United States
Application April 26, 1946, Serial No. 665,036
3 Claims. (Cl. 235—84)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

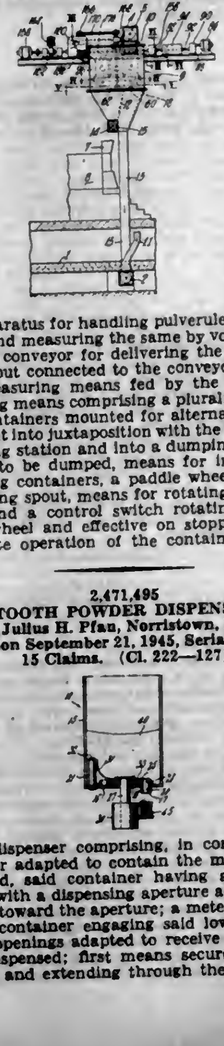
1. A calculator for solving problems in the determination of tree-volume content of lumber involving variable relating to: "tree length," that is, number of logs of a given length into which the tree can be cut; tree diameter measured outside of the bark at a given height, which height is less than the said given length; and the ratio of the top diameter of the first log, that is, of the butt log, of said given length, to the said tree-diameter measurement, said ratio being the "form class"; said calculator comprising two plates pivotally attached to each other for rotary motion with respect to each other, one over the other; one of said plates having a number of logarithmic scales arranged on arcs of progressively larger concentric circles, one of said logarithmic scales corresponding to "tree volume," the others of said logarithmic scales each corresponding to a series of "tree diameters"; the second of said plates having an opening through which a section of the tree-diameter scales is visible, said opening having "tree length" divisions each of which is adjacent to a "tree-diameter" scale, said second plate having a second opening through which a section of the "tree volume" scale is visible, and having an arcuate "form class" scale which is adjacent to the latter opening and is concentric with the "tree-volume" scale, the scales being so arranged that, upon setting a chosen "tree diameter" adjacent to a selected "tree length," the "tree volume" appears adjacent to the selected "form class."



2,471,492
PORTABLE DERRICK
Dewey R. Moore, Dallas, Tex.
Application September 12, 1946, Serial No. 696,477
5 Claims. (Cl. 189—11)

1. A portable derrick or the like comprising a support, a lower mast section pivotally mounted at its lower end on said support and adapted for alternative movement into substantially horizontal and substantially vertical positions, an upper mast section pivotally connected to the free end of said lower mast section and adapted to alternately occupy juxtaposed and overlying positions with respect to said lower mast section, the pivotal connection between said lower mast section and said support being inwardly of said support and the pivotal connection between said upper and lower mast sections being outwardly

of said support, a diagonal mast support including a pair of detachable and juxtaposed sections, the upper section of said mast support being pivotally connected to said upper mast section adjacent the upper portion of the latter, the lower section of said mast support extending to the ground, an elongate diagonal brace pivotally connected to and extending between the lower end of said upper mast section and the lower end of said diagonal mast support, and means for positioning the lower end of said diagonal mast support relative to said first named support.



2,471,493
CAM FINISHING MACHINE
Wendell P. Norton, Jr., Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a corporation of Vermont
Application February 18, 1948, Serial No. 9,142
9 Claims. (Cl. 51—127)

1. A cam cutting machine comprising a supporting structure, a carriage mounted on said supporting structure with provision for linear movement in opposite directions, a work holder supported rotatably on said carriage with its axis of rotation transverse to the path of the carriage, a master cam secured to the work holder, a cutting tool operatively mounted in relation to the carriage such that the carriage moving in its prescribed path displaces a work piece secured to

the work holder, toward or away from the cutting tool, and a pantograph linkage pivoted at a fixed point on the supporting structure arranged to be moved about its pivot by said master cam and including an adjustable connection with the carriage.

2,471,494
AUTOMATIC MEASURING DEVICE FOR BULK MATERIAL
Perry F. Overmyer, Chicago, Ill., assignor to Universal Atlas Cement Company, a corporation of Indiana
Application May 21, 1945, Serial No. 594,979
5 Claims. (Cl. 73—218)

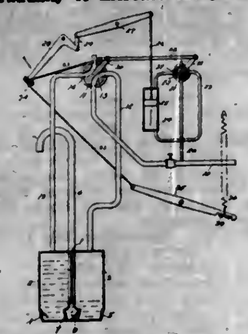
1. Apparatus for handling pulverulent material in bulk and measuring the same by volume, comprising a conveyor for delivering the material, a filling spout connected to the conveyor, and material measuring means fed by the spout, said measuring means comprising a plurality of measuring containers mounted for alternate indexing movement into juxtaposition with the filling spout at a filling station and into a dumping station in position to be dumped, means for indexing the measuring containers, a paddle wheel located in the feeding spout, means for rotating the paddle wheel, and a control switch rotating with the paddle wheel and effective on stoppage thereof to initiate operation of the container indexing means.

2,471,495
TOOTH POWDER DISPENSER
Julius H. Pfau, Norristown, Pa.
Application September 21, 1945, Serial No. 617,836
15 Claims. (Cl. 222—127)

1. A dispenser comprising, in combination, a container adapted to contain the material to be dispensed, said container having a lower wall formed with a dispensing aperture and a slot extending toward the aperture; a metering member in said container engaging said lower wall and having openings adapted to receive the material to be dispensed; first means secured with said member and extending through the slot for engagement by a material receiver to bias said first means to one end of the slot to register the openings in said member with the dispensing aperture; and second means normally biasing said first means to the other end of the slot to move the openings in said member out of registry with the dispensing apertures.

2,471,496
RECLAIMING SCRAP OF NATURAL RUBBER MIXED WITH BUNA-S
Robert L. Randall, St. Louis, Mo., assignor, by mesne assignments, to Midwest Rubber Reclaiming Company, East St. Louis, Ill., a corporation of Delaware
No Drawing. Application July 14, 1945, Serial No. 605,183
7 Claims. (Cl. 260—5)

1. The process of reclaiming mixed, previously vulcanized rubber scrap containing both natural rubber and an elastomer which is a rubbery copolymer of butadiene and styrene, comprising heating the said scrap with from 1 to 15% of abietic acid and from 3 to 30% of Gray Tower resin oil which is a residual by-product obtained in the refining of gasoline.



2,471,497
BONDING CELLULOSE SURFACES
Robert Pierce Roberts and Kenneth Jones, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application June 3, 1943, Serial No. 489,494. In Great Britain June 27, 1942
2 Claims. (Cl. 154—136)

1. Process for bonding together surfaces of material composed substantially of cellulose which comprises applying to said surfaces a composition containing polyvinyl alcohol, formaldehyde and hexamethylene tetramine the molecular ratio of formaldehyde to CH_2CHOH groups of polyvinyl alcohol being between 1.15:2 and 1.5:2 and the proportion of hexamethylene tetramine employed being 2 to 5% on the weight of polyvinyl alcohol, bringing the surfaces together, and effecting acetalization of the alcohol by the aldehyde under the influence of heat so as to form in situ a strong bond uniting the surfaces.

2,471,498
PNEUMATICALLY OPERATED PUMP
George A. Rood, Los Angeles, Calif.
Application January 12, 1946, Serial No. 640,872
4 Claims. (Cl. 103—238)

1. In a fluid pressure operated pump, the combination with a tank vertically divided into two chambers and having a water inlet passage to each chamber, a discharge pipe, an outlet passage from each chamber to said pipe, check valves in all of said passages preventing return flow therethrough and a conduit for pressure fluid, of a main valve having two positions, one for carrying pressure fluid to one chamber and the other for admitting pressure fluid to the other chamber, means alternately moving the valve back and forth to the two positions, a control valve having two positions, means interconnecting the two valves for simultaneous movement, a closed cylinder, pipes leading from the ends thereof to the said control valve, a power-controlled connection to said main valve, a piston within said cylinder extending to said connection, and a pipe from said pressure fluid conduit to carry pressure fluid from said control valve to one end of

said cylinder or the other, thereby to move said piston gradually to increase the power of said

connection until sufficient to throw said valves from one position into the other.

2,471,499
FISHING LURE
Frank G. Shipman, Shelburn, Ind.
Application July 19, 1946, Serial No. 684,928
1 Claim. (Cl. 43—39)

In a fish lure, the combination which comprises a longitudinally disposed stem having an eye at the forward end and a bushy fibrous tail with a fish hook embedded therein extended from the opposite end, a float mounted on said stem, a spinner having an arcuate nose with outwardly flared propeller blades extended rearwardly therefrom rotatably mounted on said stem, a pair of outwardly bowed, arcuate leaders extended from the eye at the forward end of the stem and extending rearwardly, and arcuate blades shaped to represent minnows flexibly connected to the ends of the leaders and positioned to be influenced by churning water from the blades of the spinner.

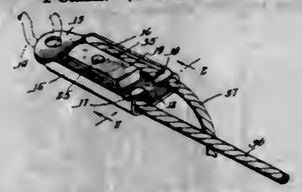
2,471,500
COATED METAL STRUCTURE
Francis S. Stewart, Los Angeles, Calif., and Vernal R. Hardy, Wilmington, Del., assignors, by direct and mesne assignments, to Douglas Aircraft Company, Inc., Santa Monica, Calif., a corporation of Delaware
Application July 25, 1944, Serial No. 546,524
8 Claims. (Cl. 117—75)

1. As a new article of manufacture, a metal structure coated with a plurality of coats of a mixture of a synthetic linear polyamide comprising the reaction product of a polyamide-forming composition in which the molecules are bifunctional and contain two amide-forming groups each of which is complementary to another amide-forming group in said composition, and a rubber-like composition taken from the class consisting of polymers of the unit

$$\left(-\overset{|}{\underset{|}{C}}-\overset{|}{\underset{|}{C}}.8-\right)$$

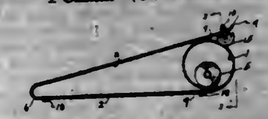
in which the two carbon atoms are joined to each other and polymers of the same unit in which an intervening structure is contained between said carbon atoms, said coats graded to contain a greater proportion of said polyamide in a subsequently applied coat.

2,471,501
METHOD FOR THE REPAIR OF DENTURES
Forrest E. Steigleman, Baltimore, Md.
Application February 6, 1947, Serial No. 726,791
1 Claim. (Cl. 18—55.1)



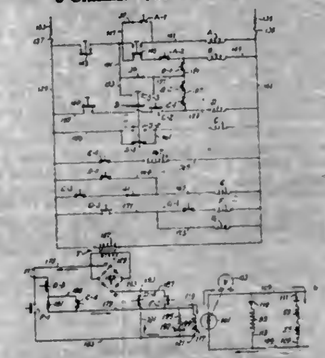
The method of repairing acrylic dentures, consisting in removing foreign matter from the edges of the broken denture sections, subjecting the edges of the broken denture sections to the action of a solvent consisting of a solution comprising sixty percent ether, thirty percent acetone, and ten per cent grain alcohol, softening the broken edges of the denture sections, placing the softened edges of the broken denture sections together, subjecting the sections to pressure forcing the edges together, maintaining the pressure on the sections for a period of time until the denture becomes hardened, and finally trimming off surplus material at the point of connection between the broken sections.

2,471,502
METHOD OF IMPROVING FERMENTED BEVERAGES AND PRODUCT OBTAINED THEREBY
James S. Wallerstein, New York, N. Y., Eduard Farber, New Haven, Conn., and Ralph T. Alba, New York, N. Y., assignors, by mesne assignments, to Wallerstein Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application August 12, 1944, Serial No. 549,298
12 Claims. (Cl. 99—52)



1. The method of improving fermented beverages of mildly acid nature derived from cereals and containing normally organic components of proteinaceous nature which are soluble in mildly acid medium but are capable of causing turbidity on changes of temperature, comprising bringing the beverage at any stage during its manufacture into intimate contact with a water-insoluble and acid-insoluble lignin remaining after acid-hydrolyzing the carbohydrates of wood, while maintaining the pH value of the beverage liquor in the acid range, and thereby forming an insoluble complex of the lignin with said components, and separating the beverage from said complex.

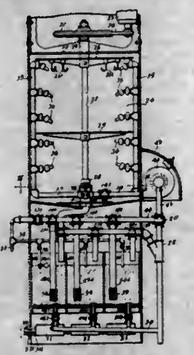
2,471,503
ROPE HOLDER
George A. Ward and Otto Koleske, Springfield, Ill., assignors to Modern Machine Products Co., Springfield, Ill., a copartnership composed of George A. Ward and Otto Koleske
Application February 27, 1946, Serial No. 650,446
1 Claim. (Cl. 24—134)



A rope-holder incorporating in combination a first sheet-metal member having a flat bottom wall with a transverse slot and a separate aperture therethrough and a stationary abutment-pin upstanding from said bottom wall, and having erect from such wall and integral therewith a pair of marginal, parallel, longitudinal flanges with smooth inner surfaces spaced apart facing one another, the forward ends of the top portions of said flanges having a pair of opposed inwardly directed aligned spaced-apart ears integral with the flanges, the back ends of said flanges having appropriate means for the support of the rope-holder, a second member having a flat upper portion parallel with said bottom wall and apertured in register with the aperture of said first member, a stud occupying said apertures and at least in part supporting said second member, the forward end of said second member being bent down and having a tip positioned by and occupying said transverse slot, said second member being spaced from both of said flanges of a width to receive the rope to be secured, a cam between said first and second members oscillatory on said stud, said cam having a pair of substantially parallel opposite edge surfaces and at one end such edge surfaces being of eccentric increasing radius to the outermost point, the shape of such cam at its opposite end being similarly of increasing radius with somewhat rounded marginal teeth, the cam surface without teeth coacting with the rope and later with the inner surface of one of the flanges whereas the eccentric toothed surface of the cam cooperates with the rope and the inner face of the other flange, whereby a loop of the rope near one end thereof is applied inside of the holder beneath the ears between the cam and abutment-pin on the one hand and one of the flanges on the other hand around the inner end of the cam beneath said second member and between the cam and the other flange and then pulled lengthwise away from the holder on the free end of the rope strand to place the whole length of the rope under appropriate strain whereby such movement of the rope turns the cam by engagement therewith against the abutment-pin and provides adequate spaces between the two flanges and the two portions of the cam for the rope to slide easily in the holder, whereupon as soon as the operator releases his pull slightly on the rope the backward strain of the latter causes the rope to turn a slight amount around the axis of the abutment-pin and carry the cam with it whereby the rope is held from further relieving the applied strain by reason of the fact that the rotation of the cam causes its toothed surface to grasp the rope and firmly hold it between itself and the corresponding flange.

2,471,504
MEMORANDUM PAPER HOLDER
Ernest Lisle Wayne, Victoria, Tex.
Application June 28, 1946, Serial No. 680,147
1 Claim. (Cl. 281—6)

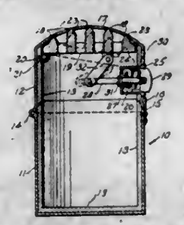
A memorandum paper holder comprising, a frame formed of a strip of thin material a portion thereof forming a base and one end portion shaped into a cylindrical container for containing a roll of paper, said strip terminating, at said one end, in a free margin which is spaced from the base to provide a passageway for the unwound paper, said strip having another portion connected to the other end of the base portion and forming an inclined table which overlies the container, said strip having an externally curved surface and a transverse slot at the juncture of the base and table through which slot, and around which surface, the unwound paper may pass onto the table, the upper end of the table extending beyond the container and being curved upwardly and terminating in a transverse cutting edge, said extended end being provided with a plurality of openings, bearing blocks secured to the margins of said upwardly extended end, a transverse gripping roller mounted to rotate in bearings in said blocks above said openings, a transverse shaft beneath the extended upper end of the table and mounted to rotate in said bearing blocks, friction rollers fixed on said shaft and working through the table openings in co-operation with the gripping roller to grip the paper between them, a hand grip fixed on an end of said shaft for rotating the shaft and friction rollers and end caps fitted into, and gripped by, the ends of the container.



2,471,505
PUNCH PRESS
Jerrold B. Winther, Kenosha, Wis., assignor to Martin P. Winther, as trustee
Application January 4, 1947, Serial No. 720,256
5 Claims. (Cl. 172—284)

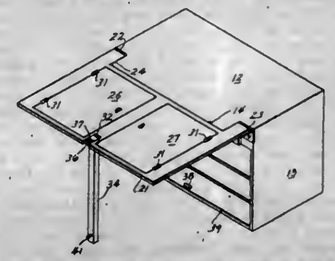
1. A press comprising a ram, means for reciprocating the ram including a rotary ram shaft, means for driving the shaft including an electromagnetic inductive coupling having a coupling

field coil, an electromagnetic inductive brake for braking said shaft having a braking field coil, a reversible pole generator, a connection across the output of said generator including said coupling coil and an electric valve permitting current flow through said coupling coil only when said generator is of one polarity, a parallel connection across said generator output including said braking coil and an electric valve permitting current flow through said braking coil only when said generator is of opposite polarity, and means coordinated with the motion of the ram shaft for reversing current flow in the field of said generator for reversing its polarity.



2,471,506
SPRAY TYPE WASHING MACHINE FOR SOLID OBJECTS
Harry Bruce Wiswall, Los Angeles, Calif.
Application March 22, 1943, Serial No. 479,976
3 Claims. (Cl. 134—43)

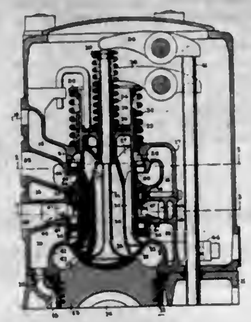
3. An apparatus of the type described comprising in combination: a washing cabinet having spray nozzles, supply pipes therefor and a drain; a circulating pump having an outlet connected with said supply pipes; a series of liquid containers arranged in a row below said cabinet; a drain conduit system for said cabinet including a main line communicating with a sewer outlet, a series of lateral pipes extending from said main line to each of said liquid containers, and three-way valves disposed in series in said main line for communicating with a corresponding lateral pipe or communicating with the succeeding valve; a supply conduit system for said cabinet including a main line extending between a water supply and a sewer outlet, a plurality of lateral intake lines extending from said main line to each of said containers and to said pump, a plurality of three-way valves disposed in series in said main supply line for communication with their respective containers or communication with the succeeding three-way valve, and an end three-way valve communicable with said pump or with said last named sewer outlet.



2,471,507
SALT SHAKER
Mozel A. Adams, Evangeline, La.
Application September 20, 1946, Serial No. 696,327
2 Claims. (Cl. 65—57)

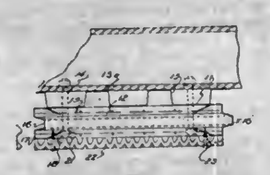
1. In a salt shaker comprising a hollow body portion with a top having a plurality of holes arranged in rows therein, a movable closure grid within the hollow body portion having a plurality of grid bars with upwardly-projecting tapered points fixed thereon and adapted to close said holes in raised position of the closure grid, the features including a hinge connection between the edge of the closure grid and the rear edge of the salt shaker, a horizontally-disposed push bar extending slidably through the front wall of the

salt shaker, a spring biasing the closure grid upward upon the hinge connection into closed position, a downwardly-extending lug upon the bottom of said closure grid, a link pivotally connected at one end to the lug and at the other to the inner end of said push bar, there being a head or finger piece upon the outer end of the push bar, and a second spring urging said push bar outwardly with respect to the front wall of the shaker.



2,471,508
KITCHEN CABINET WITH TABLE FORMING FRONT
Senator W. Adams, Birmingham, Ala.
Application October 11, 1946, Serial No. 702,679
5 Claims. (Cl. 312—161)

1. In a cabinet embodying a door frame and doors therein forming a front for the cabinet, means to pivot the door frame at its upper end, a leg pivoted to the door frame adjacent the bottom thereof, a stationary latching member on the lower portion of the cabinet, and a complementary latching means carried by the pivoted end of said leg for engaging the stationary latching member to secure the pivoted frame to the cabinet.



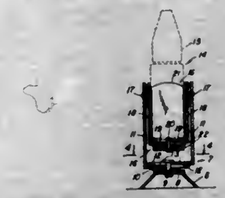
2,471,509
INLET AND EXHAUST VALVE MECHANISM WITH ASSOCIATED TURBOCHARGER
Karl Volmar Anderson, Milwaukee, Wis., assignor to Nordberg Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application May 9, 1947, Serial No. 747,080
8 Claims. (Cl. 60—13)

1. In an internal combustion engine the combination of a cylinder and piston enclosing a working space; coaxial inlet and exhaust poppet valves controlling admission to and exhaust from said space; a rotary runner encircling said valves and having turbine blades in the path of exhaust

flow and turbo-compressor blades in the path of inlet flow whereby the runner is adapted to apply the energy of exhaust to stimulate inlet flow; and means for operating said valves.

2,471,510
PANEL
John B. Anthony, Berkeley, Calif., assignor to Kaiser Engineers, Oakland, Calif., a corporation of California
Application October 19, 1945, Serial No. 623,223
4 Claims. (Cl. 108—6.5)

1. An exterior building wall including in combination a plurality of exposed and spaced apart parallel structural members, an interior panel assembly comprising a plurality of interlocking pre-cast slabs of fire resistant material lying adjacent one another and supported by and spaced from said structural members, a longitudinally corrugated exterior sheet interposed between and contacting said structural members and said slabs of said panel assembly and common fastening means for securing said corrugated sheet to said structural members and to said slabs.

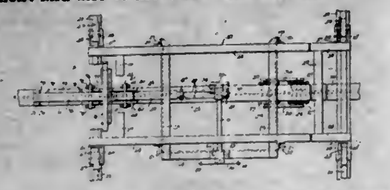


2,471,511
BASKETBALL TOY PADDLE
Solomon Axelrod, New York, N. Y.
Application December 30, 1948, Serial No. 68,241
4 Claims. (Cl. 273—97)

1. In an article of the character described, the combination of a paddle having an opening through its striking surface of a size to permit a ball to pass therethrough, an open-mouthed receptacle to receive the ball through said opening and a manually operable shutter to obstruct said opening to the passage of the ball therethrough;

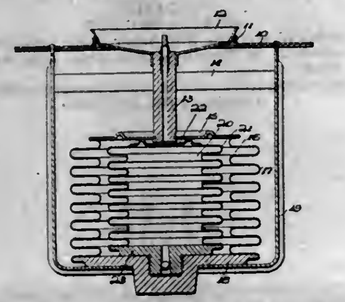
the receptacle and shutter being carried on the paddle.

2,471,512
BOTTLE HOLDER
Everett W. Barlock, Ann Arbor, Mich., assignor of one-half to Pearle S. Reimann, Ann Arbor, Mich.
Application November 18, 1947, Serial No. 786,707
4 Claims. (Cl. 248—102)



1. In a bottle holder of the class described, a relatively stationary stand, a suction cup on said stand for attaching same to the surface of a table or the like, a receiver-type bottle holder, said bottle holder being situated in and tiltably mounted on said stand, the stand being made up of relatively adjustable parts, and said holder also being made up of adjustable parts and the respective parts of the stand and bottle holder being simultaneously adjustable to handle bottles of varying sizes.

2,471,513
CONVEYER LOCKING AND ALIGNING SYSTEM
Aubrey B. Bogle, Highland Park, Mich.
Application December 15, 1945, Serial No. 635,240
4 Claims. (Cl. 104—98)



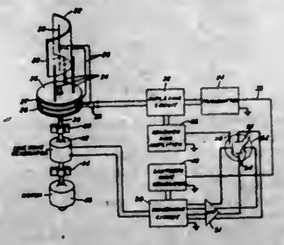
1. A safety aligning and stop mechanism for trolleys traveling on relatively movable tracks comprising a trolley stop pivotally mounted near the end of one track and arranged to swing into and out of stopping relationship with said trolley, a latching member movable into and out of latching engagement with said stop, a locking bolt reciprocably mounted on one of said tracks, a keeper mounted on the other of said tracks and having a bolt recess and an inclined cam portion, said cam portion being operative simultaneously

to lift said bolt upward into said recess in response to the relative motion of said tracks into alignment and also to move said latching member out

of latching engagement with said stop whereby to release said stop and permit travel of said trolley from one track to the other.

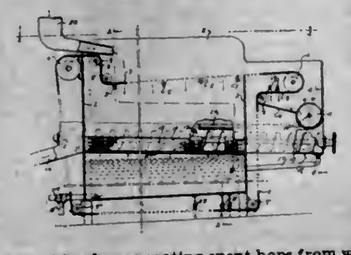
2,471,514
SAFETY TYPE THERMOSTAT
Charles D. Branson, Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application July 20, 1945, Serial No. 606,194
6 Claims. (Cl. 297—8)

1. In a device of the character described, in combination with means to be controlled, an expansible and collapsible chamber having a movable wall operatively connected to said means and charged with gas under a vacuum, a second expansible and collapsible chamber within said first named chamber and charged with a vaporizable liquid, said second named chamber having a movable wall with which said first named movable wall is held in engagement by the difference in external and internal pressure acting on said first named chamber, said second named chamber being the sole means for expanding said first named chamber through the engagement of said movable walls as long as a vacuum remains in said first named chamber.



2,471,515
ANTENNA
George H. Brown and Jess Epstein, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application July 25, 1944, Serial No. 546,449
8 Claims. (Cl. 250—33)

1. A radio antenna comprising a plurality of stacked groups of four orthogonally disposed horizontal dipoles, spaced vertically at half wave intervals to form four orthogonally related panels; a vertical conductive member of square cross section, mechanically connected to and acting as a support and reflector for one of said panels respectively on each of its vertical surfaces, said member including an axial bore, a conductor disposed coaxially within said bore and cooperating with said member to function as a coaxial transmission line, and means for coupling respectively one element of each of said

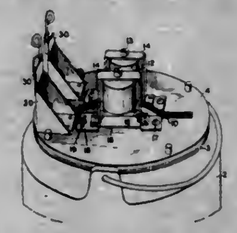


dipoles to said coaxial conductor and means for connecting respectively the other element of each of said dipoles to said supporting member, with the mechanical arrangements of adjacent stacked groups reversed with respect to each other whereby all of said dipoles are electrically cophasal.

2,471,516
PLAN POSITION INDICATING SYSTEM AND METHOD
Newton W. Bryant, Chatham, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 20, 1941, Serial No. 423,757
5 Claims. (Cl. 343—11)

5. In a radio exploratory system, a highly directive rotating beam antenna, means for rotating said antenna about a vertical axis, a periodic pulse transmitter, a receiver, a duplexing unit connecting both said transmitter and said receiver to said antenna, a cathode ray oscilloscope having two pairs of deflecting plates, horizontal and vertical, respectively, in quadrature relation and a control anode, a source of sine wave voltage, a source of saw-tooth wave voltage, means for rotating said antenna, means for synchronizing said sine wave voltage with the rotation of said antenna, means for synchronizing said saw-tooth wave voltage with the emission of energy by said transmitter, means for combining said sine wave and saw-tooth wave voltages to provide a sine wave voltage and a cosine wave voltage, each modulated by said saw-tooth wave voltage, means for impressing the modulated sine and cosine voltage waves upon the horizontal and vertical deflecting plates of said oscilloscope, respectively, means for impressing the output of said receiver upon the control anode of said oscilloscope, means synchronized with the rotation of said antenna for generating control pulses at predetermined angular positions of said antenna and means for impressing said generated control pulses on said control anode to increase the intensity of the radial sweep traces of said cathode-ray oscilloscope at angular positions of said radial sweep trace corresponding to said predetermined angular positions of said antenna.

2,471,517
MACHINE FOR SEPARATING SPENT HOPS FROM WORT
Edmund L. Chaffee, Milwaukee, Wis.
Application April 15, 1946, Serial No. 662,167
1 Claim. (Cl. 210—149)



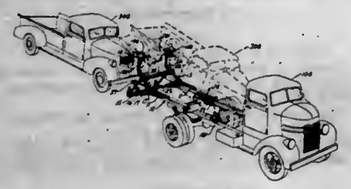
A machine for separating spent hops from wort, comprising a storage tank having side walls and front and rear walls, one side wall being provided with a longitudinally disposed drain slot extending from the front to the rear walls thereof and inclined downwardly towards said rear wall, a wort receiving hopper extending from the rear wall of said tank, having a semi-circular bottom inclined towards the slotted side of the tank and provided with a discharge mouth, an inclined trough extending from the slotted side wall of said tank and hopper communicating with the hopper discharge mouth and tank drain slot, whereby a fluid receiving pocket is formed at the lower end of said trough, a pipe communicating with the lower pocket end of the trough and tank, a semi-circular screen seated in the bottom of the aforesaid trough and extending longitudinally of the tank drain slot communicating with the same, and driven worms nested within the trough and hopper bottom, whereby the saturated hops are discharged into the bottom pocket of the trough and thereafter caused to travel upwardly therein to drain the wort through the slot into the tank.

2,471,518
NICOTINIC ACID AMIDE AND PROCESSES FOR PREPARING SAME
Bernard F. Daessel, Yonkers, and Harris L. Friedman, New York, N. Y., assignors to Pyridium Corporation, Nepera Park, N. Y., a corporation of New York
No Drawing. Application August 28, 1942, Serial No. 456,728
10 Claims. (Cl. 260—295.5)

3. The process of producing nicotinamide which comprises partially hydrolyzing 3-cyanopyridine by subjecting the same only to the action of an inorganic alkalizing agent in aqueous solution, said agent being employed in a quantity not substantially in excess of that required to produce an alkalinizing strength equivalent to that effected by sodium hydroxide in an amount of about 2½% of the weight of said 3-cyanopyridine.

2,471,519
ROTARY DISK GLUE APPLICATOR
Lawrence C. Fitzgerald, Oregon, Wis.; dedicated to the free use of the People in the territory of the United States
Application April 4, 1947, Serial No. 739,352
4 Claims. (Cl. 91—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

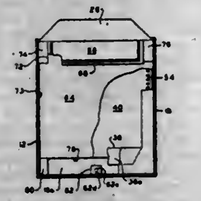
1. An applicator comprising a casing, a slotted cover for said casing, a vertical disc supported within the casing, a portion of the disc projecting through the slot in the cover, a shaft passing through a hole in the center of the disc, means for positioning and fastening the disc on the shaft, said means and said disc being movable longitudinally along the shaft to adjust the position of the disc, mounting means for suspending said shaft from said cover, the said shaft being free to rotate, work guide means mounted on the cover at each side of the plane of the disc adjacent the lowermost portion of the projecting periphery of the disc, second work guide means comprising two vertical rollers the axes of which are each positioned at each face of the disc, opposite the point of maximum elevation of the periphery of the disc, which is the point of glue application, a vertical axial shaft for each roller, means for supporting each vertical shaft on the cover and for adjusting each roller, horizontally, toward or away from the said disc.



2,471,520
PRODUCTION OF ETHYLENE DIFORMATE
Harold W. Fleming, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application June 10, 1946, Serial No. 675,811
12 Claims. (Cl. 260—473)

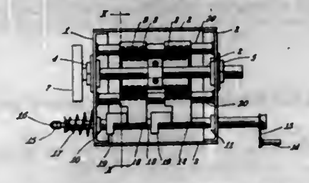
1. The process which comprises oxidizing dioxane with an oxygen-containing gas at an elevated temperature and pressure such that ethylene diformate is formed.

2,471,521
MEANS FOR TRANSPORTING MOTOR VEHICLES
Floyd I. Galey, Detroit, Mich.
Application November 24, 1947, Serial No. 787,685
10 Claims. (Cl. 280—33.44)



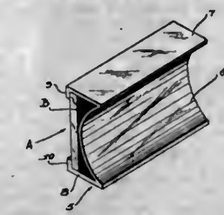
1. Means for transporting one motor vehicle on another motor vehicle serving as a transport

vehicle comprising a frame extension including upwardly and rearwardly disposed arms, an extensible bolster composed of a pair of extension members supported by and extensible with respect to the said frame extension arms and having upwardly disposed axle supporting arms at



the ends thereof, an axle supporting cradle at the upper end of each of the said axle supporting arms, means for removably securing the rear axle of the vehicle to be transported in the said cradles, and means for removably securing the said frame extension to the said transport vehicle.

2,471,522
PHOTOGRAPHIC FILM HOLDER
Elmer E. Garrett, Freeport, Robert C. Steck, Mount Vernon, and Alexander T. Yasensky, Jamaica, N. Y., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application September 20, 1947, Serial No. 775,365
15 Claims. (Cl. 95—66)



1. An assembly of materials adapted to direct photographic exposure of a film embodied therein and to processing of said film by subjection of the assembly to compression, said assembly comprising, in combination, a photographic film, an opaque sheet normally covering the light-sensitive surface of said film and adapted to displacement therefrom, a processing fluid contained for release between adjacent portions of said film surface and opaque sheet, and an envelope substantially enclosing the aforesaid materials, said envelope comprising an aperture normally closed by said opaque sheet and adapted to admit actinic light to said film surface when said sheet is displaced therefrom, said envelope also comprising an opening through which said opaque sheet may pass during said displacement thereof, said envelope being so formed as to leave uncovered a portion of said sheet when said sheet is in said envelope and is covering said light-sensitive surface so that said sheet is accessible for engagement by mechanical means for effecting slidable movement of said sheet relative to said film surface.

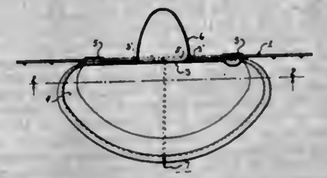
2,471,523
CIRCUIT ELEMENT FOR TUNING AN ELECTRIC CIRCUIT OVER A PLURALITY OF FREQUENCY BANDS
Frederik Hendrik Gusdorf and Alexandre Horowitz, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 17, 1946, Serial No. 662,880
In the Netherlands November 4, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires November 4, 1961
11 Claims. (Cl. 250—40)

1. An arrangement for tuning an electric circuit over a plurality of frequency bands, comprising a plurality of circuit elements, a variable capacitor having a first capacity adjusting means and a second capacity adjusting means independent of said first capacity adjusting means, a band selecting switch mechanically coupled to said first capacity adjusting means to adjust the capacity range of said second capacity adjusting means and select said circuit elements corresponding to a desired frequency band, and means coupled to said second capacity adjusting means to continuously vary the capacity of said capacitor through said adjusted capacity range to tune over said desired frequency band.

2,471,524
ANTIGLARE REARVIEW MIRROR ATTACHMENT
William L. Hendricks, Los Angeles, Calif.
Application April 23, 1946, Serial No. 664,219
1 Claim. (Cl. 88—77)

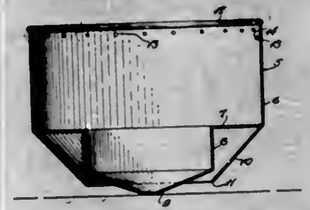
In a rear-view mirror structure of the class described, an elongated transversely curved transparent member, the longitudinal edges thereof being provided with right angularly disposed flanges, said flanges being of a length commensurate with the length of the transparent member, said flanges being parallel to one another and the free longitudinal edge portions of the flanges being laterally directed toward each other to provide a pair of retention lips, said flanges projecting in a direction to reach points beyond the convexed surface of said member, and a flat reflecting mirror fitted between said flanges and held in place by said lips, the reflecting side of said mirror being in contact with the convex side of said member.

2,471,525
REACTION OF AN ACETYLENE WITH HF TO PRODUCE VINYL FLUORIDE AND/OR DIFLUOROETHANE AND HOMOLOGUES THEREOF
John C. Hillyer and Joseph F. Wilson, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application December 19, 1947, Serial No. 792,832
11 Claims. (Cl. 260—653)



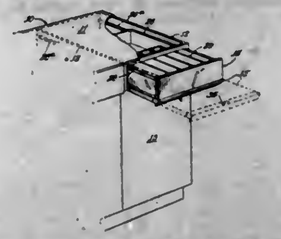
7. An improved method for reacting an acetylene and hydrogen fluoride, which comprises contacting a mixture comprising an acetylene and a molar excess of hydrogen fluoride with a solid catalyst comprising a catalytic material of the group consisting of aluminum fluoride and aluminum oxide at an elevated reaction temperature, whereby hydrogen fluoride adds to said acetylene, and recovering a resulting fluoro hydrocarbon.

2,471,526
DENTAL HAND PIECE
Hans E. T. Jensen, Los Angeles, Calif.
Application August 21, 1946, Serial No. 692,010
2 Claims. (Cl. 32—27)



1. In a dental hand piece the combination with a tubular handle having a drive shaft carrying a driving pinion, and a head mounted on the handle having a bore intersecting the pinion axis and provided at its outer end with an interior thread, of a spindle journaled in said bore carrying a pinion meshing with the drive pinion, a sleeve carried by the threaded portion of the head having an inner end engaging the spindle pinion and an outer end extending beyond the head and knurled on its outer end for finger adjusting engagement and a nut on the projecting end of the sleeve cooperating with the head for locking said sleeve.

2,471,527
DRINKING CUP FOR MINK OR OTHER PENNED ANIMALS
Le Roy F. Jonas, Wausau, Wis.
Application February 14, 1947, Serial No. 728,541
1 Claim. (Cl. 119—18)

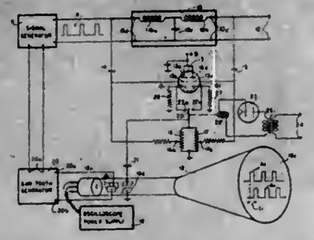


A water container for animal cages having an opening therein, comprising a pan in removable pivotal connection with the cage, a U-shaped cup extending from the pan through the cage opening, a division plate secured to the cage above the opening extending into the U-shaped cup there being a space between the cup edges and division plate to permit free flow of water between the pan and spout, and a lock and release bar pivoted to the pan having a hook end engagable with the cage wire.

2,471,528
CHILD'S ROCKING BOWL
Lester E. Kling, Yorktown, Va.
Application March 2, 1945, Serial No. 580,559
4 Claims. (Cl. 272—56)

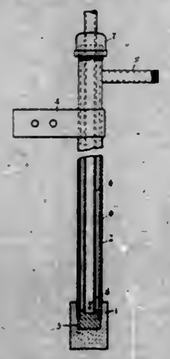
3. A device of the class described including a walled cylindrical container, a cylindrical sleeve of reduced diameter at the base of said container, a bowl-shaped bottom on said sleeve, and an inverted frusto-conical guard depending from the base of said container and surrounding said sleeve but terminating at a point above said bottom.

2,471,529
CABINET WITH DRAWER AND WORK BOARD COMBINATION
Dwight La Barre, Detroit, Mich., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois
Application February 19, 1947, Serial No. 729,551
10 Claims. (Cl. 312—149)



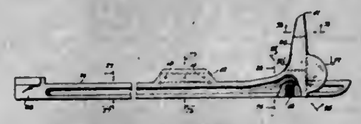
9. In combination with a support having a compartment; a drawer member slidable in said compartment; a work board member slidable in said compartment adjacent said drawer member; means whereby said drawer and work board are independently supported within the cabinet for sliding movement; and latch means releasably connecting said members for simultaneous movement, said latch means when released adapting said members for movement independent of each other.

2,471,530
SYSTEM FOR COMPARING SYNCHRONIZED WAVE SIGNALS
Seymour Lobel, Brooklyn, N. Y., assignor to Air King Products Company, Inc., a corporation of New York
Application September 12, 1945, Serial No. 615,895
1 Claim. (Cl. 315—26)



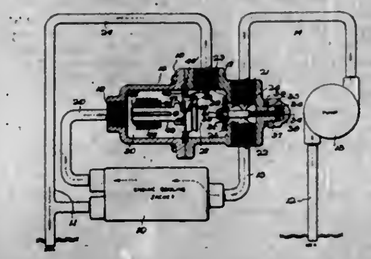
A system for enabling visual comparison of two related synchronized wave signals comprising,

two vacuum-tube repeater paths having individual input circuits and a common cathode load resistance means, said input circuits being returned to electrically spaced points on said resistance means, means for individually applying said signals to said input circuits, an oscillographic device, means for scanning said device



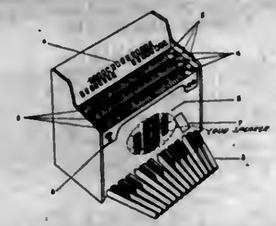
synchronously with said signals, means for deflecting the beam of said device, circuit means for coupling said deflecting means to said resistance means, and means for periodically connecting said resistance means alternately in circuit with said repeater paths, whereby laterally displaced traces of said signals are developed simultaneously by said device.

2,471,531
ELECTRODE
Glenn H. McIntyre, Cleveland Heights, and Robert E. Skinner, Lakewood, Ohio, assignors to Ferro Enamel Corporation, Cleveland, Ohio, a corporation of Ohio
Application October 30, 1946, Serial No. 706,616
1 Claim. (Cl. 13—18)



An electrode, comprising coaxial inner and outer tubular conductors forming an annular space therebetween, an exteriorly threaded imperforate plug having threaded engagement in one end of said outer conductor and formed with a central recess bearing a close telescopic fit over and thus coaxially locating the corresponding end of said inner conductor with respect to said outer conductor, a nut surrounding said inner conductor having threaded engagement with the other end of said outer conductor, said inner conductor being formed with a lateral opening adjacent said plug affording communication between the interior of said inner conductor and the annular space between said conductors, and an interiorly threaded electric conducting body threaded onto said outer conductor formed with a recess including bottom and side walls respectively in electrical contact with the outer end face of said plug and with the sides of said plug and outer conductor, such recess in said body being of depth such that said body extends along said outer conductor at least to a point opposite the lateral opening in said inner conductor and the annular space defined between said conductors.

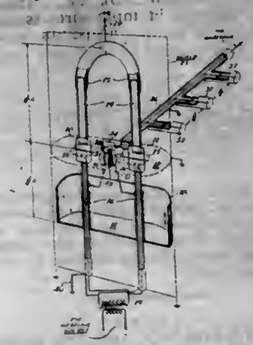
2,471,532
PICKER STICK
Heinz Menking, Rocky River, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 20, 1945, Serial No. 573,687
2 Claims. (Cl. 139—157)



1. A magnesic metal picker stick having a cross section substantially in the shape of an I.

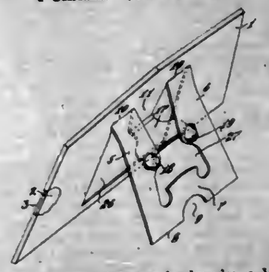
2,471,533
TEMPERATURE REGULATOR FOR INTERNAL-COMBUSTION ENGINES
David L. Morgan, Bridgeport, Conn., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application March 10, 1947, Serial No. 733,642
6 Claims. (Cl. 123—178)

2. A temperature regulator for the cooling system of an internal combustion engine of the marine type including an engine jacket and a pump for delivering water from an external source to the engine jacket in excess of the requirements of the cooling system under at least some conditions, a housing providing a passage in communication with said pump and with the inlet of the engine jacket, said housing also providing a chamber in communication with the outlet of the engine jacket and an outlet chamber, an outlet conduit in communication with said outlet chamber, a valve port between said passage and said outlet chamber, a pressure responsive valve cooperating with said port and operable under variations in pressure in said passage for delivering variable quantities of water to said outlet chamber, a valve port between said first named chamber and said outlet chamber, a thermostatically operated valve cooperating with said last named port and responsive to the temperature in said first named chamber, and means in association with said last named valve for maintaining a predetermined flow of water over said thermostat when said thermostatically operated valve is closed.



2,471,534
MUSICAL INSTRUMENT
William Muth and John Muth, Jr., Brooklyn, N. Y.
Application March 29, 1943, Serial No. 480,910
12 Claims. (Cl. 84—1.28)

1. In combination, a plurality of circular record discs having thereon a plurality of circular concentric endless recordings of musical tones according to the musical scale, the said recordings being characterized by a smooth overlapping of start and finish without respect to phase relationships of the recorded vibrations between the start portion and finish portion as produced by simultaneous magnetic erasing and recording, a plurality of shafts for carrying said record discs, means for driving the respective shafts at different steady speeds, a plurality of electrical recorder-reproducers adapted to simultaneously erase and record sound vibrations on said discs respectively cooperating with said circular recordings, microphone members adapted to take a pick-up from a musical instrument and an amplifier connectable between said microphone and said recorder-reproducers for producing said concentric endless recordings of musical tones, the said recordings comprising magnetic material discs, the said electrical recorder-reproducers comprising high permeability magnetic systems, cooperating with electrical windings thereon, a plurality of keys respectively having electrical contacts connected to said reproducers, an amplifier connected to said keys and a loud speaker system supplied with electrical vibrations from said amplifier.

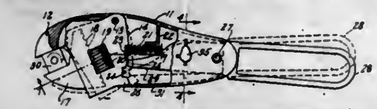


2,471,535
FEEDBACK SYSTEM
Leon S. Nergaard, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 2, 1945, Serial No. 608,576
14 Claims. (Cl. 250—36)

1. An electron discharge device system comprising a vacuum tube having separate cathode and anode tuned circuits, and a feedback loop magnetically coupling both of said tuned circuits, and means for maintaining the center of said loop substantially at ground potential over a path having reactance which is appreciably

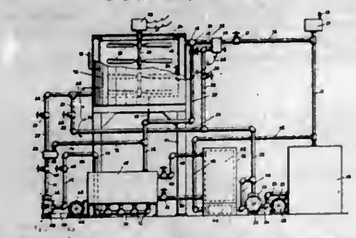
greater than zero but low compared to the reactance of said loop at the operating frequency.

2,471,536
EASEL
Gordon E. Nichols, Middleboro, Mass., assignor to Winthrop-Atkins Co., Inc., Middleboro, Mass., a corporation of Massachusetts
Application February 7, 1946, Serial No. 646,114
4 Claims. (Cl. 248—35)



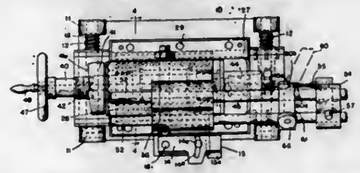
1. An easel comprising a body ply, a leg and a brace, the leg and brace being hinged at their upper ends to said body ply, the body ply having a chamber in which the leg and brace are housed when the easel is folded, the brace having laterally spaced tabs at its lower end, said tabs having locking elements and the leg having laterally spaced openings of such dimensions as freely to receive said tabs, the locking elements of said tabs being seated in locking engagement with the material bordering the openings by the natural resilience of the brace.

2,471,537
ADJUSTABLE RATCHET WRENCH
Arthur E. Norman, Fergus Falls, Minn.
Application September 16, 1947, Serial No. 774,291
5 Claims. (Cl. 81—91)



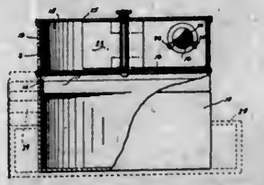
1. A wrench comprising a main hollow body member formed at its forward end with a first jaw element, a swingable member pivoted in said main body member and carrying a second jaw element at its forward end adapted to cooperate with said first jaw element, spring means biasing said swingable member forwardly, the rear edge of said swingable member being formed with a

pair of spaced projections defining a notch therebetween, a handle pivotally secured in said main body member and having a forward tip portion swingable to abut either of said spaced projections and adapted to enter said notch, and



adjustable means limiting pivoting movement of said handle so that at times said forward tip portion may not be swung into abutting relation to one of said projections and at other times may not be swung into abutting relation to the other of said projections.

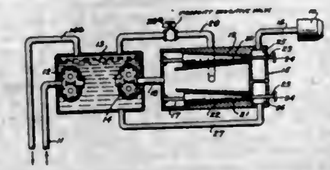
2,471,538
APPARATUS FOR HEATING AND COOLING KETTLES
Orion Ottis Oaks, Summit, N. J., assignor, by mesne assignments, to Thermal Liquids, Inc., New York, N. Y., a corporation of Delaware
Application September 16, 1947, Serial No. 774,376
1 Claim. (Cl. 257—4)



In a system and apparatus as described employing tetra-aryl ortho silicate as the heat transfer medium, a jacketed kettle, means for heating the heat transfer medium, closed means for circulating the heated heat transfer medium from said heating means through the jacket of said kettle and returning the heated heat transfer medium from the jacket of said kettle to said heating means, expansion means for the heated heat transfer medium in said circulating means above and adjacent to said heating means including normally closed pressure and vacuum responsive relief means, absorption type refrigerating means including a generator, closed means for circulating heated heat transfer medium from the heating means through said generator and for returning the heat transfer medium from said generator to the heating means, a reservoir receiving cooled transfer medium from said refrigerating means, closed means for circulating cooled transfer medium from said reservoir through the jacket of the kettle and from the jacket of the kettle to said reservoir, thermostatically controlled by-pass means in said first named circulating means and subject to temperatures within the kettle and constructed and arranged so that heated heat transfer medium will be by-passed around the jacket when temperatures within the kettle exceed desired temperatures, valve means in said first named circulating means for terminating the flow of heated heat transfer medium to the jacket when cooled transfer medium is admitted to the jacket, a thermostatically controlled by-pass means in said third named circulating means and subject to temperatures within the kettle and constructed and arranged so that cooled transfer medium will be by-passed around the jacket when temperatures within the kettle fall below desired temperatures, and valve means in said third named circulating means for terminating the flow of transfer medium to the jacket when heated heat transfer medium is admitted to the jacket.

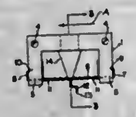
2,471,539
FIXTURE FOR RELIEF GRINDING OF CUTTING TOOLS
Emmett E. Parker, Farmington, Mich., assignor to Midwest Tool & Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application July 21, 1947, Serial No. 762,234
7 Claims. (Cl. 51—232)

1. A fixture for the relief grinding of cutting tools comprising a base adapted for mounting on a grinding machine in operative relation to the grinder thereof, a sub-carriage mounted on said base for rectilinear movement thereover in one direction thereof, a super-carriage mounted on said sub-carriage for rectilinear movement thereon in a direction perpendicular to the aforesaid movement, a shaft rotatably mounted on said super-carriage with its axis parallel to the direction of movement of one of said carriages, said shaft being provided with an axially arranged tool holder at one end thereof, an exchangeable cam mounted on said shaft and a cooperating bearing whereby the rotation of said shaft will move the same and one of said carriages in one of the said directions, a second cam operated by the movement of said carriage for simultaneously moving the other carriage and shaft in the other of said directions thereby moving said tool axially and radially thereof with respect to the grinder.



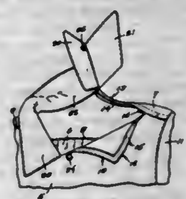
2,471,540
TRAP
Charles L. Phillips, St. George, N. Y.
Application October 8, 1946, Serial No. 702,011
1 Claim. (Cl. 43—71)

An animal trap, comprising a lower casing for holding water and having its top open, an upper casing having a side and bottom with the side projecting downwardly below the bottom to form a flange to be detachably mounted upon



the upper open end of the lower casing, the bottom of the upper casing having a large outlet opening formed therein and the side having a small inlet opening, a cap removably mounted upon the upper end of the upper casing, a vertical bolt passing through the bottom and cap of the upper casing, a removable nut detachably engaging the bolt and disposed exteriorly of the cap, a rotatable element arranged within the upper casing and including radial vanes and a hub having an opening for receiving the bolt, the hub being removable from the bolt by an upward vertical movement, a toothed element mounted upon the lower portion of the bolt adjacent to the bottom of the upper casing for engaging the lower edges of the vanes, and a bait holding receptacle having a part contacting with the face of one vane and secured to such vane, the vane closing one side of the bait holding receptacle.

2,471,541
BURNER CONTROL SYSTEM, INCLUDING A VISCOSITY SENSITIVE BY-PASS VALVE
Raymond B. Plass, Berkeley, Calif., assignor to Ray Oil Burner Co., San Francisco, Calif., a corporation of Delaware
Application January 28, 1946, Serial No. 643,896
1 Claim. (Cl. 158—36.3)



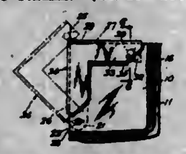
A burner control system comprising a source of fuel oil, an enclosed chamber, a pump for delivering oil from said source under pressure to said chamber, means for communicating part of the oil under pressure in the chamber to a burner, means for bypassing part of the oil from said chamber to the source, apparatus in said chamber for restricting flow through both of said means to regulate the flow substantially in compliance with Poiseuille's law, an auxiliary bypass for reducing flow to the burner, said auxiliary bypass extending between the source of oil and a point in said chamber containing said flow regulating means, and a regulating valve in said auxiliary bypass in close proximity to the connection of said bypass with said chamber, and similar flow restricting apparatus in said regulating valve.

2,471,542
PHONOGRAPH PICKUP UNIT USING MAGNETOSTRICTIVE WIRE
Stanley R. Rich, Cambridge, Mass.
Application October 25, 1945, Serial No. 624,362
8 Claims. (Cl. 179—100.41)

1. A phonograph pick-up device comprising a permanent magnet of high flux retentivity, providing two opposing pole elements, a magnetostrictive wire bridging said pole elements and supported thereby, means maintaining said magnetostrictive wire in torsion between the pole elements the torsional stresses acting in the same direction along its entire length, a stylus attached to said magnetostrictive wire in free equilibrium and extending from said magnetostrictive wire at the mid section thereof and a coil wound about said magnetostrictive wire on both sides of said stylus for converting the magnetic flux variations produced by said magnetostrictive wire to electromotive force.

2,471,543
SLIP-OVER STYLE OF OUTER GARMENT
Walter A. Riggs, Everett, Wash.
Application October 5, 1946, Serial No. 701,456
4 Claims. (Cl. 2—128)

1. A shirt of the slip-over type providing a neck opening in the body proper of the garment, and having a pull-down collar attached permanently to the body proper of the shirt through a portion only of the length of the collar and such as to leave one end of the collar free, said free end being comprised of a neck band arranged to underlie and a turned-down flap arranged to overlie the body proper of the shirt along the related margin of the neck opening, said neck band having the plan configuration of an elongated tetragon and being unattached to any part of the shirt other than the flap with said attachment extending only along the long side of the tetragonal figure, one shoulder of the shirt having a closeable gap leading laterally as a reentrant slit frum the neck opening and originating at a point approximately coinciding with the juncture of the free with the attached portions of the collar.



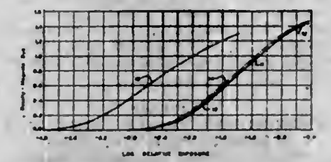
4. A shirt of the slip-over type providing meeting waist and shoulder-yoking sections acting together to provide a neck opening, and having a pull-down collar attached permanently to the body proper of the shirt through only a portion of the length of the collar leaving an end free, said free end being comprised of a neck band arranged to underlie and a turn-down flap arranged to overlie the related margin of the neck opening, the shirt being formed to present a closeable gap leading laterally as a reentrant slit from the neck opening and having the components of a zipper fastening provided along the meeting edges of said closeable gap arranged, when zipped for closing, to work in the direction of the neck opening, and also providing a flap arranged, when said zipper is zipped into closed condition, to project as a fly over and beyond the closed zipper to substantially conceal both components of said zipper fastening, said closeable gap originating at a point approximately coinciding with the juncture of the free with the attached portion of the collar and extending along a line parallel, or approximately parallel, with the crest of the garment's shoulder.

2,471,544
MEANS FOR CONNECTING MOORING CABLES TO ROTARY WINGED AIRCRAFT
Grant A. Ring, West Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application March 30, 1945, Serial No. 585,611
3 Claims. (Cl. 244—115)

1. Means for connecting a mooring or landing cable to rotary winged aircraft comprising in combination, a guide cable secured to said aircraft at two points spaced laterally from a vertical line passing through the center of gravity thereof, a pair of pulleys also secured to said aircraft for guiding said guide cable, said pulleys being spaced from said points and lying on the opposite side of the vertical line, said guide cable being longer than a line passing from one of said points through said pulleys and back to the other of said points, and a landing cable carriage mounted upon said guide cable at a pair of points lying between said pulleys and said points.

2,471,545
PICTURE FRAME HAVING PIVOTED CORNERPIECES
George Rosenberg, New York, and Louis Spiselman, Brooklyn, N. Y.
Application April 1, 1946, Serial No. 658,818
3 Claims. (Cl. 40—156)

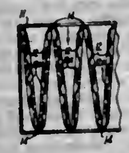
3. In a picture frame provided with a back and with a coextensive glass, corner pieces each having a front section and a rear section, said sections being joined at the outer peripheral edges thereof by connecting portions integral with said sections and defining the bottom of a groove therebetween, a fastener pivotally securing an end part of the rear section to the back, and means aiding the fastener to retain the corner piece in an operative position wherein portions of the glass and back are received in the groove, said means comprising an area on the inner surface of one of the sections, which surface constitutes a side surface of the groove, said area being offset out of the plane of the remainder of the aforesaid inner surface and being offset at one end more than at the other end thereof and being movable with the corner piece in an arc about the fastener as a center, and a relatively fixed part on the back engaging said area and thereby changing the lateral distance of said relatively fixed part from the sections as the corner piece is rotated into and out of its operative position.



2,471,546
RODENT TRAP
Joseph Russell, Bailey, Mich., assignor of one-half to John Hoefling, Ravenna, Mich.
Application September 29, 1944, Serial No. 556,427
2 Claims. (Cl. 43—76)

1. A rodent trap comprising a box for captive reception of the rodents, a framework supported on said box above its floor and comprising an access tunnel opening at its outer end to receive a rodent and having a floor provided adjacent the inner end of the tunnel with a trap door opening through which the rodent can fall into said box, a normally horizontal trap door freely hinged on said framework and closing said trap door opening in its horizontal position and arranged to tilt downwardly into said opening under the weight of a rodent, a bait chamber at the inner end of said tunnel, a free-swinging bait arm pivoted to depend into said bait chamber and biased gravitationally to assume a normal vertical position therein, a bait container on the bait arm and normally positioned at the inner

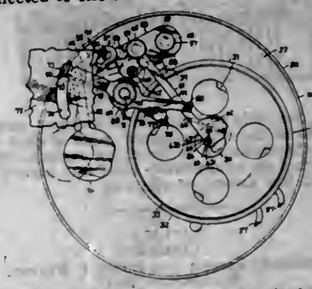
end of the tunnel whereby a slight pressure against said arm by a rodent standing on the trap door is sufficient to actuate said arm into a release position, a detent on said arm engaging under the trap door to hold the same closed in the normal position of the bait arm, and coordinating means effectively connecting the bait arm and the trap door whereby inward actuation of the bait arm by the rodent withdraws said detent and releases the trap door to tilt downwardly under the weight of the rodent and deposit the rodent into said box, and whereby subsequent gravitational return of the bait arm toward the normal vertical position operates to reset the trap door in closed position and reengage the bait arm detent therewith.



2,471,547
PHOTOGRAPHIC PROCESSES FOR PRODUCING MULTICOLOR IMAGES
William H. Ryan and Vivian K. Walworth, Cambridge, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application February 24, 1947, Serial No. 730,274
3 Claims. (Cl. 95—2)

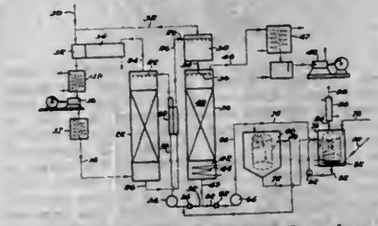
1. A process of color photography which comprises exposing an emulsion layer containing light-sensitive material comprising at least one silver halide selected from the class consisting of silver bromide and silver chloride and forming therein a latent image representative of a color component of a multicolor image; developing said latent image with a color-forming developer which forms a dye image and a silver image in said layer; giving the layer a controlled uniform exposure to light; without development of latent image created by said uniform exposure, treating said layer by subjecting the layer to the action of only one soluble halide which is reactable

with silver ion to form silver halide and which is selected from the class of halides consisting of soluble bromides and soluble chlorides, and an oxidizing agent which is substantially inactive with respect to image dye and which in the presence of the soluble halide selected from said class of soluble halides, possesses the properties of effecting formation from silver of silver halide having a halogen element which is the same as that of said soluble halide, of destroying latent image, of reducing the sensitivity of unexposed silver halide and of forming reaction products other than said silver halide which are soluble whereby the light-sensitive material of said layer essentially comprises silver halide having the same halogen element as said soluble halide and possesses substantially uniform but lower sensitivity than the light-sensitive material of said layer prior to any exposure thereof; forming in the layer in register with said already-formed dye image at least one other latent image representative of another color component of said multicolor image and developing the last-mentioned latent image with a color-forming developer which forms in said layer a silver image and a dye image having a color different from that of said first-mentioned dye image; and when multicolor image formation is concluded removing substantially all silver and silver salts from said layer.



2,471,548
ZIGZAG FILTER CONSTRUCTION
Oliver H. Schaaf, Chagrin Falls, Ohio, assignor to Air-Maze Corporation, Cleveland, Ohio, a corporation of Delaware
Original application February 1, 1943, Serial No. 474,311. Divided and this application December 14, 1945, Serial No. 634,996
4 Claims. (Cl. 183—71)

1. A fluid treating unit comprising a sheet of stiff screen material, said sheet having a series of zig-zag folds therein providing parallel ridges facing alternately in opposite directions, the flanks of each ridge diverging from the crest of the ridge, the material of said sheet along said flanks having corrugations extending at an acute angle to the crests of said ridges, and frame means open front and rear holding said folds with said ridges spaced apart so that fluid passing through said unit may pass between said ridges and through said folded screen generally at right angles to a plane passing through the ridges of said folds and said corrugations divert said fluid stream and catch small particles carried thereby.



2,471,549
ELECTRIC ALARM CLOCK
William K. Sessions, Jr., Bristol, and Earl D. Brightman, Forestville, Conn., assignors to The Sessions Clock Co., Forestville, Conn., a corporation of Connecticut
Application November 26, 1947, Serial No. 788,292
22 Claims. (Cl. 58—38)

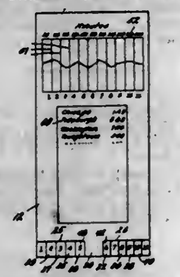
1. In an electric alarm clock: a cup-shaped bell comprising a bottom wall and a side wall; an electric motor mounted on said bottom wall within said side wall, said electric motor having a continuously-rotatable eccentric hammer-actuating pin; and mechanical alarm-means mounted on said bottom wall in juxtaposition to said motor, comprising a toggle-joint, a hammer operatively connected to one end of said toggle-joint and an

actuating-member engaged at one end by said eccentric-pin and pivoted at its opposite end to the opposite end of said toggle-joint thereby to transmit the movement of said actuating-member to said hammer for striking the side wall of said bell.

2,471,550
TREATMENT OF COKE-OVEN GAS
Joseph A. Shaw, Pittsburgh, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
Application March 9, 1948, Serial No. 13,881
In Great Britain July 10, 1946
17 Claims. (Cl. 260—677)

1. A process of separating olefines from gas containing hydrogen and small amounts of olefines and acetylene comprising: separating the olefines and acetylene from other constituents of the gas by selectively absorbing the olefines and acetylene in an aqueous solution of silver nitrate containing 25 to 35 percent by weight of silver nitrate, and maintaining in the solution free nitric acid and from 5 to 15 percent by weight of ferric nitrate based on the weight of silver nitrate in the solution to keep a silver acetylide complex formed by the absorption of acetylene dissolved in the silver nitrate absorbent and to prevent the precipitation of silver.

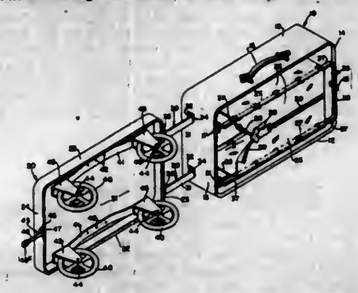
2,471,551
STOCK GUARD
James A. Slaughter, Kermit, Tex.
Application February 20, 1946, Serial No. 649,050
1 Claim. (Cl. 256—14)



In a stock guard, a metallic sheet having a zig-zag cross-sectional configuration and form-

ing a plurality of spaced parallel drain channels each defined by a pair of spaced parallel side walls and a semi-circular bottom wall, upwardly convexed semi-circular portions of said sheet bridging together the side walls of the ad-

jacent channels and constituting spaced parallel surfaces of uncertain footing, each of said bottom walls declining in relatively opposite directions from an intermediate crest line toward the ends of the associated channel.

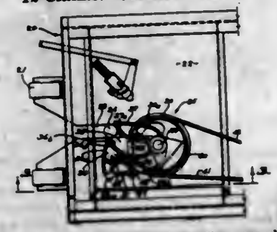


2,471,552
CHART
Benjamin Specter and James J. Murray, Washington, D. C.
Application July 24, 1946, Serial No. 685,895
4 Claims. (Cl. 283—35)

3. A sheet having a chart printed on both faces, the chart having crease lines for zigzag folding which divide each face of the sheet into a series of sections each composed of a pair of panels facing each other when the chart is folded, each panel having an integral tab dependent from its lower edge, each succeeding tab having a greater dimension edgewise of the panel than the preceding tab and having a portion exposed to view when the chart is folded, the exposed portions being disposed alternately to the right or left of the preceding tab, such exposed portions bearing indicia identifying said map sections, and serving as finger holds in turning the chart to selected sections; said exposed portions being divided into two groups of successive exposed portions, one of these groups serving to identify the sections on one face of the sheet and the other group for the other face of the chart.

2,471,553
COLLAPSIBLE PORTABLE CART
Samuel George Zuckerman, Brooklyn, N. Y., assignor of one-eighth to Albert B. Breslow, New York, N. Y.
Application March 18, 1947, Serial No. 735,490
11 Claims. (Cl. 280—37)

1. A collapsible cart comprising a body member constituting a composite suitcase and wagon member having a floor, sides and end walls, a pivotal member constituting a composite lid and wheel base member having a floor, sides and end walls, a pair of double-joint hinges each having a main link and end links, one of the end links of the hinges being secured to an end wall of the body member and the other end links being secured to the corresponding end wall of the pivotal member whereby the two members may be turned about said hinges to a closed suitcase condition with the pivotal member over the body member, or to an open hand-cart condition with said floor of the pivotal member in underlying relation to the floor of the other member, a pair of strips secured interiorly to the floor of the pivotal member and disposed close to the sides thereof, four wheels rotatively mounted on said strips, a handle-bar frame having lateral bars pivotally secured on one end wall of the body member whereby it is movable between an inner and outer position, its distal handle-bar portion being disposed close to the other end wall when the frame is in the inner position, a pair of sheets of pliable material secured along the floor of the body member to

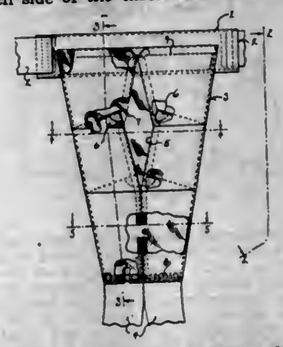


extend in substantially underlying relation to said lateral bars when the frame is in said inner position, a plurality of spaced hooks secured to said sheets and adapted to be hooked over said lateral bars, and a closure provided along the distal edges of said sheets to form an enclosed compartment, said wheels being received, when the device is in said closed suitcase condition, in the spaces between the sides of said compartment and the respective sides of the body member, and fastening means comprising a lock plate, a bar and plate to which said bar is pivotally secured, said bar having a tongue at its distal end, said lock plate being secured to a wall of the body member and said hinge plate being secured to the corresponding wall of the other member, whereby in said closed suitcase condition of the device, said bar tongue is received in said lock plate and when turned substantially 180° in said open hand-cart condition is received in the lock plate to lock the parts in said condition.

2,471,554
PROCESS FOR IMPROVING THE TENSILE STRENGTH OF GRAY COTTON YARN
Luther Axford, Clifton, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 21, 1947, Serial No. 756,323
6 Claims. (Cl. 117—7)

1. The process of improving the tensile strength of grey cotton yarn which comprises saturating the yarn with a hot aqueous solution comprising from 10 to 50 per cent of water and correspondingly from 90 to 50 per cent of a saturated monohydric aliphatic alcohol which contains from three to five carbon atoms per molecule and which is capable of dissolving water at 75°–95°

C. to the extent of at least 10 parts of water per 100 parts by weight of the alcohol and water solution, said solution being at a temperature of from 60° C. to the boiling point of said solution, tensioning the yarn while it is hot and wet with said solution at a temperature of from 60° C. to the boiling point of said solution and under a tension of from 50% to 75% of the breaking strength of the untreated yarn measured at 65% relative humidity and 70° F., and drying the resulting yarn under substantial tension at a temperature sufficiently high to volatilize all of said solution therefrom.

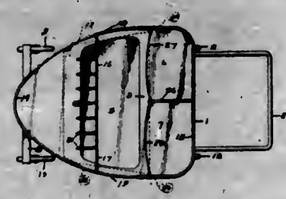


2,471,555
TRAILER COUPLING
Walter Bennett, Los Angeles, Calif., assignor to Utility Trailer Manufacturing Company, Los Angeles, Calif., a corporation of California
Application September 20, 1946, Serial No. 698,094
12 Claims. (Cl. 280—33.05)

1. In a tractor and semi-trailer combination in which the tractor and trailer are provided with co-operating elements including a coupler on one vehicle and a coupler operating element on the other vehicle, and in which the trailer is provided with a support movable between supporting and nonsupporting positions by back-and-forth rotation of a support operating element; a rotatively mounted coupler unit adapted to rotate back and forth between two positions, and a flexible interconnective belt comprising two runs each extending between and connected to the coupler unit and the rotary support operating element to transmit rotational movement between them, the two belt runs being effectively connected to the rotary coupler unit and the rotary operating element at opposite sides of their respective axes of rotation, so that upon rotation of the coupler unit in one direction or in the opposite direction movement is transmitted to the operating element by tension exerted respectively through one or the other of the belt runs.

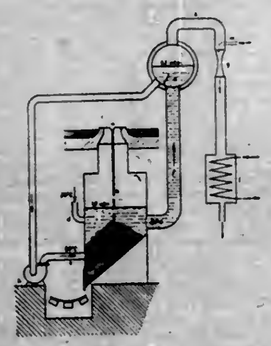
2,471,556
DIAPER HOLDER
Carol B. Birkle, Sheboygan, Wis.
Application March 6, 1947, Serial No. 732,814
1 Claim. (Cl. 128—284)

A diaper holder comprising a belt supported body formed from a double ply of waterproof material including an imperforate outer wall, said outer wall gradually tapering from its upper edge toward its lower edge, inturned flaps on the tapering side edges of the outer wall, said flaps being spaced apart adjacent to the upper end of the body defining an entrance throat and said flaps having their inner longitudinal edges in engagement adjacent to the lower end of the body, means securing the upper and lower ends of the flaps to the outer wall and to a belt, means securing the meeting edges of the flaps together below the throat and adjacent to their lower ends defining with the outer wall a depending sack, transversely extending pleats on the flaps on each side of the throat and above the sack



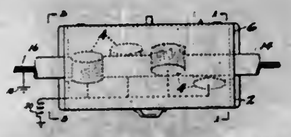
shortening the length of said flaps, whereby to impart a longitudinally extending, body conforming curve to the flaps and a fullness to the outer wall, and water absorbent material removably inserted in the body through the throat.

2,471,557
OIL SEAL REMOVING TOOL
Willard H. Bishop, Garrettsville, Ohio
Application December 20, 1944, Serial No. 569,021
1 Claim. (Cl. 81—3.1)



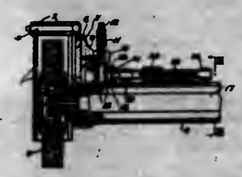
A tool for removing an oil seal from a housing surrounding an axle, the seal having a metal outer wall overhanging a yielding packing, said tool comprising a bar having a substantially straight shank and having a handle at one end extending in the same direction as the shank and connected with it by an offset portion, the shank at the other end being provided with a hook bill coming substantially to a point, the inner face of the bill extending at substantially a right angle to the shank and the outer face of said bill being curved from a point where it leaves the shank to said point of the hook bill, the said point being located a sufficient distance from the shank so that when the bill is inserted between the axle and seal and swung into position within the seal it will extend beyond the packing and bear against the inner face of said outer wall of the seal.

2,471,558
CARRIAGE
George Edward Barcher, Jr., Newport News, Va.
Application November 14, 1945, Serial No. 628,553
1 Claim. (Cl. 296—37)



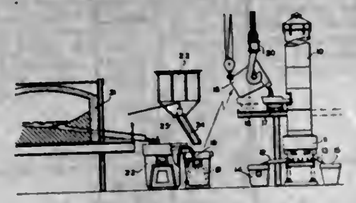
In a carriage of the character described, comprising a storage compartment and a seat compartment, a vehicle body having a floor composed of a front section and a rear section with an aperture therebetween, a foot rest beneath said aperture secured to the underside of said floor, a front wall rigidly secured to the front floor section, and a rear wall rigidly secured to the rear floor section, said front wall having an upright front portion and side portions extending rearwardly therefrom, said rear wall having an upright rear portion and side portions extending forwardly therefrom and spaced from the side portions of the front wall, in the vicinity of the rear portion of the said foot rest, a grill assembly disposed between and secured to the rear portions of the said side portions of the front wall, thereby forming the storage compartment of the carriage, and a seat member disposed between and secured to the said side portions of the rear wall, thereby forming the seat compartment of the carriage.

2,471,559
INSTALLATION FOR THE GRANULATION OF SLAG
Richard Dolezal, Vitkovice, Czechoslovakia
Application November 24, 1948, Serial No. 61,816
In Czechoslovakia November 27, 1947
5 Claims. (Cl. 18—2.4)



1. Installation for the granulation of slag comprising in combination a granulating chamber adapted to hold cooling water and having a top opening for the introduction of melted slag, an evaporation chamber, a pipe line to conduct warmed up cooling water from the granulating chamber into the evaporating chamber, a second pipe line to return the recooled water from the evaporating chamber into the granulating chamber and means effecting such return flow of the water, means to keep the temperature of the warmed up cooling water within the granulating chamber below its evaporation temperature, and means to reduce the pressure within the evaporating chamber below the evaporation pressure equivalent to the temperature of the warmed up cooling water entering said evaporating chamber.

2,471,560
SPARKING ELECTRODE FOR DRY ELECTRICAL TESTING OF INSULATED WIRE
Russell B. Everson, Tallman, N. Y., and William E. Ward, Dover, N. J., assignors to The Okonite Company, Passaic, N. J., a corporation of New Jersey
Application November 9, 1945, Serial No. 627,728
4 Claims. (Cl. 175—183)

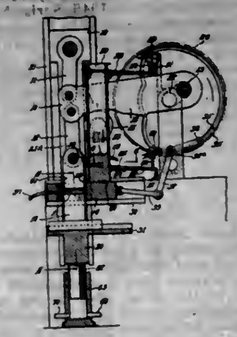


1. Testing apparatus for the dry testing of the insulation of electrically insulated wire, said apparatus comprising in combination a plurality of rotatable electrodes disposed in staggered relation along and about a common axis, said electrodes being rotatable about axes positioned at right angles circumferentially about said common axis, each electrode comprising a pair of spaced heads the plane of which is parallel to said common axis, spring metal members spanning or bridging said heads and constituting the body of each electrode, said spring metal members being adapted to engage the surface of the insulation under test when a wire the insulation of which is to be tested is moved along said common axis.

2,471,561
GUARD FOR GRINDING MACHINES AND THE LIKE
Edgar Charles Fielding, Walsall, England
Application September 20, 1946, Serial No. 698,188
In Great Britain October 25, 1945
5 Claims. (Cl. 51—269)

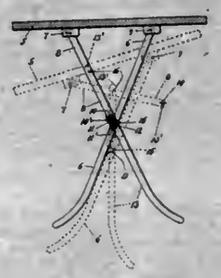
1. A guard for a grinding wheel or the like comprising two covers extending over the wheel, a common pivot upon which the two wheel-covers are pivotally mounted, the said pivot being disposed outwards of the wheel centre, a stationary part, cam slots in the stationary part, pins on the wheel-covers engaging the slots, the slots being disposed symmetrically on opposite sides of a plane containing the axes of the wheel and of the common pivot, and means for displacing said common pivot, the slots being so disposed and shaped that movement of the pivot with respect to the wheel centre causes the two wheel-covers to turn through equal angles about the said pivot, inwards or outwards, simultaneously.

2,471,562
METHOD OF UTILIZING METALLURGICAL SLAGS
George R. Fitterer, Oakmont, Pa., assignor to Eric H. Heckett, Valencia, Pa.
Application March 25, 1946, Serial No. 657,027
10 Claims. (Cl. 75—24)



1. A process for the beneficial treatment of fluid metallurgical slag upon tapping of the same from a steel making furnace which consists of initially intermixing with said slag a quantity of exothermic reducing material operative to effect at least partial deoxidation of the metallic oxides contained in said slag, and completing said deoxidation by reaction with carbon in a cupola.

2. A process for the beneficial treatment of fluid metallurgical slag upon tapping of the same from a steel making furnace for the recovery of a metal alloy from the metallic oxides of the slag and the simultaneous production of a slag product usable as Portland cement "clinker" which consists of initially intermixing with said slag a limited quantity of metallic aluminum of an amount insufficient to effect complete reduction of the metal of said oxides, and completing the deoxidation of said metallic oxides by reaction with carbon in a cupola.

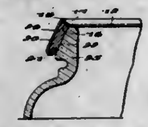


10. A process for the beneficial treatment of fluid metallurgical slag upon tapping of the same from a steel making furnace for the recovery of the values contained in the metallic oxides of the slag and the simultaneous production of a slag product useful as an agricultural fertilizer which consists of initially intermixing with said slag a quantity of exothermic reducing material operative to maintain the fluidity of the slag and to effect at least partial deoxidation of said oxides, completing said deoxidation in a heat imparting furnace whereby the heat and fluidity of said slag is further maintained, separating the metal and slag phases of the product of said furnace, and immediately thereafter infusing the slag product with crushed phosphate rock as desired.

2,471,563
TOGGLE PRESS AND METHOD FOR MOLDING ARTICLES FROM GRANULAR MATERIAL
Major E. Gates, Crystal Lake, Ill.
Application February 25, 1944, Serial No. 523,892
12 Claims. (Cl. 25—40)

1. In a press of the character described, the combination comprising a mold, a toggle frame carrying upper and lower plungers for compressing material in the mold, a hydraulic jack for controlling the position of said frame relative to said mold, means for introducing pressure liquid into said jack to elevate the same and adjustable means for relieving the pressure in said jack to limit its upward travel.

2,471,564
FOLDING TABLE
Henry V. Gaudette, Los Angeles, Calif.
Application February 1, 1946, Serial No. 644,832
1 Claim. (Cl. 311—83)



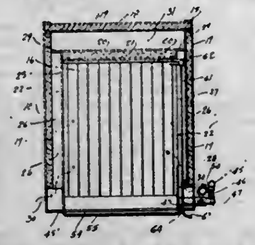
A folding table including a top, a pair of outer tubular legs pivotally connected thereto at their upper ends, a pair of inner tubular legs between said outer legs and pivotally connected to said outer legs intermediate their ends, whereby to be moved to crossed relationship with each other, a U-shaped tubular member having its two ends pivotally connected with said table top and its connecting portion parallel with and adjacent the axis of the pivotal connection between said outer and inner legs, a through bolt with spacing sleeve on, connecting said outer and inner legs and constituting the axis of their pivotal movements, an anchor plate rigidly secured to said through bolt and said spacing sleeve and having its free end positioned to be engaged flatwise by the connecting portion of said U-shaped member, when said table is in open operative condition, said plate having a hole therethrough and said connecting portion having a stud projecting therefrom to enter said hole as said table is opened up for use, said table top being rigidly held in a level horizontal position by means of said interconnections.

2,471,565

CONTAINER AND CLOSURE THEREFOR

Gustave Glocker, Washington, D. C.; Eugenie Glocker, administratrix of said Gustave Glocker, deceased, assignor to Super-Seal Container Corporation, Washington, D. C., a corporation of Delaware

Application December 4, 1945, Serial No. 632,647
2 Claims. (Cl. 215—40)



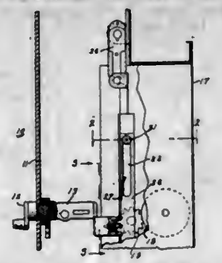
1. A package consisting of a container having a neck terminating in a mouth, a closure cap on the mouth of said container comprising, a disc-shaped top portion having a diameter substantially equal to the outer edge of the receptacle neck and adapted to rest in substantial contact with the walls defining the mouth of said receptacle, an annular bead carried by the peripheral portion of the disc-shaped top portion above the plane thereof and extending outwardly about the mouth of said receptacle, an annular frusto-conical shaped skirt depending from said bead and arranged substantially at right angles to the inner opposite wall of the bead and substantially parallel to an exterior surface of the receptacle neck whereby said closure cap may be seated without substantial pressure, an inwardly directed flange carried at the lower portion of the skirt, a sealing composition flowable under elevated temperature forming an annular layer of substantially uniform thickness about the inner surface of the skirt between the flange and the bead, the inner face of said annular layer being substantially parallel to the exterior seating surface of said neck, and said opposite wall of said annular bead forming an abutment surface limiting the upward and inward displacement of the heat flowable sealing composition.

2,471,566

COOKING OVEN WITH MEANS TO WITHDRAW UTENSILS THEREFROM

Richard Groetchen, Chicago, Ill.

Application February 23, 1945, Serial No. 579,329
2 Claims. (Cl. 126—337)



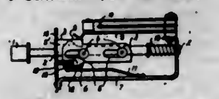
1. An apparatus of the class described including an enclosure, means dividing the enclosure into a plurality of compartments comprising spaced grid plates and burner structures spaced from the plates, a follower slidably supported upon each of said plates for removing pans or the like from the plates, and means for moving the follower over the plate comprising a handle element extending exteriorly of the enclosure through an opening formed in a wall thereof and having a longitudinally extending guiding groove formed therein, and a member carried by said wall and provided with a prong extending into said groove.

2,471,567

VOTING MACHINE

Alvin N. Gustavson, Bemus Point, N. Y., assignor to Automatic Voting Machine Corporation, Jamestown, N. Y., a corporation of Delaware

Application June 11, 1943, Serial No. 490,455
2 Claims. (Cl. 235—54)



1. In a voting machine having an indicator movable into voting position, a counter for registering an indicated vote, a shaft mounted pinion operable to rotate said counter, gears keyed to and slidable along the shaft of said pinion, voter actuable means engageable with and adapted to sequentially act on said gears in one slidable position thereof, and means, operable by movement of said indicator, to position said gears for engagement by said voter actuable means.

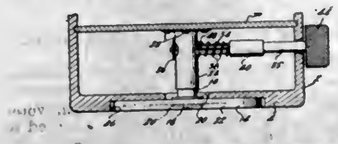
2,471,568

ELECTRICAL SWITCHING DEVICE

William James Dafferen Harrison, Coventry, England, assignor to The General Electric Company Limited, London, England

Application February 8, 1946, Serial No. 646,385
In Great Britain January 16, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires January 16, 1965
9 Claims. (Cl. 74—469)

1. A switch device comprising an actuating member mounted for movement from a first to a second position, a second member mounted for movement between a first and a second position relative to said first member, means to bias said second member toward its first position relative to said first member, means to interconnect said members for joint movement upon actuation of said first member when said second member is in its first position relative to said first member, means to detain said second member after the same is moved with said first member upon movement of said first member from its first to its second position, whereby upon return of said first member to its first position, said second member will remain in its second position relative to said first member, a contact-actuating finger having an actuated and an unactuated setting, each of said members having a cam surface adapted to be engaged by said finger, said finger remaining



in one of its settings while engaging either of said cam surfaces, said cam surfaces being juxtaposed when said second member is in its first position relative to said first member, said finger engaging the cam surface of the second member when said first member is in its first position and said second member is in its first position relative to said first member, and said finger engaging the cam surface of the first member when said first member is in its second position whereby the setting of the finger is unaltered as the first member moves from its first to its second position and said finger shifts from the cam surface of the second member to the cam surface of the first member, said cam surfaces being spaced apart when said second member is in its second position relative to said first member and said first member is in its first position whereby said finger will move between the cam surfaces and thus into the other of its settings when said first member returns from its second to its first position.

2,471,569

RADIO RECEIVING SET

Malcolm Hay, Canajoharie, N. Y.

Application February 7, 1946, Serial No. 646,041
4 Claims. (Cl. 312—7)

1. The combination of a cabinet provided with a bottom wall having a recess in the underside thereof, the cabinet being normally supported by said bottom wall, a supplemental support rotatably connected with the cabinet and normally received in said recess, a manually operable member, means operable by said member for raising and lowering the cabinet with relation to said supplemental support to cause the cabinet to be respectively supported by said support and bottom wall, and means cooperating with said member and said first mentioned means for maintaining the cabinet in a desired position with relation to said support when said member is released.

2,471,570

ADDITION OF CHLORINATED ACETIC ACID DERIVATIVES TO OLEFINS

Morris S. Kharasch and Wilbert H. Urry, Chicago, Ill., assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey

No Drawing. Application August 23, 1946, Serial No. 692,734
4 Claims. (Cl. 260—406)

1. An adduct of a compound of the formula $RCH{=}CH_2$ where R is a saturated hydrocarbon radical in which the carbon atoms range from 1 to 6 and an acid chloride of a chloracetic acid which contains two to three alpha-chlorine atoms.

2,471,571

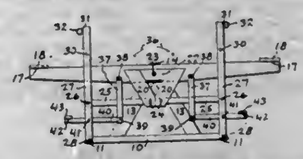
SEPARATOR

Garman O. Kimmell, Oklahoma City, Okla., assignor to Black, Sivalls & Bryson, Inc., Kansas City, Mo., a corporation of Delaware

Application April 21, 1947, Serial No. 743,008
9 Claims. (Cl. 183—115)

1. In a separator of the character described, a primary separating section

ing sections located respectively above and below the primary separating section and having connections through axially arranged openings, means for effecting circumvolution of a combined liquid, gas and foam flow in the primary separating section to effect primary separation of the liquid from the gas and foam components of the flow to cause discharge of the gas and lighter foam into the upper secondary separating section and heavier foam into the lower secondary separating section, a gas quieting section having connection with the upper secondary separating section, a tray section below the lower secondary

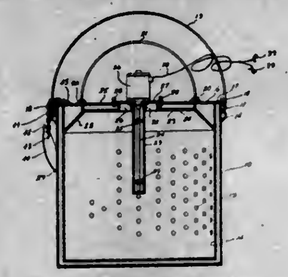


separating section for receiving the foam component from the lower secondary separating section, vent means directly connecting the tray section with the gas quieting section in bypassing relation with the separating sections, a liquid collecting section below the tray section, a canopy section between the tray section and liquid collecting section for housing a float adapted to operate on liquid admitted into the canopy section from the liquid collecting section, means for discharging liquid from the liquid collecting section, and means for discharging gas from the gas quieting section.

2,471,572

TEETERING DEVICE

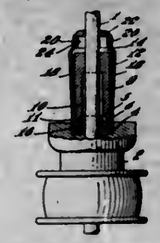
Elmer H. Loker, Sioux City, Iowa, assignor of one-half to Edward P. Stahly, Sioux City, Iowa



Application July 23, 1945, Serial No. 606,607
3 Claims. (Cl. 272—54)

3. A teetering device comprising a support, a teetering member pivoted centrally on said support, vertical arms pivoted to the support, handles attached to said arms for grasping by person seated at the ends of said teetering member, said arms being attached to said teetering member so that movement of said handles will rock the same, including links pivotally attached to the arms, brackets attached to said teetering member, said links beng pivotally attached to said brackets, further links pivotally attached to said teetering member, levers pivotally attached to said further links and to said arms, foot recess-

ing bars attached at the outer extremities of said levers, whereby foot action against said foot receiving members will cause further rocking action of said teetering member.

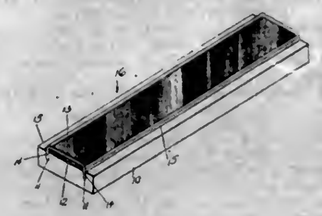


2,471,573
AERATED MINNOW BUCKET
Kenneth L. Lumpkin, Gladwater, Tex., assignor of one-fourth to Clinton A. Lowe, Houston, Tex.
Application June 14, 1946, Serial No. 676,754
1 Claim. (Cl. 43—57)

In a bait bucket comprising an outer receptacle with an imperforate bounding wall, an imperforate flat bottom and an open top, an inner receptacle with a flat bottom, a perforate bounding wall and a perforate top having a central opening, the features which include a flange on the outer receptacle about the open top, a corresponding flange of substantially equal diameter therewith integral with the top of the inner receptacle, spring clips serving to secure the flanges together, a bail upon said outer receptacle, a second independent bail upon the top of said inner receptacle, and an inner perforate top within said inner receptacle spaced below the first-mentioned top thereof and having the outer marginal portion thereof sloping outwardly downward to form a frusto-conical portion secured to the interior of the bounding wall of said inner receptacle, and which includes having the inner receptacle of sufficient cross-section and depth to present a very narrow space between the bounding wall thereof and the bounding wall of said outer receptacle and a similar narrow space between the flat bottoms of the two receptacles, a detachable closure for the opening in the first-mentioned top of said inner receptacle, a motor supported on said closure and a downwardly extending impeller driven by said motor, said closure having an opening adapted to receive said downwardly-extending impeller.

2,471,574
BOBBIN CLUTCH
George Magrath, Whitinsville, Mass.
Application August 20, 1945, Serial No. 611,621
4 Claims. (Cl. 242—46.2)

1. A bobbin clutch comprising a blade, a whirl mounted on said blade, said whirl having a circular recess concentric with said blade, a flanged neck seated in said recess, a case mounted on said blade above said neck, said case having a plurality of longitudinally extending, circumferentially spaced slots on its outer face, a clutch spring having an annular body disposed in said recess and anchored between the flange of said neck and the lower end of said case in contact with the portions between the slots therein, said spring having a plurality of circumferentially spaced resilient clutching fingers with their fixed ends positioned in the lower end of said slots so that their



body portions and free ends may be flexed radially within said slots, and a cap fixed to said blade above said case, said cap having parts engageable with the free ends of said fingers to limit the outward flexing movement.

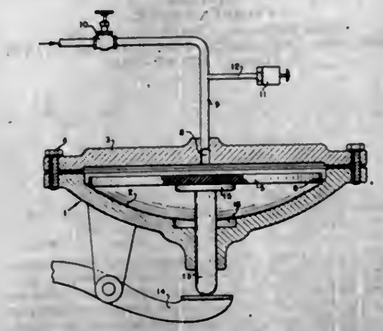
2,471,575
PROCESS OF PREPARING 2,4-DICHLORO-PHENOXYACETIC ACID
Richard H. F. Manske, Guelph, Ontario, Canada, assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application September 4, 1947, Serial No. 772,211. In Canada May 21, 1947
7 Claims. (Cl. 260—521)

1. A process of preparing 2,4-dichlorophenoxyacetic acid which comprises introducing elemental chlorine into phenoxyacetic acid while maintaining the phenoxyacetic acid and the resulting reaction mixture in the molten state and in the absence of a solvent until substantially two atoms of chlorine per molecule of phenoxyacetic acid originally present have entered into the phenoxyacetic acid molecule by substitution.

2,471,576
COMPOSITE ORNAMENTAL STRIP
Simon Matsner, New York, N. Y.
Application May 18, 1946, Serial No. 670,812
3 Claims. (Cl. 41—21)

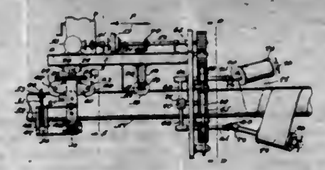
1. As an article of manufacture, a composite ornamental strip comprising in combination a base having a pair of spaced apart parallel grooves extending longitudinally thereof, a non-plastic decorative strip superposed over the base intermediate the grooves, and a transparent channel shaped cover, the sides of which extend into the said grooves, the said cover being secured to the base.

2,471,577
BODYING OF OIL BY HEAT
Eugene W. Moffett, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
No Drawing. Application October 25, 1946, Serial No. 705,816
12 Claims. (Cl. 260—407)



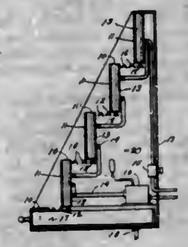
2. A process of heat bodying a glyceride drying oil which comprises admixing 2 to 4% of 3,4 epoxy 1 butene with the oil and subjecting the mixture to a temperature of about 290–310° C. until desired body is reached.

2,471,578
FAN
Robert D. Moore, Kansas City, Mo., assignor to The Moore Company, Kansas City, Mo., a corporation of Missouri
Application January 5, 1946, Serial No. 639,265
4 Claims. (Cl. 170—160.52)



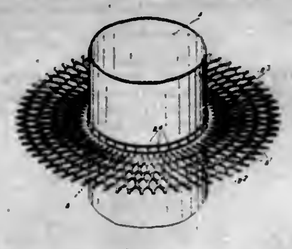
1. A fan including a hub having radial spindles, blades, cup-like housings carried by the blades and having openings for passing the spindles, collars on the spindles, resilient members in said housing on the respective sides of the collars, and means in the cup-like housings for retaining said resilient members in compression in the axial direction of the spindles.

2,471,579
AIR OPERATED ACTUATOR
John Neuroth, Syracuse, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a corporation of New York
Application June 7, 1945, Serial No. 598,134
1 Claim. (Cl. 137—157)



An air operated motor or actuator comprising a chamber having a concave wall, a piston having a cylindrical wall in the chamber opposed to the concave wall, the piston being a flexible resilient disk free of the walls of the chamber and initially engaging at the most the concave wall at the corner only of the cylindrical wall of the disk and the face thereof opposed to the concave face of the chamber, and conforming at the margin thereof with the concave wall when pressure is applied to the disk on the side thereof opposite to that exposed to the concave wall, and means for transmitting the flexing movement of the disk.

2,471,580
APPARATUS FOR TREATING PIPE
Ainslie Perrault and Lewis Perrault, Tulsa, Okla.
Application December 17, 1943, Serial No. 514,722
8 Claims. (Cl. 154—41)



1. A pipe treating apparatus comprising a carriage arranged to travel upon a pipe line, a heating unit movable with the carriage and providing heat to the pipe from substantially all radii thereof for removal of moisture and loosening of scale, a rotatable pipe cleaning unit movable with the carriage and arranged to remove scale from the hot pipe, and a wrapping unit movable with the carriage and rotatable about the pipe simultaneous with the cleaning unit, said wrapping unit including rolls of thermoplastic wrapping material, said heating unit and wrapping unit so constructed and arranged to utilize the heat impounded in the pipe to cause the wrapping material to adhere to the pipe.

2,471,581
BOTTLE COOLING AND DISPLAY DEVICE
William G. Poissant, Youngstown, Ohio
Application September 17, 1947, Serial No. 774,580
5 Claims. (Cl. 62—89.8)

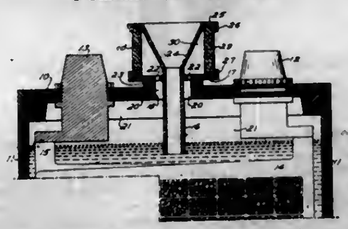
1. A liquor cooling and display device comprising a step-like construction, the vertically standing portions of which are provided with a plurality of cross sectionally arcuate, vertically standing recesses, each of which is of the approximate radius of a liquor bottle and means for refrigerating the said riser portions of the said device to form cold conducting walls with respect to bottles of liquor positioned against the vertically standing recesses thereof.

2,471,582
HEAT EXCHANGE APPARATUS FOR FLUIDS
Ralph Poole, London, England
Application October 25, 1945, Serial No. 624,456
In Great Britain September 15, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires September 15, 1964
2 Claims. (Cl. 257—262.16)

1. A heat conducting device, comprising a sheet metal strip having spaced first and second longitudinal edges and having spaced first and second groups of transverse slits therein to permit expansion thereof, each of said groups of slits including a plurality of transversely aligned slits and the slits of said first groups being staggered with respect to the slits of said second groups, the slits of said groups which are nearest said first longitudinal edge terminating at points spaced therefrom so as to render said first longitudinal edge continuous, the slits of said groups which are nearest said second longitudinal edge extending through said longitudinal edge to render the same discontinuous, said strip being bent along a line parallel to and spaced from said first longitudinal edge to provide a flange for attachment to a convex surface, the transverse slits nearest the said first longitudinal edge extending substantially to the line of bend; said strips being unexpandable at said first longitudinal edge and being expandable to a progressively increasing extent throughout its width from said first longitudinal edge to said second longitudinal edge.

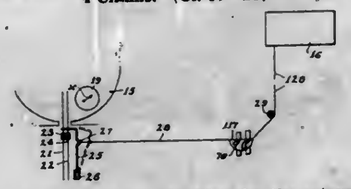
2,471,583
STABILIZATION OF NITROCELLULOSE
Richard E. Reeves, New Orleans, La., and Joel E. Giddens, Washington, Ga., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application May 16, 1946, Serial No. 670,086
3 Claims. (Cl. 260—223)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. The process of stabilizing nitrocellulose comprising boiling nitrocellulose with an aqueous solution containing ammonium sulfate, said solution being buffered to maintain a pH of about 4 to 5.5.



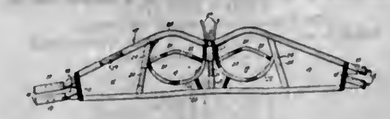
2,471,584
BRICK CLIP
Ronald Alfred Richards, Victoria, British Columbia, Canada
Application October 28, 1947, Serial No. 782,602
4 Claims. (Cl. 248—71)

1. A supporting clip adapted for insertion into brickwork joints or like recesses comprising a piece of strip material having a horizontal base adapted to rest on the lower side of the recess, an inner portion folded over the base to engage the upper side of the recess, a forward portion extended downwardly from the base portion to



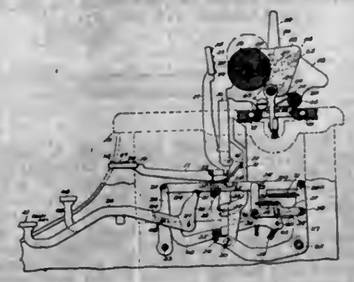
engage the marginal face of the recess, and an upwardly turned wing struck out from the strip material adapted to be engaged by a material supporting tie.

2,471,585
EXPLOSION-PROOF BATTERY VENT AND FILLER PLUG
John Bittenhouse, Norristown, Pa., and Melville F. Peters, Beltsville, Md., assignors, by mesne assignments, to C & D Batteries, Inc., Conshohocken, Pa., a corporation of Pennsylvania
Application March 9, 1946, Serial No. 653,324
3 Claims. (Cl. 136—179)



2. In a storage battery, a filling tube mounted to enter said battery, said tube being formed as a funnel at its outer end and having its inner end of a length to be submerged in the electrolyte in the battery, a porous stone encircling the protruding portion of said tube to form a chamber therewith, and means forming a passage between said chamber and the gas space above the electrolyte in said battery.

2,471,586
COMPENSATOR
Jonas Robinson, Clarks Summit, Pa.
Application December 21, 1946, Serial No. 717,728
4 Claims. (Cl. 87—14)

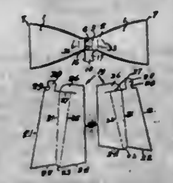


1. A device for compensating for the extension and contraction of an elongated connecting element extending between an actuating element and an actuated element, said device comprising a swinging element receiving a pulling force transmitted by said elongated connecting element and means supporting said swinging element to cause said swinging element to swing about said actuated element and to transmit a smaller pulling force to said actuated element.

2,471,587
BRASSIÈRE
Abraham Rubinstein, Brooklyn, N. Y., assignor to Perfect Brassiere Company, Inc., Jersey City, N. J., a corporation of New Jersey
Application November 30, 1946, Serial No. 713,269
2 Claims. (Cl. 2—42)

1. A brassière comprising a band for encirclement of the bust, said band including a pair of breast pockets, and at least three flexible stays providing suspension supports for said pockets, the stays being secured to the band and extending substantially from its lower marginal edge to its upper marginal edge, one of the stays being disposed vertically midway between and adjacent to the near edges of the two pockets, the other stays extending upward obliquely toward the central stay with the upper end of each oblique stay coming within the upper portion of the far edge of one of the pockets respectively, and with the lower end thereof spaced outwardly from the breast pocket.

2,471,588
TYPEWRITER MULTIPLE CASE SHIFT MECHANISM
Richard W. Sears, II, Evanston, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a corporation of Illinois
Application March 15, 1946, Serial No. 654,600
5 Claims. (Cl. 197—72)

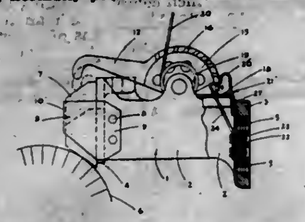


1. In a typewriter embodying type bars, each having two series of a plurality of characters, each series being individual to and active in one of the zones of operation into which the platen is moved, a platen carriage, a platen mounted upon the carriage for bodily swinging movement into two different zones of operation, a shift key for the platen carriage, a track located below and rearwardly of said platen, means mounting the track for bodily shifting movement, means connected with the platen and movable along said track, means operated in response to the actuation of said key for shifting said track to shift the platen, whereby the zone of operation of said platen may be changed, and means located rearwardly of the platen for releasably locking said platen in each of its zones of operation.

2,471,589
DETACHABLE BUTTON
Harry A. Shaffer, East Cleveland, Ohio
Application January 15, 1945, Serial No. 572,800
7 Claims. (Cl. 24—109)

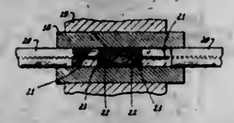
1. A separable button, comprising in combination, an anchor member having a base portion attachable to a garment, a pair of supports on the base portion extendable through a garment button-hole and a ring integral with each support extending outwardly therefrom and parallel to and spaced from the base portion; and a head member having a recess therein and having two oppositely facing slots in the walls of the said recess detachably engaging the aforesaid rings.

2,471,590
DECORATIVE BOW
Frank C. Southgate, San Francisco, Calif.
Application July 1, 1946, Serial No. 680,815
11 Claims. (Cl. 41—10)



1. A blank for the forming of a bow comprising a hub, a pair of wings extended oppositely from said hub being made of flexible stiff material, each wing being adapted to be bent upon itself so as to bring its outer ends to said hub, engagement ears on said outer ends of said wings, said hub having slits therein to be engaged by said wings to hold said wings in bent position, the outer ends of each wing being scored by lines extended from and between the ears, each wing being cut between the ears inwardly so as to permit the dishing and denting of said outer ends at said score lines to form the hollow dished inner ends of each wing of the bow.

2,471,591
BRUSH HOLDER
Elio J. Talamini, Kearney, N. J., assignor to Joshua Hendy Iron Works, Ampere, N. J., a corporation of Nevada
Application January 31, 1945, Serial No. 575,390
2 Claims. (Cl. 171—323)



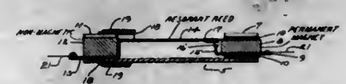
1. A brush holder comprising a body portion, a brush receiving portion mounted on the body portion, an arm pivotally mounted on the body portion and engaging the brush to hold it in position, a spring for applying tension to said arm, and a stop comprising a leaf spring member mounted on the body portion of the holder and arranged in the path of the arm to limit its move-

ment in a direction away from the brush, the stop being normally positioned to prevent movement

of the arm a distance sufficient to permit removal of the brush from the holder.

2,471,592
METHOD OF MAKING INSULATED RESISTORS
Homer G. Thomson, Wauwatosa, Wis., assignor to Allen Bradley Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 4, 1945, Serial No. 620,235
5 Claims. (Cl. 18—59)

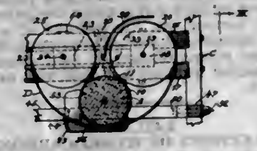
1. The method of forming an insulated resistor of the class described which consists in subjecting a pre-determined quantity of plastic binder mixed with conductor particles to sufficient heat and pressure to solidify the same while held within a cavity of predetermined shape adapted to mold the same into the form of a core having electrode sockets therein, forming a tubular capsule having a partially closed end and an open end by subjecting plastic insulating material to heat and pressure while held within a cavity of predetermined shape, then inserting said core within said capsule through the open end thereof, then partially closing said open end of said capsule by application of heat and pressure thereto to form an encapsulated core having openings in said capsule opposite the electrode sockets in said core and then inserting electrode terminal heads through the openings in said capsule into said electrode sockets in said core while subjecting the whole while held within a cavity of predetermined shape to heat and pressure sufficient to cause said core and capsule to flow in the presence of one another into intimate contact with said terminals.



2,471,593
CROSSARM LATHE WRENCH
Irvin E. Toye, Omaha, Nebr.
Application August 18, 1947, Serial No. 769,292
2 Claims. (Cl. 81—177)

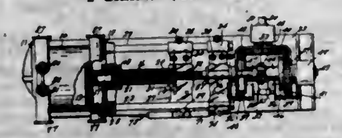
1. A lathe wrench comprising a handle portion provided with an elongated slot disposed therethrough, said slot having two oppositely disposed sidewalls and two oppositely disposed end walls, said handle portion having a hole extending therethrough in a direction transverse thereof, portions of said hole being disposed on either side of said slot; two nibs each being slidably disposed in a position extending partially into said hole and partially protruding outwardly of said oppositely disposed side walls of said slot; resilient means disposed in each of said hole portions adjacent said nibs; two set screws threadedly and adjustably secured to the walls of respective ones of said hole portions and on the opposite side of said resilient means from said nibs for regulating the pressure of said resilient means against respective ones of said nibs; and an elongated arm portion, said arm portion being of a length for re-

ceipt between said end walls of said slot at times when said arm portion is disposed in alignment with said slot, said arm portion having two parallel elongated recesses, the latter being disposed, one each, in opposite sides of said arm portion, said nibs being each partially received in respective ones of said recesses to permit said arm portion to pivot with respect to said handle portion and then to be moved in a direction transversely of said handle portion.



2,471,594
RESONANT MAGNETIC SWITCH ASSEMBLY
Herbert G. Weightman, Scituate, Mass., assignor, by mesne assignments, to Stevens-Arnold, Inc., Boston, Mass., a corporation of Massachusetts
Application August 14, 1946, Serial No. 690,387
4 Claims. (Cl. 200—91)

1. A resonant switch comprising a channel member having a base, and sides extending substantially perpendicular to said base; an armature of magnetizable spring metal; means including a filler block for supporting said armature as a cantilever beam in one end of said channel member; a contact member of magnetizable metal in the other end of said channel member and having its inner end overlapping and spaced from the free end of said armature; a permanent magnet alongside said contact member and having its inner end closely spaced from said free end of said armature; insulation around said contact member and said magnet for insulating same from said channel member; extensions on said sides of said channel member bent over at one end thereof for supporting said filler block and said armature in said channel member; other extensions on said sides bent over at the other end thereof for supporting said insulation, said magnet and said contact member in said channel member, and an energizing coil supported around said channel member for magnetizing said armature, said free end of said armature being adapted to strike said contact



member and to close an electric circuit connected thereto and to said armature when alternating current having the resonant frequency of said armature is passed through said coil.

2,471,595
MACHINE AND METHOD OF MAKING OIL FILTER PACKS
Albert R. White, Glendale, Calif.
Application May 27, 1946, Serial No. 672,489
14 Claims. (Cl. 57—5)

1. In an oil filter pack-making machine, means for rotatably supporting a filter core, means for rotating the filter core and applying successive layers of a filtering material around the core and compressing these layers toward the core to provide a cylindrical oil filter pack, means for forming parallel opposing ends on the pack, and means for winding a string or the like spirally around the peripheral surface of the cylindrical pack for binding it permanently to the core.

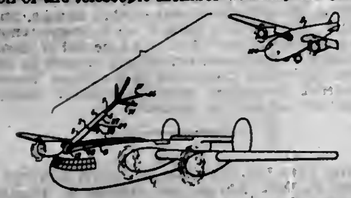
2,471,596
PUMP
John C. Williams, Oakland, Calif.
Application April 4, 1945, Serial No. 586,551
1 Claim. (Cl. 74—59)

Driving means for a pump having a cylinder and a piston rod, comprising a standard having a bearing supported thereon, and tie rods anchoring said standard to said cylinder and simultaneously functioning as crosshead guides; a crosshead slidably operative on said guides and intermediately coupled to the end of said piston rod and having a nut included therein and forming a coupling for said nut to the outer end of the piston rod; a screw journaled in said bearing and threadedly operating in said nut and an axial bore formed in said piston rod to receive the screw as it operates through said nut.

2,471,597
PROCESS FOR SOLVENT EXTRACTION OF PENICILLIN CULTURE LIQUORS
Claude A. Wilkerson, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application July 15, 1946, Serial No. 683,771
9 Claims. (Cl. 195—2)

1. In a process for the solvent extraction of penicillin from aqueous penicillin-containing culture liquors from which the mycelial growth and the major portion of suspended solids have been removed with organic water-immiscible solvents, the method for preventing the formation of emulsions between the said culture liquors and the said solvents which comprises adding to said culture liquors a proteolytic enzyme in an amount of the order of a few thousandths of a per cent based on the weight of said culture liquors, and heating said culture liquors at a temperature between about 35 and 70° C. for a period of about two hours to inactivate emulsifiers present in the liquors, and then subjecting said culture liquors to solvent extraction with an organic water-immiscible solvent for penicillin.

2,471,598
TOOL FOR INSTALLING HOLLOW RIVETS
Homer E. Witt, Akron, and George A. Tincler, Randolph, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application December 3, 1945, Serial No. 632,570
3 Claims. (Cl. 218—19)



1. A tool for installing a hollow internally threaded rivet, said tool comprising a tubular housing having a side opening, a hollow handle of sheet metal secured to said housing about said opening and extending substantially radial to the axis of the housing, a bushing secured in one end of the housing, a hollow anvil slideably mounted in the bore of said bushing for movement axially of said housing, a bushing secured in the opposite end of said housing, a rod rotatably mounted in the bores of said last-named bushing and said anvil and having a threaded portion extending beyond said anvil for engagement with the threaded bore of a rivet, a knob secured to said rod beyond said housing for rotating said rod to engage it in the threaded bore of a rivet, a pivot pin extending through said handle in said side opening, cam means pivotally mounted on said pivot pin at said side opening and extending therethrough in engagement with the inner face of said anvil, spring means for holding said anvil in retracted position, and a lever secured to said cam and extending through and along said handle for rotating said cam to advance said anvil along said rod to effect upsetting of the rivet.

2,471,599
APPARATUS FOR CONNECTING AND DISCONNECTING HEAVIER-THAN-AIR AIRCRAFT WHILE IN FLIGHT
Sanford C. Young, French Creek, W. Va.
Application April 20, 1946, Serial No. 663,734
11 Claims. (Cl. 244—2)

1. In a device of the character described, an airplane, a telescopic arm pivotally mounted on said airplane at the forward end thereof, means for pivoting the telescopic arm to move the rearward portion thereof upwardly relative to said airplane, means for extending said telescopic arm

members, means on the telescopic arm adapted to engage a contacting plane whereby differential speed of the respective planes will cause retraction of the telescopic member whereby the planes

are moved into pickaback relation, and means responsive to differential of the speed of the planes for automatically releasing the contacting plane from engagement with said fingers.

2,471,600

METHOD OF MAKING FURFURYL ALCOHOL RESINOUS PRODUCTS AND THE PRODUCT

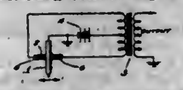
William H. Adams, Jr., and Hans H. Lebach, Newark, Del., assignors to Haveg Corporation, Newark, Del., a corporation of Delaware

No Drawing. Application November 29, 1944, Serial No. 565,808

12 Claims. (Cl. 260—38.5)

1. The process of preparing a convertible furfuryl resin composition, capable of utilization in the initial stage of condensation in the formation of articles therefrom and of subsequent conversion into the infusible, insoluble stage which comprises intimately mixing, with an initial resinous condensation product from which at least sufficient water has been removed to provide a viscous product and of insufficient acidity to be convertible during the utilization thereof in the formation of articles therefrom, said initial resinous condensation product being selected from the group consisting of furfuryl alcohol initial condensation products and initial condensation products of furfuryl alcohol and not more than about 15% furfural, an amount of latent catalytic material selected from the group consisting of dimethyl amino benzene sulphonate, diethyl amino toluene sulphonate, ammonium benzene sulphonate, ammonium benzene disulphonate, ammonium phenol sulphonate, ammonium naphthalene sulphonate, ammonium anthracene sulphonate, ammonium anthracene disulphonate, ammonium sulphanilate, ammonium paratoluene sulphonate, paratoluene sulphonchloride, and para acetyl amino benzene sulphon chloride, which is sufficient to cause, upon heating, condensation and polymerization of the resin into the infusible, insoluble stage characterized by a loss in flexural strength at 212° F., as compared with the flexural strength at 75° F., of less than 35%, when tested in accordance with the test set forth in the specification hereof.

2,471,601



VARIABLE RESISTANCE PHONOGRAPH PICKUP

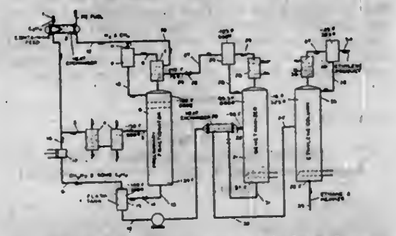
Robert B. Albright, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application April 28, 1944, Serial No. 533,218

8 Claims. (Cl. 179—100.41)

1. A phonograph pick-up device, comprising a deformable body composed of rubber and graphite, a stylus arranged to differentially deform different parts of said body when actuated by lateral cut undulations of a record groove, an output transformer including a primary winding, means connecting the extremities of said winding to the said parts of said body respectively, means connecting the midpoint of said winding to said stylus, a source of unidirectional voltage included in said last-mentioned connecting means, a second

body similar to said first body and arranged to be deformed by said stylus when the latter is actuated by vertical cut undulations of a record groove, a second primary winding on said transformer, and means connecting said second body and said second winding in circuit with said voltage source.



2,471,602

TREATMENT OF HYDROCARBONS

Philip M. Arnold, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Application May 1, 1944, Serial No. 533,614

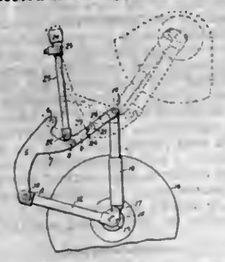
6 Claims. (Cl. 62—175.5)

1. The process of recovering ethylene from a feed stock containing the same in admixture with hydrogen and methane which comprises subjecting said feed stock to a fractionation operation and removing therefrom an overhead product comprising most of the hydrogen, some methane and practically no ethylene, passing the liquid bottoms from the fractionation operation to a demethanizing operation and therein fractionating same, removing an overhead product of methane from said demethanizing operation, and condensing this overhead product, refluxing said demethanizing operation with a portion of this condensed liquid methane, and flashing the balance of the condensed liquid methane and passing same in heat exchange with the overhead vapors from the first fractionation operation whereby a portion of said overhead vapors is condensed to a liquid, and refluxing said first fractionation operation with said condensed liquid, and removing bottoms of ethylene from said demethanizing operation.

2,471,603

RETRACTABLE MOUNTING AND LOCKING DEVICE FOR THE WHEELS OF AIRCRAFT

Arthur Ernest Joseph Bishop, Alexandria, near Sydney, New South Wales, Australia, assignor to National Motor Springs Pty. Limited, Alexandria, near Sydney, New South Wales, Australia, a company of New South Wales



Application October 17, 1945, Serial No. 623,156

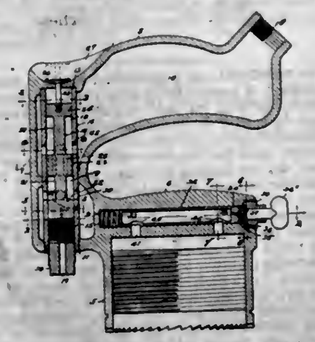
In Australia October 13, 1944

3 Claims. (Cl. 244—102)

1. An articulated frame mounting for the wheels of aircraft comprising a pillar, an arcuate

forearm member having a relatively deep base portion pivotally connected to the pillar and arranged in the wheel-running position to project forwardly and downwardly at an oblique angle to the pillar, a drag arm having its head end pivoted to the outer end of the arcuate forearm and declining rearwardly and supporting a wheel axle at its lower end, a rear arm comprising two members providing a telescoping shock absorber pivoted to the lower end of the drag arm and pivotally connected at its upper end to the rear of

the pillar, a toggle mechanism comprising a pair of links pivotally connected respectively to the base of the forearm member and the pillar, said toggle mechanism being actuable to lock the forearm relative to the pillar and retain the frame in projected wheel-running and retracted wheel positions respectively, a stop on said toggle limiting movement thereof from an in-line position in one direction, and means to actuate said toggle and move the frame from wheel-running to wheel retracted positions.



2,471,604

SAFETY DEVICE FOR PNEUMATIC TOOLS

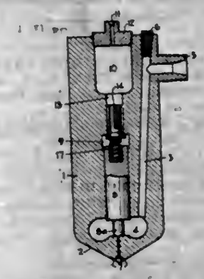
Charles F. Boyer, Allentown, Pa.

Application March 7, 1947, Serial No. 733,239

1 Claim. (Cl. 121—35)

In a pneumatic tool including a head, a grip, and a handle connecting the head and grip, a cylinder mounted in the handle, a plug in one end of the cylinder, the plug having an air release opening and the cylinder having an air release port near said end and having air inlet and outlet ports, an air valve slidable in the cylinder and grooved to define heads at opposite ends of the valve and a medially positioned closure member, the closure member and one head respectively adapted in one extreme position of the valve to open the inlet and outlet ports, said head in said position of the valve closing the air release port, and in the other extreme position to close the inlet and outlet ports while opening the air release port, a spring between said head of the valve and the plug and adapted to normally retain the valve in the second named position, a stem connected to the other head, the handle having an opening at one end and the stem being slidably positioned through the opening, and a thumb lever on the stem and comprising means for shifting the valve to its other extreme position.

2,471,605



PRESSURE CONTROLLED INJECTION VALVE

Johannes J. Broeze, Delft, Netherlands, assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Application June 30, 1947, Serial No. 758,107

In the Netherlands January 3, 1947

7 Claims. (Cl. 137—153)

1. A pressure controlled injection valve, for internal combustion engines comprising a casing having an axially extending guide bore, a fuel inlet passage, a fuel chamber at one end of the bore, a fuel discharge passage in said casing leading from said fuel chamber and provided with a valve seat, a loading chamber for loading liquid separate from said fuel chamber and in communication with said bore, and a reservoir for loading liquid; a valve member having a piston portion within said guide bore coacting with said valve seat for controlling said discharge passage and having a surface facing toward said seat exposed to the fuel pressure in said fuel chamber and a surface facing in the opposite direction exposed to the pressure of the loading liquid in the loading chamber, whereby fuel pressure will tend to open said valve member and loading liquid within said loading chamber will oppose the opening thereof; a narrow flow channel formed in said casing for the loading chamber adapted to permit the restricted flow of loading liquid out of the loading chamber; and a wider flow channel having a valve adapted to permit the substantially free flow of loading liquid from the reservoir into the loading chamber and prevent the free flow of loading liquid out of the loading chamber.

2,471,606

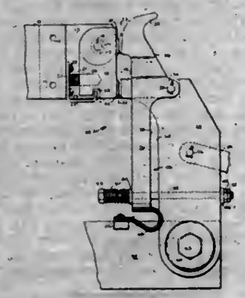
CLOTHESPIN

Bruce Burns, Los Angeles, Calif.

Application April 1, 1946, Serial No. 658,643

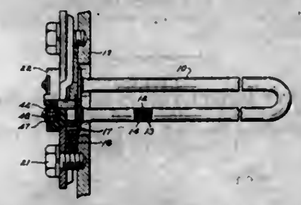
3 Claims. (Cl. 24—137)

1. In a clothespin: a pair of members, comprising jaw portions, means providing for rela-



tive pivotal movement of said members about a transverse axis adjacent the rear ends of said jaw portions, each member also comprising a handle portion, said handle portions extending rearwardly from said axis and diverging outwardly from each other to provide a space therebetween when said jaw portions are pivoted into contact with each other, an opening through each member, said openings providing unobstructed and generally parallel straight passageways extending forwardly from the space between said handle portions and along outer surfaces of the associated jaw portions, and a C-shaped spring having its bight portion between said handle portions and its legs extending forwardly generally along said passageways and into engagement with the said outer surfaces of said jaw portions.

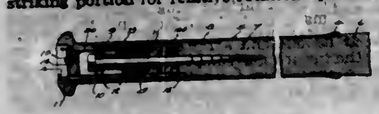
2,471,607
FACSIMILE RECORDING PAPERS
Frank G. Calkin, Glen Rock, N. J., assignor to Finch Telecommunications, Inc., Passaic, N. J., a corporation of Delaware
No Drawing. Application January 9, 1947, Serial No. 721,163
1 Claim. (Cl. 204—2)



A dry conductive facsimile recording paper and an electrically discolorable coating therefor consisting essentially, in parts by relative weight, of lead formate 1.875, titanium dioxide 5.0, zinc dust 0.31, polyvinyl acetate solution 10 and ethyl acetate 20.

2,471,608
CIRCUIT BREAKER CONTACT CONSTRUCTION
Arthur S. Caswell, Philadelphia, Pa., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa., a corporation of Pennsylvania
Original application April 22, 1944, Serial No. 532,269. Divided and this application November 2, 1946, Serial No. 707,289
4 Claims. (Cl. 200—170)

1. A circuit breaker structure comprising a terminal, opposed spaced plate extensions secured to said terminal, a pair of stationary contact juxtaposed blocks having a slot in one end thereof, a pin supported between said plate extensions, said contact blocks being pivotally mounted on said pin, a movable contact arm having main and arcing contact surfaces, said contact blocks having main and arcing contact surfaces, the main contact surface being engageable by the movable main contact surface and the arcing contact surface being engageable by the movable contact surface, said contact blocks being each provided with a bore, a positioning bracket secured to one end of said terminal, said bracket having a reentrant extension entering said slot, a compression spring positioned in each of said bores, one end of said compression spring bearing against the base of its bore and the opposite end bearing against said positioning bracket for biasing said contact blocks toward said movable contact, said re-entrant extension in said slot limiting the outward and inward movement of said contact blocks on said pivot pin, said contact blocks each having a bore extending from their engaging surfaces coaxial with each other and forming a continuous bore, a compression spring mounted in said continuous bore for biasing said contacts apart, a highly conductive spacing washer mounted between said contact blocks and said extension plates, said compression spring driving said contact blocks against their respective extension plates to form good electrical contact therewith.



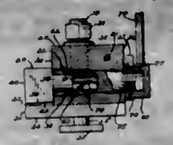
2,471,609
ELECTRIC IMMERSION HEATER
Allan P. Charbonneau, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application May 13, 1948, Serial No. 26,731
7 Claims. (Cl. 219—38)

1. In combination, a sheathed electric immersion heater, a gasket clamping plate to close the entrance opening for said heater into a receptacle and to shield hereinafter specified elements, said heater having its sheath projecting through said plate and having therewith fluid tight connection, an insulating terminal block into which the heater sheath projects with snug fit after passing through said plate, a mounting plate through which said block extends, said mounting plate being confined between the first mentioned plate and an abutting part of said block, and terminal plates located on the outer end of said block, to which the terminal leads of said heater are led through said block and to which said terminal leads are secured for electrical connection therewith and for securement of said block to said heater after assembly therewith of said mounting plate.

2,471,610
ROTATABLE PRACTICE BALL BAT
Carl A. Christensen, Milwaukee, Wis.
Application October 25, 1946, Serial No. 705,672
10 Claims. (Cl. 273—72)

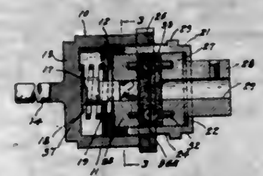
1. As a new article of manufacture, a bat having a ball striking portion and an elongated handle portion in swivel connection with the ball striking portion for relative rotation upon a predetermined axis extending longitudinally of the handle.

2,471,611
PIPE CLAMP
Peter G. Damstra, Holland, Mich.
Application June 11, 1945, Serial No. 598,874
6 Claims. (Cl. 267—54)



6. A structure as described comprising a base, a vertical post on said base bent into curved shape between its ends, said base having a socket therein, a clamping member having a foot removably received in said socket and having a curved portion between its ends, a cap to embrace the upper ends of both said post and said clamping member and means for retaining said cap in place.

2,471,612
THERMOPLASTIC LUGGAGE FRAME
Harry Freeman, Providence, R. I.
Application December 22, 1945, Serial No. 636,661
1 Claim. (Cl. 190—53)



A luggage unit comprising a body portion having a plurality of walls, a thermoplastic frame extending completely about the edges of said walls and having a central rib and flange portions, said flange portions having outer surfaces extending from opposite sides of said rib substantially at right angles to each other to provide shoulders on said ribs, said shoulders and said surfaces forming exterior angles of at least ninety degrees, marginal portions of said walls being positioned adjacent said shoulders and in contact with said surfaces, said rib having a protuberance joining said shoulders and positioned outwardly of planes containing the walls, and said walls being weld bonded to said flanges.

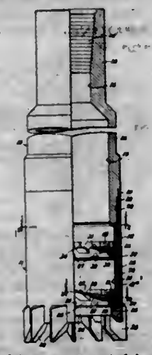
2,471,613
CUTTER MOUNTING
Hugh A. Fry, Los Angeles, Calif.
Application July 23, 1945, Serial No. 606,545
2 Claims. (Cl. 82—36)

1. A cutter mounting for use in a machine tool including, a body having a finished face, a cutter carrier with cutter carrying means and having a finished face to cooperatively engage the face of the body and having a straight turned projection, and a single means gripping the carrier and holding it with its face in bearing engagement with the face of the body and including a jaw member carried in a tapered opening in the body and having a socket portion receiving the projection and contractible onto the projection when the member is moved lengthwise of the opening.

2,471,614
DEVICE FOR CONTROLLING THE TIGHTNESS OF EXPANDED TUBE JOINTS
Russell A. Gilman, San Gabriel, Calif.
Application June 1, 1948, Serial No. 30,368
1 Claim. (Cl. 64—30)

In a device for controlling the tightness of an expanded tube joint, an outer cup-shaped case, means for connecting said case with a source of torque force, a tubular inner case axially adjustable within said outer case, means for locking said cases in adjusted relation, a tube expander, a driven plate rotatably mounted within said inner case and having means for positive driving connection with said tube expander, a driving plate axially slidable within said inner case, a post fixed to said outer case having a non-circular part extending into a non-circular bore in said driving plate for driving the latter, said driving and driven plates having frictionally engaging faces, and a compression spring sleeved about said post to force the driving plate against said driven plate under pressure predetermined to effect expansion of the tube and to automatically release the expander when desired tightness of joint is attained.

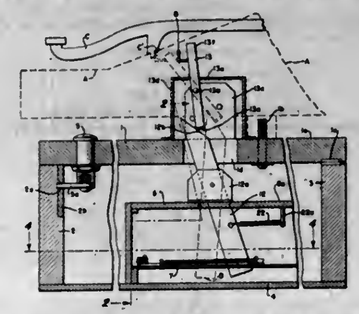
2,471,615
BUSHING
John N. Gladden, Glendale, Calif.
Application August 7, 1944, Serial No. 548,439
3 Claims. (Cl. 286—26)



1. In an insert device, the combination of: a body member having a bore and a counterbore of larger diameter than said bore and axially aligned with said bore, there being a conical an-

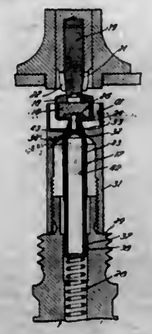
nular shoulder therebetween, said body member having an integral relatively thin-walled, tubular extension providing a substantially conical, annular flange extending axially and radially inward and forming a semi cup-shaped closure element partially closing said counterbore; and an annular sealing ring confined in said counterbore and adapted to roll therein between said conical

shoulder and said conical closure element, said ring being formed of resilient material and being normally circular in cross section, said ring when assembled in said counterbore having an external diameter substantially equal to the diameter of said counterbore and an internal diameter substantially less than that of said bore, said counterbore being substantially longer than the axial dimension of said sealing ring.



2,471,616
CORE CATCHER
John S. Goodwin, Whittier, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Application April 10, 1945, Serial No. 587,453
6 Claims. (Cl. 255—72)

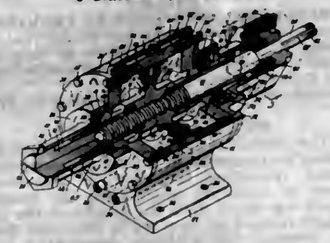
1. Core breaking and catching means including, a vertical external elongate ring having an inwardly directed annular shoulder flange at its lower end, a vertical internal ring of lesser height than the external ring arranged within the external ring and engaged with said shoulder flange, means connecting said rings, a plurality of seats comprising aligned notches formed in both rings, a plurality of like dogs, means pivotally mounting a dog in each seat, and resilient means engaging each dog and normally yieldingly holding it in position where it extends substantially radially of the rings and is inwardly directed from its point of pivotal mounting.



2,471,617
COIN-OPERATED TYPEWRITER CONTROL APPARATUS
Jesse B. Graham, La Mesa, Calif.
Application November 13, 1944, Serial No. 563,136
3 Claims. (Cl. 197—193)

1. In a coin operated typewriter control apparatus of the class described, the combination consisting of a reciprocably mounted coin receiving slide, a pivotally mounted arm having cam means in connection therewith near the end thereof and in the path of said coin receiving slide at its one end arranged to shift said arm with the inward movement of said coin receiving slide, a shaft connected with and forming the axis of said arm, escapement timing mechanism

in connection with said shaft and operable therewith, a pivotally mounted trip lever in the path of said pivotally mounted arm engageable with the cam means thereof, a latch in the path of said trip lever and arranged to engage the same, a spring tending to hold said trip lever in engagement with said latch, and a latch control lever operated by said timing mechanism arranged to relieve said latch.



2,471,618
INSTRUMENT AND BEARING THEREFOR
Stanley S. Green, La Fayette, Ind., assignor to Duncan Electric Manufacturing Company, La Fayette, Ind., a corporation of Indiana
Application May 26, 1943, Serial No. 488,493
23 Claims. (Cl. 308—159)

1. A bearing assembly for a rotative member and the like, including a holder, a pivot shiftable in the holder, urged in one direction by a spring and limited in its movement in said direction by means engaging the pivot near its tip and having an automatic centering action thereon, said pivot being elongated and having a close fit with the holder at a point remote from the tip to prevent canting of the pivot and being hollow to reduce

its inertia, and a cup-shaped jewel carried by the rotative member and resting on the tip of the pivot.

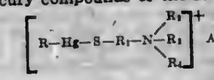
2,471,619
HYDRAULIC PRESSURE TRANSMITTER
Gordon W. Hardy, Cleveland Heights, Ohio
Application March 22, 1943, Serial No. 480,023
5 Claims. (Cl. 60—54.6)

1. In a hydraulic actuator, a cylinder, end caps secured on the ends of said cylinder, hollow axial bearing extensions screw threaded on said caps to provide a pair of aligned cylindrical internal bearing surfaces, a threaded shaft passing through said cylinder and into each of said aligned bearings and radially spaced therefrom, a piston with an axial opening in said cylinder, a tubular piston extension at each end of said piston, surrounding said shaft and extending into and journaled in respective hollow axial bearing extensions, an internal thread in said axial opening in said piston to engage thread on said shaft, and packing interposed between said caps and said hollow axial bearing extensions surrounding said tubular piston extensions at the ends of said pistons.

2,471,620
EXPENDABLE RAZOR
Julius H. Harris, Dallas, Tex.
Application May 28, 1945, Serial No. 596,199
4 Claims. (Cl. 30—47)

1. An expendable razor including a blade pocket and a handle formed of a blank of moisture-proof material comprising a rectangular intermediate section and rectangular side sections of shorter length than the intermediate section, one side section being of greater width than the other side section and being folded onto its companion half portion of the intermediate section, and the other side section being folded onto its companion half portion of the intermediate section whereby their abutting edges are offset from the axis of the intermediate section; the intermediate section being folded longitudinally along the abutting edges of the folded side sections to enclose the side sections, the wider side section having a series of perforations in the line of fold to form a razor blade guard; the blank thus formed being folded transversely at predetermined points to define a blade receiving pocket; a blade in said pocket having its edge exposed at the narrower of the folds of the intermediate section; the last named folds being secured to the pocket portion; the opposed ends of the blank being folded outwardly at their line of abutment at the center of the pocket portion; and the outer ends of the blank being secured together to form a handle portion.

2,471,621
MERCURY COMPOUNDS AND PROCESS OF MAKING SAME
Max Hartmann and Werner Bosshard, Riehen, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J., a firm
No Drawing. Application June 30, 1945, Serial No. 602,675. In Switzerland August 4, 1944
14 Claims. (Cl. 260—431)



1. A mercury compound corresponding to the formula

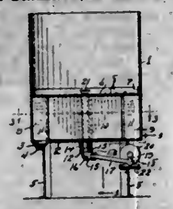
R—Hg—S—R_1—A

wherein R is a member selected from the group consisting of alkyl, cycloalkyl and aryl univalent hydrocarbon radicals, R_1 is a member selected from the group consisting of alkylene, aralkylene and arylene divalent hydrocarbon radicals, and A stands for a tertiary dialkylamino group, R_1 being directly linked to the nitrogen atom of the latter.

2,471,622
MERCURY COMPOUNDS AND PROCESS OF PREPARING SAME
Max Hartmann and Werner Bosshard, Riehen, Switzerland, assignors to Ciba Pharmaceutical Products Inc., Summit, N. J., a corporation of New Jersey
No Drawing. Application June 30, 1945, Serial No. 602,676. In Switzerland August 4, 1944
14 Claims. (Cl. 260—431)

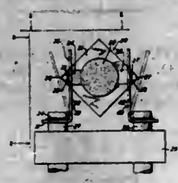
1. Mercury compounds of the formula

wherein R is a member selected from the group consisting of alkyl, cycloalkyl and aryl univalent hydrocarbon radicals, R_1 is a member selected from the group consisting of alkylene, aralkylene and arylene divalent hydrocarbon radicals, each of R_2, R_3 and R_4 represents an alkyl univalent hydrocarbon radical, and A is an anion selected from the group consisting of alkyl sulfate ions and aryl sulfonate ions.



2,471,623
APPARATUS FOR HANDLING FLUIDS
Adrian O. Hubbell, Long Beach, Calif.
Application December 19, 1944, Serial No. 568,873
9 Claims. (Cl. 251—5)

9. A control for two resilient tubes including, an elongate body having an opening passing the tubes and having a guideway normal to the opening and having a bore entering it from one end, a web carried by the body shiftable to alternately pinch the tubes, and means normally yieldingly holding the web in position where it pinches one

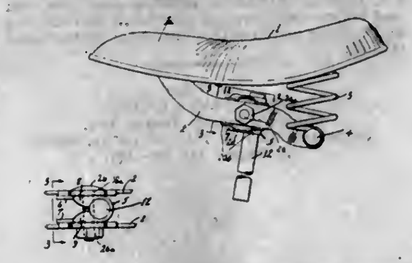


of the tubes and including a stem attached to the web and operating the web to pinch the other tube, the stem having a head slidably carried in the bore of the body and projecting from one end of the body to be engaged by an operator, said means including a spring in the body surrounding the stem and engaging the head.

2,471,624
CYLINDER HYDRAULIC WASHER
Lawrence Johnston, Meadville, Pa.
Application August 15, 1944, Serial No. 549,571
1 Claim. (Cl. 68—190)

In a washing machine, the combination, which comprises, a vertically disposed cylindrical casing, a false bottom having pairs of rows of perforations therein spaced from the lower end of the casing providing a lower compartment therein, and removably mounted in said casing, radially disposed partitions in the said lower compartment of the casing positioned between the rows of perforations, with one row of perforations of a pair on each side of each partition, a spider having a sleeve with a plurality of vanes extending therefrom rotatably mounted in the said lower compartment and with the vanes positioned between the said partitions, and means oscillating the said spider, wherein the said vanes squeeze water in the areas between the vanes and partitions upwardly through the rows of perforations of the false bottom on one side of each of said partitions as the vanes approach the partitions and draw water downwardly through the perforations behind the vanes.

2,471,625
ELECTRICAL MOUNTING DEVICE
Harold G. Johnstone, Plainfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application August 18, 1944, Serial No. 550,052
2 Claims. (Cl. 173—324)

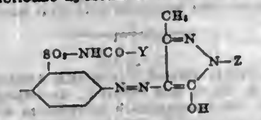


1. A mount for quickly attaching under gripping tension an electrical unit having a pair of spaced conductive terminals, including an insulator, a pair of resilient metal connector members mounted on the insulator and normally slanting upward and away from each other, each of said connector members having an aperture therein providing mutually opposed prongs between which a terminal of the electrical unit may be forced to be held thereby, and the parts being so related that when both terminals of the electrical unit are gripped respectively between the prongs of the two connector members the pronged apertures are held spaced less than their normal distance apart to securely hold the unit under a permanent pulling tension.

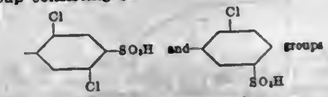
2,471,626
PRESERVATION OF EGGS BY FREEZING
Socrates A. Kaloyereas, Baton Rouge, La., assignor to Board of Supervisors of Louisiana State University and Agricultural and Mechanical College, Baton Rouge, La.
No Drawing. Application September 13, 1947, Serial No. 772,923
5 Claims. (Cl. 99—196)

1. The process of treating unbroken eggs preparatory to storage under low temperature, which includes subjecting the eggs to dehydration thereby to evaporate water from the contents through the shells until the weight of the eggs has been reduced by from 5% to 10%, and thereafter freezing the partially dehydrated eggs, whereby expansion of the contents within the shells, which takes place during freezing, does not break the shells.

2,471,627
POST AND CLAMP MECHANISM FOR CYCLE SADDLES
Harold E. Kalter, Elyria, Ohio, assignor to The Troxel Manufacturing Company, Elyria, Ohio, a corporation of Ohio
Application July 12, 1946, Serial No. 682,275
5 Claims. (Cl. 155—5.24)



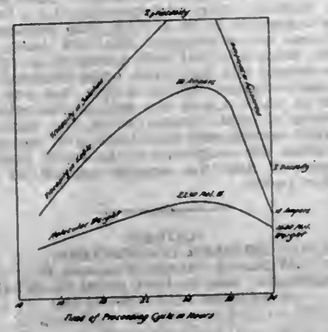
1. A cycle saddle post and clamp assembly comprising in combination with a pair of laterally spaced, longitudinally extending reach bars having transversely aligned apertures, a pair of indentured apertured members each carried by one of said reach bars, a substantially U-shaped clamp bent from a piece of flat sheet steel material and affording a web and a pair of intermediately apertured side arms, said arms positioned between, while extending longitudinally of, said bars, the outer surface of each arm disposed flatwise in contiguous relation to an inner surface portion of a different indentured member, a substantially upright post having a transverse notch on a side of its upper end portion, said upper portion adapted to be disposed between said arms and its unnotched surface portions to be concurrently engaged with inner surface portions of said arms and an inner surface portion of said web, and said notch being presented towards the space between the ends of the arms, and bolt means comprising a stem portion adapted to be projected successively



through a bar aperture, said indentured member and clamp arm apertures, and the other bar aperture and concurrently to pass through and be embraced by said post notch, and said bolt means adapted for adjustment to inwardly compress said bars against the indentured members, to inwardly compress the side portions of the clamp arms against the sides of the post.

2,471,628
MONOAZO PYRAZOLONE DYES
Oscar Knecht and Theodor Wirth, Basel, Switzerland, assignors to Sandoz Limited, Fribourg, Switzerland, a firm of Switzerland
No Drawing. Application July 26, 1945, Serial No. 607,258. In Switzerland August 21, 1944
4 Claims. (Cl. 260—163)

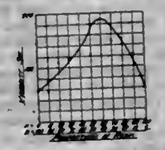
1. A monoazo dyestuff of the formula



wherein Y stands for a member selected from the group consisting of the $C_{13}H_{11}$ and $C_{17}H_{13}$ radicals, and —Z represents a member selected from the group consisting of

groups

2,471,629
DEPOLYMERIZED COPAL-LIKE RESINOUS ESTERS
William Krumbhaar, New York, N. Y.
Application May 1, 1946, Serial No. 666,438
4 Claims. (Cl. 260—75)

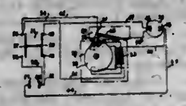


1. The method of preparing copal-like resinous esters which comprises depolymerizing a reversible gel resin of a rosin acid-polyhydric alcohol ester containing free hydroxyl groups, the polyhydric alcohol being selected from the group consisting of glycerine and the pentaerythritols, said rosin acid-polyhydric alcohol ester being modified by reaction with maleic acid and said reversible gel resin being free from fat acid esters, by heat treatment from just below gelation temperature to the maximum temperature used and from said maximum temperature back to just below gelation temperature, all in a time period of from 4 to 10 hours within the temperature range of 270 to 325° C. with agitation to equalize the temperature in the mass but without mastication, during which heat treatment the resinous ester first gels and then degels and passes through its maximum viscosity to produce a depolymerized copal-like resinous ester.

2,471,630
PRESSED AND SINTERED OXIDATION RESISTANT NICKEL ALLOYS
Jacob Kurtz, Teaneck, N. J., assignor to Callite Tungsten Corporation, Union City, N. J., a corporation of Delaware
No Drawing. Original application January 13, 1944, Serial No. 518,100. Divided and this application October 23, 1945, Serial No. 624,095
2 Claims. (Cl. 75—22)

1. A pressed and sintered oxidation resistant alloy consisting of 75% to 96% of nickel, chromium and copper in the proportions of 70.2%–74% nickel; 0.1%–2.0% chromium; and 29.7%–24% copper; and silver in the proportions of 25%–4%; the constituents being thoroughly diffused and free from chromium oxide inclusions.

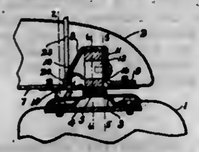
2,471,631
FURFURYL ALCOHOL-PHENOL ALDEHYDE RESINOUS PRODUCTS AND METHOD OF MAKING THE SAME
Hans H. Lebach, Newark, Del., assignor to Haveg Corporation, Newark, Del., a corporation of Delaware
Application September 7, 1944, Serial No. 553,074
4 Claims. (Cl. 260—43)



1. A potentially reactive resinous composition in the form of a viscous liquid which consists essentially of a potentially reactive, unmodified, syrupy, resinous product obtained by reacting phenol and formaldehyde and removing free water from said reaction product, and a potentially reactive unmodified, syrupy, resinous product obtained by acid-condensing a material selected from the group consisting of furfuryl alcohol and a mixture of furfuryl alcohol and not more than about 15% furfural and removing free water from said condensation product, the said phenol-formaldehyde resinous product being present in an amount between about 50% and about 25% based on the mixture of the said two resinous products.

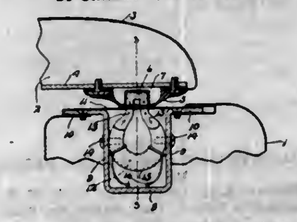
2,471,632
RETARDED CEMENT
Norman C. Ludwig, Chicago, Ill., assignor to Universal Atlas Cement Company, a corporation of Indiana
No Drawing. Application February 12, 1947, Serial No. 728,207
4 Claims. (Cl. 106—93)

1. A cement composition adapted when mixed with water to form a slurry having a retarded set at temperatures above atmospheric, said composition comprising Portland cement and from



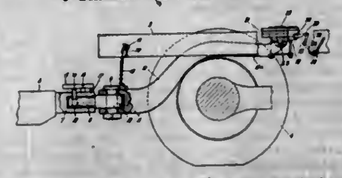
0.03 to 0.27% by weight of cement of one of the group consisting of dry cellulose oxidized by contact with nitrogen dioxide and inorganic salts of cellulose so oxidized.

2,471,633
ELECTRIC CIRCUIT CONTROLLER
George B. Lutz, Lakewood, Ohio
Application April 12, 1947, Serial No. 741,115
19 Claims. (Cl. 171—97)



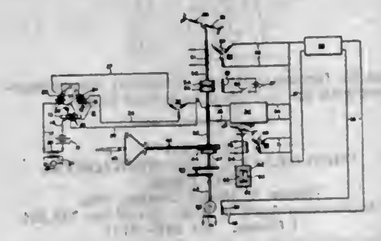
19. An electrical circuit controller comprising a manually operable switching means including a movable conductive means and spaced stationary electrical contacts adapted to be selectively engaged by said movable means to provide two independent paths for electrical power through said switching means, a first electrical circuit including electrical conductors adapted to connect an electrical appliance in series with a source of electrical power through one of said independent paths therefor of the switching means when the movable means is actuated to one position, an electrically operated timing device, an electrical switch periodically operated by said timing device, a second electrical circuit including electrical conductors adapted to connect the said electrical appliance in series with said source of electrical power through the periodically operated switch and the other of said independent paths of the switching means, and other electrical conductors adapted to connect said electrical timing device to said source of electrical power through the said other path of said switching means and in parallel with said periodically operated switch and appliance, whereby the said appliance may be selectively continuously energized through said first circuit or periodically energized through said second circuit and the said timing device is operated only when the appliance is connected for periodic energization.

2,471,634
REFRIGERATOR CLOSURE AND SEAL
Vennice E. Mark and Lloyd L. Anderson, Grand Rapids, Mich., assignors to Winters & Crampton Corporation, Grandville, Mich., a corporation of Michigan
Application July 27, 1944, Serial No. 546,888
3 Claims. (Cl. 20—69)



1. In a construction of the class described, a door jamb member, a door member movably mounted with respect thereto to be brought into closing relationship therewith, a sealing gasket of flexible compressible material secured to one of said members at the face thereof, an elongated channel support located within the other of said members, a magnet holder located lengthwise of the channel support and secured therein having spaced apart fingers extending toward the open side of the channel, a plate of non-magnetic material across the open side of the channel support, a permanent magnet and a block of non-magnetic material at each side of the permanent magnet located in each recess between adjacent fingers, a plurality of alternate blocks of soft iron and of non-magnetic material located between said magnet holder and said plate, and means for simultaneously shifting said blocks of soft iron and of non-magnetic material into positions where said iron blocks lie against the adjacent ends of the magnets and said blocks of non-magnetic material lie against the adjacent ends of the blocks of like material at each side of the magnets, or to another position where said blocks of soft iron extend across the blocks of non-magnetic material at each side of the magnets, and the adjacent end of each magnet is partially covered by a block of non-magnetic material between two adjacent soft iron blocks.

2,471,635
MAGNETIC DOOR CLOSURE AND SEAL
Vennice E. Mark and Lloyd L. Anderson, Grand Rapids, Mich., assignors to Winters & Crampton Corporation, Grandville, Mich., a corporation of Michigan
Application July 27, 1944, Serial No. 546,889
10 Claims. (Cl. 20—69)

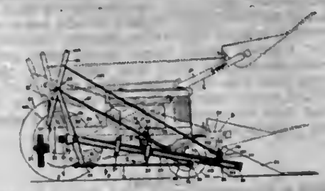


2. The combination including a door and a door jamb therefor, said door carrying a flexible gasket adapted to be brought into engagement with and pressed against the door jamb, said gasket being provided with a magnet lengthwise thereon and said door jamb being provided with an electromagnet having a core, the end portions of which are in the field of magnetic attraction of said magnet when the gasket is brought against said door jamb, and means for energizing the electromagnet to create repulsion between it and the magnet carried by said flexible gasket.

2,471,636
TRAILER CONNECTION
William E. Martin, Kewanee, Ill.
Application July 30, 1945, Serial No. 607,859
9 Claims. (Cl. 280—33.44)

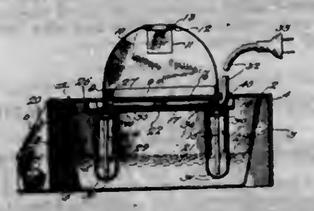
1. A structure for the purpose indicated comprising a socket member for fixed attachment to a trailer unit, a fifth wheel for attachment to a truck, a connecting unit for connecting the socket to the fifth wheel, said connecting unit being unitary at one end and divided at its other end, and a spindle connected to the unitary end of said connecting unit, said spindle being readily connectible to and disconnectible from the socket, the ends of the divided end of the connecting unit being connected pivotally to said fifth wheel.

2,471,637
AUTOMATIC STEERING CONTROL
Alan M. MacCallum, Maywood, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application November 26, 1945, Serial No. 630,808
12 Claims. (Cl. 318—489)



12. An automatic steering system for a craft having a control surface, comprising a servomotor for operating said surface, an inductive device having a wound stator and a wound rotor, means connecting said motor to said wound rotor for actuating the latter relative to said stator, a source of alternating current, a magnetic pick-off device comprising a core of permeable magnetic material adapted to receive a magnetic flux from a uni-directional magnetic field, a secondary winding on said core, a primary winding on said core connected for energization by said source of alternating current, means for interconnecting the secondary winding of said core to the wound stator of said inductive device, means electrically connecting the wound rotor of said inductive device to said motor for energizing the latter to operate said surface, normally yieldably centered follow-up means adapted for operation by said motor for modifying the energization of the latter, and means for connecting said follow-up means for operation by said motor.

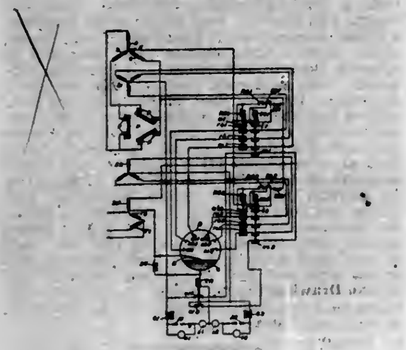
2,471,638
RUST PREVENTIVE COMPOSITIONS
Paul R. McCarthy, Allison Park, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Application July 14, 1945, Serial No. 605,178
6 Claims. (Cl. 106—14)



1. An improved liquid rust preventive composition adapted to form a water-impervious film on metal surfaces consisting essentially of a mineral oil having a viscosity within the range of from about 100 seconds to about 500 seconds at 100° F., and containing 5 to 15 per cent, by weight, of petrolatum wax, 1 to 2 per cent, by weight, of an oil-soluble wetting agent, and 1 to 2 per cent, by weight, of blown soya oil having a viscosity of about 1900 seconds to about 2000 seconds at 210° F.

2,471,639
LOADING MACHINE
Eric M. McElhaney, Dysart, Iowa
Application December 29, 1945, Serial No. 637,921
11 Claims. (Cl. 214—141)

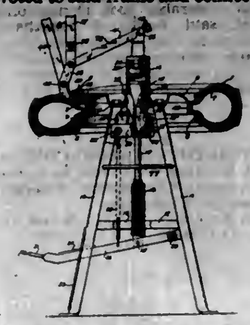
1. A loading machine including a portable frame, and a pair of pivoted telescoped lifting arms arranged on opposite sides of said frame, means pivotally supporting the rear ends of said arms on said frame, telescoping members for said lifting arms movable forwardly of said frame, a load carrying unit supported between the front ends of said telescoping members, means for raising and lowering said lifting arms including a transverse rock shaft mounted on said frame, a pair of rock arms on said shaft, arranged at opposite sides of said frame and extended forwardly from said rock shaft for up and down movement in a vertical plane, with the free ends of said rock arms being adapted to movably support the telescoping members thereon, means for rocking said shaft, a pair of upright levers pivoted intermediate their ends on said frame adjacent to the rear ends of said lifting arms for pivotal movement longitudinally of said frame, first rods connected between said telescoping members and the upper ends of said levers, second rods connected between the free ends of said rock arms and the lower ends of said levers, with said first and second rods and said pivoted levers acting to extend and contract the telescoping members in response to the movement of said rock arms.



2,471,640
ELECTRIC INSECT AND RODENT TRAP
Leo M. McFadden, Denver, Colo., assignor to Roy Wilbur McKee, Jr., Lodi, Calif.
Application January 7, 1946, Serial No. 639,492
2 Claims. (Cl. 43—98)

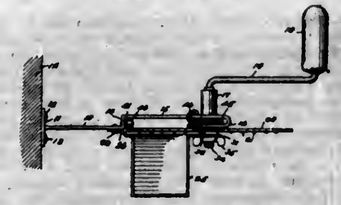
1. An insect and rodent trap including an insulated water container and a cover adapted to be disposed over the same and to extend to the bottom thereof, a bait container on the side wall of said cover, an annular collar formed by concentrically arranged upstanding flanges on the top of said cover, a dome shaped wire screen cage detachably supported by said collar between said flanges and formed with a central opening, a

depending cylindrical screen guide supported in said central opening, said cover having an opening formed through it out of vertical alignment with said screen guide, a housing formed with spaced upper and lower walls secured to the under surface of said cover, an insulating disk supported upon the upper surface of said lower wall, depending spaced electrodes having positioning flanges formed about their upper ends seating on said insulating disk and extending therethrough and into the water when placed in said insulated water container, and means for connecting said electrodes with any desired electric current supply outlet.



2,471,641
SUPPLY EQUIPMENT FOR ELECTRIC ARCS
John Charles Milne, Wolverhampton, England, assignor to The Electric Construction Company Limited, Wolverhampton, England, a British Company
Application January 4, 1949, Serial No. 69,117
In Great Britain May 27, 1946
3 Claims. (Cl. 315—141)

1. An alternating current electric equipment for supplying a pair of projection arc lamps, comprising a transformer having two secondary windings connected to operate in phase-opposition and a mercury vapour rectifier having two sets of electrodes establishing two distinct conductive paths in said rectifier, said two sets of electrodes being connected in circuit respectively with said secondary windings and with the projection arc lamps.



2,471,642
WHEEL SUPPORTING STAND FOR TIRE CHANGING
Benjamin E. Moltz, Gridley, Calif.
Application November 9, 1946, Serial No. 708,973
2 Claims. (Cl. 144—288)

1. A pneumatic tire machine comprising a supporting frame adapted to support a wheel having a central hub opening; a tube mounted on said frame to extend above said wheel through said hub opening, said tube having longitudinal slots through its lower portion; brackets on said tube on opposite sides of said slots; a plurality of cam surface - equipped jaws pivoted between said brackets respectively, said jaws being normally retained within said tube but being movable through said slots; a conical cam slidable within said tube and engaging said cam surface of said jaws and having a depending stem; and a foot pedal pivoted to said frame and connected to said

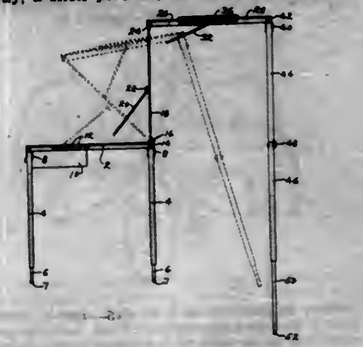
stem for forcing said jaws outwardly into engagement with the hub opening of said wheel.

2,471,643
FOOD GRATER WITH HORIZONTAL AXIS DISK
Wilson A. Moran, Antigo, Wis.
Application April 28, 1947, Serial No. 744,384
1 Claim. (Cl. 146—177)

In a food grater, a supporting bracket having an offset portion, means for securing one end of the bracket to a supporting surface, the offset end of the bracket being formed into a loop of a width equal to the width of the offset portion, the loop portion of the bracket having openings, an operating shaft extending through the openings, a handle formed at one end of the shaft for rotating the shaft, a grating disc secured to one end of the shaft to rotate therewith, spaced stub shafts mounted in the offset portion of the bracket and extending towards the disc, rollers mounted on the stub shafts and resting against the disc, a food guide chute pivotally mounted on the operating shaft adjacent to the rollers, a flange extending from the chute, studs extending from the bracket, said flange having openings accommodating the studs, pivotally supporting the chute on the bracket, and said chute guiding material to the grating disc to be grated.

2,471,644
LENGTH METERING APPARATUS FOR DRILL PIPE AND THE LIKE
Joseph F. Moore, Jr., Berryville, Va.
Application June 4, 1946, Serial No. 21,186
14 Claims. (Cl. 33—136)

14. In a successive lengths-metering apparatus, for association with drilling equipment including a bodily-reciprocable, elongative hook, for metering successive lengths of drill pipe suspended from said hook during bodily reciprocation of said hook, said apparatus including electric switch means operable upon elongation and retraction of said hook; a lengths-metering mechanism; electro-mechanical means operating said lengths-metering mechanism upon closing of said switch and bodily reciprocation of said hook, an electric conductor electrically connected with said switch and electro-mechanical means, a rotor over which intermediate portions of said conductor are trained, and means operatively connecting said rotor and lengths-metering



mechanism, to actuate said lengths-metering mechanism; and means to take up slack in said conductor at said intermediate portions thereof and between said switch and rotor, including a drum to which is attached the end portion opposite the switch-attached end portion of said conductor and over which the drum-attached end portion of said conductor is wound, and spring means for normally rotating said drum to wind said drum-attached end portion thereon and yieldably resisting unwinding of said conductor from said drum.

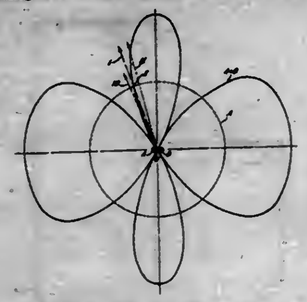
2,471,645
DETERGENT COMPOSITION
Mark M. Morris, Berkeley, and Annette K. Kleeman, San Francisco, Calif., assignors to Clorox Chemical Co., Oakland, Calif., a corporation of Delaware
No Drawing. Application August 30, 1946, Serial No. 694,148
4 Claims. (Cl. 252—137)

1. An aqueous household cleaning solution consisting essentially of water and the following three active ingredients in the following proportions by weight: an alkali metal hexametaphosphate—about five tenths percent (0.5%) to two percent (2.0%); triethanol amine—about five tenths percent (0.5%) to two percent (2.0%); wetting agent selected from the group consisting of alkyl aryl sulfonates, sulfonated alcohols, sulfonated castor oil and sulfonated soybean oil—about one tenth (1/10) the amount of the alkali metal hexametaphosphate; said solution having a pH of between about nine and two tenths (9.2) and ten (10).

2,471,646
BED TABLE
Elise R. Norwood, Fairfax, Calif.
Application September 23, 1946, Serial No. 698,797
2 Claims. (Cl. 311—95)

1. A folding bed table comprising a base tray having pivotally mounted legs depending therefrom, an intermediate panel pivoted at one edge to the tray, the pivotal connection of the panel to the tray adapted to permit swinging of the panel to selected angles up to 180° relative to the tray, a shelf pivotally mounted to the other

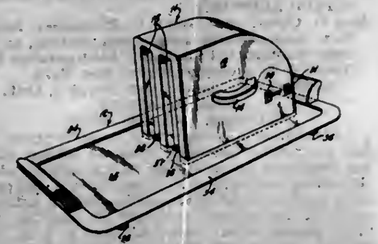
edge of the panel, the shelf being swingable to selected angles up to 180° relative to the tray, means for adjustably supporting the panel with relation to the tray, and the shelf with relation to the panel, and legs carried by the shelf and engageable with a supporting surface.



2,471,647
ISOMERIZATION OF OLEFINS IN THE PRESENCE OF HYDROGEN FLUORIDE IMPREGNATED ALUMINA
Alex G. Oblad and Joseph U. Messenger, Dallas, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application March 4, 1946, Serial No. 651,990
3 Claims. (Cl. 260—683.2)

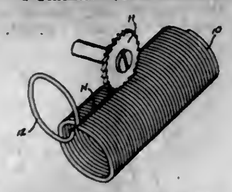
1. A process for converting straight chain olefins containing not more than six carbon atoms per molecule to branched chain olefins which comprises contacting at isomerization temperatures said straight chain olefins with a catalytic material consisting essentially of alumina catalyst impregnated with hydrofluoric acid, said catalyst containing fluorine equivalent to from about 0.5 per cent to about 10 per cent of hydrogen fluoride based on the total weight of the hydrofluoric acid-impregnated alumina.

2,471,648
EQUISIGNAL RADIO BEACON SYSTEM
William J. O'Brien, London, England, assignor to The Decca Record Company, Limited, London, England, a corporation of Great Britain
Original application March 2, 1942, Serial No. 432,948. Divided and this application November 8, 1943, Serial No. 509,445
2 Claims. (Cl. 343—110)



1. The method of producing a radio frequency equi-signal surface for guiding mobile vehicles which consists in radiating radio frequency signals of like frequency from a pair of spaced points, and producing each of said signals intermittently in substantially identical repeating cycles of off and on periods with the on periods of one signal overlapping the on periods of the other signal for a time constituting a substantial fraction of the duration of said periods.

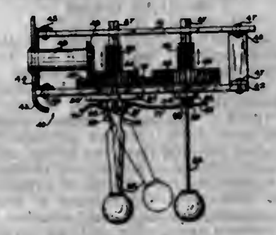
6. A radio beacon system comprising a pair of antennae spaced from each other, means for radiating from said antennae radio frequency signals of like frequency, and means for cyclically interrupting the radiation from each of said an-



tennae to produce each of said signals intermittently in repeating cycles of off and on periods with the on periods of one signal overlapping the on periods of the other signal for a time constituting a substantial fraction of the duration of said periods.

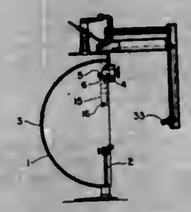
2,471,649
TOASTER-TRAY COMBINATION
Herbert E. Page, Oakwood, Ohio
Application September 10, 1946, Serial No. 695,908
1 Claim. (Cl. 99—401)

In a toasting device, the combination of a toaster element comprising a casing having horizontally spaced sides defining therebetween a toasting compartment having unobstructed openings at its front and bottom, a heat element carried by each side, and a base for supporting the casing, the base having a top surface of substantially greater length than the length of the casing interrupted at and adjacent one end by a pair of horizontally spaced parallel recesses shaped to receive the lower edge portions of the sides of the casing and by an intervening plane surface disposed to project into and form a bottom for the compartment, whereby to support a slice of toast in the compartment and to provide a slideway for said toast, and pusher means in the rear end of the compartment operable to slide the toast along the slideway out of the compartment through the front opening onto that portion of the top surface of the base in front of the casing; said casing being movable relative to the base whereby to provide free access to the compartment through said openings for cleaning purposes.



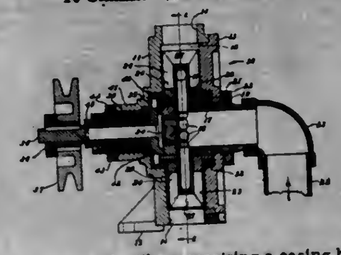
2,471,650
FUSIBLE RING AND METHOD OF MAKING SAME
Albert Pandolfi, Milwaukee, Wis., assignor to Donald F. Lucas, Howard A. Milhaupt, and Albert Pandolfi, copartners, doing business under the name and firm style of Lucas-Milhaupt Engineering Sales Co., Cudahy, Wis.
Application October 19, 1945, Serial No. 623,297
4 Claims. (Cl. 113—110)

1. As an article of manufacture, a substantially helical coil of material adapted to be fused into joints of parts to be united and also adapted to be packaged without tending to become entangled, said coil having a channel extending from end to end of said coil and penetrating successive convolutions, whereby its convolutions are individually notched to provide breakable zones so that individual split rings may be readily separated from the coil at the point and time of use.



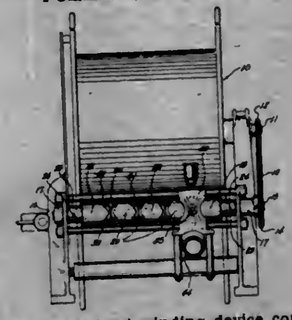
3. The herein described method of producing fusible rings which comprise size winding a wire of suitable composition on a mandrel into the form of a coil, and notching the convolutions of the coil in a line from end to end of a predetermined series of convolutions thereof to such an extent that each such convolution has a frangible or breakable section connecting it to the next adjacent coil whereby the coils may be packaged, stored or shipped without becoming entangled and individual convolutions may be readily broken from the coil at the time and place of use to provide separate unentangled split rings.

2,471,651
AUTOMATIC IGNITION SHUTOFF DEVICE
Anthony F. Pantuosco, New York, N. Y.
Application November 8, 1946, Serial No. 708,555
4 Claims. (Cl. 200—52)



4. In combination with an automobile ignition system, a bottom plate, a top plate disposed above said bottom plate, a gear rotatively mounted on the top face of the bottom plate and formed with a concentric threaded opening, a shaft having a square top portion and a threaded lower portion threadedly engaging the threaded opening of said gear, said shaft having its square top portion slidably extended through a complementary opening formed in said top plate to retain said shaft against rotation to cause the shaft to move up or down when said gear is turned in one direction or the other, an insulation block mounted on the bottom face of said bottom plate and formed with a hole through which the bottom end of said shaft freely extends, spaced contacts mounted on said insulation block on opposite sides of said shaft and connected in series in the ignition system, a pendulum of conductive material pivotally mounted on the bottom end of said shaft, ears extending laterally from the sides of said pendulum and engaging said contacts to be effective through a relatively wide arc of pivotal movement of said pendulum, and key operated means for turning said gear in a direction to move said shaft downward to similarly move said ears downward with relation to said contacts to reduce the effective contact of said ears with said contacts to a relatively small arc of pivotal movement of said pendulum.

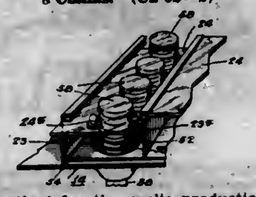
2,471,652
OPHTHALMIC PERIMETER COMPRISING AN ARTIFICIALLY ILLUMINATED CONCAVE SPHERICAL REFLECTOR
Hans Paprits, Berne, Switzerland, assignor to Haag-Streit Werkstatten fur Prazisionsmechanik, Berne-Liebefeld, Switzerland
Application September 29, 1945, Serial No. 619,354
In Switzerland October 14, 1944
1 Claim. (Cl. 88—20)



An ophthalmic perimeter comprising a stationary hemispherical bowl having a diffusely reflexing inner surface, means for projecting a test mark on any desired part of said inner surface, an electric lamp mounted inside said bowl near the rim of the bowl and outside the field of vision of the eye to be examined, a fixed reflector for said lamp reflecting the latter's light on the inner surface of said bowl to produce a uniform diffuse illumination of the entire remainder of the inner surface of the bowl, an adjustable screen for said lamp to vary the intensity of said diffuse illumination, a fixed comparison screen mounted outside of the bowl near the rim portion thereof at a short distance from the outer surface of said bowl opposite an aperture in said rim portion of the bowl, the inner surface of said comparison screen having the same albedo as the inner surface of said bowl and being adapted to receive light of controlled intensity from a source outside of said bowl whereby on manipulation of the adjustable screen the intensity of the diffuse illumination of the inner surface of the bowl can be reduced to the value of the illumination of the comparison screen.

2,471,653
PUMP OR THE LIKE
Albert O. Price, Leesville, Ohio, assignor of one-half to Vincent Palumbo, Cleveland Heights, Ohio
Application April 27, 1946, Serial No. 665,472
10 Claims. (Cl. 103—103)

1. A pump or the like comprising a casing having a substantially annular chamber therein and having an outlet formed in its periphery, a disc-like distributor head stationarily positioned centrally within said casing and having peripheral suction pockets, said distributor head having a chamber formed therein for receipt of fluid input and having ports leading from the chamber to said pockets, and a rotor journaled on said distributor head, said rotor carrying a plurality of substantially U-shaped blades that straddle said distributor head in immediate relationship to the periphery thereof.



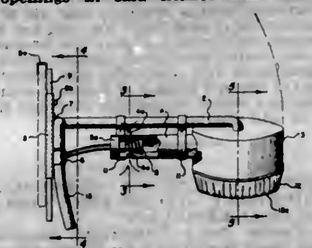
2,471,654
CAM FOR LEVEL WINDING DEVICES
Donald S. Reitz, Milwaukee, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application February 1, 1946, Serial No. 644,904
4 Claims. (Cl. 74—567)

1. A cam for a level winding device comprising a core shaft, a pair of identical end sleeves through which the core shaft non-rotatably extends, said end sleeves being spaced apart and having facing ends provided with helical shoulders arranged to form fragments of the sides of crossing level wind grooves, and a plurality of identical and interchangeable intermediate sleeves through which the core shaft non-rotatably extends mounted between the end sleeves, said intermediate sleeves each having both ends provided with helical shoulders which are complementary to the shoulders on the end sleeves, and said intermediate sleeves being assembled in

alternately reversed position with the helical shoulders on one sleeve spaced from the helical shoulders on an adjacent sleeve.

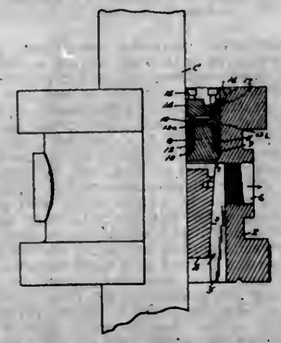
2,471,655
AUTOMATIC ICE MAKER
Theodore W. Rundell, Abington, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 28, 1943, Serial No. 515,958
8 Claims. (Cl. 62—2)

1. A method for the cyclic production of ice, which comprises supplying water to an ice-molding receptacle, freezing said water to form an ice mass, freeing the mass from the mold member automatically in response to the temperature of the mass and effecting positive movement of said mass to a position in which at least a portion thereof is displaced from the freezing zone of said receptacle, supplying additional water to the molding receptacle, freezing said additional water in contact with the mass previously frozen to effect a bond therewith, effecting controlled cyclic repetition of the aforesaid steps until a mass of a desired size has been formed, and then effecting automatic termination of the process by virtue of a restraining force created by the dimensional increase of said ice mass.



2,471,656
CIGARETTE ROLLER
Arthur F. Sas, Holland, Mich.
Application April 9, 1945, Serial No. 587,273
4 Claims. (Cl. 131—45)

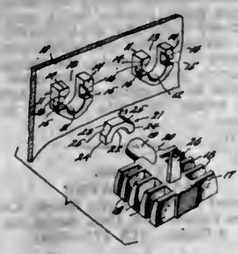
1. In a construction as described, an elongated trough-like member open longitudinally at one side, a flexible apron secured to said member at a side of the opening thereto, said apron having a width approximating the length of said member, and a closure for the open side of said member and permanently secured to the inner side of the apron transversely thereof in position whereby said closure may be moved to a position in which it substantially closes said opening.



2,471,657
HAIR DRIER
John F. Saye, Powerdite, Mo.
Application May 31, 1947, Serial No. 751,523
3 Claims. (Cl. 34—99)

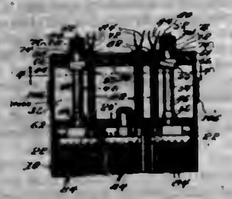
1. In a hair dryer of the class described, the combination of a helmet having openings therein near its lower edge, a casing surrounding said helmet in substantially air tight relationship communicating with said openings, a heater tube communicating with the interior of said casing, a heating element in said tube, openings in said tube surrounding said heating element arranged to admit air adjacent said heating element, a vacuum tube communicating with the upper middle portion of said helmet, a vacuum cleaner hose in connection with said vacuum tube for creating an air draft through said heater tube around said heating element into said casing through the openings in said helmet and outwardly

through said vacuum tube and vacuum cleaner hose, a helmet skirt in air tight relationship with the lower portion of said helmet extending downwardly therefrom and provided with a contracting band portion arranged to be fitted around a person's scalp adjacent the hair line thereof, said vacuum tube disposed on substantially a horizontal plane, bearing means for supporting said vacuum tube, a bracket to which said bearing means is connected and a hanger on which said bracket is vertically adjustably mounted, said hanger having a clip portion at its upper end adapted to be fitted over the upper edge of a door.



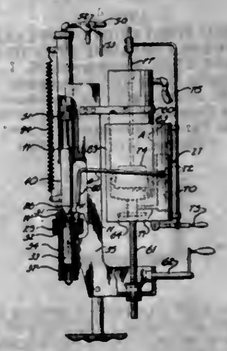
2,471,658
CASING LANDING HEAD
Donald U. Shaffer and Frank J. Schweitzer, Jr., Brea, Calif., assignors to Shaffer Tool Works, a corporation of California
Application June 24, 1946, Serial No. 678,907
4 Claims. (Cl. 285—22)

1. A casing head assembly including a tubular body, a crown ring slidably fitting and rigidly seated on the bore wall of the body, rubber-type packing bands mounted concentrically on the crown ring one to seal on the body wall and the



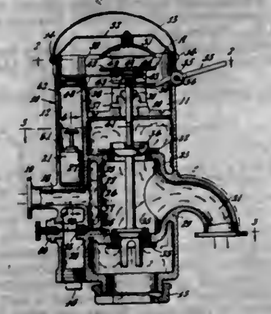
other on an interposed, central wall casing, a follower ring axially movable in the said body and concurrently engaging said bands, and a collar slidably fitted and locked in the bore of the body and having screws for jamming the follower onto the bands.

2,471,659
GRATE FASTENING
Harolde M. Simon, Utica, N. Y., assignor to Utica Radiator Corporation, Utica, N. Y., a corporation of New York
Application October 12, 1945, Serial No. 621,923
8 Claims. (Cl. 126—176)



1. In combination with a grate bar, a support for said grate bar, said grate bar being insertable in the support in a reverse position and rotatable to its operative position, and retaining means movable longitudinally into and out of the support for releasably securing the grate bar to the support, said grate bar having stop means movable in the path of the retaining means when the grate bar is rotated to its operative position to prevent removal of the retaining means from the support.

2,471,660
STORAGE BATTERY WITH LEVEL INDICATOR
Stanley Stelmack, Philadelphia, Pa.
Application February 27, 1945, Serial No. 579,969
2 Claims. (Cl. 136—182)



1. A storage battery comprising a multicell body having an upstanding rear wall portion, a flange formed integral with said wall and extending parallel to the top of said body, terminal posts for said body extending upwardly from the same and through said flange, insulating means positioned beneath said flange embedding said posts between said body and said flange and electrodes in said insulating means adapted to be connected to a remotely-located indicator to indicate the height of liquid in said cells.

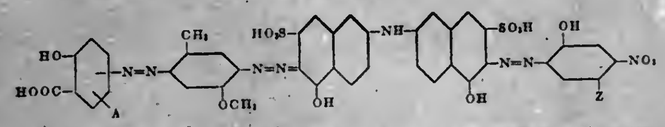
2,471,661
APPARATUS FOR MOUNTING WORK IN A HOLDER
Edward E. Stevenson, Whittier, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Original application May 22, 1944, Serial No. 536,754. Divided and this application February 10, 1945, Serial No. 577,316
2 Claims. (Cl. 22—56)

1. Apparatus of the character described including, a stationary head to support a cup-shaped holder upright and centrally in the head, and centering means for engaging work and holding it centrally in the holder with its upper end above the top of the holder and with its lower end seated on the bottom of the holder to form a continuous annular space between the holder and work to hold molten material and including upper and lower centers for engaging the upper and lower ends of the work and shiftable relative to each other to clamp the work, the lower center being spring supported and the upper center being power operated.

2,471,662
LAVATORY FLUSH VALVE
Joseph Sweeney, Auburn, N. Y.
Application October 4, 1947, Serial No. 778,009
4 Claims. (Cl. 137—93)

1. A flush valve comprising a casing having an inlet port, an outlet port and a passageway there-

between, a valve seat in said passageway, a valve closure member normally resting on said seat and closing said passageway, means for moving said closure member from its seat to open said valve, vacuum means operative upon said movement for retaining said closure member from its seat and means operable by fluid passing through said passageway for breaking said vacuum to release said valve closure member to close said valve.

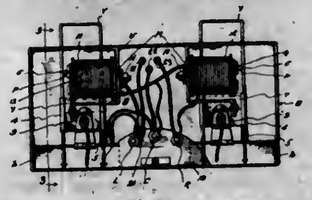


2,471,663
METHOD FOR PRODUCING CLADDED METAL COOKING UTENSILS
Herbert David Tietz, Maplewood, N. J., assignor to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware
Application December 29, 1944, Serial No. 570,228
In Canada November 12, 1944
3 Claims. (Cl. 29—148.2)

1. A method for producing a cooking utensil of cladded metal possessing a high degree of corrosion resistance on an exposed surface and a high degree of heat conductivity in a direction parallel to the plane of said surface, which comprises the steps of producing blanks suitably contoured to produce the finished utensil from sheets of nickel-chromium alloy, separately producing similarly contoured blanks from sheets of copper, cleaning and nickel plating one face of said nickel-chromium alloy blanks, arranging one of said copper blanks interfacially, engaging the plated face of one of said nickel-chromium alloy blanks, bonding said assembled contoured blanks together to provide a contoured composite blank by subjecting the assembled blanks to a temperature of from 1700° F. to about 1975° F. in a reducing atmosphere and under pressure and thereafter forming said cooking utensil from said composite contoured blank thereby to substantially eliminate the production of composite metal scrap.

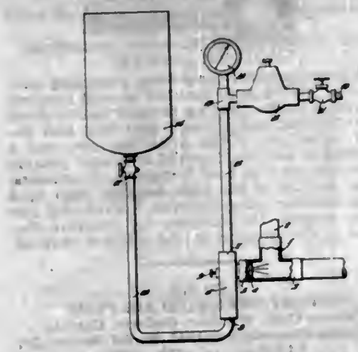
2,471,664
TRISAZO DYES
Walter Wehrli and Fritz Kehrer, Basel, Switzerland, assignors to Sandoz Ltd., Fribourg, Switzerland, a Swiss firm
No Drawing. Application May 4, 1945, Serial No. 592,064. In Switzerland May 17, 1944
3 Claims. (Cl. 260—173)

1. The dyestuffs of the general formula



wherein Z stands for a member selected from the group consisting of hydrogen, alkyl and halogen and A stands for a member selected from the group consisting of hydrogen and alkyl, which dyestuffs dye cellulosic fibres in blue shades, which, when after-coppered, become improved in their fastnesses to light and wet treatments.

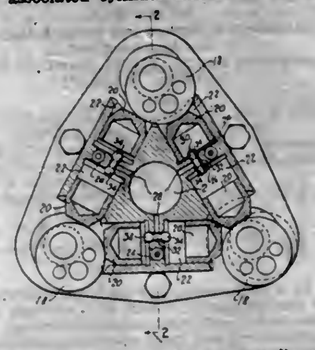
2,471,665
CAM ACTION UNIVERSAL JOINT
Villor P. Williams, Chicago, Ill.
Application June 18, 1945, Serial No. 600,163
3 Claims. (Cl. 64—7)



3. A universal joint comprising a male member having a head and arcuate keys pivotally mounted on the head, a female member having diametrically opposed slots extending to one end thereof and a shoulder located beyond the inner ends of the slots, said male member being seated in the female member with the keys thereof in said slots, and a shroud fitted over said members and having flanges at both ends, the flange at one end overlapping the head of the male member and the flange at the other end overlapping said shoulder to retain the male member in the female member.

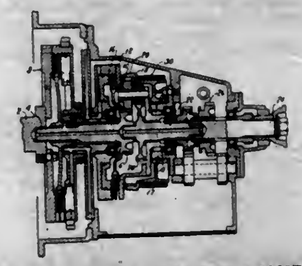
2,471,666
ANNUNCIATOR
Fremont E. Wood, Long Beach, Calif.
Application February 9, 1945, Serial No. 577,694
1 Claim. (Cl. 177—329)

A motor condition indicator comprising a case having a front wall formed with an opening, a bracket mounted against the inner surface of the front wall and projecting therefrom inwardly of the case below the opening, a yoke having arms extending vertically through the bracket and the top wall of the casing and slidable vertically therethrough, a sign carried by the arms of said yoke back of the opening in the front wall of the casing and bearing legends disposed one above the other and individually displayed through the opening by vertical shifting movement of the yoke, a spring about one arm of said yoke having its lower end resting upon the bracket and its upper end abutting the sign and being normally expanded to display the lower one of the legends through the opening, the other arm of the yoke being formed with a notch, U-shaped bracket disposed in the upper portion of the case and having an upper arm secured to the top wall of the case and a lower arm provided with a depending lip, an electro-magnet disposed horizontally and secured at one end to the U-shaped bracket between the arms thereof, a resilient armature for said magnet carried by a depending resilient plate having its lower end secured to the lip of the bracket and normally holding the armature spaced from the magnet, and a pawl carried by the armature and projecting therefrom and normally engaged in the notch of the yoke to hold the yoke depressed and the upper legend displayed through the opening in the case, the pawl being withdrawn from the notch to permit upward movement of the yoke and the sign by action of said spring when the magnet is energized.



2,471,667
METHOD FOR DRY CLEANING
Carl S. Arnold, Cullman, Ala., assignor to Emery Industries, Inc., Cincinnati, Ohio, a corporation of Ohio
Application August 21, 1945, Serial No. 611,858
1 Claim. (Cl. 259—4)

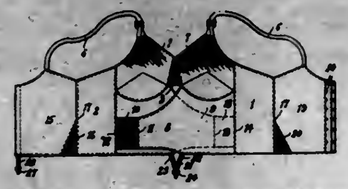
A method of dispersing moisture in a dry cleaning solvent which comprises establishing turbulence at a local area in a confined moving stream of solvent, and projecting atomized particles of water, by means of an air blast directed into the moving stream of solvent at said local area of turbulence and in the direction of flow of said stream.



2,471,668
TRANSMISSION
Malvern S. Baker, Muskegon, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application August 30, 1946, Serial No. 693,938
4 Claims. (Cl. 74—774)

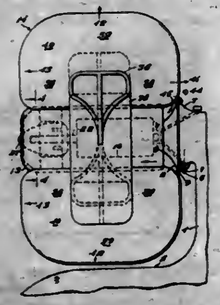
4. In a planetary transmission, an input shaft and an output shaft, a sun gear mounted on each shaft, a planet gear carrier supported for rotation in one direction about the axes of said shafts, spindles rotatably supported by said carrier, planet gears meshing with said sun gears and secured to said spindles, a cam secured to each of said spindles, said carrier structure provided with opposed axially aligned cylinders disposed intermediate a pair of adjacent cams, pistons operable in each of said cylinders, means for supplying fluid under pressure to said cylinders to urge said pistons outwardly of said opposed cylinders into engagement with said cams but supplying fluid to only one cylinder at a time, said planet gears operable to rotate about their own axes and to drivingly rotate said cams relative to said carrier when the ratio of input speed to output speed is other than unity, a passage communicating the opposed cylinders with each other, and adjustable valve means in said passage and operable to variably restrict flow of fluid through said passage from one cylinder to the other to vary the ratio of input speed to output speed of said shafts, one of said adjacent cams constructed and arranged to move the piston coacting therewith inwardly of the cylinder, while said adjacent cam coacting with the piston operable in the other associated cylinder allows for movement

of said last mentioned piston outwardly of the cylinder at the same speed as the first piston, said cylinders arranged generally triangularly and symmetrically about the axes of said input and output shafts, each of said cams being rotatable about axes extending normal to the plane containing all said cylinder axes, the center of rotation of said cams disposed at the apices of the triangle formed by the axes of said cylinders.



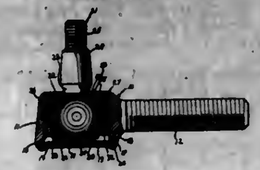
2,471,669
POWER-TRANSMITTING DEVICE
Malvern S. Baker, North Muskegon, Mich., assignor to Continental Motors Corporation, Muskegon, Mich., a corporation of Virginia
Application September 28, 1946, Serial No. 700,097
2 Claims. (Cl. 74—765)

1. In combination, a power gear, a second gear meshing with the power gear, rotatable mounting means for the second gear whereby the second gear may rotate about its own axis and the axis of the second gear may rotate about the power gear, a hub integral with the mounting means, a stationary flange surrounding the hub, a one-way brake disposed between the hub and the flange and arranged to hold the mounting means against rotation in a direction opposite to the direction of rotation of the power gear, a third gear meshing with the second gear and rotatable



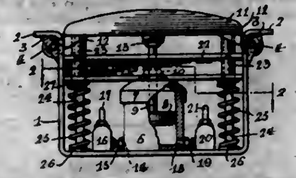
on the stationary flange, means to hold the third gear against rotation, an output shaft rotatable inside the aforesaid hub, gears connecting the aforesaid second gear with the output shaft, and means operable to lock the mounting means to said power gear to rotate the whole as a unit.

2,471,670
BRASSIÈRE
Abraham S. Becker and Victor I. Becker, Los Angeles, Calif.
Application August 11, 1947, Serial No. 767,958
2 Claims. (Cl. 2—42)



1. In a garment of the character described, a body portion having a pair of bust cups, a flap located below each bust cup and extending laterally therefrom, said flaps extending oppositely to one another and lying in overlapped relation over the diaphragm of the wearer, each of said flaps having a tapered end, each of the tapered ends being attached to one end of a relatively wide elastic insert, the opposite end of the elastic insert being permanently secured in a vertical seam of the garment and above the lower edge of the garment, the tapered end of the innermost of the flaps and the elastic insert secured to the same being disposed behind and concealed by the outermost one of the flaps.

2,471,671
AIR CIRCULATING FAN
John H. Beckert, Los Angeles, Calif.
Application September 30, 1946, Serial No. 700,366
7 Claims. (Cl. 230—259)

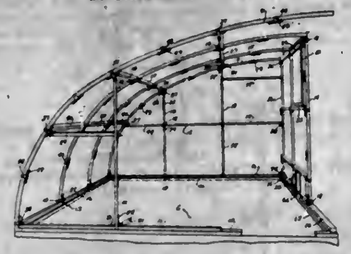


1. In an air circulating fan, a motor through which air may be circulated in an axial direction; an impeller having a hub sleeve open at one end and surrounding said motor and having a plurality of fan blades thereon shaped to deliver air both radially and axially; and a support for said motor and impeller including a head portion providing an annular barrier disposed adjacent the open end of said sleeve and extending radially beyond the open end of said sleeve and in the path of air currents discharged axially from said impeller adapted to deflect some of said air currents inwardly into said hub sleeve.

2,471,672
JOINT ASSEMBLY
James H. Booth, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application October 22, 1945, Serial No. 623,739
7 Claims. (Cl. 287—85)

1. A joint assembly comprising a housing having a side wall, a joint member in said housing, a resiliently backed bearing member tightly fitted in said housing against said side wall and engaging a portion of the joint member, and a rigid bearing member disposed in spaced relation to said side wall in said housing and engaging another portion of the joint member, said rigid bearing member being shiftable toward said side wall to engage the housing for limiting the amount of deformation of the resilient backing.

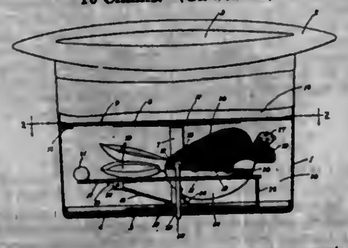
2,471,673
WEIGHT-OPERATED AIR PUMP
Charles Coté, Windsor, Ontario, Canada
Application December 3, 1945, Serial No. 632,527
4 Claims. (Cl. 230—216)



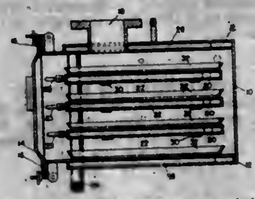
1. A weight-operated pump comprising a frame adapted to be embedded in a pavement, a dome slidably mounted in said frame and normally extending beyond the top of said frame, braces mounted in said frame, guide sleeves carried by said dome and passing slidably through said braces, guide rods fixed to the bottom of said frame and having their free ends slidably received in said sleeves, whereby to provide bearing surfaces for said rods rigid with an in close proximity to said dome, a cylinder mounted in said frame beneath said dome, a piston in said cylinder, a piston rod extending from said piston and connected to said dome, and valve-controlled inlet and outlet means associated with said cylinder.

2,471,674
ELECTRICAL HEATING UNIT
Alfred Cote, Montreal, Quebec, Canada
Application June 6, 1946, Serial No. 675,340
6 Claims. (Cl. 219—38)

1. An electrical heating unit comprising a pair of horizontally spaced water headers, a horizontal cross pipe connecting said headers, an insulated tube mounted spacedly in said pipe and having apertures through its wall, an electric heating element in said tube, and contact means mounted in said headers and engaging the ends of said element.



2,471,675
POULTRY HOUSE
Peter De Jongh, Arlington, N. J., assignor to Lou R. Crandall, New York, N. Y.
Application August 28, 1944, Serial No. 551,473
15 Claims. (Cl. 189—1)



1. A poultry house comprising a front wall structure and end wall structures and a roof curving downwardly from the top of the front wall structure to the floor, studding members for said wall structures in the form of metal tube lengths, connector fittings on the studding elements and wooden spacer members extending between the studding members and secured thereto by said connector fittings, floor engaging sill boards on which the studding members rest, spacer strips secured to said sill boards between the lower end portions of the studding members, and connector fittings on the lower ends of the studding members secured to said spacing strips.

2,471,676
HAT TRICK TOY
Edward Loyd Enochs, Modesto, Calif.
Application June 1, 1948, Serial No. 30,224
10 Claims. (Cl. 272—8)

10. A trick comprising, as a toy, a container formed to represent a top-hat, a facsimile rabbit's head normally disposed in the container below the upper end thereof, means in the container supporting the facsimile rabbit's head and tending to raise the same upwardly to a position projecting out of the top of the container, holding means releasable from outside the container operative to normally prevent actuation of said first named means, and a yieldable closure member arranged in connection with the container in a manner to normally close the same above said facsimile rabbit's head and said means whereby to normally conceal the same.

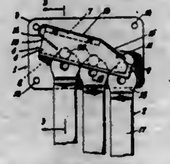
2,471,677
PROCESS OF DESICCATING ORANGE JUICE INVOLVING FREEZE DRYING
Earl W. Flosdorf, Forest Grove, Pa., assignor to Lyophile-Cryochem Corporation, Baltimore, Md., a corporation of Maryland
Application July 20, 1946, Serial No. 685,019
1 Claim. (Cl. 99—206)

The process of desiccating orange juice which comprises concentrating a proportion of the juice in the liquid state, admixing the resulting concentrated product with a proportion of fresh, unconcentrated juice equal in volume to from about 10% to about 50% of the original volume of the concentrated juice, freezing the resulting admixture and removing water from the frozen product by the use of a high vacuum.

2,471,678
PROCESS OF DESICCATING LEMON AND LIME JUICES
Earl W. Flosdorf, Forest Grove, Pa., assignor to Lyophile-Cryochem Corporation, Baltimore, Md., a corporation of Maryland
No Drawing. Application August 2, 1947, Serial No. 765,805
3 Claims. (Cl. 99—206)

1. In the desiccation of lemon and lime juices by sublimation of water therefrom from the frozen state, the step of adding to the juice before freezing at least about 10%, based on the juice, of a sugar, to prevent the desiccated juice from darkening on storage.

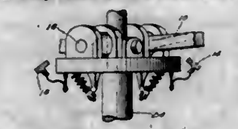
2,471,679
OIL SEAL
Allen F. Gardner, Birmingham, Mich., assignor to Chicago Rawhide Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application May 14, 1945, Serial No. 593,701
4 Claims. (Cl. 288—3)



1. A seal adapted for coaction with a pair of relatively movable parts comprising a flexible sealing member adapted to be secured to one of said parts and having an annular sealing portion radially engageable with the other, an annular thrust member disposed concentrically of said sealing member, said members having adjacent, annular, generally frusto-conical surfaces en-

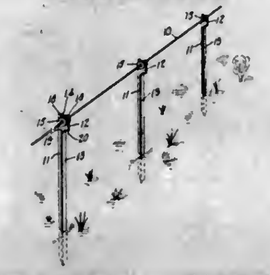
gageable in the operation of the seal and at least one thereof being fabricated of a resilient material susceptible of swelling in section when subjected to certain fluids in operation to impart radial sealing thrust through said surfaces, and means supporting said members in operative re-

lation including means rigidly confining said last named one of said members axially at a zone thereof adjacent and axially aligned with its frusto-conical surface, to thereby restrain swelling thereof in a direction laterally of the thrust direction.



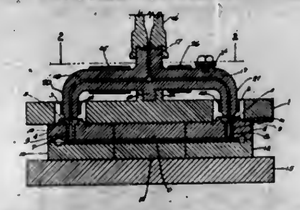
2,471,680
TOOTHBRUSH HANDLE
George A. Gibson, Jr., New York, N. Y.
Original application June 10, 1944, Serial No. 539,767. Divided and this application November 17, 1945, Serial No. 629,299
1 Claim. (Cl. 15—143)

A handle for a toothbrush which is adapted to be suspended next to another brush of the same kind from a trackway, having a longitudinally extending shaft to carry the brush at one end, said shaft at the other end having a flattened head enlarged along the greatest lateral dimension of the shaft and oppositely disposed projections on said enlarged head substantially perpendicular to the broader surfaces thereof adapted to be seated on said trackway whereby the toothbrush will be in spaced relation with respect to adjacent brushes on the trackway.



2,471,681
STOP FOR HELICOPTER BLADES
Michael E. Gluhareff, Stratford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application July 24, 1944, Serial No. 546,299
4 Claims. (Cl. 170—160.55)

1. A helicopter rotor comprising, a drive shaft, a hub mounted on said shaft having an outstanding blade support, a rotor blade pivotally mounted on said hub for flapping movement and engageable with said support for limiting the downward flapping movement of said blade, and means operative below a predetermined speed of rotation of said blade for limiting the downward flapping movement of said blade in its movement toward said support including a stop supporting member pivoted to said support, a resilient arm carried by said member having a blade stop at its free end, and spring means constantly biasing said member in a direction to swing said stop into an operative position be-



tween said support and said blade in which said stop is moved by said blade into abutting engagement with said blade support as said blade flaps downwardly towards the latter.

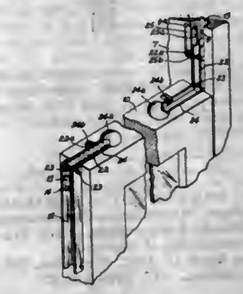
2,471,682
ELECTRIC FENCE POST
Benjamin Grob, Grafton, Wis.
Application August 31, 1946, Serial No. 694,308
1 Claim. (Cl. 256—48)

An electric fence post comprising an elongated metal strip transversely cut adjacent one end thereof to form a head portion separated from an adjacent edge portion of said strip, said edge portion being bent out of the plane of said head portion to form a longitudinally extended reinforcing flange for said strip, said head portion having an opening therein to receive and support a wire-supporting block of insulating material.

2,471,683
MULTIPLE NOZZLE MECHANISM FOR INJECTION MOLDING MACHINES
Ernest W. Halbach, Andover, Mass., assignor to The Bolta Company, Lawrence, Mass., a corporation of Massachusetts
Application September 6, 1945, Serial No. 614,677
6 Claims. (Cl. 18—30)

1. Moulding mechanism for injection moulding machines comprising a stationary die-supporting plate having symmetrically spaced nozzle-receiving apertures equally spaced from a center thereof, a plurality of mould sections secured to said

die-supporting plate having raised flat surfaces registering with said apertures and having cavities and provided with sprue holes extending centrally from said flat surfaces communicating with the respective cavities, a complementary relatively movable die-supporting member having a plurality of mould sections provided with cavities complementary to the cavities of said stationary mould sections, means for simultaneously conducting molten material to said mould cavities comprising a hub pivotally mounted on said stationary die-supporting plate at said center having an axial conduit therein and integral radial branches having conduits therein extending from said hub and provided with curved end portions forming nozzles passing through the apertures in said die-supporting plate engaging the flat surfaces of the moulds and registering with the sprue holes therein, and means for rotating said hub and the branches thereof about the pivot sufficiently to position the nozzle out of registry with the respective sprue holes thereby to cut off the supply of material to said moulds without wastage and electric heating means surrounding the respective branches for maintaining the fluidity of the material therein when the nozzles are not in registry with the sprue holes.

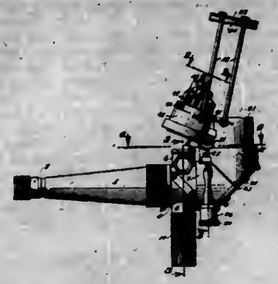


2,471,684
MACHINIST'S GAUGE
James E. Hastings, Athol, Mass., assignor to The L. S. Starrett Company, Athol, Mass., a corporation of Massachusetts
Application September 30, 1946, Serial No. 700,305
2 Claims. (Cl. 33—162)

1. A gauge, comprising a base the upper face of which is formed to present an inclined slideway having a T-slot extending substantially from end to end thereof, the side walls of the leg portion of said T-slot being inclined upwardly and outwardly with respect to the head portion of said T-slot and having convexly rounded surfaces, a superposed gauge head slidable along said slideway and having on its under face a longitudinal groove with parallel side walls registering with said T-slot, a key having side walls which at their upper ends are parallel and closely fit the parallel side walls of said groove and below said parallel sides are inclined downwardly and inwardly for line contact with the convexly rounded surfaces of the upwardly and outwardly inclined side walls of the head portion of said T-slot, and means for clamping said gauge head in adjusted positions along said slideway.

2,471,685
WINDOW FRAME AND DOUBLE SASH UNIT
Prentice M. Henderson and Louis H. Gatter, St. Louis, Mo.
Application March 12, 1945, Serial No. 582,192
1 Claim. (Cl. 20—49)

In a window frame and sash unit of the kind described and including a sill having its inner ledge raised above the outer ledge, and there being spaced side rails extended vertically at the ends of the sill in transverse, parallel alignment and formed with guide channels longitudinally extended along their inner sides, and including a window sash slidably mounted within the frame with the lateral edges of the sash aligned over the guide channels of the side rails, and including brace strips slidably mounted within the guide channels of the side rails and of the approximate length of the sash, and there being pivotal connections between the lower ends of the brace strips at each side and the side rails of the sash, whereon the sash may be tilted inwardly, latches hinged to the upper ends of the brace strips and arranged to turn down into sockets as formed in the upper horizontal faces of the upper cross rail of the sash for locking the sash to its normal, vertical and operative position in the frame, the said latches however being adapted to turn



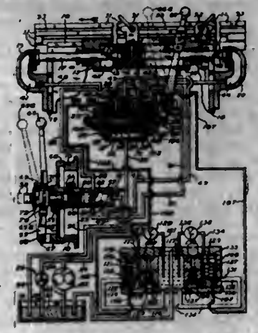
upwardly from the sash and vertically into the guide channels of the side rails of the frame, and being provided with laterally extended studs, there being recesses formed and extended laterally at one side of the guide channels of the side rails, elongated metal housings mounted within said recesses, the same being closed on all sides except the sides facing and opening into the guide channels of the side rails of the frame, and except for inwardly opening cut-outs for receiving the said laterally extended studs of the latches as mounted on the sash with the latter in lowered position in the frame, whereby the studs may enter into the housing as the latches are raised, and the sashes then be turned down horizontally inward over the raised inner ledge of the sill, the length of the housing permitting the lower end of the sash to travel upwardly relative thereto for flatly positioning the sash across the sill.

2,471,686
CELESTIAL NAVIGATION INSTRUMENT
Walter F. Hiltner, Pasadena, Calif.
Application September 24, 1945, Serial No. 618,232
4 Claims. (Cl. 88—2.7)

4. A celestial navigational instrument comprising a mount element, a group of at least three light receiving elements carried by said mount element in such a predetermined relationship to each other that upon orientation of such group and said mount into a predetermined relation to all the stars, light from every particular selected star corresponding to each of said light receiving elements is directed by its respective element in a predetermined direction relative to a single preselected axis, means supporting said mount for rotation about said axis, means supporting

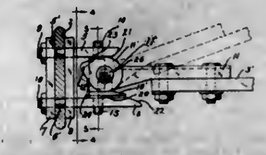
said first supporting means for rotation about a second axis perpendicular to said first axis, a zenith indicator secured to said second supporting means with its zenith axis perpendicular to said second axis, and means operable to indicate

the angular position of said mount about said first axis relative to said first supporting means and the angular position of said first supporting means about said second axis relative to said second supporting means.



2,471,687
DYNAMIC DAMPER COUNTERBALANCE
Gifford I. Holmes, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 11, 1945, Serial No. 587,720
11 Claims. (Cl. 170—160.57)

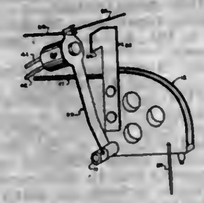
1. In a helicopter, a drive shaft, a rotor hub turned by said shaft, a blade pivotally mounted on said hub for vertical movement having a shank portion, and means for counterbalancing and damping the vibrations of said blade comprising a counterweight support pivotally mounted on said shank portion on the opposite side of said shaft from said blade, and a counterweight pivotally mounted on said support, the pivotal axes of said support and said counterweight being angularly related to each other, whereby said support and said counterweight move in angularly related planes.



2,471,688
HYDRAULIC TABLE RECIPROCATING MECHANISM
Donald H. Holmes, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application June 13, 1945, Serial No. 599,184
5 Claims. (Cl. 121—45)

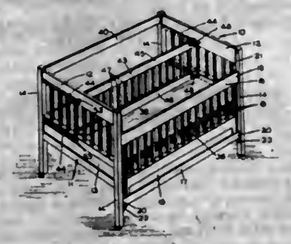
1. In a hydraulically operated table reciprocating mechanism, a longitudinally reciprocable table, a piston and cylinder therefor, a source of fluid under pressure, a piston type reversing valve comprising a slidably mounted valve member having a pair of spaced valve pistons thereon, a reversing valve slidably supported on said member having a plurality of spaced integrally formed pistons, a valve chamber formed at each end of the reversing valve between the reversing valve and said spaced pistons respectively, table actuated means to shift the valve member and the reversing valve to shift the reversing valve to a central position so as to cut off exhaust of fluid from the table cylinder, means to admit fluid under pressure to one of said valve chambers to

shift the reversing valve into a reverse position, and means to provide a predetermined back pressure in the other valve chamber to prevent the shifting of the reversing valve into a reverse position for a predetermined but adjustable period of dwell during reversal of the table.



2,471,689
TRAILER COUPLING
Thomas Hotchkiss, Sr., St. Louis, Mo.
Application September 27, 1946, Serial No. 699,836
9 Claims. (Cl. 280—33.15)

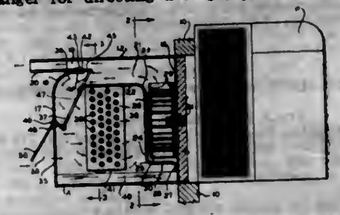
1. A trailer coupling comprising a pair of horizontally disposed and vertically spaced members securable to a towing vehicle; a member securable to a trailer; a pin supported in said members and rotatable on a vertical axis; a table formed on said pin; forked means on said member adapted to rest on said table and operatively associated with said pin; and a second pin extending through said first mentioned pin and said means, said second pin freely movable when the vehicle is at rest.



2,471,690
AUXILIARY THROTTLE VALVE CONTROL
Paul L. Howland, Wichita, Kans.
Application July 14, 1947, Serial No. 760,913
8 Claims. (Cl. 192—.058)

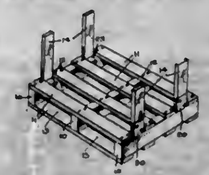
1. In an automotive vehicle provided with a carburetor throttle valve, a control shaft therefor, an accelerator, and operating linkage between the accelerator and shaft, an auxiliary control for the shaft comprising: a radially projecting arm rigidly affixed to said shaft to move in unison therewith; an electro-magnet; and means supporting said electro-magnet in the path of travel of said arm, whereby when the accelerator is depressed sufficiently the arm is moved into contact with the electro-magnet, and the arm, shaft and consequently the valve are prevented by the

electro-magnet from returning to their respective engine idling positions when foot pressure on the accelerator is released.



2,471,691
CHILD'S CRIB HAVING A MOVABLE PARTITION
Francis M. Hurst, Sumter, S. C.
Application September 16, 1947, Serial No. 774,234
5 Claims. (Cl. 5—100)

3. In a child's crib, upstanding head and foot ends, each end including a top and bottom rail, each rail having a longitudinal slot formed therein, a vertically adjustable side for the crib connected with the ends, a top rail at the opposite side of the crib connected with the ends, a bottom rail disposed beneath the second named top rail and connected to the ends, and a laterally adjustable side for the crib and including parts to slide in the slots, such side being adapted to enter between the second named top and bottom rails when in the outermost position.



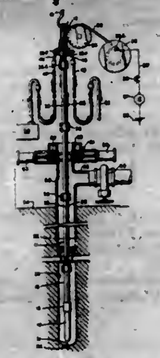
2,471,692
MEANS FOR PREVENTING FROSTING OF EVAPORATOR HEAT EXCHANGERS
Frederick M. Jones, Minneapolis, Minn., assignor, by mesne assignments, to U. S. Thermo Control Co., Minneapolis, Minn., a corporation of Minnesota
Application January 2, 1943, Serial No. 471,208
7 Claims. (Cl. 62—129)

1. In combination with a room to be air-conditioned, a casing in said room enclosing a chamber, an evaporator heat exchanger in the casing, an opening in the front of the casing for admitting air from the room into the chamber, means for varying the area of the inlet opening, an outlet passageway permitting air to be forced from the chamber into the room, means for varying the cross-sectional area of the outlet passageway, a blower for causing air to move through the evaporator heat exchanger and to and through the outlet passageway, and a second passageway connected with and of greater cross-sectional area than the outlet passageway connected with the part of the chamber in front of the heat exchanger for directing a larger part of the air

moved by the blower to cause it to pass back to the front of the evaporator heat exchanger and to be recirculated therethrough and through the blower for greatly increasing the volume of air passing through the evaporator heat exchanger relative to the volume of air delivered to the room.

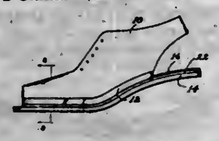
2,471,693
PALLET CONSTRUCTION
Jacob Lilienfeld, Philadelphia, Pa., assignor to Lit Brothers, Philadelphia, Pa., a corporation of Pennsylvania
Application September 10, 1947, Serial No. 773,138
2 Claims. (Cl. 248—120)

1. A pallet comprising spaced parallel cleats, spaced parallel cross boards connecting said cleats and collapsible supporting members hingedly mounted on opposite sides of the pallet upon the end cleats thereof in the space between cross boards and adapted alternatively to lie in the horizontal plane of said cross boards in the spaces therebetween or to extend upwardly therefrom.



2,471,694
ADJUSTABLE METALLIC WRIST BAND
Benjamin Maestri, Chicago, Ill.
Application February 15, 1946, Serial No. 647,760
7 Claims. (Cl. 24—206)

1. A two-part separable metallic wrist band comprising one part having the opposite margins of a portion of its length downwardly and inturned forming flanges, a cover overlying said flanges to form a hood, one end of said cover being inturned and hooked underneath said flanges at one end of said portion with the other end of said cover free, said cover being capable of slight movement about said one cover end as a hinge towards and away from said flanges, said



cover having detent means inwardly of its free end, said other part having a portion enterable in said hood and under said flanges, said other part portion having a series of recess means for selective engagement with said detent means to lock said two parts together in adjusted relation, and said parts being disconnected by lifting the free end of said cover.

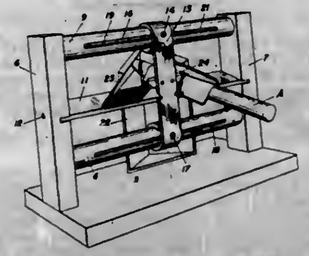
2,471,695
METHOD OF AND APPARATUS FOR FORMING WELLS
Ira J. McCullough, Pioche, Nev.
Application December 27, 1946, Serial No. 718,864
5 Claims. (Cl. 219—15)

1. In a means for forming a hole in the ground, the combination of: an electrode; conductor means connected to said electrode; a source of electric power; means for connecting said source of power to the ground and to said conductor means; means for supporting said electrode and forming a channel to receive said conductor means, said supporting means having therein a passage for a cooling medium; means for moving said supporting means; and means connected to said passage for delivering thereto a cooling medium.

2,471,696
METHOD FOR MACHINELESS MANUFACTURE OF SHOES
Leo Milchen, Los Angeles, Calif.
Application September 13, 1946, Serial No. 696,636
1 Claim. (Cl. 12—142)

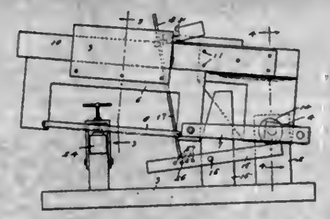
A method of manufacturing shoes comprising preliminarily fastening a mud-guard to the shoe upper with the edges of the mud-guard projecting beyond the edges of the upper, then stitching an insole to the combined mud-guard and upper with the edges of the insole and the edges of the upper in alignment, assembling a shank tuck to an out-sole and then applying the assembled shank tuck and out-sole to the mud-guard, while all the parts are positioned upon a last, the edges of the mud-guard and out-sole being in alignment.

2,471,697
PROCESS FOR REDUCING CARBONYL COMPOUNDS TO THEIR CORRESPONDING METHYLENE ANALOGUES
Huang Minlon, Cambridge, Mass., assignor to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey
No Drawing. Application November 8, 1946, Serial No. 708,815
12 Claims. (Cl. 260—397.1)



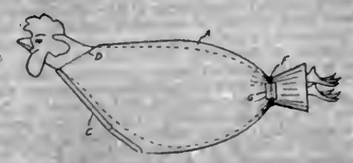
1. The process of reducing a carbonyl compound selected from the class which consists of aldehydes and ketones to the corresponding methylene analog, which comprises reacting said carbonyl compound with an aqueous solution containing hydrazine hydrate, an alkali metal hydroxide, and a high-boiling solvent, evaporating low-boiling components from the reaction solution until the boiling point of said solution reaches an elevated temperature of at least about 170° C., and heating the resulting solution at said elevated temperature.

2,471,698
BUTTON-MAKING TUBULAR-SAW HOLDER AND EXPELLER
Rufus N. Palmer, Pittsburgh, Pa., assignor to American Pearl Button Co., Washington, Iowa, a corporation of Iowa
Application August 14, 1944, Serial No. 549,387
17 Claims. (Cl. 79—16)



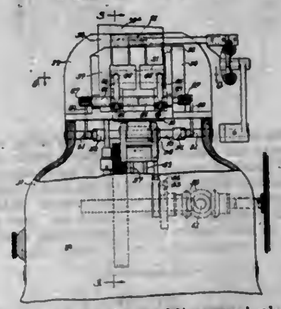
5. In a button cutting machine, a frame, a tubular spindle journaled therein, a tubular saw carried by one end of said spindle, a sleeve screw threadedly carried by said frame and having a concave seat, a thrust connection with the other end of said spindle including a thrust element having a convex surface against said seat, said sleeve being threaded relative to said frame to take up developed end play, and a blank expeller rod through said spindle and sleeve.

2,471,699
DEVICE TO FORM TEETH IN THE EDGE OF A KNIFE
Louis Pavesi and Francis F. Rodoni, San Francisco, Calif.
Application February 5, 1947, Serial No. 726,708
4 Claims. (Cl. 76—89.1)



1. In a device for cutting teeth along the edge of a knife-blade, an elongated cutter having oppositely diverging cutting ridges extending from a medial line toward the opposite ends of said cutter, knife positioning means mounted adjacent said cutter, and a gauge mounted parallel to the cutting ridges of said cutter whereby a knife in said positioner and abutting said gauge may be moved over said cutting ridges to form teeth therein.

2,471,700
BLADE LIFTING DEVICE FOR POWER HACK SAWS
Theodore A. Podhajsky, Traer, Iowa
Application June 7, 1945, Serial No. 598,076
1 Claim. (Cl. 29—73)

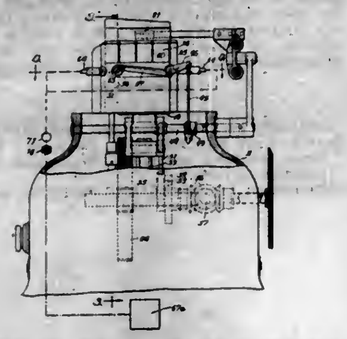


In a blade lifting device for power hack saws, a base, a horizontal drive shaft, mounted on the base, a horizontal lifting arm pivoted to the base, said arm provided in one end with a series of transverse openings, a cam carried by said drive shaft and working against the opposite end of the lifting arm, said cam adapted to depress said last mentioned end of the lifting arm once during each revolution of the drive shaft, a reciprocating saw frame, a saw mounted in said saw frame, a yoke pivotally supported on the drive shaft and carrying said saw frame, a cross head secured to the saw frame, a guide bar carried by the oscillating yoke for the cross head, a supporting arm extending from the top of the yoke, a dog pivoted intermediate its ends to said supporting arm, said dog comprising an apertured shank formed at one end with a weighted head, a vertically disposed inclined rod adjustably connected at its lower end to the apertured end of the lifting arm and arranged with its upper end working through the apertured shank of the dog, said inclined rod and dog co-acting to lift the blade off the work when the second mentioned end of the lifting arm is depressed by the cam during the return stroke of the saw.

2,471,701
POULTRY BAG
Durrel E. Post, Gates Mills, Ohio
Application April 12, 1946, Serial No. 661,642
1 Claim. (Cl. 229—53)

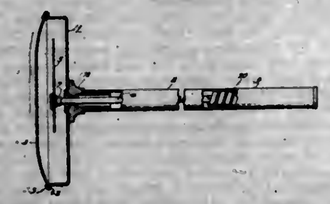
As a new article of manufacture, a poultry bag comprising a bag of generally oblong form and open at one end, the opposite end of the bag having two converging edge portions of different length, the edge portion of shorter length being open to provide a small head opening through which the head of a fowl, inserted head-first into the bag through the open end thereof, may pass, the edge portion of longer length being closed and shaped to fit the breast of a fowl whose body is received in the bag with its head extending through the head opening, and a tie member permanently attached to the bag adjacent to the open end to wrap about and clamp the open end portion of the bag about the legs of a fowl so that the latter is held with its breast against the closed edge portion and its head protruding through said head opening.

2,471,702
MOLDING AND PACKAGING MACHINERY
Earl J. Rapp and Harold R. Coon, Sr., Toledo, Ohio, assignors to Lynch Corporation, a corporation of Indiana
Application January 25, 1946, Serial No. 643,244
4 Claims. (Cl. 31—8)



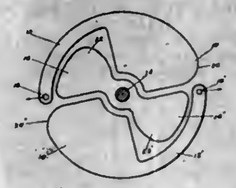
1. In a machine for molding semi-plastic materials into prints, means for advancing material under pressure, a box-like open-ended mold casing, a front plate which with the mold casing forms a mold cavity for containing a predetermined amount of said material, said mold case being movable for recurrent disposal in the path of said advancing means to receive said material, a plurality of valve ports near the sides of said mold cavity in said front plate, a plurality of valves for opening and closing said ports, valve seats on said front plate for said valves, means for moving said mold casing between said material receiving position and a second position wherein prints can be ejected from said mold casing, said advancing means being rendered ineffective during movement of the mold casing and being rendered effective when said mold casing is returned to its material receiving position, a rotatable shaft for actuating said valves, means for rotating said shaft, means for controlling said shaft rotating means to coordinate said shaft rotation with said mold movement so that said valves will be open when said mold is in a material receiving position for thereby venting said mold, and a ram for discharging a print from said mold casing when said casing is in said second position.

2,471,703
MOLDING AND PACKAGING MACHINERY
Earl J. Rapp and Harold R. Coon, Sr., Toledo, Ohio, assignors to Lynch Corporation, a corporation of Indiana
Application January 31, 1946, Serial No. 644,625
9 Claims. (Cl. 31—8)



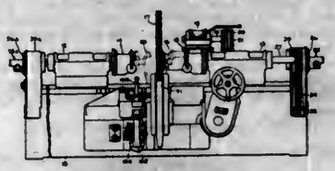
1. In a machine for molding semi-plastic materials into prints including a source of vacuum,

which machine includes an open ended mold movable to molding and ejecting positions for containing the material under pressure in the molding position, a front plate for closing said mold in the molding position, and a port in said front plate to vent air from the mold in the molding position; a rotary valve adapted to open and close



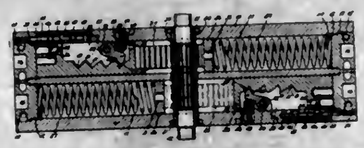
said plate port, said front plate including a valve seat, means for rotating said rotary valve on said seat, said rotary valve having a port adapted to communicate with said port in the front plate and having another port to communicate with said source of vacuum to remove said air, and a passageway in the rotary valve for placing said valve ports in communication with each other.

2,471,704
INDICATING GAUGE
Alexander D. Rose, Park Ridge, and Bernhard Willach, Chicago, Ill., assignors to Jas. P. Marsh Corporation, Chicago, Ill., a corporation of Illinois
Application October 1, 1945, Serial No. 619,474
1 Claim. (Cl. 73—367)



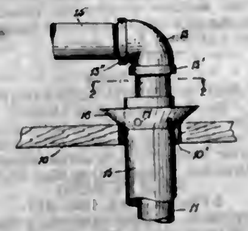
In an indicating gauge, a dial, bezel, indicator, and transparent cover construction comprising an integral cupped housing of material of uniform thickness having dial indicia on the inside of its rear wall, a pointer co-operating with said dial, said rear wall having an opening therethrough, a bushing secured to said rear wall having an opening in alignment with the opening in the wall, a shaft extending through said bushing in which said pointer is mounted, said cupped housing having an annular peripheral shoulder integral therewith, extending outwardly from the radial outermost portion of the cupped portion, and a transparent cover seated on said peripheral shoulder, said shoulder having its peripheral edge flanged over the edge of said transparent cover to hold it in place on said shoulder.

2,471,705
VARIABLE REACTOR
Otto H. Schmitt, Minoola, N. Y., assignor to the United States of America as represented by the Secretary of the Navy
Application August 13, 1946, Serial No. 690,809
6 Claims. (Cl. 250—40)



1. A variable reactor comprising a pair of first capacitor surfaces, separate inductor strips connected at one terminal to respective ones of said capacitor surfaces, the other terminal of each said strip being spaced from the capacitor surface to which the other strip is connected, and a second capacitor plate optionally positionable in face-to-face opposition to said first surfaces or in approximate edge-to-edge opposition to said strips, or in any proportions of opposition to said plates and said strips, the other terminals of said stripe constituting the terminals of said reactor.

2,471,706
CRANKPIN GRINDING MACHINE
Albin V. Spongberg and Harry G. Pasholan, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application February 7, 1946, Serial No. 645,988
5 Claims. (Cl. 51—237)



3. In a crankpin grinding machine having a transversely movable rotatable grinding wheel, a work support comprising a pair of aligned opposed work heads, a rotatable spindle in each of said heads, a pot chuck on each of said spindles including a pivotally mounted clamping jaw and a piston and cylinder to actuate said jaw, a fluid pump, means including a control valve to control the admission to and exhaust of fluid from said chuck cylinder to clamp and release said clamping jaw, a spring normally to maintain said valve in a closed position, direct connections between the fluid pump and said valve to open said valve and clamp said jaw to hold a crankshaft in said chuck, and fluid connections to close said valve after a grinding operation has been completed so as to exhaust fluid from the chuck cylinder and thereby unclamp said jaw to release the finished crankshaft.

2,471,707
DOOR CHECK
Anton Van Veen, Canton Center, and Kenneth B. Noble, Branford, Conn.
Application August 31, 1945, Serial No. 613,720
8 Claims. (Cl. 16—62)

1. In a door closing and checking device, an elongated casing having rectangular parallel top and bottom walls and rectangular side walls and provided with openings to permit attachment of either side wall to a support, said casing having a bore extending longitudinally therein and containing a fluid, a rotatable toothed spindle vertically mounted midway between the ends of said casing and midway between the side walls thereof and having its end projecting above and below the top and bottom walls of the casing, a plunger slidably mounted in said bore and having a rack meshing with said spindle, a spring in said bore urging said plunger in one direction, and means for controlling the flow of fluid to the opposite ends of the plunger.

2,471,708
FLOOR PROTECTOR
Wilson E. White, Pontiac, Mich.
Application July 10, 1947, Serial No. 760,175
6 Claims. (Cl. 285—30)

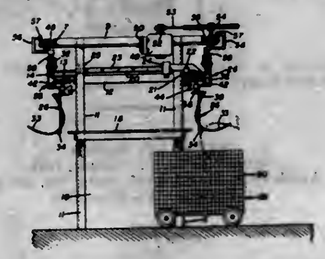
1. As a means for protecting a floor from condensation from a pipe passing through an opening therein, a tube of larger bore than the outside diameter of the pipe adapted to be placed in spaced relation around said pipe and through the floor opening, and a funnel-shaped flange on the upper end portion of and draining into said tube.

2,471,709
STEEL MEASURING RULE
Eugene J. Witchger, Saginaw, Mich., assignor to The Lufkin Rule Co., Saginaw, Mich.
Application April 28, 1947, Serial No. 744,486
3 Claims. (Cl. 242—84.8)

1. In a measuring device of the character described, the combination comprising a case formed with a flat base and vertical end walls with an entrance slot in the end wall adjacent one end of said base, a collable measuring rule in said case and projecting through said slot, a hook secured on the free end of the rule, and means in said base spaced inwardly from said entrance slot and engageable by said hook securing means for

securing it in engagement with the case when the rule is in fully coiled position.

2,471,710
VENETIAN BLIND
Charles Adler, Cincinnati, Ohio
Application May 7, 1946, Serial No. 667,870
7 Claims. (Cl. 160—178)

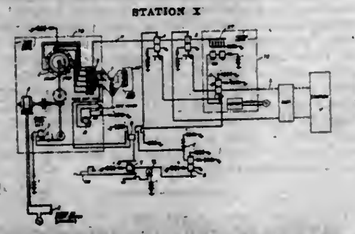


1. In a Venetian blind a ladder tape comprising a pair of flexible members each of a length of the Venetian blind when extended located one on each side of the blind and in transverse alignment, slat supports, one for each slat, joining said members, said slat supports all being located outwardly of the median line of said members, means above the uppermost slat for supporting the ladder tape and slats, and means for securing the upper ends of said flexible members to the support, comprising a separate member extending across said supporting means from one side of the blind to the other and coacting means between said flexible members and said separate member for detachably securing the said flexible members and said separate member together.

2,471,711
AUTOMATIC WEIGHING AND SORTING MACHINE
William F. Altenpohl, Philadelphia, Pa.
Application December 31, 1946, Serial No. 719,516
2 Claims. (Cl. 209—121)

1. In a machine of the class described, an endless substantially elliptical conveyor chain power-driven and disposed in a horizontal plane, a similarly shaped and disposed supporting rail for said chain, a similarly shaped track disposed in the horizontal plane below said chain and rail and centered relative thereto, an elongated supporting frame for said rail and track having transversely arranged stalls formed therein along its length below said track and open at one side of said frame, said chain, rail and track extending outwardly beyond the frame and said stalls,

load-weighing means comprising depressible track sections in said track opposite said stalls at said side of the frame, load-conveying carriages suspended from said track to travel around said stalls onto said sections for lowering thereon to depress the same under the weight of a load and thereby weigh said load at said side of the frame



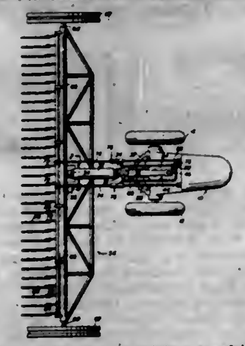
and opposite said stalls, operating connections between said chain and carriages extensible vertically to provide for lowering of said carriages while connected to said chain, self-dumping load supports on said carriages, means to cause dumping of said supports as said carriages are lowered opposite said stalls, and means in the stalls for receiving the contents of the dumped supports.

2,471,712

INTERCOMMUNICATION TELETYPEWRITER SYSTEM

Walter M. Bacon, New York, N. Y., and Charles R. Walker, Jersey City, N. J.; said Bacon assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York, and said Walker assignor to American Telephone and Telegraph Company, a corporation of New York

Application June 15, 1945, Serial No. 599,540
8 Claims. (Cl. 178—4)



1. In a telegraph system, a main loop circuit for signal transmission, a plurality of signal transmitters and receivers connected to said loop circuit, two relays operated by each transmitter, one of said relays being also a receiving line relay connected to said loop circuit, means for operating said relays substantially simultaneously in response to signals outgoing from their local transmitter, recording means controlled by said receiving line relay responsive to signals incoming over said loop circuit, means for locking said recording means during outgoing transmission, and means operative when the said relays operate to positions different from each other for furnishing an alarm at said station local to said relays.

2,471,713

TRACTOR TYPE HAYRAKE

Albert R. Baker, Gordon, Nebr.

Application October 15, 1947, Serial No. 779,885
1 Claim. (Cl. 56—27)

A farm implement comprising a vehicle, a rod pivoted at one end to said vehicle, a sleeve rotatively journaled on said rod having a frame secured thereto, a tool bar pivoted to said frame, means for adjustably positioning said frame including a gear secured to said vehicle, a pivot pin carried by said rod, a planetary gear mounted on said pin engaging said first-mentioned gear, means for rotating said tool bar including a link pivoted to said tool bar, fluid-actuated means for adjusting said link and manually operable means for operating said rod in a substantially horizontal plane including a link fixed at one end to said pivot pin, a handle pivoted to said vehicle and a lost motion connection attaching said handle to the opposite end of said last-mentioned link.

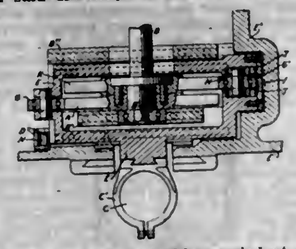
2,471,714

STABILIZED DRY ROSIN SIZE COMPOSITION

Justus C. Barthel, Stamford, Arnold R. Davis, Riverside, and Edward Nichols Foor, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application May 22, 1948, Serial No. 28,754
2 Claims. (Cl. 106—218)

1. A dry rosin size composition consisting essentially of rosin size stabilized against oxidation by a content of from 0.1% to 1% of phenothiazine based on the weight of the rosin.



2,471,715

DEVICE FOR PRODUCING RECTILINEAR MOVEMENT OF THE OPTICAL ASSEMBLY IN CINEMATOGRAPH APPARATUS

Antoine Bécote, St. Etienne, France

Application August 7, 1947, Serial No. 767,233
In France December 18, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires December 18, 1961
5 Claims. (Cl. 88—16.8)

1. In a kinematographic apparatus of the continuous film unwinding type, the provision of an optical system and means for producing a reciprocating rectilinear movement of the latter comprising a rotary shaft, two cams rigid with the shaft the shape and setting of which cams is such that the uppermost tangent to one cam and the lowermost tangent to the other cam are permanently spaced by a constant distance for all angular settings of the shaft, a stationary frame rigid with the apparatus and including vertical slideways, a movable cage slidingly carried between said slideways and carrying the optical

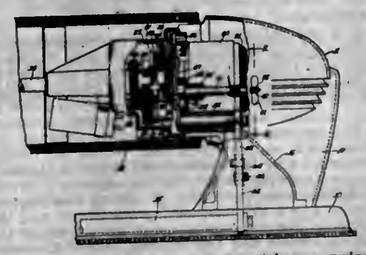
system and rollers rotatably carried at the upper end and at the lower end of the cage and operatively engaging respectively the upper portion of the first cam and the lower portion of the second cam.

2,471,716

BARREL SPUT

Leon M. Bell, Portsmouth, Ohio; Pauline Welch Bell executrix of said Leon M. Bell, deceased

Application March 12, 1945, Serial No. 582,383
2 Claims. (Cl. 285—49)



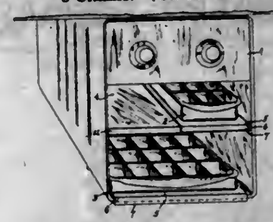
1. A metallic vessel having an opening provided with a neck; a sput in said neck and comprising a section of a metal tube of a proper diameter and having an outwardly flared end, a gasket on the outer edge of said end, said section having at least one recess in its outer wall-face, said neck being in tight contact with the surfaces of said flared end and embracing said gasket and having a portion projected into said recess for purposes described.

2,471,717

IRONING MACHINE CONTROL MECHANISM

William H. Bradley, Fort Wayne, Ind., assignor to Horton Manufacturing Company, Fort Wayne, Ind., a corporation of Indiana

Application February 21, 1946, Serial No. 649,180
2 Claims. (Cl. 38—61)



2. An ironing machine comprising a pair of relatively shiftable ironing elements, one being a roll, a base, casing means extending upwardly from the base at one end thereof and having a rounded head portion, power driven mechanism mounted in said head portion for rotating said roll and for shifting one of said elements toward and from the other including a pair of clutches for controlling such rotation and for effecting such shifting, and a pair of disengaging members for the respective clutches, a member located in said head portion and swingable in one direction to move the disengaging member for the clutch controlling the rotation of the roll and in the opposite direction to move the disengaging member for the clutch for effecting the shifting movement, said swingable member being normally positioned between said disengaging members whereby opposite movements of said swingable member are required for moving the respective disengaging members, said head portion having a slot extending circumferentially thereof, and a hand lever extending generally radially from said head portion through said slot and angularly movable to the limits of said slot to actuate said swingable member.

2,471,718

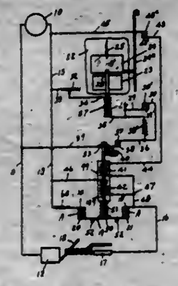
ANTIFREEZE APPLIANCE

Lawrence W. Breck, Cleveland, Ohio

Application October 11, 1948, Serial No. 53,917
5 Claims. (Cl. 62—1)

1. An appliance for preventing an ice cube tray from freezing to a refrigerated supporting surface, said appliance comprising a fibrous absorbent sheet having embedded in its interstices particles of sodium chloride and particles of a second solid having the property of controlling the resultant of the pH values of the sodium chloride and of the fibrous sheet and giving a neutral pH value to moisture condensing on the tray and support.

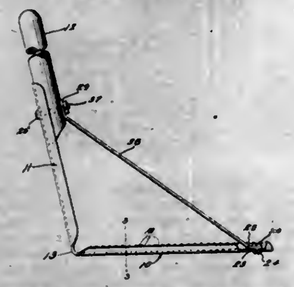
2,471,719



AUTOMATIC WELDER'S HOOD CONTROL

Wilgus S. Broffitt, Indianapolis, Ind., and Homer F. Montague, Lexington, Ky.

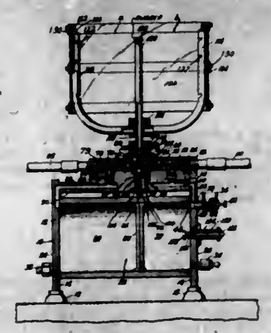
Application January 19, 1946, Serial No. 642,190
1 Claim. (Cl. 2—8)



In a welding apparatus having a welding circuit switch normally constrained to open position and a helmet having an opening protectable by a shield movable into and out of registration with the opening, movement in one direction being electrically controlled, the combination of electrically operable means for effecting such control, switch means for controlling such electrically operable means, electrically operable multiple means for closing the welding circuit switch, one of the multiple means being connected in shunt across the last mentioned switch and always energized when the work is electrode engaged, another switch means normally open and being closed only when the shield is fully registered with the opening and being in

series with another of the electrically operable multiple means for energization thereof, total multiple means energization only effecting closing of the welding circuit switch, and par-

tial energization of the electrically operable multiple means effecting the operation of the electrically operable means switch means when the work is electrode engaged.



2,471,720
WEED SLASHER
Norman E. Brooke, Washington, D. C.
Application July 13, 1945, Serial No. 604,836
2 Claims. (Cl. 30—318)

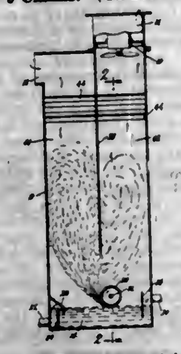
1. A weed cutter or slasher, comprising a relatively long blade body of flattened V cross section, a handle attached thereto, the top corners of the longitudinal edges of the body being cut away transversely at closely spaced positions therealong to form a series of sharpened concave cutting edges, the material of the body between said cutting edges presenting flat striking faces designed to guard the cutting portions.

2,471,721
SANITARY DRINKING GLASS CLEANER
Fred William Bunch, Green Bay, Wis.; Emily E. Bunch, administratrix of said Fred William Bunch, deceased, assignor of thirty-three and one-third per cent to Emily E. Bunch, Green Bay, Wis., thirty-three and one-third per cent to Frederick W. Bunch, Jr., and thirty-three and one-third per cent to Benjamin Bunch, both of Eau Claire, Wis.
Application February 27, 1945, Serial No. 579,910
21 Claims. (Cl. 134—50)

20. A receptacle cleaning apparatus comprising a housing, a piston operable in the housing defining a high pressure chamber and a low pressure chamber, a block mounted on said housing and formed with a chamber, a spray unit swingably supported by said block and depending into said chamber and communicating therewith, an inlet for a fluid under pressure associated with the block chamber and communicating with the high pressure chamber, control means interposed between the first inlet and the block member, conduit means between the low pressure chamber and the block chamber, means for admitting a detergent fluid into said low pressure chamber, a second fluid inlet associated with said block

chamber, said conduit means communicating with the second inlet, control means associated with said second inlet, said last control means being actuated by said spray unit for establishing a communication between the low pressure chamber and the block chamber and between the second inlet and the block chamber, said first control means being actuated by the spray unit for establishing communication between the first inlet and the block chamber, and drainage means for said block chamber, said last means being responsive to a neutral positioning of the spray unit with respect to both of the control means.

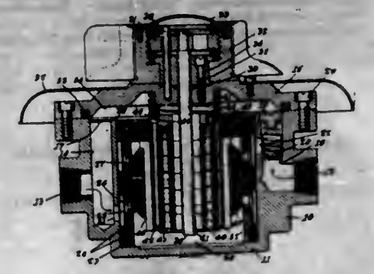
2,471,722
EXTENSIBLE FIGURE WHEELED TOY
Donald A. Campbell, Cleveland, Ohio
Application October 17, 1945, Serial No. 622,830
4 Claims. (Cl. 46—104)



3. A toy simulating a ground traveling creature comprising a horizontally extendable lazytong structure adapted to be substantially enclosed by a covering representing a creature, leading ground wheels mounted adjacent to the forward end of the lazytong structure, ground wheels mounted to the trailing end of the structure whereby the structure is supported by said wheels for rolling movement over the ground and is free to elongate and contract parallel with the ground as it moves along the latter, a crank driven by the leading wheels, and a link connecting the crank and the lazytong structure at a point intermediate the leading wheels and the trailing end of the lazytong structure whereby the latter is extended and retracted by rotation of the leading wheels.

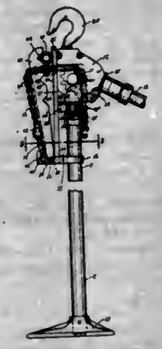
2,471,723
FISHING REEL
Richard L. Cannon, Spokane, Wash.
Application September 16, 1946, Serial No. 697,196
3 Claims. (Cl. 242—84.5)

1. A fishing reel including a spool having a central open hub, a bushing locked in the hub and formed with an upper threaded extension, a washer on the extension and having a portion of its periphery flat, a winding disk rotatable about the washer, a tensioning nut on the extension and clutch means between the winding disk and the nut whereby increased tension on the line of the spool will permit retrograde movement of the spool while the winding disk is being rotated in winding direction.



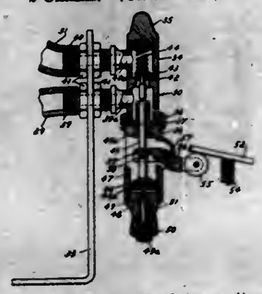
2,471,724
GAS WASHER
Niels C. Christensen, Salt Lake City, Utah
Application December 30, 1944, Serial No. 570,619
9 Claims. (Cl. 183—22)

1. In an air washer, an upright casing having a liquid containing sump in its bottom portion, a rotatably driven spray rotor horizontally supported within the casing and extending from one side of the casing to the other and disposed to dip into the liquid in the sump, an upright partition superimposing in spaced relationship the spray rotor and extending upward tangentially to the rising side of the rotor and extending from one side of the casing to the other dividing the space within the casing above the rotor into an upright downdraft portion and an upright updraft portion communicating below said partition.



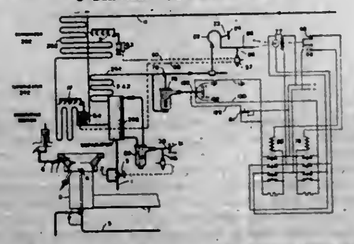
2,471,725
MIXING VALVE
Walter B. Clifford, Boston, Mass.
Application August 7, 1946, Serial No. 689,038
5 Claims. (Cl. 251—75)

1. A mixing valve comprising a hollow valve body, a resinous lining sleeve sealed to the interior of the valve body and having ports therein, a valve sleeve carrying O-rings which make running seals between the lining sleeve and the valve sleeve adjacent to the said ports, and a longitudinally fluted sleeve carrying said valve sleeve,



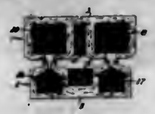
being movable therewith and providing a longitudinal fluid passage from one end of the valve body to the other.

2,471,726
JACK OPERABLE AND SUPPORTED VISE
Fredrick W. Coffing, Danville, Ill., assignor to Coffing Hoist Company, Danville, Ill., a corporation
Application April 12, 1946, Serial No. 661,734
15 Claims. (Cl. 81—21)



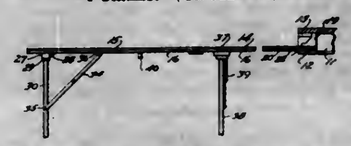
1. In combination with a hoist structure including a body portion, an inextensible flexible means such as a cable, chain and the like, power transmitting mechanism incorporated in the body portion for moving the flexible means therethrough, and a tubular standard detachably supporting the body portion; a detachable vise structure comprising a stationary supporting member for a vise jaw, a movable supporting member for a vise jaw, means mounting said movable member on said stationary member, means for connecting the flexible means to the movable member, the flexible means extending from said connecting means and passing through both members and into the body portion, and vertically spaced means rigidly and detachably connecting the stationary member to the body portion and standard.

2,471,727
APPARATUS FOR SUPPLYING ABRASIVE TO BUFFING WHEELS
James P. Creamer, Hamden, Conn., assignor to Lea Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application June 19, 1947, Serial No. 755,548
2 Claims. (Cl. 51—263)



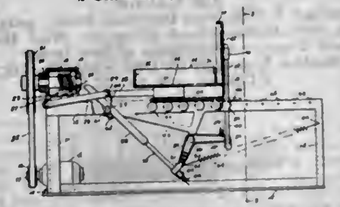
1. In an apparatus for applying a liquid buffing compound to a buffing wheel, a spray gun, means for supplying buffing liquid and compressed air to said gun, and a timer mechanism for automatically cutting off the supply of air at the end of a predetermined time interval, said timer mechanism including a normally closed valve for controlling the flow of said liquid and air, a longitudinally movable valve rod connected at one end to said valve, a lever connected to an intermediate portion of said rod and adapted to move the rod to open the valve, a spring urging said valve to closed position, and a dash pot at the other end of said rod to hold the valve open against the force of said spring for a predetermined time period.

2,471,728
CONTROL SYSTEM
Paul S. Dickey, East Cleveland, Ohio, assignor to Bailey Meter Company, a corporation of Delaware
Original application July 24, 1940, Serial No. 347,191. Divided and this application June 27, 1942, Serial No. 448,829
3 Claims. (Cl. 122—480)



1. In a vapor generator having generating and superheating portions lying in parallel paths conducting heated gases, in combination, dampers arranged in said paths so as to proportion the flow of heated gases therethrough, fluid actuated means for positioning said dampers, valve means for controlling the supply of pressure fluid to said fluid actuated means, means including an elongated member connected between its ends to said valve means for controlling the latter, means sensitive to the temperature of the vapor leaving the superheater and operatively connected to one end of said elongated member, a reversible motor connected to the other end of said elongated member for moving the latter to different positions, and means for energizing said motor to run for a predetermined period of time in one direction or the other on a predetermined change in the load conditions on the generator.

2,471,729
ELECTROMAGNETIC RECIPROCATING MOTOR
Eduard Diebold, Zurich, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland, a joint-stock company
Application January 2, 1946, Serial No. 638,668
In Switzerland January 13, 1945
8 Claims. (Cl. 172—126)

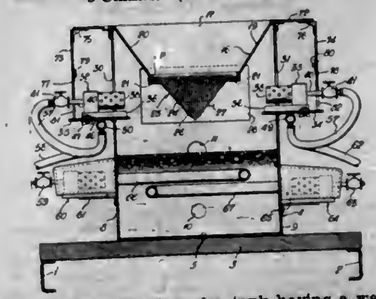


1. An electromagnetic motor for producing linear reciprocating motion comprising a stator element, an armature element, said stator and armature elements being magnetizable bodies spaced slightly from each other to provide an air gap therebetween, one of said elements including a pair of C-shaped cores bridged by a yoke, the two ends of each said core constituting a set of double pole pieces facing said air gap and the other element including at least one pole piece disposed opposite each said set of double pole pieces, winding means surrounding said yoke and adapted when energized with direct current to establish a single magnetic flux circuit through said elements and across said air gap, and a second winding means comprising at least one winding surrounding a leg of each said core and adapted when energized with alternating current to establish two magnetic flux circuits in opposite directions which each include a part of the armature element and one of said sets of double pole pieces, whereby the simultaneous energization of both said winding means results in a non-uniform flux distribution in the pole pieces of the respective sets of double pole pieces.

2,471,730
TABLE ATTACHMENT FOR AUTOMOBILE LUGGAGE COMPARTMENTS
Elisabeth C. Doerr, Newburgh, N. Y.
Application December 5, 1944, Serial No. 566,676
4 Claims. (Cl. 311—21)

1. In table attachment assemblages for automobiles, wherein the luggage compartment of the auto receives the table portion of the assemblage for transportation and housing purposes, and wherein the table portion is sectional and positionable for service rearward of the compartment with the sections presenting a substantially planar top having one end supported by the auto and with the planar top additionally supported by leg formations, an assemblage of such type including front and rear sections hingedly connected to permit folding into superposed positions with the rear section overlying the front section, said sections being supported in such superposed relation within the compartment with the front section carried by and movable on ways positioned within the compartment, said ways and front section having cooperating means for preventing complete withdrawal of the front section from the ways to thereby place the ways as a support for the front end of the table in service, the fore and aft length of the rear section being less than that of the front section to permit free swinging of the rear section about the hinging axis to form the planar top formation for service, said rear section having its free end zone equipped with a pair of pivoted leg formations each movable pivotally in fore and aft direction between a position to support such table and a position to overlie the rear section when the sections are housed, one of said sections carrying a single pivoted leg formation with the formation located in the vicinity of the hinging line and positioned in an intermediate zone in the width of the section, with the single leg formation movable for housing purposes into a position of substantial parallelism with the section which carries it.

2,471,731
CONCRETE BRICK PRESS
Hermen Kenneth Farris and Ward Renshaw, Eldorado, Ill.
Application November 8, 1946, Serial No. 708,490
2 Claims. (Cl. 25—88)



1. In a brick press having motor-driven means, a reciprocable plunger of substantially rectangular cross-section driven thereby, a horizontally-disposed and substantially rectangular tunnel member in which the plunger is adapted to reciprocate, and a supporting frame for the tunnel member and the motor-driven means, the features including a substantially flat table forming the top of the tunnel member having an aperture for dropping material into said tunnel member in advance of said plunger, an upwardly-extending bounding wall upon the table forming a substantially rectangular open box therewith, a horizontally-disposed movable receiving plate located beneath the bottom portion of the tunnel member and having a group of supporting rollers arranged in a horizontal series upon said frame beneath said receiving plate and in the path of movement thereof, an upwardly-projecting frame rigidly disposed upon the end of the box remote from the motor-driven means, a pair of vertically-disposed rods guided upon the upwardly-projecting frame and the supporting frame for vertical movement, a downwardly-directed knife fixed at the ends thereof upon intermediate portions of the vertically-disposed rods, means normally suspending said rods and said knife in position to dispose the knife at the delivery end of the tunnel member to form a stop for a brick being formed by the plunger in said tunnel member against said knife, and lever means connected to said rods beneath said knife and operated by the motor-driven means for moving the knife in said upwardly-extending frame to cut off the formed brick extruded from said tunnel member upon said receiving plate by said plunger.

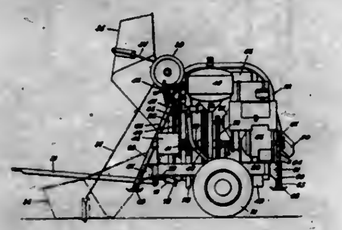
2,471,732
RESISTANCE ELEMENT FOR COAXIAL TRANSMISSION LINES
Eugene Feenberg, St. Louis, Mo.
Application March 13, 1947, Serial No. 734,327
5 Claims. (Cl. 201—63)

1. A resistance element for insertion between the inner and outer conductors of a coaxial transmission line, comprising an electrical energy dissipating element having at least one tapered edge to provide one part more narrow than another part and composed of sheet-like resistive material spirally wound to provide a mass of uniform composition mountable between said conductors.

2,471,733
SNOW AND ICE MELTING MACHINE
Anthony Fiducela, Cedar Grove, N. J.
Application January 7, 1948, Serial No. 884
3 Claims. (Cl. 126—343.5)

3. The combination of a tank having a water receiving lower section, a hopper secured to the upper end of said tank to receive snow and/or ice, a wire mesh trough at the lower end of said hopper, and a plurality of horizontally arranged burners for directing flames at said trough, the trough being triangular in cross section with the apex at the bottom and disposed below the level of the flames of said horizontally arranged burners but above the level of the water in said water receiving lower section.

2,471,734
TOGGLE OPERATED SLIDABLE JAW WRENCH
Friedriech C. Fischer, De Witt, Nebr.
Application April 17, 1947, Serial No. 742,098
2 Claims. (Cl. 81—88)

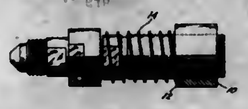


1. In a wrench, a hollow handle, a fixed jaw extending laterally from one end of the handle,

a movable jaw opposed to the fixed jaw and having a shank slidably fitted in said handle to be advanced out of the same and retracted therein and correspondingly move the movable jaw relative to the first jaw, a shaft slidably extended through said handle for advance and retraction and threadedly connected to said shank in laterally offset relation thereto to advance and retract the same upon rotation of said shaft, a hand lever pivoted on said fixed jaw for swinging

toward and away from said handle, a link pivoted at one end to said hand lever with its other end connected to said shaft and forming with a part of said hand lever a toggle between said fixed jaw and one end of said shaft movable into straightened out position into alignment with said shaft to exert a push against said shaft for retracting the same when said hand lever is swung toward said handle, and spring means in said handle for advancing said shaft.

2,471,735
SEMITRAILER VEHICLE WITH ELEVATING MEANS
George A. Fleischmann, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application March 1, 1944, Serial No. 524,595
2 Claims. (Cl. 254—86)

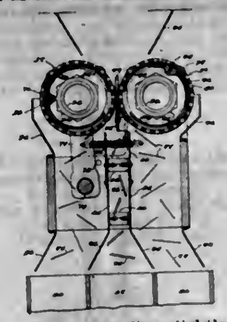


1. In a vehicle of the semi-trailer type, the combination of a frame; a load carrying receptacle mounted thereby and having a discharge opening; a pair of wheels having axle means supporting said frame intermediate its ends for longitudinal tilting movements in each direction; extensible legs carried by one end of the frame for adjustment to and from ground engaging position; a ground engaging frame raising and lowering device adjacent the other end of the frame, whereby the latter may be tilted about said axle means, said legs then extended to and secured in ground engaging position, and the frame then tilted in the opposite direction by said device on said legs as fulcrums to level the frame with the discharge opening of said load carrying receptacle in an elevated position; and extensible legs at the other end of the frame, adjustable to engage the ground and support such end of the vehicle in said elevated position with its wheels clear of the ground.

2,471,736
BASEBALL BASE
John G. Fleming, Pawtucket, R. I., and William J. Klem, Miami Beach, Fla., assignors, by mesne assignments, to said Fleming
Application May 20, 1947, Serial No. 749,216
1 Claim. (Cl. 150—52)

A cover for a baseball base comprising a single piece of rubber-like material having a rectangular bottom wall with an open center of a diameter considerably smaller than the diameter of the base, said cover being sufficiently elastic to permit the opening to stretch and admit said baseball base, an upper wall of generally rectangular shape having a lower peripheral edge merging with the bottom wall, the depth of said cover being greater than the thickness of the base to be held therein, said cover having slots at the juncture of said bottom wall and upper wall, straps extending through said slots and extending across the lower side of the bottom wall to partially cover said opening, said straps crossing each other at the location of said opening and said straps being of a thickness to space the bottom wall with an opening therein above a supporting surface.

2,471,737
AIR GAUGE
Raymond S. Fox, West Hartford, Conn., assignor to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application November 30, 1946, Serial No. 713,201
4 Claims. (Cl. 73—37.5)



1. A gaging head for air gages comprising a cylindrical head having opposed air delivery nozzles therein, a collar mounted on and slidable over said cylindrical head to nozzle covering position, and resilient means normally positioning said collar over said nozzles and permitting retraction of said collar to an inoperative position when a work piece is mounted on said head in gaging position.

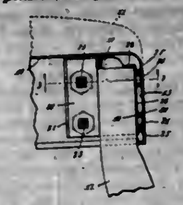
2,471,738
MICA SPLITTING MACHINE
Clark Goodman, Cambridge, Mass., assignor to New England Mica Company, Waltham, Mass., a corporation of Massachusetts
Application March 16, 1946, Serial No. 654,962
10 Claims. (Cl. 125—24)

1. Mica splitting apparatus having, in combination, a pair of cooperating rotatable cylinders having a relatively large number of suction openings distributed substantially uniformly around the surface thereof, said cylinders having provision for connection with a source of suction, and being disposed horizontally and with their lateral surfaces in closely disposed relation, each

cylinder having therein stationary valve means so disposed as to confine the suction action to a

relatively small arc extending slightly above and below a plane through the axes of the cylinders.

2,471,739
METHOD OF AND APPARATUS FOR MAKING MOLDED ARTICLES
Jon Gregg, New Hope, Pa.
Application August 11, 1945, Serial No. 610,261
20 Claims. (Cl. 18—4)



3. Apparatus of the character described, comprising a preheater, high frequency current apparatus adjacent the preheater, and a post-heater adjacent the high frequency current apparatus, means for moving a mold successively through said preheater, high frequency current apparatus, and post-heater, means for heating the mold in the preheater, means for subjecting the mold cavity in said mold to high frequency current in the high frequency current apparatus, and means for heating the mold in the post-heater.

15. In apparatus of the character described, a preheater, high frequency current apparatus and a post-heater, all arranged in tandem, a mold having a mold cavity, means to convey said mold successively through said preheater, apparatus and postheater, means to subject material within said cavity to high frequency current as said mold is conveyed through said apparatus, said last means including bus bars in said apparatus connected to the terminals of a high frequency current generator, and conductors on said mold, above and below said cavity, in contact with said bus bars.

2,471,740
METAL FURNITURE
Bertis F. Hamilton, Columbus, Ind., assignor to Hamilton Manufacturing Corporation, Columbus, Ind., a corporation of Indiana
Application December 1, 1944, Serial No. 566,643
4 Claims. (Cl. 155—194)

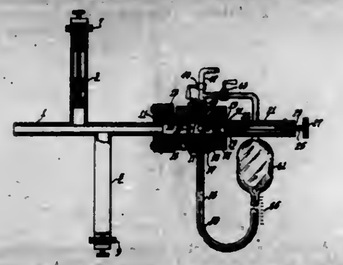
1. In an article of furniture having a seat and supporting legs therefor, said seat including a downwardly extending flange of sheet metal, clamps secured at intervals against the inner face of said flange, each of said clamps having a leg associated with it, each of said legs being formed of metal tubing flattened on one side for a distance from its upper end, each of said clamps being formed of a piece of sheet metal bent to surround the upper end of the associated leg and having a plane wall-portion in juxtaposition

to the flattened side of said leg, the plane wall-portion of each clamp lying against the inner face of said flange and having its upper edge bent inwardly to overlie the upper end of the associated leg, the ends of said piece of sheet metal opposite said plane wall portion being bent to form ears extending in parallel relation and inwardly of the seat, and one or more clamp-bolts passing through said ears.

2,471,741
ELECTRIC GENERATOR
Robert C. Harris, Fort Wayne, Ind.
Application May 10, 1946, Serial No. 668,833
7 Claims. (Cl. 171—209)

1. An electric impulse generator comprising a member for providing a magnetic field, a second member supported in said field and through which the flux of the field passes in one direction or in the opposite direction dependent upon the position occupied by one member relatively to the other member, a coil inductively coupled to said second member, means for moving one of said members relatively to the other member for changing the direction of flux passing through said second member, and means on one of said members bearing against the other member and constantly tending to move one member relatively to the other member.

2,471,742
POLYMERIZATION OF ACRYLONITRILE
Stuart A. Harrison, Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application July 12, 1946, Serial No. 683,423
2 Claims. (Cl. 260—88.7)



1. The method of preparing a latex containing dispersed, finely-divided particles of polyacrylonitrile which comprises polymerizing acrylonitrile

in an aqueous emulsion containing from 10 to 100% by weight based on the acrylonitrile, of ethylene dichloride.

2,471,743
AQUEOUS EMULSION POLYMERIZATION OF ACRYLONITRILE IN THE PRESENCE OF AN AROMATIC HYDROCARBON
Stuart A. Harrison, Stow, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
No Drawing. Application July 13, 1946, Serial No. 683,424
4 Claims. (Cl. 260—29.6)

1. The method of preparing a latex containing dispersed, finely-divided particles of a resinous polymer of a nitrile of an alpha-methylene aliphatic monocarboxylic acid, which comprises polymerizing a monomeric material predominantly comprising a nitrile of an alpha-methylene aliphatic monocarboxylic acid, in an aqueous emulsion comprising, in addition to the emulsified monomeric material, an emulsified liquid non-polymerizable aromatic hydrocarbon in a concentration of 10 to 100% based on the monomeric material.

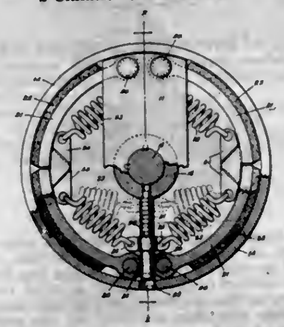
2,471,744
METHOD OF AND MEANS FOR MEASURING MICROWAVE POWER
William D. Hershberger, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 29, 1944, Serial No. 537,960
9 Claims. (Cl. 171—95)

7. A wattmeter for microwave energy including means defining a closed conductive chamber, ammonia gas disposed in said chamber under normally fixed pressure and temperature conditions, means for dissipating substantially all of said energy in said gas to vary the pressure thereof due to changes in the molecular energy levels established in said gas in response to said dissipated energy, means for indicating said pressure variations in terms of said dissipated energy, and means external of said chamber for tuning said chamber to resonate to said microwave energy.

2,471,745
SPACER TRAP FOR ROCKETS
Clarence N. Hickman, Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War
Application March 21, 1946, Serial No. 656,118
6 Claims. (Cl. 60—35.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

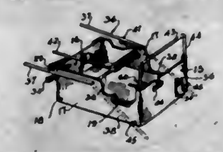
1. In a rocket motor assembly having powder grains strung on a trap wire, the said trap wire being provided with a plurality of spaced nubs intermediate its ends, a spacer member for positioning on said wire between the ends of said

grains, said spacer member having a slot therein to receive said trap wire and having retaining means adjacent said slot to engage with a nub on the said trap wire.



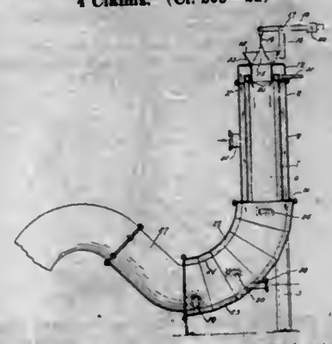
2,471,746
GAUGE TOOL FOR TIMING DIESEL ENGINES
Rudolph Hilbert, Salt Lake City, Utah
Application December 23, 1948, Serial No. 67,056
4 Claims. (Cl. 33—181)

4. An engine timing tool, comprising a rigidly formed, elongate base member adapted to rest substantially horizontally upon the cylinder head of the engine, comprehending a recess therein normally occupied by a fuel injector; a rigidly formed, elongate bracket arm rigidly joined to said base member so as to extend upwardly above the corresponding injection push rod of the engine when the tool is in operative position; rigid gauge-mounting means formed at the upper part of said bracket arm; a movable gauge member slidably mounted in said gauge-mounting means, and extending downwardly in the operative position of the tool for engagement by the said injection push rod of the engine; a pair of stud-receiving passages formed through said base member, said passages being mutually spaced along the length of said base member for receiving a pair of cylinder head studs which flank the said fuel injector means at opposite sides thereof; an elongate gauge slideway member extending transversely through said base member between said stud-receiving passages and in fixed



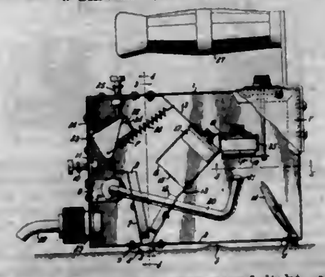
relationship with said base member, so as to be substantially vertically disposed in the operative position of said tool and depend into the said fuel injector recess; and gauge slide means movably mounted in said slideway, said slide means including a push rod member which projects from the lower rod of said slideway member for engagement by the corresponding piston of said engine.

2,471,747
CENTRIFUGALLY OPERABLE CLUTCH
Werner Hinden and Hellmut Hinden, Rio de Janeiro, Brazil
Application August 1, 1947, Serial No. 765,562
In Brazil August 6, 1946
2 Claims. (Cl. 192—105)



1. In a centrifugal clutch, the combination of a rotatable driving member; a driven member disposed in co-operative relation thereto; a plurality of centrifugally operable clutch elements pivotally mounted on the driving member for torque transmitting engagement with the driven member, each pair of said elements having their pivoted portions disposed adjacent one another and provided with complemental recesses; a threaded rod for each such pair of clutch elements, disposed radially of the clutch and having one end journalled by the driving member and its other end journalled by said complemental recesses in the adjacent pivoted portions of its pair of clutch elements; a nut threaded upon each of said rods; and a retracting spring for each of said clutch elements, having one end attached to such element, the other ends of the springs of each said pair of clutch elements being attached to the nut on the rod associated with that pair.

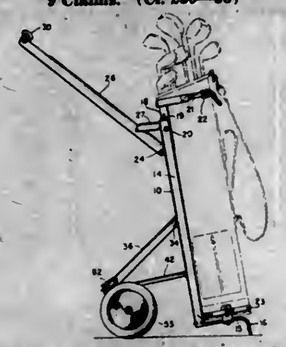
2,471,748
ANIMAL TRAP
William R. Horne, Los Angeles, Calif.
Application November 26, 1946, Serial No. 712,439
19 Claims. (Cl. 43—81.5)



1. A trap comprising a frame, a trigger mounted on said frame and releasable by an animal to be trapped, a spring-actuated striker consisting of a U-shaped rod having its basal portion pivoted to said frame, and latching means positioned releasably to hold said striker in its set position, said latching means being operatively connected to said trigger.

2,471,749
FURNACE
Ernest O. Howle, Chicago, Ill.
Application August 11, 1945, Serial No. 610,222
4 Claims. (Cl. 263—21)

2. In a furnace of the class described, a tubular upright combustion chamber having a hopper at its upper end to receive a measured quantity of material, a gas ring about the upper end of the chamber having discharge ports inclined to discharge downwardly in said chamber and toward its axis, an elbow duct communicating with the lower end of the chamber, an air jacket about said chamber, a means establishing communication between the jacket and the interior of the chamber outside of said gas ring to direct the flow of entering air into the vortex created by the gas discharge.

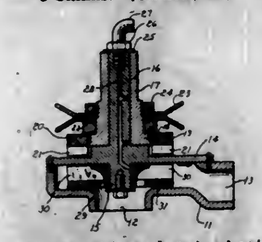


2,471,750
PHOTOELECTRIC GLOSSMETER
Richard S. Hunter, Franklin Park, Va., assignor to Henry A. Gardner Laboratory, Inc., Bethesda, Md., a corporation of the District of Columbia
Application February 20, 1948, Serial No. 9,810
6 Claims. (Cl. 250—41.5)

1. In a glossmeter, a source of light, optical means for twice reflecting light rays from said light source from the surface of a test object, and a measuring system including a photoelectric device positioned in the path of the light rays twice reflected from the test object, and a second pho-

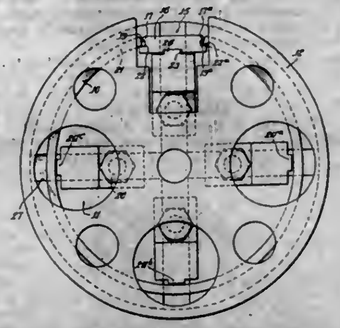
toelectric device to compensate for light rays reaching said first photoelectric device along paths other than those of the twice reflected light rays.

2,471,751
COLLAPSIBLE GOLF BAG CART
Thomas A. Hutsell, Renton, Wash.
Application April 15, 1947, Serial No. 741,475
9 Claims. (Cl. 280—38)



1. A golf-bag cart, comprising: a main frame adapted to support a golf bag; a bracket bar pivotably secured to said main frame; a bracket strut pivotably secured to said bracket bar; said bracket bar and said bracket strut being adapted to form a rigid triangular bracket when the cart is in use; wheel outriggers, having down-turned ends, supported by said bracket in either an extended position of use or in a folded position; wheels mounted for rotation on the down-turned ends of said wheel outriggers; said bracket bar forming housing means for said outriggers when in the folded position adapted to position said wheels with their axis of rotation substantially aligned with the longitudinal axis of said main frame.

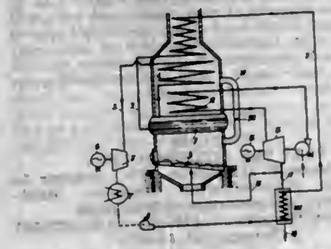
2,471,752
PROCESS OF COVERING WIRE CONDUCTORS
John H. Ingmanson, New Haven, Conn., assignor to The Whitney Blake Company, Hamden, Conn., a corporation of Connecticut
Application December 22, 1945, Serial No. 636,789
8 Claims. (Cl. 18—59)



1. The process of covering a wire conductor with inner and outer coverings of plastic material, including: causing a wire conductor to travel longitudinally; extruding substantially uniformly over said traveling conductor, an inner deformable covering of vulcanizable plastic material; extruding through a die over said traveling inner covering while it is in unvulcanized deformable condition, an outer covering of different plastic material, said outer covering being extruded from said die in the form of a tubular sheath around said inner deformable covering with a space annular in cross section therebetween so as to exert no pressure on said traveling inner deformable covering while the latter is within the die; contracting said tubular sheath after it has passed out of said die substantially uniformly to smaller size into contact with said traveling inner deformable covering thereby to maintain the uniformity of said inner deformable covering over said wire conductor; and heating said inner covering of vulcanizable material to temperature to vulcanize it while it is covered by and traveling with said outer covering.

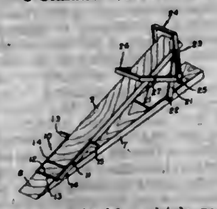
2,471,753
PUMP DEVICE
George Johnston, St. Clair, Mich.
Application July 12, 1946, Serial No. 683,033
3 Claims. (Cl. 103—87)

1. A pump comprising a housing having an inlet and an outlet passageway therein, a stud carried by said housing and having one end projecting exteriorly of the latter, a pulley rotatably mounted on the projecting end of said stud, magnet means rotatably mounted on the projecting end of said stud and operatively connected to said pulley, a fluid impeller rotatably mounted on a portion of the stud within said housing, and a second magnet means within said housing operatively connected to said impeller and coupled magnetically to said first magnet means for rotating said impeller as the pulley is rotated.



2,471,754
WORKHOLDER FOR PISTON RING HEAT-TREATMENT
Cernyw F. Jones, Maywood, Ill., assignor, by mesne assignments, to Harry M. Bramberry, Sr., New Castle, Ind.
Application August 3, 1944, Serial No. 547,958
5 Claims. (Cl. 266—2)

1. A fixture for supporting and tensioning a split piston ring formed of an alloy having the

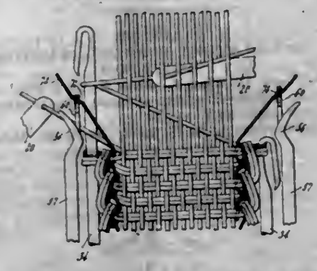


composition .20–.27% C, .40–.70% Mn, .30 max Si, 1.10–1.40% Al, 1.00–1.30% Cr, .20–.30% Mo, 3.25–3.75% Ni and the balance Fe, during heat treatment thereof in a nitriding atmosphere, comprising means for engaging the opposite side faces of the ring to support it, means adapted to be disposed between the ends of the ring to hold them apart and tension the ring and having edges respectively adapted to engage the end faces of the ring approximately perpendicularly to the opposite side faces thereof and other parts respectively adapted to engage the inner wall of the ring adjacent the end faces thereof, and means for preventing radial inward movement of said ring-tensioning means beyond its position in the un-heated condition of the ring while otherwise permitting free movement thereof.

2,471,755
STEAM-AIR-THERMAL POWER PLANT
Werner Karrer, Zurich, Switzerland, assignor to Maschinenfabrik Oerlikon, Zurich-Oerlikon, Switzerland
Application March 1, 1945, Serial No. 580,438
In Switzerland January 5, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires January 5, 1964
5 Claims. (Cl. 60—49)

1. In a steam-air power plant, the combination with a steam generator comprising a steam boiler, a combustion chamber and steam superheater, of an air heater arranged between said steam boiler and said steam super-heater, and means for conducting a portion of the hot gases from said combustion chamber into the combustion gases where the latter enter the zone in which said steam super-heater is arranged while the remaining hot gases heat the boiler and the air heater.

2,471,756
PORTABLE AND FOLDABLE VEHICLE LIFTING RAMP
Lloyd A. Larson, Oakland, Calif.
Application January 27, 1947, Serial No. 724,600
5 Claims. (Cl. 254—88)



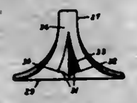
1. A portable, foldable vehicle ramp structure comprising a base-board, a plank forming a ramp, said plank being disposed in superposed position above the base-board, prop means foldably connecting one end portion of said plank to a corresponding end portion of said baseboard a ball-like member pivotally mounted on the opposite end portion of said plank, said baseboard being provided with a tranverse kerf forming a keeper, the bight portion of said ball-like member constituting a detent and being releasably seatable in said keeper.

2,471,757
LINE PRODUCING DEVICE FOR TYPEWRITERS
Manuel G. Lemos, New York, N. Y.
Application March 13, 1948, Serial No. 14,717
2 Claims. (Cl. 197—113)

2. A typewriter having a sliding carriage and a rotary platen thereon, means for controlling the position of the carriage, a scale bar located on the carriage below the platen and provided with a rack bar having inclined ratchet teeth, and printing means carried by the typewriter to engage the platen and the teeth of the rack bar and adapted to be vibrated by said teeth when the carriage is shifted and the printing means is held in printing position against the platen.

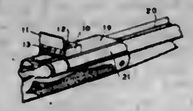
2,471,758
SELVAGE FORMING MECHANISM
Carl F. Libby, Stoughton, Mass.
Application March 31, 1947, Serial No. 738,447
6 Claims. (Cl. 139—124)

1. In a loom having shed-forming means and means for projecting loops of weft yarn through said shed from opposite sides thereof in alternation, a knitting mechanism on each side of the shed for knitting the successive loops from the far side of the shed together with the weft yarn on the near side, each said mechanism comprising a vertical guide plate having a lateral



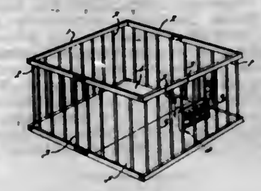
groove therein, a knitting needle having its shank slidably fitted in said groove, a vertical cover plate covering a portion of said groove to maintain the needle therein, spring means pressing said cover plate against said guide plate, and means for reciprocating said needle at predetermined intervals.

2,471,759
PIPE COUPLING
George A. Lowrey, Houston, Tex.
Application December 11, 1945, Serial No. 634,239
6 Claims. (Cl. 285—146)



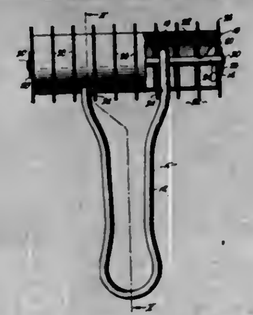
1. A coupling for an operating string of pipe comprising, a tubular housing, a tubular nipple extended into each end of the housing the ends of the nipples being spaced radially inwardly from the housing to allow universal movement of the nipples relative to the housing, each nipple and the corresponding end of the housing having means which interengage to prevent detachment of the nipples from the housing, a seal ring in the housing between the inner ends of the nipples, tubular string sections connected to the respective nipples and clutch means between said string sections and the corresponding nipples.

2,471,760
OSCILLATORY WASHING MACHINE AGITATOR
Rutherford H. Marsh, Girard, Pa.; Mildred L. Irons administratrix of said Rutherford H. Marsh, deceased
Application April 18, 1945, Serial No. 588,975
4 Claims. (Cl. 68—134)



1. In a washing machine, an oscillatory agitator having a vane with an upper face between liquid impelling side faces, the upper face being free to liquid flow from one side face to the other over the upper face, a trough in the upper face, and the liquid impelling side faces converging toward the base of the trough.

2,471,761
GUN SIGHT
Daniel S. McMillan, Raleigh, N. C.
Application August 12, 1947, Serial No. 768,117
6 Claims. (Cl. 33—51)



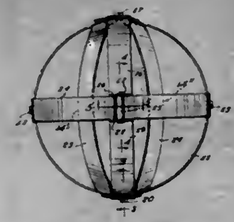
1. A sight for a gun comprising a slotted, hollow, substantially rectangular, open-ended casing having a flange extending upwardly from one of its open ends for encouraging sighting through said casing instead of thereover when aiming the gun on which the device is applied, a slotted mounting member for said casing constructed to clampingly engage a gun to which the device is applied, a resilient shock-absorbing and protective member for said mounting member, fastening elements for securing said casing and said mounting member in assembled relation, slotted washer plates for location one in each of said casing and said mounting members, said fastening elements comprising bolts and nuts adapted to be spaced transversely of said casing and with said nuts located within said casing to provide spaced sighting leads, the slotted portion of the open-ended casing providing for the admission of light upon said lead-forming nuts and facilitating application and removal thereof.

2,471,762
PLAY PEN CONSTRUCTION
Earle E. Merrett, Manitowoc, Wis., assignor to Hamilton Manufacturing Company, Manitowoc, Wis., a corporation of Wisconsin
Application December 7, 1945, Serial No. 633,561
3 Claims. (Cl. 46—32)

1. In a child's play pen, in combination, a side member including upper and lower rails and a plurality of spaced vertical bars, a play device slidably mounted on a pair of said bars, said play device comprising a rectangular frame having a first pair of spaced vertical side frame members interconnecting a second pair of spaced horizontal side frame members, a portion of each of said first side members projecting at an angle to and beyond one of the faces of each of said second side members, inwardly opening longitudinally extending grooves formed in the projecting portions of said first pair of side members and slidably receiving said pair of bars to permit said play device to move vertically with respect thereto, and flat springs extending transversely through said grooves with their opposite ends fixed in said side members and with the intermediate portions resiliently engaging said bars to support said device in an adjusted position thereon.

2,471,763
WALLPAPER PERFORATOR
Layton T. Merrick, Kansas City, Mo.
Application February 17, 1947, Serial No. 728,996
1 Claim. (Cl. 164—123)

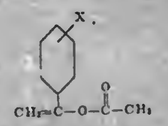
A wall paper perforator of the kind specified comprising a frame; and a drum rotatably carried by the frame, said drum including a number of discs each provided with space cutting points along its peripheral edge, said frame comprising a shaft rotatably mounting the drum, and a handle on the shaft intermediate the ends thereof, said handle being substantially U-shaped and having the free ends of its legs attached to the shaft, said discs being threadably mounted on the shaft and having spacing members therebetween, two of said members having openings for receiving the said legs of the handle.



2,471,764
MAGNETIC HAND PICKUP TOOL
Carl H. Miller, Arlington, Va., and Wilbur S. Wilks, Trenton, N. J.
Application January 31, 1946, Serial No. 644,510
4 Claims. (Cl. 294—65.5)

1. In a magnetic hand tool for picking up small objects of magnetic material, a tubular handle member at least a portion of which is composed of non-magnetic material; a sleeve of magnetic material fixed in one end portion of said tubular member; a generally cylindrically shaped magnet slidable in said sleeve between a retracted position in which it is disposed wholly within said sleeve and its magnetic action is neutralized by said sleeve and an extended position in which one end of said magnet is projected beyond said sleeve to an extent such that the neutralizing effect of said sleeve is discontinued; manually operable means extending through said tubular member for projecting said magnet; and resilient means within said tubular member operative to retract said magnet.

2,471,765
CHICK FOUNTAIN GUARD
John R. Morton, Mountain Grove, Mo.
Application November 19, 1946, Serial No. 710,739
4 Claims. (Cl. 119—72)



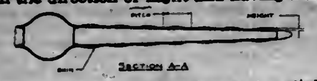
2. A guard device for drinking pans, comprising a generally circular rigid base member, a plurality of rigid strip elements secured to said base member at equal arcuate points along the periphery of the latter member, said elements extending upwardly and toward a point above the center of said base member, two of said strip elements being substantially diametrically-opposed and

formed at the portion adjacent the point above the center of said base member with vertical prong portions, a third strip element having a channel portion at its top, and attachment means extending through said vertical prong portions and said channel portion.

2,471,766
COPOLYMER OF STYRENE AND A PHENYL-VINYL ACETATE
David T. Mowry and Charles L. Mills, Jr., Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application November 15, 1947, Serial No. 786,331
5 Claims. (Cl. 260—86)

1. A copolymer of from 70 to 98 percent by weight of styrene and from 30 to 2 percent of a phenyl-vinyl acetate having the structural formula:

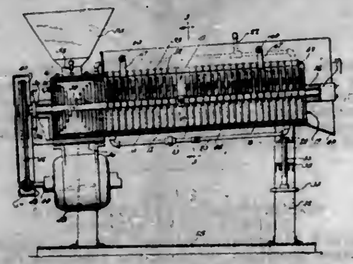
wherein X is a radical of the group consisting of hydrogen and chlorine.



2,471,767
PREPARATION OF FUMARONITRILE
David T. Mowry and William H. Yanko, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application November 15, 1947, Serial No. 786,332
2 Claims. (Cl. 260—465.8)

1. A method of preparing fumaronitrile which comprises reacting α-chloroacrylonitrile in an aqueous solution of pH value of 7 to 9 with a water soluble cyanide of the group consisting of alkali metal cyanides and alkaline earth metal cyanides.

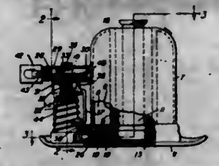
2,471,768
SHEET COVERING FOR AIRCRAFT PARTS
Felix Nagel, College Park, Md., assignor to Engineering and Research Corporation, Riverdale, Md., a corporation of Maryland
Application February 16, 1945, Serial No. 578,289
2 Claims. (Cl. 244—35)



1. An aircraft part, such as a wing, having a flexible metal skin sheet covering formed into

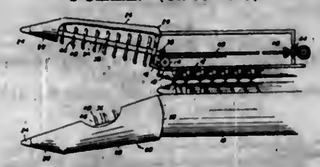
sine-wave configuration by corrugations extending in the direction of flight and having a height

of approximately 0.1 inch or less and a pitch-to-height ratio of at least 10 to 1.



2,471,769
WHIPPING MACHINE
Frank S. Nanna, North Lake Village, Ill.
Application January 4, 1946, Serial No. 639,085
7 Claims. (Cl. 259—6)

1. A whipping machine for aerating material used in confections and the like and comprising, in combination, a housing providing a whipping chamber having a semi-cylindrical bottom, a shaft disposed in the whipping chamber along the central axis of the semi-cylindrical bottom, means for rotatably supporting the shaft, a multiplicity of relatively narrow whipping rods secured to the shaft in axially spaced relationship and extending radially thereof, said rods being of a length such that their ends pass close to the semi-circular bottom of the chamber when the shaft is rotated, means for continuously supplying unwhipped material to the chamber near one end thereof, means for rotating the shaft at a speed such that the rods impart sufficient rotation to the material during the whipping that centrifugal force tends to cause said material to form a substantially tubular mass into which the ends of the rods extend, a series of vanes each having one end anchored to a wall of said chamber and the other end rotatably connected to said shaft between a pair of said axially spaced rods, a second series of vanes each having one end rotatably connected to one of the first mentioned series of vanes, adjustable means for supporting the other ends of said second series of vanes for movement about their rotatably supported ends in a direction toward and from the first mentioned series of vanes, said vanes being normally stationary and in planes extending between said rods so as to increase the agitation of said material between said rods, the end of said chamber opposite that at which the material is supplied being open to provide an outlet for the whipped material, and means for urging the material from the supply end to the outlet end of the chamber.

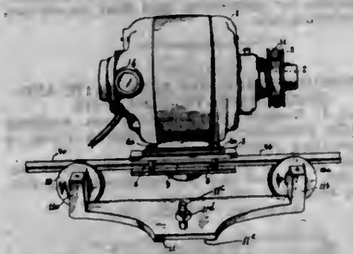


2,471,770
HYDRAULIC JACK
Stanford V. Noble, North Hollywood, Calif.
Application August 6, 1947, Serial No. 766,861
6 Claims. (Cl. 60—52)

6. A hydraulic jack comprising a vertical ram cylinder, a ram in said ram cylinder, a reservoir, a pump for forcing fluid from said reservoir into said ram cylinder to raise said ram, said pump including a pump cylinder having a piston reciprocable therein, said jack including a part having a passage through which the fluid may be bled from the ram cylinder to the reservoir to allow the ram to lower, a valve operable to open and close said passage, means including a rotatable eccentric member acting upon said piston for reciprocating the latter, a manually

operable rotatable and axially movable shaft on which said eccentric member is mounted, and means to simultaneously clutch said eccentric member to said shaft and disconnect said shaft from said valve when said shaft is moved axially in one direction and to simultaneously unclutch said eccentric member from said shaft and connect said shaft to said valve when said shaft is moved axially in the opposite direction, whereby the shaft may be selectively used to actuate the pump piston or the valve.

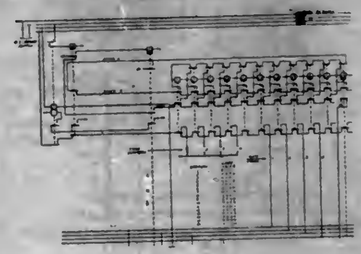
2,471,771
CORN PICKER GATHERING SHOE
John R. Parks and Henry Hielen, Giltner, Nebr.
Application December 8, 1947, Serial No. 790,466
3 Claims. (Cl. 56—119)



1. In a corn picker having conveyor means and actuating means for motivating parts of the picker, a pair of pointed corn gathering shoes carried on a corn picker in front of said conveyor means and adapted to straddle a row, a shaft longitudinally and rotatively mounted in each of said shoes, teeth carried by said shafts and spaced therealong, and connecting means for operatively connecting said shafts to said actuating means, said shoes being disposed at an acute angle with the direction of travel of the shoes in operation, and said teeth being mounted on said shafts and pivoted on axes normal to the axes of the shafts.

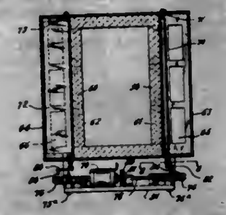
2,471,772
PRODUCTION OF SULFONAMIDES
Siegfried Pickholz, Liverpool, and Haydn Geoffrey Dickenson, Warrington, England, assignors to Ward, Blenkinsop & Company Limited, Brooklands, Halewood, Liverpool, England
No Drawing. Application June 26, 1945, Serial No. 601,717. In Great Britain June 7, 1944
Section 1, Public Law 690, August 8, 1946.
Patent expires June 7, 1964
10 Claims. (Cl. 260—239.6)

1. A process for the production of a benzene sulphonamide in which the nitrogen atom of the sulphonamide group is directly linked to a nuclear carbon atom of a heterocyclic nucleus containing a nuclear nitrogen atom which comprises heating together at an elevated temperature a benzene sulphonamide containing at least one free hydrogen atom in the sulphonamide grouping and a thioether of the general formula R^2SR^3 in which R^2 is selected from the group consisting of alkyl and aralkyl hydrocarbon groups and R^3 is the above-mentioned heterocyclic nucleus and is selected from the group consisting of a mononuclear heterocyclic group and a mononuclear heterocyclic group fused to a benzene ring, the group R^3 being directly linked to the sulphur atom of the thioether through a nuclear carbon atom of the heterocyclic group.



2,471,773
FLOATING MOTOR MOUNT
Abraham Pollak, Linfield, Pa.
Application March 23, 1946, Serial No. 656,730
5 Claims. (Cl. 74—242.13)

1. A floating motor mount embodying, in combination, a motor having a conventional casing, drive-shaft and drive-pulley, a motor-carrying rod fixedly mounted on the motor-casing and extending parallel to said shaft, means including anti-friction devices for mounting said rod on said anti-friction devices to move axially and to carry the motor therewith, and a driving connection between said drive pulley on the motor shaft and a driven pulley on a machine unit to be driven by the motor, whereby tensioning of an adjusted drive-belt may be procured by the rotative reaction of the motor.

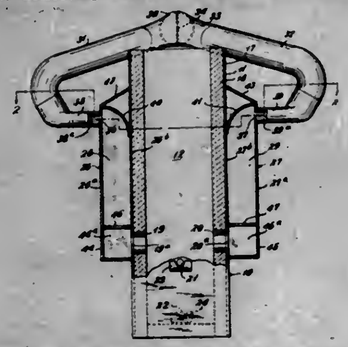


2,471,774
ELECTRICAL VOTING SYSTEM OR THE LIKE
Winfred T. Powell, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York
Application September 8, 1944, Serial No. 553,255
16 Claims. (Cl. 235—50)

10. In a voting system, a plurality of stations connected to a central office by a stepping line and a coding line, a channel selecting device at said office and a channel selecting device at each of said stations, means at each station for indicating one of a plurality of votes or choices thereat by a distinctive selective code, a plurality of code responsive relays in said office, a plurality of card punching magnets in said office, means for effectively associating a given station with said stepping and coding lines, means controlled over said stepping line for synchronously operating the channel selecting device at said given station and at said office through a cycle, means controlled over said coding line for selectively operating said code responsive relays during a first portion of said cycle for operating one of said magnets to record the identity of said given station, and means controlled over said coding

line for again selectively operating said code responsive relays during a second portion of said cycle for operating one of said magnets to record the indicated vote or choice at said given station.

2,471,775
APPARATUS FOR SUPPLYING AIR TO CUPOLA FURNACES
Herbert A. Reece, Cleveland Heights, Ohio
Application March 24, 1947, Serial No. 736,780
1 Claim. (Cl. 266—30)



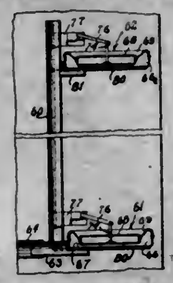
A cupola having a rectangular shaped shaft having a separate windbox on each of two opposite sides, each windbox having a set of tuyères, an air supply means to each windbox, a movable shutter means in each windbox between the air inlet and tuyères thereof, and means for operating said shutter means to alternately retard or shut off the flow of air through the tuyères of each windbox.

2,471,776
AIR SUPPLY APPARATUS FOR CUPOLA FURNACES
Herbert A. Reece, Cleveland Heights, Ohio
Application March 24, 1947, Serial No. 736,781
2 Claims. (Cl. 266—30)

1. A cupola having a rectangular shaped shaft having a separate windbox on each of two opposite sides, each windbox having a set of tuyères, a common main blast line for supplying air to said windboxes, a proportioning valve in the main blast line to permit selective proportioning of air to each of the windbox inlets so that the tuyères of one windbox may supply an equal, greater or less volume of air to the cupola shaft than the tuyères of the diametrically opposite windbox, the portion of each windbox opposite the inlet being

provided with a curved deflector plate facing the inlet deflecting the air toward the tuyères to

obtain substantially equal air velocities in the tuyères of either tuyère set.



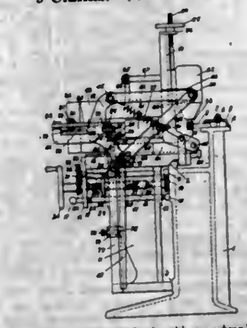
2,471,777
METHOD OF MAKING ULTRA HIGH FREQUENCY INDUCTORS
John L. Reinartz, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Original application March 27, 1946, Serial No. 657,420. Divided and this application March 27, 1947, Serial No. 737,659
3 Claims. (Cl. 29—155.57)

1. The method of utilizing a single conductor for making an ultra-high-frequency inductor comprising the steps of bending said conductor at a point midway between its ends to form a U-shaped loop having substantially parallel-disposed sides, winding said loop to form a substantially non-inductive uniform diameter cylindrical coil, and separating alternate turns of said coil to form two intersecting coils having parallel axes.

2,471,778
FLUID RESPONSIVE CONTROL APPARATUS
Luther Ringer, St. Joseph, Mich., assignor to Nineteen Hundred Corporation, St. Joseph, Mich., a corporation of New York
Application May 3, 1943, Serial No. 485,448
3 Claims. (Cl. 137—68)

1. Fluid responsive means for controlling the level of fluid in a vessel comprising a container, a standpipe extending substantially parallel to the axis of said container and interconnected therewith at the lowermost portion thereof, a plurality of basins disposed at points along said standpipe intermediate its ends corresponding generally with the fluid level desired to be maintained in said container, means for connecting said basins and said standpipe to admit fluid from said standpipe to each of said basins when the fluid level in the container and the interconnected standpipe rises to the level of the connecting means for each of said basins, float means in each of said basins actuated by the rise and fall of the fluid in said container and said standpipe, flexible means for maintaining said float means in said basins without restricting their freedom of move-

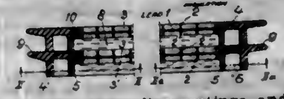
ment, switch means for controlling the supply and removal of fluid to and from said container, and means for connecting said float means and said switch means.



2,471,779
CONTROL DEVICE FOR AUTOMATIC AND SEMIAUTOMATIC FIREARMS
William C. Roemer, New Haven, Conn., assignor to Olin Industries, Inc., New Haven, Conn., a corporation of Delaware
Original application March 30, 1945, Serial No. 585,666. Divided and this application April 6, 1946, Serial No. 660,184
2 Claims. (Cl. 89—142)

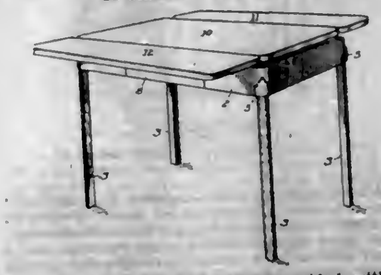
1. A control-mechanism for automatic and semiautomatic firearms, including in combination: a trigger-and-sear unit including a trigger and a sear, the said trigger being operatively connected to the said sear for moving the same, the said trigger-and-sear unit being also provided with a stop-portion engageable with the hereinafter-mentioned control-member; a control-member mounted in the firearm-structure for axial reciprocation substantially crosswise of the path of movement of the stop-portion of the said trigger-and-sear unit and for transverse oscillation, the said control-member being provided with a safety stop-surface located relatively remotely from its center of oscillation, the said control-member also being provided with a semiautomatic stop-surface located relatively closer to the center of oscillation of the control-member as compared to the location of the said safety stop-surface, the said semiautomatic stop-surface being out of circumferential alignment with the said safety stop-surface, the said control-member also being formed with a full-automatic clearance-portion in circumferential alignment with the said semiautomatic stop-surface, the said full-automatic clearance-portion being constructed and arranged to permit the said stop-portion of the trigger-and-sear unit to move past the positions which are permitted by either the safety stop-surface or the semiautomatic stop-surface, the said control-member being movable axially relative to the stop-portion of the said trigger-and-sear unit to selectively bring either

the safety stop-surface thereof or both the semiautomatic stop-surface and the full-automatic clearance-portion into axial position for cooperation with the stop-portion of the said trigger-and-sear unit, the said control-member being oscillatable about its axis at both extremes of its axial movement, whereby the said control-member may be moved from any given one of its three described positions directly into any one of the others thereof; and detent-means yieldingly holding the said control-member in any one of its three aforesaid positions.



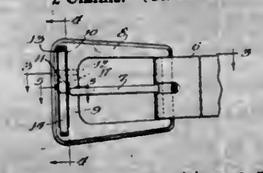
2,471,780
MACHINE FOR FABRICATING STRAKES FOR BOAT CONSTRUCTION OR THE LIKE
Alexander Greswolde Seymour Sandison, Brantford, Ontario, Canada
Application August 23, 1944, Serial No. 550,738
In Canada January 24, 1944
9 Claims. (Cl. 144—134)

3. A machine for fabricating strakes for boat construction or the like having a longitudinal table to support the work, longitudinal ways, a saddle mounted on said longitudinal ways for longitudinal rectilinear movement relative to said table, mechanism to move said saddle, an eccentric rotatably mounted on said saddle, gearing connecting said mechanism to said eccentric, a slide mounted on said saddle for movement in a direction transverse to the direction of said longitudinal rectilinear movement, a frame mounted on said slide, a cutting tool mounted on said frame, an eccentric follower engaging said eccentric, a mounting for said eccentric follower supported on said slide, and connecting means coupling said frame with said mounting.



2,471,781
ELECTRIC ACCUMULATOR OF THE BIPOLAR TYPE
Wilhelm Georg Schmidt, Saltsjobaden, Sweden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
Application September 19, 1944, Serial No. 554,789
In Sweden June 29, 1943
3 Claims. (Cl. 136—12)

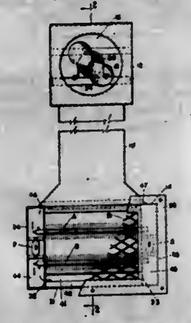
1. An electric accumulator of the bipolar type having a plurality of vertical electrode plates stacked against each other between terminal plates, each electrode plate comprising a thin lead sheet, a grating of insulating material on each side of said sheet, positive and negative active materials impressed in the meshes of said gratings, a frame around the edge of said gratings and having flanges projecting from one electrode to an adjacent electrode, said flanges having a height exceeding the total thickness of the



lead sheet with surrounding gratings, and parallel vertical walls extending between adjacent plates close to the vertical boundaries of the active part of the electrode plate.

2,471,782
EXTENSION LEAF TABLE
Charles H. Schnorr, Springdale, Pa.
Application January 29, 1947, Serial No. 724,942
11 Claims. (Cl. 311—55)

2. A table having a frame provided with a skirt having a peripherally extending upper edge, a table top comprising a main panel and a leaf normally positioned beneath the panel and beneath said upper edge of the skirt, supporting means for said leaf, a plurality of spaced bearing means beneath the panel engaging said leaf-supporting means for horizontal and vertical movement of the supporting means relatively to the panel, and means including a shaft extending between and journaled in said bearing means for vertically shifting the panel and leaf to move the leaf into position above said upper edge of the skirt, whereby the leaf may be drawn horizontally from beneath the panel and the panel positioned in the plane thereof.

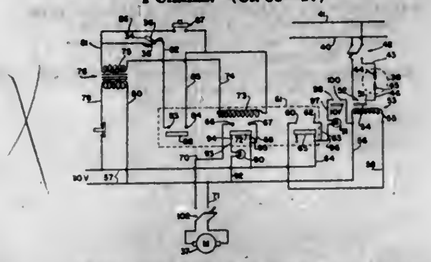


2,471,783
NAPKIN HOLDER
Bernard A. Schroeder, Winnetka, Ill.
Application September 18, 1947, Serial No. 774,870
2 Claims. (Cl. 24—7)

1. A napkin holder comprising: a waist belt buckle frame provided with a slotted end bar; a lever, pivotally mounted in the slot in said end bar, including a downwardly extending gripping arm to engage the bar and an opposed handle arm which is depressible into the upper portion of said slot; a spring seat in the slot; an exten-

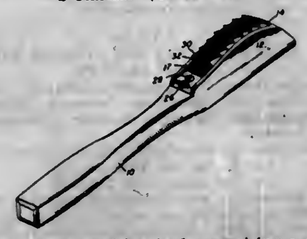
sion on said lever; and a compression spring mounted between said seat and extension so as to urge yieldingly said gripping arm against said bar.

2,471,784
HEAT EXCHANGE UNIT
Louis P. Seifner and Ralph C. Moreau, Seattle, Wash.; said Moreau assignor to said Seifner
Application November 19, 1945, Serial No. 629,534
1 Claim. (Cl. 236—37)



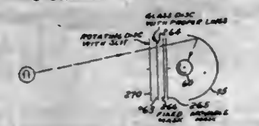
A heat exchange unit, consisting of: a vertically disposed conduit having an air intake opening at its upper extremity and an air discharge opening, in a plane parallel to the upper opening, at its lower extremity; a pressure-creating fan in said upper opening; a heat exchanger in said lower opening, having finned heating elements disposed with the lowermost element nearer the discharge opening than the upper; a shield member disposed behind and below said heating elements in spaced relation to the means forming the conduit and adapted to form a directing means for the heated air and a cold air passageway behind and below said heating elements; end chambers at each end of said heating elements, each having a cold air inlet at their tops and a discharge at their bottoms; a baffle plate horizontally disposed above said heating elements; a longitudinally extending air passageway in said plate having downwardly extending flared edges adapted to direct air under pressure downwardly upon said heating elements; a first thermal responsive switching means responsive to heat demand and manual switching means for controlling said heating elements; and a second thermal responsive switching means responsive to the temperature of the heating element and manual switching means for controlling said fan, said thermal responsive means being adapted to insure automatic operation of the heat exchange unit in response to heat demands and to insure full discharge of all heat generated in said heat exchange unit.

2,471,785
COPOLYMERS OF VINYL AROMATIC COMPOUNDS
Raymond B. Seymour and John Mann Butler, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corperation of Delaware
No Drawing. Application June 21, 1944, Serial No. 541,466
11 Claims. (Cl. 260—74)



1. An interpolymer comprising a biphenyl compound selected from the class consisting of vinylbiphenyl, vinylchlorobiphenyl and vinylfluorobiphenyl copolymerized with a compound selected from the class consisting of styrene, alpha-methylstyrene and alpha,para-dimethylstyrene, said vinylbiphenyl compound comprising from 5% to 95% by weight of said interpolymer and said other compound comprising at least 5%.

2,471,786
SAFETY DEVICE FOR MOTION-PICTURE PROJECTORS
James G. Shepler, Columbus, Ohio
Application March 19, 1948, Serial No. 15,814
4 Claims. (Cl. 88—17)

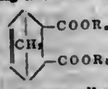


1. Safety mechanism for motion picture projectors of the type having a driving motor and an arc lamp comprising a source of current; a relay switch between said current source and said arc lamp; a field coil in said relay switch; a control circuit for said field coil; a second source of current connected in said control circuit, a second relay switch in said control circuit between said second current source and said field coil; a circuit containing said driving motor in parallel with said control circuit; a second field coil in said second relay switch; a pilot circuit containing said second field coil, said pilot circuit being connected with said second current source; a pair of switches connected in series in said pilot circuit one of said switches being controlled by the film and the other being controlled by the field coil in said second relay switch; and a third normally open switch arranged in said pilot circuit in parallel with one of said pair of switches.

2,471,787
LEATHER ROUGHING TOOL
Claude C. Smith, Oklahoma City, Okla.
Application June 23, 1947, Serial No. 756,468
2 Claims. (Cl. 69—20)

1. A leather roughing tool comprising a shank having three walls projecting from one end thereof including a pair of side walls and an end wall, a plurality of spaced parallel blades between said side walls, one end of said blades bearing against said end wall, a retaining block removably secured to said shank bearing against the free ends of said blades, and spacer plates interposed between adjacent blades.

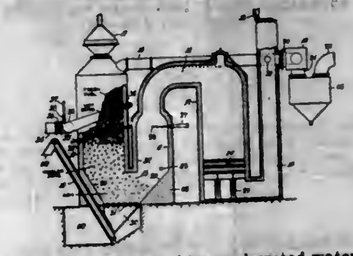
2,471,788
ELECTRONIC COMPUTER
Richard L. Snyder, Jr., and Jan A. Rajchman, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Original application March 21, 1942, Serial No. 437,002, now Patent No. 2,431,591, dated November 25, 1947. Divided and this application February 15, 1947, Serial No. 728,802
5 Claims. (Cl. 177—351)



1. In a computer for substantially continuously deriving a mathematical function of the variable angular displacement of two elements, a disk having a narrow radial slit therein, a transparent fixed screen having fiducial marks, fixed and movable masks for said marks coaxial with said disk, a spherical reflector, a light responsive device at the focus of said reflector, a light source, and means for directing said light through said disk and said unmasked portion of said screen to said reflector and from said reflector to said device to derive trains of electrical pulses the duration of each said train being a function of said unmasked marks.

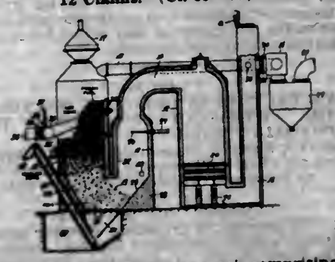
2,471,789
RUBBER PLASTICIZER COMPOSITION
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
No Drawing. Original application February 20, 1943, Serial No. 476,638. Divided and this application July 6, 1946, Serial No. 681,760
20 Claims. (Cl. 260—31.6)

1. A new composition of matter, comprising rubber selected from the group consisting of natural rubber and rubber-like polymers of butadiene-1,3, isoprene, piperylene and 2-chlorobutadiene-1,3, and as a plasticizer therefor a diester of styrene glycol having a nuclearly substituted hydrocarbon group, the said plasticizer being included in a quantity equal to from 2% to 50% the weight of the said selected rubber.



2,471,790
INSECT-AFFECTING COMPOSITIONS
Frank J. Sowa, Cranford, N. J., and Arthur Schwerdle, New York, N. Y.; said Schwerdle assignor to said Sowa
No Drawing. Application April 26, 1945, Serial No. 590,500
14 Claims. (Cl. 167—30)

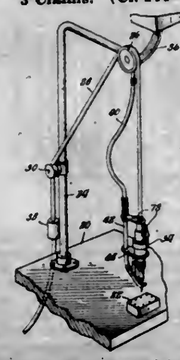
6. An insect-affecting composition comprising a compound having the following general formula



in which R_a and R_b are alkyl groups, the total number of carbon atoms in both groups together being from 2 to 8, together with at least one insect-affecting composition of the contact paralysis type selected from the group consisting of dimethylphthalate; 1,1,-dimethyl 1, 2-dihydro 8-butacarboxyl gamma pyrone; and p,p'-dichloro diphenyl trichloro ethane.

2,471,791
PROCESS OF MAKING WATER GAS
George R. Steere, Ipswich, Mass.
Application September 26, 1945, Serial No. 618,670
17 Claims. (Cl. 48—205)

1. In a process of making carbureted water gas in a set comprising a generator containing a bed of fuel and heat regenerator chamber which process comprises always blasting the fuel bed downwardly with an oxygen containing gas, burning the resultant blast gases in the heat regenerator chamber to heat this chamber, passing steam through the heat regenerator chamber and thence up through the fuel bed and withdrawing the resultant water gas directly from the generator and passing steam down through the fuel bed and carbureting the resultant water gas in said heat regenerator chamber.

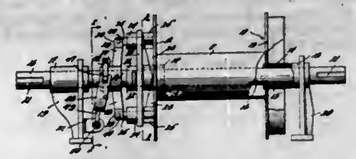


2,471,792
APPARATUS FOR MAKING WATER GAS
George R. Steere, Ipswich, Mass.
Application September 26, 1945, Serial No. 619,135
12 Claims. (Cl. 48—79)

1. A carbureted water gas set comprising in combination a generator, carburetor and superheater located in separate and detached shells and connected in series, the base of the generator communicating with the base of the carburetor through a permanently unobstructed passage devoid of valves and the top of the carburetor communicating with the top of the superheater through a permanently unobstructed passage devoid of valves for flow of water gas from the generator up through the carburetor and down through the superheater and flow of steam up through the superheater, down through the car-

buretor into the base of the generator and up through the fuel bed therein, means for introducing air into the upper portion of the fuel bed for blasting the fuel bed in a downward direction, a gas offtake leading from the superheater and a separate gas offtake leading from the top of the generator bypassing the carburetor and superheater.

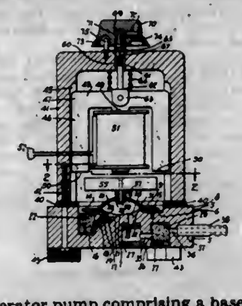
2,471,793
FASTENER FEEDING AND SECURING APPARATUS
John S. Stull, Chicago, Ill.
Application May 7, 1945, Serial No. 592,415
3 Claims. (Cl. 144—32)



1. The combination comprising a pulley, a flexible power conductor positioned over said pulley, a motor driven tool connected to one end of said conductor, a magazine mounted adjacent said pulley, a flexible conduit extending from said magazine to said tool, means biasing said pulley toward one position, means connected to said conduit for receiving therefrom an article and for positioning said article adjacent the end of said tool, a control handle for starting said tool, said control handle being arranged to operatively position said latter means relative to said tool, and a feeder arm mounted on said pulley and responsive to the movement of said pulley for releasing an article from said magazine.

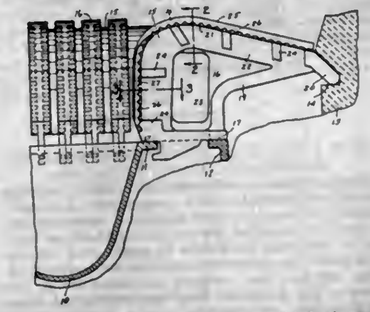
2,471,794
MANUFACTURE OF COLORING MATTERS OF THE PHTHALOCYANINE SERIES FROM PHTHALYL HALIDES
Robert J. Sumner, Manchester, N. H., assignor to Roberts Chemical Company, Perth Amboy, N. J.
No Drawing. Application July 15, 1948, Serial No. 38,950
5 Claims. (Cl. 260—314.5)

1. The process for preparing a copper phthalocyanine which comprises heating together a phthalyl halide, the halogen atoms of which have an atomic weight of at least 35 and not more than 80, a cupriferous reagent and a member of the group consisting of urea and biuret.



2,471,795
ONE-WAY CLUTCH OF THE PIN AND SOCKET TYPE
William A. Taylor, Louisville, Miss.
Application August 26, 1946, Serial No. 693,051
2 Claims. (Cl. 192—47)

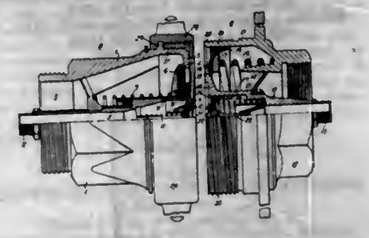
1. In a transmission of the class described, in combination, a drive shaft, a driven disc element mounted for rotation on said shaft, clutch means for effecting and disengaging a driving connection between said shaft and said driven disc element, said means comprising a drive bar welded to the shaft adjacent said disc element and extending transversely of the shaft, said drive bar having openings therethrough one on each side of the axis of said shaft, a pin-carrying member slidably mounted directly upon said shaft, said pin-carrying member comprising a hub and a pair of diametrically extending arms, pivots carried



by the ends of said arms, said pivots extending transversely with respect to the axis of said shaft, one or more projectible pins carried by said pivots and guided within the openings in said drive bar for projection toward and retraction from said disc element, sockets in said driven disc element for reception of said pin elements when the clutch is engaged, and a shifting yoke operatively connected with said pin-carrying member for projection and retraction of the pin elements through said drive bar and into and from engagement with said sockets.

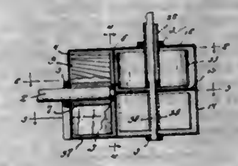
2,471,796
AIR PUMP FOR AQUARIUM AERATORS
George A. Thiberg, Cedar Knolls, N. J.
Application October 1, 1945, Serial No. 619,566
9 Claims. (Cl. 230—170)

1. An aerator pump comprising a base provided on its top face with an inner recess and an annular upwardly and inwardly inclined face surrounding the recess and forming an upwardly pointed substantially frusto-conical face; an upwardly curved resilient diaphragm having its margin resting on said frusto-conical face, a clamping ring clamped on said margin and having a lower inner bevel conforming to the shape of said frusto-conical face and clamping said margin to incline the margin inwardly and upwardly to cause the diaphragm to assume a normal dome shape cooperating with the inner recess to form a pump chamber, a housing on said base around said frusto-conical face and communicating with the exterior, passages being provided from the pump chamber to the interior and exterior respectively of the housing, check valve means in the passages opening into and from the pump chamber, and means for vibrating the diaphragm, the resiliency of the diaphragm causing the diaphragm to rebound to normal dome shape.



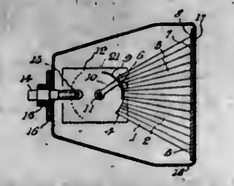
2,471,797
TUYÈRE CONSTRUCTION FOR UNDERFEED STOKERS
Edward B. Thomas, Middletown, N. Y., assignor, by mesne assignments, to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application December 23, 1944, Serial No. 569,483
2 Claims. (Cl. 110—44)

1. A tuyère construction for solid fuel underfeed stokers, including a retort through which the fuel is fed upwardly, a tuyère bar supporting frame extending outwardly therefrom, a plurality of tuyère bars supported to extend upwardly and outwardly upon said frame about the upper portion of said retort, each of said bars being exposed to an air chamber and having a fuel supporting surface with a web portion formed with inwardly inclined surfaces, a baffle T-shaped in cross section having a web portion thereof supported on said frame between each of said bars and having a baffling flange partially overlapping said bars to jointly present therewith a fuel supporting surface, spacing lugs on opposite surfaces of each bar web portion to engage and space the web portion of said baffle laterally therefrom for air admission and distribution therebetween, and a series of serrations formed inwardly of said flange to diffuse and direct the air laterally over the fuel supporting surfaces of said bars, the effective openings provided by said serrations decreasing from the outer to the inner portions of the tuyère to admit more air to that portion of the tuyère on which the fuel may normally burn more slowly than that portion on which the fuel may normally burn faster.



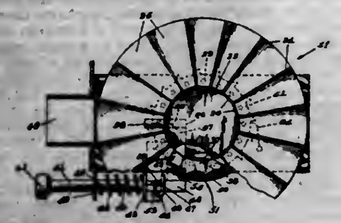
2,471,798
SELF-CLOSING PIPE COUPLING
Percival Edward Thomas, London, England, assignor to Sterling Industries Limited, London, England
Application May 9, 1947, Serial No. 746,907
In Great Britain April 12, 1946
Section 1, Public Law 690, August 8, 1946
Patent expires April 12, 1966
3 Claims. (Cl. 284—19)

1. A pipe coupling comprising a first unitary component providing a plurality of concentric flow passages and concentric self-closing valve devices to close the terminals of the passages, a second unitary component providing a corresponding plurality of concentric flow passages



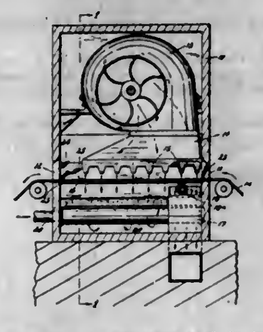
and concentric self-closing valve devices to close the terminals of those passages, and means to secure the two components together and to open the various valve devices when the coupling is made.

2,471,799
ROTARY TURBINE TYPE HYDRAULIC TRANSMISSION
Edward W. Tombs, Pittsburgh, Pa.
Application October 19, 1945, Serial No. 623,273
1 Claim. (Cl. 60—54)



In a fluid power transmission, the combination, which comprises a power impeller, a driving shaft on which said impeller is mounted, said impeller having angularly positioned blades, a housing associated with said impeller, a plurality of turbines associated with said impeller and positioned to be operated in opposite directions thereby, said turbines rotatable about a common axis with the axis thereof positioned at a right angle to the axis of the impeller, the blades of one of said turbines positioned opposite to the blades of the other wherein one turbine is adapted for rotation in a clockwise direction and the other in a counter-clockwise direction, a shaft upon which one of said turbines is mounted, a tubular shaft surrounding the shaft upon which the turbine is mounted providing mounting means for the other turbine, a casing having individual compartments for each of said turbines associated with the housing of said impeller, said casing including a partition separating the compartments thereof from the housing, said partition having inlet openings with deflecting lips providing communicating means between the impeller housing and turbine compartments, one of said inlet openings positioned to admit fluid to one turbine and another of said inlet openings positioned to admit fluid to the other turbine, and return connections from said turbine compartments to the side of the impeller housing opposite to that in which the inlet openings are positioned.

2,471,800
SHADOW IMAGE PROJECTION INDICATING APPARATUS
Egbert von Mülinen, Ennetbaden, Switzerland
Application September 25, 1944, Serial No. 555,681
In Switzerland July 19, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 19, 1963
6 Claims. (Cl. 33—24)



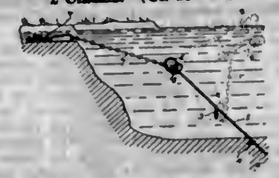
1. A measuring instrument and the like which comprises, in combination, a light source; a translucent light-diffusing shadow receiver bearing quantity measuring indicia; a screen which, in conjunction with said light source, casts a shadow for projection upon said receiver, said screen being a sector of a cylinder and mounted for pivotal movement about the cylinder axis in response to a quantity to be measured; and means for transmitting the shadow pattern from said screen to said receiver in a plurality of separate channels comprising a plurality of lengths of light-transmitting material having light receiving faces arranged to form a cylindrical mosaic surface lying closely adjacent to said shadow-casting screen and having light emitting faces arranged to form a mosaic lying closely adjacent to said receiver, the instrument being constructed and arranged whereby the position of the shadow upon the receiver indicates the value of the quantity being measured.

2,471,801
AUTOMATIC FROZEN CUBE DISPENSER FOR REFRIGERATORS
Dorothy L. Wallace, Saginaw, Mich.
Application February 28, 1946, Serial No. 650,983
5 Claims. (Cl. 312—36)

1. In refrigerating apparatus a freezing box, a rotatable ice magazine in the box and from which ice blocks are ejected, said magazine comprising a series of cells for individual blocks, each cell having an open end, said magazine being cylindrical, a turntable upon which the magazine seats, each of the cells having apertures through a wall thereof, an ejector finger adapted to operate through the apertures to dislodge the blocks, and spring controlled means for actuating the ejector and the turntable.

2,471,802
APPARATUS FOR HEAT-TREATING AIR-PERVIOUS STRIP MATERIAL
Harold J. Walter, Uxbridge, Mass., and Paul R. Rose, East Orange, N. J.
Application November 16, 1945, Serial No. 629,087
1 Claim. (Cl. 34—160)

Apparatus for conditioning and drying a strip of textile material which comprises a closed chamber having exit and entrance openings for the strip of material, means for supporting said strip of material for travel through said chamber, a port for admitting air into said chamber, an air exhaust port, means for controlling the volume of air admitted into and exhausted from said chamber, air heating means positioned in said chamber adjacent the air inlet, and means for directing the heated air against the surface of the material, a perforated support member extending across the chamber on the side of the material remote from said air directing means, the walls of said air directing means forming, together with the chamber walls, air passages leading from beyond said perforated member and from the surface of the strip of material against which the air is directed back to said heating means, whereby air which is passed through the dryer portion of the material and air which has been deflected from the surface of the material is returned, mixed with incoming air, and reheated and recirculated, and individual means for controlling the flow through said passages.



2,471,803
WELDROD FLUX COATING
Rene D. Wasserman, New York, N. Y.
No Drawing. Application December 22, 1945, Serial No. 637,117
3 Claims. (Cl. 148—24)

1. A flux coating composition consisting of:

	Parts by weight
Graphite	10–30
Alkaline earth metal carbonates	25–60
Silicon metal powder (80 to 120 mesh)	5–20
Heavy metal oxides selected from the group consisting of manganese dioxide and both manganese dioxide and lead oxide	2.5–25
Deoxidizing ferro alloys	3–30

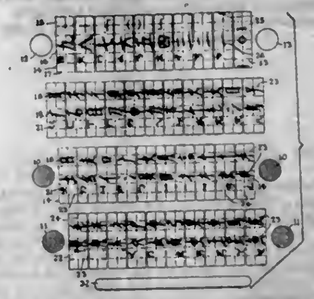
intimately admixed with a concentrated aqueous solution of an alkali-metal silicate, containing effective amounts of both a wetting agent and an anti-foaming agent, said solution being employed in an amount sufficient to impart to the coating composition from a creamy to pasty consistency.

2,471,804
ANIMAL TRAP
John Wheeler, Knox, Ind.
Application November 2, 1945, Serial No. 626,192
2 Claims. (Cl. 43—96)

1. A trap stake comprising a rod having a ring formation at one end and a point formation at its opposite end, a hook extending from the mid-length portion of said rod, and directed toward the pointed end thereof, and a barb extending from said rod adjacent to and directed away from said pointed end.

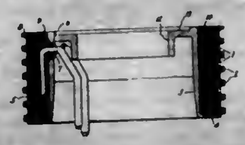
2,471,805
METHOD OF TREATING OURICURY WAX AND RESULTING COMPOSITION
Edward A. Wilder, Racine, Wis., assignor to S. C. Johnson & Son, Inc., Racine, Wis.
No Drawing. Application October 19, 1946, Serial No. 704,537
11 Claims. (Cl. 106—271)

1. A wax composition comprising carnauba wax, paraffin and up to about 16% of the total wax content by weight of ouricury wax, and a volatile solvent said ouricury wax having been pre-treated with at least 25% by weight of a paraffin hydrocarbon having at least 6 carbon atoms at a temperature of at least 150° F., the insoluble portion having been separated and the ouricury wax recovered from the soluble portion.



5. A process of refining solid ouricury wax comprising contacting ouricury wax with at least 25% by weight of a paraffin hydrocarbon having at least 6 carbon atoms at a temperature of at least 150° F., separating the insoluble portion, and recovering ouricury wax from the soluble portion.

2,471,806
THERMOSTATIC ELECTRIC SWITCH
Benjamin J. Wilson, Oreland, Raymond C. Machler, Philadelphia, Norman E. Polster, Willow Grove, and George E. R. Murray, Feasterville, Pa., assignors to the United States of America as represented by the Secretary of War
Application May 23, 1947, Serial No. 750,138
3 Claims. (Cl. 200—138)



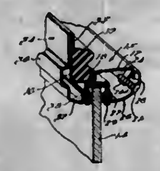
1. In a thermostatic, electric switch responsive to variations in temperature of the barrel of a machine gun slidable in the trunnion block of the gun, on recoil and counter-recoil, the combinations of a housing mounted on the gun and having a portion intruded through the trunnion block and having a passage therethrough; a carriage translatable in said passage toward and from said barrel; an electricity-conducting bearing shoe mounted on said carriage for temperature-conducting contact with the surface of the barrel; resilient means in said housing for biasing said carriage toward the barrel to effect constant contact between said shoe and said barrel; a thermostatic electric contact member attached to said shoe and positioned within said carriage; a second electric contact member mounted in said carriage for adjustment relative to said first contact member and positioned to be engaged by said thermostatic contact member; and a pair of binding posts in said housing for connecting an electric circuit with the barrel through the trunnion block and with the second contact member, respectively.

2,471,807
TYPEWRITER FOR WRITING THE CHINESE LANGUAGE
Tisheng Yen, Washington, D. C.
Application August 2, 1945, Serial No. 608,454
3 Claims. (Cl. 197—1)

1. A typewriter or the like for writing the Chinese language, comprising a keyboard and type bars operated thereby, certain of said type bars each having a radical character type and a phonetic symbol type disposed in different printing positions on different case portions of the bar for writing respectively radicals and phonetic symbols in juxtaposed relation, the arrangement of the phonetic symbol type being such that initial and final phonetic symbol type are positioned on opposite sides of a medial of the bars and medial symbol type are positioned on said medial, there being a separate bar for each of said symbol types.

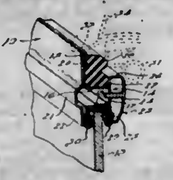
2,471,808
COLLECTOR RING ASSEMBLY
John H. Baker, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application January 30, 1946, Serial No. 644,277
6 Claims. (Cl. 171—322)

1. A current collector comprising an assembly of a plurality of axially spaced electrically conductive collector rings with a substantially L-shaped barrier ring member of insulating ma-



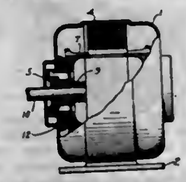
terial arranged between adjacent rings of said collector rings and having a shoulder portion extending axially in supporting engagement with the inner side of one of said adjacent collector rings, a mounting member having a portion spaced inwardly from said collector and barrier rings with a lip extending radially outwardly in engagement with the outermost of said barrier rings at one end of said assembly, and means including an insulating material substantially filling the space between said collector and barrier rings and said mounting member and extending over a part of said assembly opposite said mounting member lip for holding said assembly in position on said mounting member.

2,471,809
FILLING THREAD CUTTER FOR WEFT REPLENISHING LOOMS
Gabriel C. Beatrice, Shrewsbury, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application May 29, 1945, Serial No. 29,967
5 Claims. (Cl. 139—267)



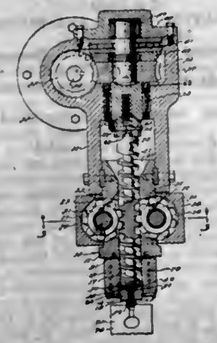
1. A weft thread cutting unit for a loom, said unit comprising a support formed with a lateral lug and having a cutter blade fixed thereto, a second cutter blade pivotally mounted on said support and having upper and lower arms on opposite sides of said lug, an adjustable stop screw on said support to engage said upper arm to vary the position of said second blade relatively to the fixed blade when said upper arm engages the stop screw, operating roll means for the second blade, and an adjusting screw supported by the lower arm and operatively connected to and supporting said roll means and rotatable relatively to said second blade to vary the position of the roll means relatively to said second blade.

2,471,810
DOOR CONSTRUCTION RECEIVING SLIDABLE WINDOW
Robert Cadwallader, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application August 2, 1944, Serial No. 547,675
5 Claims. (Cl. 296—44)



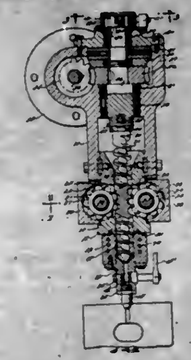
1. In a door construction having a window slidable toward and away from an end of the door, a deformable sealing strip positioned at the said end of the door, a first sheet metal element having an outwardly extending leg and a laterally extending leg formed of a first portion immediately adjacent the outwardly extending leg, a second portion extending laterally from the first portion in outwardly displaced relation, and an outwardly extending portion joining the first and second portions, the sealing strip being received between and held by the outwardly extending leg and the first portion and the outwardly extending portion of the laterally extending leg, a second sheet metal element having an outer portion clamping the outer edge of the outwardly extending leg of the first element and extending inwardly along the outwardly extending leg to a region inward of the first portion of the laterally extending leg and including a rib formation extending away from the first element, a third sheet-metal element having an outer portion detachably secured to the second portion of the laterally extending leg of the first element and an inner portion positioned inward of the laterally extending leg of the first element in opposed relation to an inner portion of the second element, and a channel positioned inward of the laterally extending leg of the first element and having a base solidily backed by the first portion of the laterally extending leg of the first element and sides held between the opposed inner portions of the second and third elements, the channel slidably receiving the outer edge of the slidable window, the rib permitting the inner portion of the second element and the channel to remain straight for receiving a straight window and the outer portion of the second element and the outwardly extending leg of the first element to be curved in conformance with the external contour of the vehicle with which the door construction is associated.

2,471,811
DOOR CONSTRUCTION
Robert Cadwallader, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Continuation of application Serial No. 547,676, August 2, 1944. This application October 18, 1947, Serial No. 780,666
8 Claims. (Cl. 296—44)



3. In a door construction having a window slidable toward and away from one end of the door, a first sheet-metal element extending along the said end of the door and having an outwardly extending leg and a laterally extending leg, a second element secured to the outwardly extending leg and extending inwardly of the laterally extending leg, a sealing strip received at the juncture of the legs of the first element, a third element secured to the first element and positioned on the side thereof on which the laterally extending leg extends from the outwardly extending leg and having a first portion outward of the laterally extending leg of the first element, said first portion and the legs of said first element providing a retaining channel for the sealing strip and a second portion inward of the laterally extending leg, and a channel held by and between the second element and the second portion of the third element for slidably receiving the outer edge of the slidable window.

2,471,812
ELECTRIC MOTOR
Angelo M. Cristiano, Springfield, Ohio, assignor to Robbins & Myers, Inc., Springfield, Ohio, a corporation of Ohio
Application May 16, 1946, Serial No. 670,102
9 Claims. (Cl. 172—36)

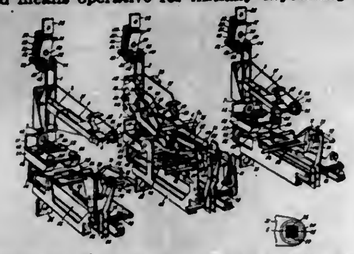


1. An electric motor, a stator ring supported in peripherally spaced relation with an enclosing housing, an armature journaled for rotation in concentric relation with the stator ring, a mounting support common to the stator ring and to the rotor and a resilient body interposed between the common support and the enclosing housing, the construction and arrangement being such that induced vibration is compensated and noise minimized.

2,471,813
INJECTION MOLDING APPARATUS
Walter P. Cousino, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application September 28, 1944, Serial No. 556,119
2 Claims. (Cl. 18—30)

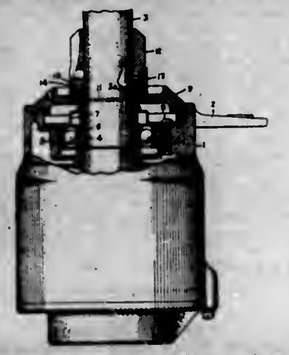
1. Apparatus for injecting material under pressure comprising a housing having inlet and outlet openings, a valve seat in said housing adjacent said outlet opening, mechanism for displacing said material from said housing comprising a screw member rotatably and axially shiftably mounted in said housing and having a valve element thereon engageable in complete sealing relationship with said valve seat for completely closing said outlet opening, and means resiliently urging said screw member axially for sealingly engaging said valve element on said valve seat when said displacing mechanism is inoperative, said screw member being shiftable axially against the action of said resilient means by back pressure of said material thereon during operation of said mechanism for disengaging said valve element from said valve seat.

2,471,814
PLASTIC INJECTION APPARATUS AND METHOD
Walter P. Cousino, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application May 10, 1946, Serial No. 668,913
14 Claims. (Cl. 18—30)



1. Apparatus for injecting moldable material into a mold having an inlet including an injecting unit provided with a discharge passage and means for displacing material therethrough, a valve adapted to close said passage, a discharge nozzle having telescoping relatively shiftable nozzle sections, one of said sections being carried by said injecting unit and yieldably held in spaced relation to said mold by the other nozzle section when the mold is initially filled, said second mentioned nozzle section being registerable with said mold inlet and movable outwardly with respect to said first mentioned nozzle section by the pressure of the material in said nozzle when said mold is filled for yieldably spacing said first-mentioned nozzle section from said mold, means relatively shiftably mounting said injecting unit and mold for bringing said nozzle into and out of mold-filling relationship with respect to said mold inlet, mechanism for relatively urging said injecting unit and mold toward their mold-filling relationship and shifting said second mentioned nozzle section inwardly with respect to said first mentioned nozzle section for maintaining pressure upon the contents of said mold and displacing material from said nozzle into said mold to compensate for shrinkage of the material therein when said valve is closed.

2,471,815
ELECTRIC SWITCH
John A. Favre, Drexel Hill, Pa., assignor to General Electric Company, a corporation of New York
Original application September 25, 1944, Serial No. 555,630. Divided and this application January 3, 1946, Serial No. 638,779
5 Claims. (Cl. 200—153)



3. An automatic trip-free circuit breaker comprising a movable circuit controlling member biased to an open circuit position, a shaft having a flat side, toggle means interconnecting said circuit controlling member and said shaft, means for operating said toggle means to move said circuit controlling member between open and closed circuit positions, releasable means for

holding said toggle in a thrust transmitting condition whereby to maintain said circuit controlling member in the closed circuit position, a support for said shaft, a bearing for said shaft comprising a bushing rotatably mounted in said support and provided with an irregularly shaped bore through which said shaft extends loosely, and means operative for initially expediting the

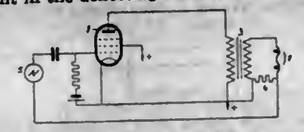
collapse of said toggle upon the release of said holding means comprising a pivotal projection on the wall of said bore opposing the flat side of said shaft, the thrust of said toggle being exerted against said projection when the switch is in the closed circuit position whereby the shaft first turns through a small angle independently of said bushing during the initial opening movement of said circuit controlling member.

2,471,816
BOBBIN SPINDLE
Clarence L. Hamm, Marblehead, Mass., assignor to General Electric Company, a corporation of New York
Application January 14, 1947, Serial No. 721,920
2 Claims. (Cl. 57—129)

1. In a vertical spinning bobbin motor, a rotatable shaft provided with a shoulder, a bearing unit surrounding said shaft and prevented by said shoulder from movement in one axial direction with respect to said shaft, a deflector surrounding said shaft and prevented by said bearing unit from movement in the same axial direction with respect to said shaft, a spinning bobbin support surrounding said shaft and provided with at least one setscrew seatable in a recess in said shaft, and a resilient washer of spring material surrounding said shaft and interposed between said deflector and said bobbin support to separate them in an axial direction.

2,471,817
VARIABLE IMPEDANCE DEVICE
Alfred Herz, Chicago, Ill.
Original application August 19, 1942, Serial No. 455,283. Divided and this application December 16, 1943, Serial No. 514,505
13 Claims. (Cl. 323—89)

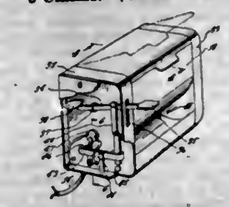
1. In a variable reactance device, the combination of a closed magnetic core structure, a reactance winding confined solely to one leg of said core structure, said reactance winding being adapted to be connected in shunt across an alternating current load circuit, and an alternating current saturating winding entirely surrounding said core structure and adapted to be energized from said alternating current load circuit, said reactance winding and said saturating winding being so connected to said source of said alternating current load circuit that during the successive alternations of the alternating current the reactance flux generated by said reactance winding and the saturating flux generated by said saturating winding always have the same directions of flow in said one leg of the core structure.



2,471,818
CARBOXYLATED RESINS AND METHOD OF MAKING SAME
Melvin J. Hunter and William C. Bauman, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application November 4, 1944, Serial No. 562,042
6 Claims. (Cl. 260—78.5)

1. A synthetic resin consisting of an alkali-insoluble copolymer of an alpha-beta-unsaturated dicarboxylic acid, a vinylidene compound containing a single olefinic group in the molecule, and divinylbenzene, chemically combined in proportions of more than 1 mole of the vinylidene compound having a single olefinic linkage in the molecule per mole of the divinylbenzene, at least 1 mole of the alpha-beta-unsaturated dicarboxylic acid per mole of the vinylidene compound having only a single olefinic linkage in the molecule, and between 0.6 and 1 mole of said alpha-beta-unsaturated dicarboxylic acid per chemical equivalent of the polymerizable compounds other than the alpha-beta-unsaturated dicarboxylic acid.

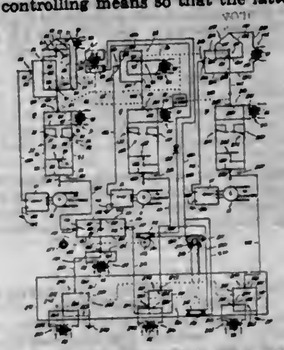
2,471,819
CIRCUIT FOR GENERATING A SAW-TOOTH-LIKE CURRENT IN THE DEFLECTING COIL OF CATHODE-RAY TUBES
Frederik Kerkhof, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 12, 1946, Serial No. 661,527
In the Netherlands November 7, 1945
3 Claims. (Cl. 315—27)



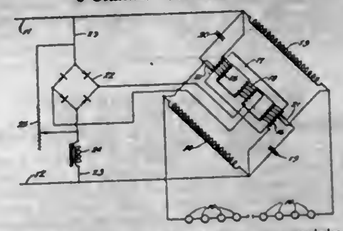
1. A circuit for generating a sawtooth-like current in the deflecting coils of a cathode ray tube,

comprising: a vacuum tube amplifier, the anode circuit of which includes a transformer coupling to the deflecting coils; a source of supply of saw-tooth voltage connected to the input of said amplifier; means for correcting the distortion of the current in the deflecting coils; and in which cir-

cuit, the primary inductance of the transformer is equal to substantially .29TR$_s$, where T is the period of the saw tooth current and R$_s$ is the transformed secondary resistance, whereby the D. C. component of the anode current is maintained a minimum.



2,471,820
LIGHTED CIGARETTE DISPENSER
Murray Kirsch, Mamaroneck, N. Y.
Application February 6, 1948, Serial No. 6,705
5 Claims. (Cl. 312—86)

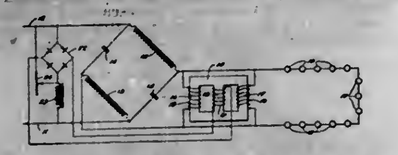


1. A lighted cigaret dispenser comprising longitudinally extending members forming a chamber, end members, a carrier member vertically connected to one of the longitudinally extending members, said carrier member adapted to receive a cigaret from the chamber and move it forwardly to dispense the same, an operating member, a heating element slidably connected in one of the end members, said operating member being connected with the carrier and the heating element to move the carrier with the cigarette forwardly and to cause the heating element to be adjusted in the end member to engage the end of the cigaret.

2,471,821
AIRCRAFT CONTROL APPARATUS
Robert J. Kutsler and Theodore J. Wilson, Minneapolis, Minn., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application December 30, 1944, Serial No. 570,712
21 Claims. (Cl. 244—77)

20. In control apparatus for an aircraft having a first motor for positioning an airfoil surface for controlling the direction of flight and a second motor for positioning an airfoil surface for controlling the pitch of the aircraft; motor controlling means including a device adapted to respond to the deviation of an aircraft from a predetermined direction of flight for automatically controlling said first motor, second motor controlling means including a device adapted to respond to the deviation of an aircraft from a predetermined attitude for automatically controlling said second motor, means including a device adapted to respond to the deviation of the aircraft about the roll axis for controlling said second motor, a manually tiltable member, means operated when said member is tilted in one direction to modify the action of said first motor controlling means so that the latter is effective to cause the aircraft to turn, and means operated when said member is tilted in a different direction to modify the action of said second motor controlling means so that the latter is effective to cause the aircraft to alter its pitch.

2,471,822
CURRENT CONTROL APPARATUS
Karl A. Lang, Glenview, Ill., assignor to Lindberg Engineering Company, Chicago, Ill., a corporation of Illinois
Application April 11, 1945, Serial No. 587,797
8 Claims. (Cl. 323—7)

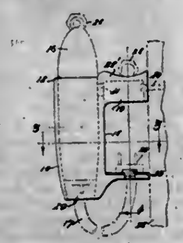


1. Current control apparatus comprising a pair of reactors having one end of each connected to a supply source and the other end of each connected to a load, a pair of inductively coupled windings wound on a common core and connected in a bridge circuit to the reactors, a capacitor connected across at least one of the windings, a saturating winding on the core, and means connecting the saturating winding to the supply source to vary the current in the saturating winding in response to voltage variations in the supply source.

2,471,823
CURRENT REGULATING DEVICE
Karl A. Lang, Glenview, Ill., assignor to Lindberg Engineering Company, Chicago, Ill., a corporation of Illinois
Application June 13, 1945, Serial No. 599,135
8 Claims. (Cl. 323—7)

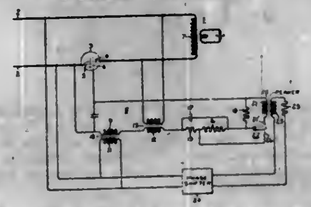
1. A current regulating device for connecting a load to a source of alternating current compris-

ing a resonant type constant potential to constant current regulating unit connected between the source and the load, a reactor winding connected across the load side of the unit, a core for



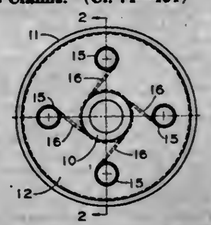
the reactor winding, a saturating winding on the core, and means responsive to the potential across the source side of the unit to supply varying saturating current to the saturating winding.

2,471,824
RECOVERY OF SILVER FROM RESIDUES CONTAINING THE SAME
Herman A. Liebhafsky and Lester B. Bronk, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
No Drawing. Application August 7, 1946, Serial No. 688,968
7 Claims. (Cl. 23—87)



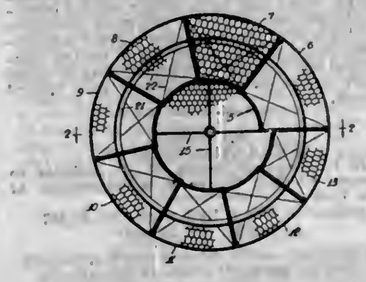
7. The process which comprises (1) firing a residue obtained by passage of chlorobenzene over a contact mass comprising silver and silicon at a temperature above 250° C., said firing taking place at a temperature above 600° C. in an atmosphere free of oxidizing agents, (2) thereafter treating the fired residue with concentrated nitric acid, (3) removing substantially all the undissolved portions from the nitric acid solution, (4) adding hydrochloric acid to the liquid nitric acid solution substantially free of solid matter to precipitate silver chloride, and (5) recovering the precipitated silver chloride.

2,471,825
ELECTRIC RAZOR HOLDER
Margaret Long, Baltimore, Md.
Application March 6, 1946, Serial No. 652,307
1 Claim. (Cl. 248—314)



A device of the character described comprising a body providing a razor receiving pocket and having a front wall provided with a substantially V-shaped slot, an integrally formed horizontally and rearwardly extending support at the upper rear of the body adapted to support a razor head guard while the razor is in use and an integrally formed rearwardly and horizontally extending shelf at the lower end of the body having notches for receiving an electric current supply line to the razor and a cleaning brush for the razor.

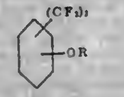
2,471,826
ELECTRONIC CONTROL CIRCUIT FOR PERFORMING A TIMING FUNCTION
Harold W. Lord, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 21, 1944, Serial No. 550,352
5 Claims. (Cl. 250—27)



2. In combination, an alternating current supply circuit, a load circuit, electric translating apparatus interconnecting said circuits including electric valve means of the gas-filled type and including an anode, a cathode and a control member, switching means movable to a plurality of operative positions, means including said switching means in one of its operative positions for impressing a periodic voltage of steep wave front on said control member to render the anode-to-cathode circuit of said electric valve means conductive at a predetermined instant during a half wave of voltage of said supply circuit, a capacitor connected in the external cathode-to-control member circuit of said electric valve means, means responsive to anode-to-cathode conduction by said electric valve means for charging said capacitor through the internal cathode-to-control member circuit of said electric valve means to a voltage of sufficient magnitude to maintain the anode-to-cathode circuit of said electric valve means nonconductive for a predetermined interval following each anode-to-cathode conduction by said valve means and regardless of the presence of said periodic voltage, a discharge circuit continuously tending to discharge said capacitor at a rate which determines the duration of said interval, and means including said switching means in another of its operative positions for removing said periodic voltage from said control member of said electric valve means and for establishing a low impedance discharge circuit for said capacitor.

2,471,827
WELDED GEAR BLANK
Joseph R. Mahan, Toledo, Ohio, assignor to The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application April 27, 1946, Serial No. 665,486
5 Claims. (Cl. 74—434)

1. A welded metallic structure provided with a hub and a rim, a pair of web plates to support said rim and welded to said hub and rim in spaced axial relation to each other, a plurality of spacers welded between said plates intermediate the hub and rim, a plurality of stiffener plates welded substantially tangential to the periphery of said hub and connected by welding with said spacers in a plane parallel to the axis of said hub, adapted to give axial rigidity to the structure, and reduce deflection, lateral oscillation and vibration to a minimum.



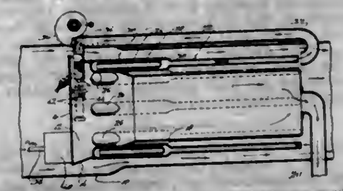
2,471,828
PARABOLIC ANTENNA
Steven E. Mautner, Port Jervis, N. Y., assignor to Skydyne, Inc., Port Jervis, N. Y., a corporation of New York
Application July 4, 1944, Serial No. 543,460
3 Claims. (Cl. 343—18)

2. In an antenna or the like an inner section having a generally spiral periphery, a plurality of outer sections to be secured thereto, said outer sections being of generally trapedzoidal form, each of said sections having a frame of sheet material, all of said outer sections being generally similar in shape and each succeeding section being sufficiently smaller than the next preceding section so as to fit within the latter, whereby said outer sections may be nested, for the purpose described.

2,471,829
HYDROCARBONOXYBIS TRIFLUOROMETHYL BENZENES
Earl T. McBee, Robert O. Bolt, and Robert Tebbe, La Fayette, Ind., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application January 8, 1946, Serial No. 639,906
15 Claims. (Cl. 260—612)

1. A hydrocarbonoxybis(trifluoromethyl) benzene having the general formula:

wherein R is selected from the group of radicals consisting of alkyl, cycloalkyl, aralkyl and aryl, said aryl and aralkyl radicals containing a single unsubstituted carbocyclic ring.



2,471,830
HYDROCARBONOXY(TRIFLUOROMETHYL)-BENZENE SYNTHESIS
Earl T. McBee, La Fayette, Ind., Robert O. Bolt, Richmond, Calif., and Robert Tebbe, Orono, Maine, assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application August 30, 1946, Serial No. 694,154
23 Claims. (Cl. 260—612)

1. The process which includes: reacting a (trifluoromethyl)-halobenzene, halogen and trifluoromethyl being the only substituents on the benzene ring, and an alkali metal hydrocarbonoxide selected from the class consisting of alkoxides, cycloalkoxides, monocyclic aralkoxides, and monocyclic aryloxides at a temperature between about 40 and about 225 degrees centigrade and separating from the reaction product a hydrocarbonoxy(trifluoromethyl)benzene.

2,471,831
BROMINE TRIFLUORIDE TREATMENT OF HALOHYDROCARBONS
Earl T. McBee, La Fayette, Ind., Vincent V. Lindgren, Cos Cob, Conn., and Waldo B. Ligett, Berkley, Mich., assignors to Purdue Research Foundation, La Fayette, Ind., a corporation of Indiana
No Drawing. Application March 12, 1947, Serial No. 734,229
8 Claims. (Cl. 260—648)

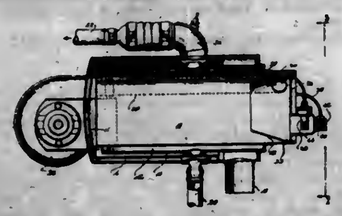
1. The process for the simultaneous introduction of fluorine and bromine into an unsaturated halohydrocarbon which includes the step of mixing an unsaturated halohydrocarbon with bromine trifluoride, maintaining the reaction at a temperature between about zero degrees and about 200 degrees centigrade, and separating from the reaction product a more highly saturated organic compound having an increased fluorine and bromine content, and having the same number of carbon atoms as the starting halohydrocarbon.

2,471,832
INTERNAL-COMBUSTION HEATER WITH KNIPP'S SINGING TUBES
Henry J. De N. McCollum, deceased, late of Chicago, Ill., by Thelma McCollum, executrix, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application March 23, 1945, Serial No. 584,361
10 Claims. (Cl. 126—116)

1. Means for causing the flow of air, comprising a pipe having an open end, an elongated tube having a bulb at one end and being open at the other end, said latter end being closely adjacent the open end of the pipe and in substantial alignment therewith, a tubular element enclosed within the bulbous end of said tube, said tubular element being open at the end facing the end of said tube and closed at its opposite end, means for supporting said element co-axially with re-

spect to said bulbous end portion, and means for heating the bulbous end portion of said tube.

10. In a sealed combustion type heater having means forming a combustion chamber, a heat exchanger communicating therewith, a ventilating air duct structure to convey air to be heated past said heat exchanger, means for supplying fuel to the combustion chamber, and an igniter, the combination of means for causing the flow of air for combustion including passage forming means and a Knipp's singing tube having its closed bulbous end portion projecting into the combustion chamber and having a second portion located in the flow path of the ventilating air, said singing tube having its open end communicating with said passage in a direction to induce the flow of air therethrough.



2,471,823

COMBUSTION HEATER WITH FUEL RETAINING TROUGH AND IGNITER POCKET

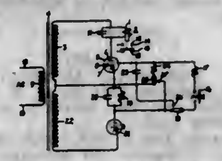
Henry J. De N. McCollum, deceased, late of Chicago, Ill., by Thelma McCollum, executrix, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia

Application October 3, 1945, Serial No. 619,980

4 Claims. (Cl. 158—28)

2. In a heater, means forming a combustion chamber having a frusto-conical wall and an adjoining wall which meets said conical wall at an acute angle forming a trough, means delivering air to said chamber in transverse relation to the axis of said frusto-conical wall and producing a whirling motion of said air about said axis of said wall and over said trough, said chamber forming means including means forming a pocket adjacent said adjoining wall, igniting means in said pocket, fuel inlet means discharging liquid fuel into said pocket in proximity to said igniting means, said pocket communicating with the conical portion of the combustion chamber through an opening in said adjoining wall which extends to the bottom of the pocket to permit liquid fuel in said pocket to drain into the said trough for exposure to the whirling air stream in the chamber and to permit an interchange of combustion air and products of combustion between said pocket and said chamber.

2,471,834



ELECTRONIC RELAY

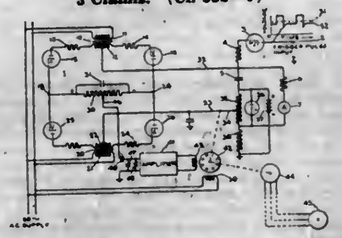
Earle B. McDowell and Pieter Juchter, Scotia, N. Y., assignors to General Electric Company, a corporation of New York

Application December 9, 1944, Serial No. 567,513

5 Claims. (Cl. 175—320)

1. In combination, a supply circuit, an electromagnetic relay including an operating coil, an electric valve including an anode, a cathode and a control electrode means connecting said supply circuit, the operating coil of said relay and the anode-cathode circuit of said valve in series, a resistor connected between said cathode and control electrode, a capacitor, a source of direct voltage, electrical connections from said source for supplying a charge to said capacitor, a circuit controlled by said relay for connecting said capacitor in parallel with said source of direct voltage when said relay is in one operative position to provide a charge on said capacitor for supplying

a negative bias voltage to said control electrode and for establishing a discharge circuit for said capacitor when said relay is in a second operative position, and a circuit including resistance and a normally open initiating contact connecting said direct voltage between said control electrode and said cathode with the negative terminal of said source electrically nearer said control electrode.



2,471,835

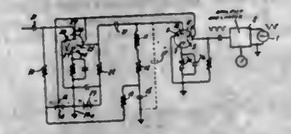
MODULATOR CIRCUIT

Donald E. Norgaard, Scotia, N. Y., assignor to General Electric Company, a corporation of New York

Application July 1, 1948, Serial No. 36,367

3 Claims. (Cl. 332—9)

1. A system for producing a voltage having an alternating voltage component whose magnitude and polarity are functions of the magnitude and sign of the difference of two unidirectional voltages, comprising two interconnected bridge circuits having one pair of bridge arms in common between a common pair of diametrically-opposite terminals, said pair of arms comprising an impedance capable of carrying direct current and having a tap connection forming a common intermediate bridge terminal, second and third pairs of bridge arms individual to the respective circuits each comprising a pair of unilaterally-conducting devices, means for impressing an alternating supply voltage between the devices of each of said pairs, said means comprising a pair of transformer windings each having a tap connection forming the other intermediate terminal of the respective bridge circuit, said pairs of devices being poled to conduct on alternate half-cycles of said supply voltage and to pass current in the same direction through said impedance, means for impressing said two unidirectional voltages respectively between said other intermediate bridge terminals and a point of reference potential, whereby said alternating voltage component appears between said common intermediate terminal and said reference point.



2,471,836

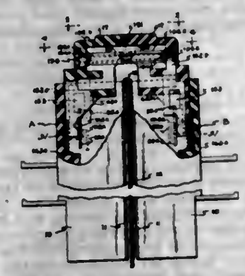
ELECTRONIC SIGNAL GENERATOR

Donald E. Norgaard, Scotia, N. Y., assignor to General Electric Company, a corporation of New York

Original application June 8, 1942, Serial No. 446,231. Divided and this application June 2, 1944, Serial No. 538,496

12 Claims. (Cl. 250—27)

1. In combination, a source of sine wave electromotive force, means to convert said sine wave electromotive force to unidirectional electromotive force varying cyclically and abruptly between different values, means to superpose upon consecutive half cycles of said unidirectional electromotive force an oscillatory transient of rapidly decreasing intensity during the half cycle to produce a combined wave in which a sharp intense pulse of maximum amplitude is produced at the beginning of each of alternate half cycles, a load circuit, and means to select said sharp intense pulses and to supply them to said load circuit.



2,471,837

CIRCUIT BREAKER

Elwood T. Platz, Detroit, Mich., assignor to Bulldog Electric Products Company, Detroit, Mich., a corporation of West Virginia

Application October 9, 1944, Serial No. 557,884

11 Claims. (Cl. 200—116)

1. A multipole circuit breaker comprising two contactors, each having its own latching and automatic unlatching means, and its own means for moving it to open circuit position on unlatching and for moving it to closed circuit position on relatching, a unitary handle for the contactors, means responsive to contactor movements to determine two different handle positions, one for open circuit, i. e., contactor unlatched, and another for closed circuit, i. e., contactor latched, an unlatching means on the handle whereby when the handle is moved to open circuit position upon unlatching of one contactor, the unlatching means of the handle causes unlatching of the other contactor, and means for permitting the handle to move, upon unlatching of either contactor, with such handle movement causing unlatching of any latched contactor.

2,471,838

PRESSURE SWITCH

Arthur E. Ross, Chicago, Ill., assignor to Cook Electric Company, Chicago, Ill., a corporation of Illinois

Application May 24, 1945, Serial No. 595,506

10 Claims. (Cl. 200—83)

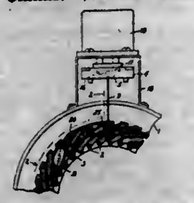
1. A pressure switch comprising a cylindrical tubular enclosing casing forming a body and a smaller enclosing casing forming a head with a threaded neck between the two casings, all in axial alignment, said body having an enlarged base portion with a threaded aperture therethrough for connection with a fluid-pressure pipe, an elongated pressure-responsive bellows in said body and secured to said base to receive fluid under pressure from the said pipe, an actuator carried at the opposite end of said bellows, an electric switch in said head, conductor terminals therefor on the exterior of said head, a push-pin slidable in said threaded neck to operate said switch and having an end adjacent the said actuator, the position of said pin with respect to said actuator being adjustable by turning the head on said threaded neck, and means to lock said neck in adjusted position, the said body forming a rigid support for said head.

2,471,839

INSULATOR MOUNTING

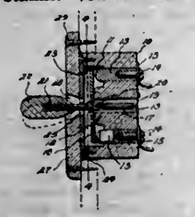
John H. Schumacher, Alma, Mo.

Application October 19, 1945, Serial No. 623,264



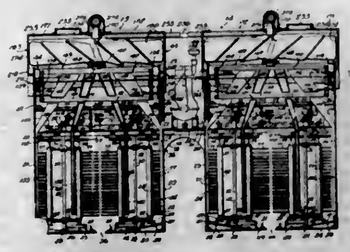
1 Claim. (Cl. 248—205)

In an electric fence, employing a post having therethrough a plurality of transverse holes, one above the other, in combination, a bracket having a horizontal upper arm and a lower arm diverging downwardly therefrom, said arms having at their ends two tongues adapted to be extended respectively through two of said holes, said arms having adjacent said tongues shouldered portions adapted to bear against one side of said post, the lower tongue having a longitudinal slot at the opposite side of said post, a releasable wedge extending through said slot with its converging edges adapted to fit respectively against said post



and against the outer end of said slot, so as to hold the adjacent shouldered portion against said post, the other tongue inclining from the horizontal so as to hold the adjacent shouldered portion so as to be adapted to bear against said post, and means adapted to attach an electric conductor supporting insulator to said upper arm.

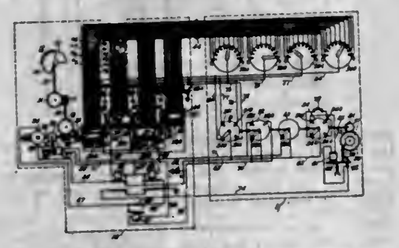
2,471,840
ELECTRIC PROTECTIVE MEANS
Richard E. Seely, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application September 13, 1945, Serial No. 615,993
3 Claims. (Cl. 171—252)



1. The combination with an electric device having a stator provided with slots, a winding of electrically insulated wire in said slots having end turns projecting from said slots, a tube of a material having low heat conductivity, a bulb provided with substantially parallel flat sides on one end of said tube inserted between said end turns with said flat sides in engagement with said end turns, a container having a fluid pressure responsive wall, a connection between said container and the other end of said tube whereby said tube, bulb and container form a sealed chamber, a liquid in said chamber adapted to be vaporized in said bulb in response to a predetermined temperature in said end turns for operation of said wall, said chamber and the contained liquid having a small volume and thermal capacity thereby to minimize the effect of thermal expansion of said liquid and to obtain optimum speed of response of said pressure responsive wall, and switching means connected to control the circuit of said device operated by said wall to deenergize said device when said end turns reach a predetermined high temperature.

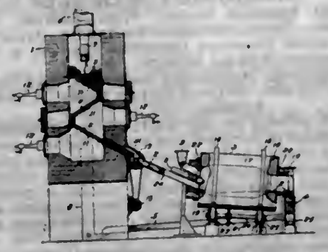
2,471,841
MULTIPLE CIRCUIT SWITCH
Harry G. Sells, Columbus, Ohio
Application July 8, 1946, Serial No. 681,892
4 Claims. (Cl. 200—6)

1. A multiple circuit-controlling switch comprising an insulating base formed with a pivotal abutment, a plurality of spaced circuit poles carried by said base, a stationary contact plate carried by said base and disposed in spaced relation to said poles, and a manually operable circuit-closing member pivotally carried upon said abutment between said poles and said plate for teetering movement into circuit-closing engagement with said plate and said poles.



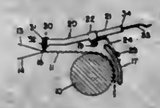
2,471,842
COTTON PICKING APPARATUS
Perry W. Spell, Roseboro, N. C.
Application January 25, 1944, Serial No. 519,656
10 Claims. (Cl. 56—12)

1. A cotton picking apparatus comprising a vehicle movable in one direction longitudinally along a row of cotton plants, power means for propelling said vehicle, a plurality of spindles, endless means carried by said vehicle and supporting said spindles for bodily movement in the opposite direction relative to the vehicle in one path of travel with the spindles projecting transversely across the row of plants, and then through a second path of travel remote from the plants, transmission means connecting said power means to said endless means to move said spindles in the last named direction alternately faster and slower than the speed of movement of the vehicle, said transmission means comprising two actuating devices, one of said actuating devices providing normal movement of said spindles at a speed slower than the movement of the vehicle and the other actuating device operating intermittently to interrupt said normal movement of the spindles and provide periods of movement of said spindles faster than the movement of the vehicle, means for rotating said spindles on their own axes during said bodily movement, and means for effecting a flow of air generally lengthwise of said spindles toward the free ends thereof in said remote path of travel for removing cotton from the spindles, said last named means comprising a vertical vacuum manifold having intake openings adjacent said spindles in said remote path of travel.



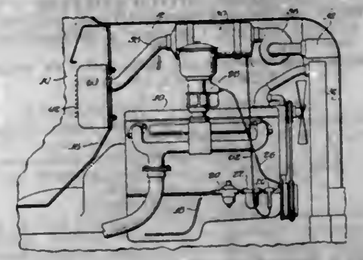
2,471,843
REMOTE-CONTROL SYSTEM
Hamilton A. Stamper, Los Angeles, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application November 28, 1945, Serial No. 631,403
9 Claims. (Cl. 318—33)

1. In a system of the type described having a control station and a controlled station; a plurality of control lines interconnecting said stations; a plurality of selection switches at said control station, each adapted to complete a circuit to different ones of said control lines, according to its setting; a driven member at the controlled station and an electric motor coupled thereto for driving it; a plurality of rotatable selection members at said controlled station, each corresponding to a different one of said selection switches at the control station, and each adapted to be associated with said control lines, and, when so associated, open a different one of said control lines in each of a plurality of predetermined different positions of rotation of the selection member; means coupling said selection members to said driven member and to each other, for



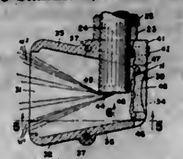
rotation at predetermined different speeds; a plurality of control circuits for energizing said motor and means for successively completing different ones of said control circuits, the first control circuit including the slowest selection member and its corresponding selection switch, and succeeding control circuits including successively faster selection members and their corresponding selection switches, whereby said motor is successively energized to successively rotate said selection members into the positions corresponding to the settings of their associated selection switches.

2,471,844
METHOD FOR CONVERSION OF IRON CHLORIDE INTO IRON OXIDE AND HYDROCHLORIC ACID
Samuel Streisoff, New York, N. Y., assignor to Chemical Construction Corporation, New York, N. Y., a corporation of Delaware
Application April 12, 1946, Serial No. 661,501
2 Claims. (Cl. 23—155)



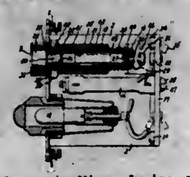
1. A method of producing hydrochloric acid gas and iron oxide from iron chloride which comprises heating, agitating and grinding in a rotatory kiln a stream of said iron chloride in the presence of air and water to temperatures of 600 to 1200° F. by the action of a stream of heated balls and thereby decomposing said iron chloride into iron oxide with the evolution of hydrochloric acid gas and water vapor, continuously removing said acid gas and water vapor, continuously removing the iron oxide and the balls, separating said iron oxide from said balls and reheating and recycling said balls.

2,471,845
LOOM STOPPING MEANS
Edward J. Szabo and Paul W. Christley, Cleveland, Ohio, assignors to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware
Application February 24, 1947, Serial No. 730,238
5 Claims. (Cl. 139—348)



1. The combination of a loom, an electric stop motion circuit in said loom, a detector in said electric stop motion circuit positioned transversely to the warp of said loom and substantially at the fell, said detector energizing the electric stop motion circuit when actuated by a separated warp continuing beyond the position of the detector.

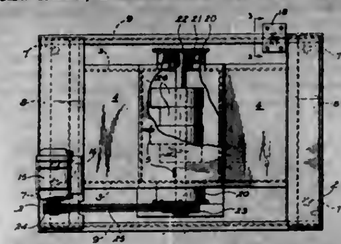
2,471,846
HEATER SYSTEM
Vernon N. Tramontini, Indianapolis, Ind., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application April 10, 1946, Serial No. 661,096
4 Claims. (Cl. 237—12.3)



2. A fuel feeding system for an automotive vehicle having a heater which burns the same fuel as the automotive vehicle engine, said fuel being highly volatile, comprising a fuel pump, means to supply fuel to said pump, an engine carburetor, a float bowl for said carburetor, an engine fuel line leading from said fuel pump to said float bowl of said engine carburetor, a fitting for withdrawing fuel from said engine line at a point between said pump and said carburetor, said fitting including means forming a passage connected to said engine fuel line and to an outlet opening lower than said engine fuel line, a heater fuel line of small diameter connected to said outlet opening at one end and to the heater at the other end, and said passage including a reservoir of sufficient cross section in proportion to the rate of flow of fuel to said heater that bubbles forming in said passage will rise against the direction of flow of fuel therethrough so that said bubbles return to said engine fuel line, said reservoir being adapted to inhibit fuel turbulence therein.

2,471,847
PNEUMATIC THREAD HOLDER FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application April 2, 1947, Serial No. 738,882
15 Claims. (Cl. 139—247)

1. In pneumatic thread control means for a weft replenishing mechanism having a magazine provided with a stack of reserve bobbins the lowest one of which is nearer the horizontal center of the magazine than are the other bobbins of the stack, a hollow pneumatic thread holder having a long narrow substantially horizontal intake mouth into which extend weft ends attached to the bobbins, and a tube extending into the holder having a thread aperture spaced from the mouth and into which the weft ends are drawn pneumatically, said aperture being so located relatively to the mouth as to cause the weft end of said lowest bobbin to enter the mouth near the longitudinal center thereof and cause the remaining weft ends to enter said mouth at points horizontally spaced from said weft end.



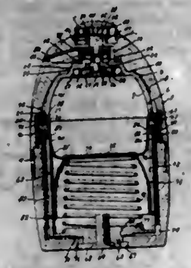
2,471,848
COMBINED SWITCH AND FUSE
Fred G. von Hoorn, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application December 29, 1945, Serial No. 638,060
8 Claims. (Cl. 200—114)

1. A circuit controlling device comprising, in combination, a supporting member, a casing of insulating material carried by said supporting member for sliding movement thereon, said casing being provided with a recess having spaced contact clips therein, a cartridge type fuse in said recess carried by said contact clips, cooperating contact means carried by said casing and said support respectively, one of said contact means being electrically connected to one of said contact clips, said contact means being operated to closed circuit position upon sliding movement of said casing and spring means biasing the contact means to open circuit position.

2,471,849
SHAKEOUT FOR COKE CHARGING CARS
Emmet W. Wallace, Canton, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Application March 25, 1948, Serial No. 17,062
3 Claims. (Cl. 214—44)

1. A shaker comprising a rectangular frame having side members to rest on a hopper, a second rectangular frame above said first frame, springs supported by the first frame and supporting the second frame, a motor near one corner of the

second frame, a counterweight for the motor on the second frame near the corner diagonally opposite to the motor, and a rotatable, unbalanced body on the first frame and connected to the motor for rotation thereby.



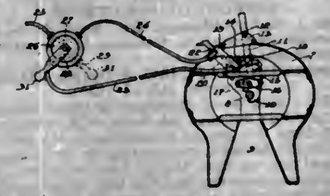
2,471,850
LIQUID POLYSILOXANE LUBRICANTS
Donald F. Wilcock, Saugus, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Application September 25, 1946, Serial No. 699,356
5 Claims. (Cl. 252—49.6)

1. A lubricant having a low boundary friction coefficient which consists essentially of (1) a water-free liquid aliphatic-substituted polysiloxane containing an average of from about 1.9 to 2.5 aliphatic groups per silicon atom, the said aliphatic groups being selected from the class consisting of lower alkyl, lower alkenyl, and cyclic alkyl radicals, and (2) from about 0.05 to 5 per cent, by weight, based on the weight of (1), of an additive selected from the class of saturated aliphatic fatty acids containing from 8 to 14 carbon atoms.

2,471,851
MANUFACTURE OF HIGH-EXPLOSIVE COMPOSITIONS OR CHARGES
Harold Reginald Wright, West Kilbride, and James Taylor, Saltcoats, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 15, 1944, Serial No. 549,639. In Great Britain August 18, 1943
5 Claims. (Cl. 52—22)

1. A process for the manufacture of detonating explosive compositions containing nitrocellulose, a crystalline high explosive compound sensitive to detonation by shock or friction selected from the group consisting of a solid crystalline nitric ester and a solid crystalline nitramine, and a liquid mixture comprising dinitrotoluenes and trinitrotoluene wherein the crystalline high explosive compound is in the predominating proportion and the nitrocellulose is in the least proportion which comprises forming a slurry of the crystalline high explosive compound and the nitrocellulose in cold water, admixing the said liquid mixture, and continuing the mixing operation until the nitrocellulose and the crystalline compound are converted into discrete aggregates, separating the thus formed aggregates from the bulk of the water without the application of pressure, and thereafter drying the aggregates.

2,471,852
DISPENSER WITH FLOW RESTRICTING VALVE
Robert Gordon Bau, North Hollywood, Calif.
Application July 19, 1947, Serial No. 762,679
3 Claims. (Cl. 222—95)



1. A dispenser comprising a casing having an outlet, a removable cartridge for said casing, an inwardly opening valve in said cartridge, a valve operator in said casing for said valve, and a second and inwardly closing valve on said operator, said cartridge having a port controlled by both of said valves, said outlet communicating with both of said valves.

2,471,853
CATALYTIC PARTIAL OXIDATION PROCESS
Leland K. Beach, Mountainside, and Gerald C. Connelly, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application February 5, 1946, Serial No. 645,714
8 Claims. (Cl. 260—342)

8. The method of partially oxidizing naphthalene to phthalic anhydride which comprises heating silica gel impregnated with about 30% of vanadium pentoxide to a temperature of about 870° C., and partially oxidizing naphthalene vapor in an oxidizing gas stream at an optimum reaction temperature between 400° C. and 550° C. in a short contact time of 0.05 to 0.5 second with suspended particles of the impregnated adsorbent modified by the heating.

2,471,854
FIFTH WHEEL LOCK FOR TRAILERS
Peter H. Bies and Finley Marvin Cruthers, McKeesport, Pa.
Application January 30, 1948, Serial No. 3,336
2 Claims. (Cl. 280—33.05)

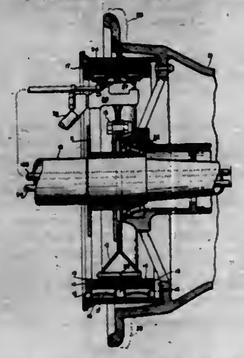
1. Apparatus for latching and unlatching a retaining hook that is movable on the fifth wheel of a tractor truck to engage and disengage the king pin of a trailer, comprising a cylinder adapted for connection to a lower portion of the fifth wheel, a piston in the cylinder, rod-like elements carried by the piston and projecting through the ends of the cylinder, the element that projects from the forward end of the cylinder serving as a latch bolt to hold the retaining hook in coupled relation to the king pin, when the piston is in its forward position in the cylinder, and the element that projects from the rear end of the cylinder serving as a pull rod that can be manually drawn back to retract the piston and the latch bolt, for release of the retaining hook and means manually operable from the tractor, to admit fluid pressure to the front and rear ends of the cylinder, selectively.

2,471,855
METAL-PLATED PLASTIC BRUSH
William C. Bird, Northampton, Mass., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware
Application March 15, 1944, Serial No. 526,502
2 Claims. (Cl. 15—159)

1. In a toilet brush, in combination, a unitary handle and back portion of a moldable plastic material plated with a metallic coat and having a recess formed in the underside of the back portion with relatively thin walls, the inside portion of said walls also being plated, and a bristle block adapted to be held in the recess, the sides of the block hiding the metal plated inner walls of the recess except for a smooth rounded portion thereof at the outer edge so that externally the metal plating of the completed brush appears to terminate in said smooth rounded margin.

2,471,856
LEAK-STOPPING COMPOSITIONS
Craig A. Blair, Hackettstown, N. J., assignor to "X" Laboratories, Inc., New York, N. Y., a corporation of New York
No Drawing. Application August 27, 1946, Serial No. 693,387
2 Claims. (Cl. 106—33)

1. A leak stopping composition for water-containing vessels including a quantity of finely divided fibrous material intimately mixed with a substantially greater quantity of the waste liquor from tanning operations in which quebracho, chestnut, mangrove, myrobalans and divi-divi have been used.

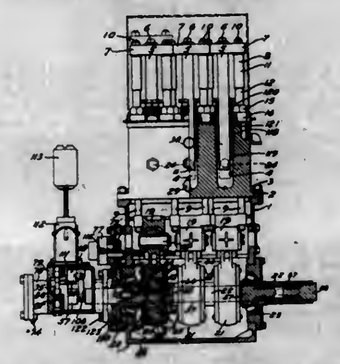


2,471,857
FLUTTER DAMPER
William M. Bleakney, Leon F. Zielinski, and Chester M. Edo, Burbank, Calif., assignors to Lockheed Aircraft Corporation, Burbank, Calif.
Application May 9, 1946, Serial No. 668,616
12 Claims. (Cl. 188—1)

1. A flutter damper adapted to suppress natural resonance vibrations in an airplane control

surface, comprising an inertia member, means for converting oscillatory movements of said control surface into rotary movements of said inertia member, means adapted to permit substantially friction-free axial movements of said inertia member in response to acceleration of said means, in either direction of rotation and braking means adapted to be engaged by acceleration induced axial movements of said inertia member whereby said flutter damper is adapted to respond only to control surface accelerations imposed on said first mentioned means.

2,471,858
BRAKE COOLING MEANS
John J. Bloomfield, Burbank, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Original application July 12, 1943, Serial No. 494,330. Divided and this application June 22, 1945, Serial No. 600,946
9 Claims. (Cl. 188—264)

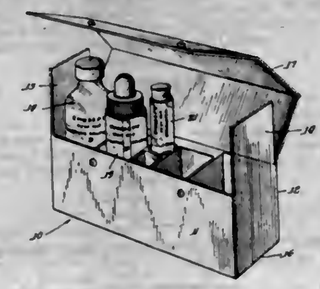


1. Cooling means for a brake mechanism having a drum presenting an internal braking surface, friction means for cooperating with said surface of the drum and a hydraulic pressure system operable to develop pressure for operating the friction means, the cooling means comprising an annular manifold within the drum for discharging water onto said surface of the drum having circumferentially spaced nozzles, water supply means, a pump operable to deliver water under pressure to said manifold, a conduit for conducting water from said supply means to the pump, and a valve in said conduit responsive to the pressure in said system to open when said pressure reaches a given valve.

2,471,859
PRESSURE REGULATING VALVE
Delphis C. Breault, Lowell, Mass.
Application November 18, 1944, Serial No. 564,005
1 Claim. (Cl. 277—64)

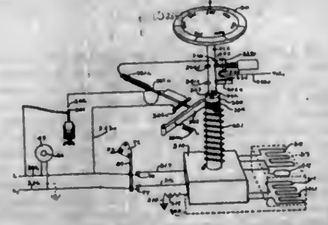
A valve comprising a housing having a chamber, a rotatable hollow sleeve therein, said sleeve being conical at one end and having an aperture in the conical portion, a fixed conical wall abutting the conical sleeve portion, an aperture through said wall for registry or selective partial or non-registry with the sleeve aperture, means to rotate the sleeve, means to yieldingly press the wall and conical sleeve portion together, a separate cap for the sleeve at the end thereof opposite the conical portion, said cap having an aperture therethrough, and a yielding closure for the cap aperture.

2,471,860
RECIPROCATING PUMP
Nelson E. Brigham, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application April 22, 1944, Serial No. 532,271
22 Claims. (Cl. 103—38)



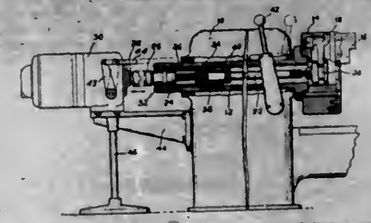
1. In a variable capacity pump, a cylinder, a reciprocating pumping plunger operating in said cylinder, a rotative driver, adjustable crank means carried by said driver and operatively connected with said plunger, a control rod operatively connected with said adjustable crank for varying its throw to change the stroke of said plunger, a pressure fluid circuit including a control cylinder, a piston on said control rod and operating in said cylinder, valve means for controlling the admission of pressure fluid into said control cylinder for moving said piston and the control rod, and means actuated by movement of said control rod for closing said valve upon admission of a predetermined amount of pressure fluid to said cylinder.

2,471,861
TESTING OF SOLUTIONS
Frank J. Cahn, Chicago, Ill., assignor to The Emulsol Corporation, Chicago, Ill., a corporation of Illinois
Application May 14, 1945, Serial No. 593,623
7 Claims. (Cl. 23—230)



1. In a method of determining the concentration, in dilute aqueous solutions, of a member selected from the groups consisting of (1) cationic quaternary ammonium compounds containing a chain of not less than about 12 carbon atoms, and (2) anionic compounds of the type which contain an uninterrupted carbon chain of not less than about 12 carbon atoms and a radical selected from the group consisting of salts of sulfonates and sulfates, the steps which comprise providing a measured volume of a dilute aqueous solution

of a compound falling into one of said groups of compounds, admixing therewith a small proportion of dichlorofluorescein, and then titrating



with a dilute aqueous solution of known concentration of a compound falling into the other of said groups of compounds.

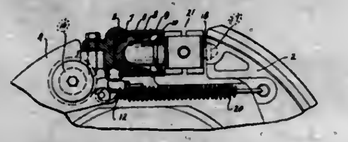
2,471,862
TIME AND TEMPERATURE CONTROLLER FOR DOMESTIC APPLIANCES
Robert R. Candor, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Original application October 11, 1943, Serial No. 505,749, now Patent No. 2,451,069, dated October 12, 1948. Divided and this application August 17, 1945, Serial No. 610,998
6 Claims. (Cl. 219—20)

6. In a device of the character described, a source of heat energy, heating means, a thermostat controlling the flow of energy from said source to said heating means in response to temperature created by said heating means, thermostat adjusting means for said thermostat including a rotatable shaft movable from an off position to a heating position, a spring powered by movement of said shaft from said off position to said heating position, a timer having time adjusting means to set a heating time limit for said heating means, means releasing said spring at said time limit, means permitting said shaft to be returned manually from said heating position toward said off position to an intermediate heating position while maintaining said spring in powered condition, and means causing said spring to return said shaft from heating position to said off position.

2,471,863
POWER ACTUATED WRENCH
Albert E. Church, New Britain, Conn., assignor to Union Manufacturing Company, New Britain, Conn., a corporation of Connecticut
Application April 5, 1948, Serial No. 19,023
3 Claims. (Cl. 279—118)

1. A chuck actuating device comprising a spindle rotatably mounted within a headstock and having a chuck mounted on one end, a draw bar extending through said spindle and attached at one end to operating means for the jaws of said chuck, a splined member within said spindle secured to the opposite end of said draw bar, and power rotated means engaging said splined member, whereby rotation of said means axially moves said splined member and draw bar to open and close said jaws.

2,471,864
CIRCUMCISION CLAMP
Thomas P. De Palo, Framingham, Mass.
Application June 19, 1948, Serial No. 34,023
3 Claims. (Cl. 128—346)



3. A surgical instrument for use in performing circumcisions comprising a hollow tubular body portion having an axial passage therethrough and a pair of outwardly yieldable clamping ring retaining arms at one end thereof, said arms being adapted to receive and retain between them a ring clamp element, a ring clamp element retained between said arms having a circular opening concentric to the axis of said passage, a clamp supporting member slidable through said passage and said opening, an inner clamp element circular in cross section and cooperating with said ring clamp element and removably supported by said supporting member, concentrically with the axis of said body portion, and having a cupped flaring outward glans penis receiving end, and a barbed prepuce retaining element also supported by said supporting member and adapted to retain a prepuce drawn over the outside of said inner clamp element, and thread means moving said clamp elements relatively together along said axis to clamp said prepuce.

2,471,865
DUAL BRAKE ADJUSTING MECHANISM
Albert Dieckmann, Normandy, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application May 3, 1945, Serial No. 591,668
10 Claims. (Cl. 188—79.5)

7. In a brake adjusting means, a pair of brake shoes arranged in tandem; means to actuate said

shoes; a first double wedge member operatively associated with said shoes; a second double wedge member operatively associated with said means; said members disposed opposite each other; said members having diverging faces disposed opposite each other and acting upon one shoe in said pair of shoes; an adjusting screw between said members; wedges on each end of said screw having wedge faces complemental to the faces on said double wedge members, one double wedge member acting upon one shoe in said pair of shoes; said wedges on said screw moving simultaneously toward or away from each other upon rotation of said screw to move said double wedge members toward or away from each other; the ends of said double wedge members adjusted relative to each other when said wedges are moved relatively to each other on said screw; and means on said screw engageable with each of said double wedge members to keep said wedges equidistant from the centers of said double wedge members.

2,471,866

RECLAIMING SYNTHETIC OLEFIN-POLY-OLEFIN-RUBBERY POLYMERS

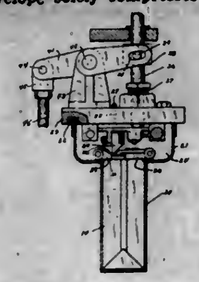
Lawrence T. Eby, Roselle, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application December 15, 1945, Serial No. 635,403

14 Claims. (Cl. 260—79)

1. The process for reclaiming a synthetic rubber polymer prepared by catalytically copolymerizing isobutylene and a polyolefin having from 4 to 10 carbon atoms per molecule at a polymerizing temperature within the range between −40° C. and −164° C. and which polymer is thereafter cured by reaction with sulfur, comprising the steps in combination of heating the cured polymer to a temperature within the range of 100° C. to 200° C. in the presence of a tertiary aliphatic mercaptan.

2,471,867



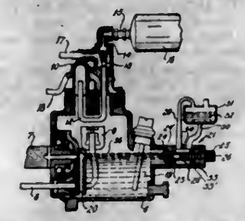
METHOD OF PROCESSING CHEESE AND PACKAGE THEREFOR

Franklin M. Fisher, New York, N. Y., and Harold C. Hopp, Des Plaines, Ill., assignors to Standard Cap and Seal Corporation, Chicago, Ill., a corporation of Virginia

Application December 26, 1945, Serial No. 637,264

1 Claim. (Cl. 99—116)

A method of knitting a mass of natural, unknitted, uncured cheese-curd in an envelope formed of non-hygroscopic material which consists in the steps of placing the envelope in a mold, filling the envelope with a quantity of natural, unknitted, uncured cheese, of thereafter evacuating air from the interior of the envelope and said mold, of hermetically closing and sealing the filled envelope, and of removing the sealed envelope from the mold and evacuating zone whereby the atmospheric pressure exterior of said envelope solely compresses the natural, unknitted, uncured cheese into a solid mass and causes knitting thereof.



2,471,868

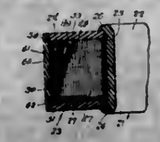
COMPRESSOR LUBRICATION SUPPLY MECHANISM

Cyril B. Fites, St. Johns, Me., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware

Application August 20, 1947, Serial No. 769,685

9 Claims. (Cl. 230—206)

1. A mechanism for replenishing the oil supply in an air compressor comprising a casing for the compressor provided with an oil reservoir which is periodically subjected to variations in pressure; injector means to introduce oil into said casing; an oil source from which oil is supplied to said injector means; means to operate said injector means when the oil in the casing reservoir is subjected to variations in pressure to thereby inject oil into said casing reservoir; and means responsive to compressor pressure to prevent loss of pressure after each operation of said injector means.



2,471,869

COIL CONSTRUCTION AND METHOD

Irving Gebel, Chicago, Ill., assignor to International Register Co., a corporation of Illinois

Application March 14, 1946, Serial No. 654,350

11 Claims. (Cl. 175—21)

1. An energizing coil for an electromagnetic device comprising, in combination, an insulating

spool, a coil of wire on said spool with the outer layer thereof on a bias so as to provide an annular lead receiving space between it and one rim of said spool, terminals for the ends of said coil disposed in insulated spaced relation in said space, and insulated leads connected to said terminals and extending annularly in opposite directions around said coil in said space.

2,471,870

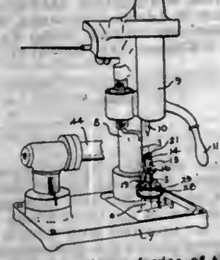
OIL-RESISTANT COMPOSITION

Philip T. Gidley, Fairhaven, Mass., assignor, by mesne assignments, to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application November 10, 1944, Serial No. 562,905

4 Claims. (Cl. 260—28.5)

1. As a new composition of matter a curable mixture consisting of: 100 parts of a rubbery butadiene acrylonitrile copolymer, 100 parts of a resin selected from the group consisting of polyvinyl formal, polyvinyl acetal and polyvinyl butyral; about 10 parts of zinc oxide; about 2 parts of sulfur; about 45 to 50 parts of tricresyl phosphate; about 1.5 parts of a vulcanization accelerator; about 72–95 parts of a filler and 0.5 to 2 parts of anti-oxidant.



2,471,871

WORK SUPPORT FOR LENS DRILLING MACHINES

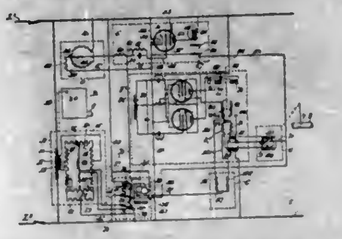
Charles T. Grant, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts

Application August 7, 1944, Serial No. 548,389

9 Claims. (Cl. 77—63)

1. A work support for a device of the character described, said work support comprising a sleeve-like member adapted to fit over an upright formed on said device, said sleeve-like member having an end portion on which the work is to be rested, a lever pivotally connected with said sleeve-like member having an engagement portion adjacent one end thereof located adjacent the work supporting end of the sleeve-like member, a member rotatably mounted on said sleeve-like member having a cam portion and means on said lever member for engaging said cam portion.

2,471,872



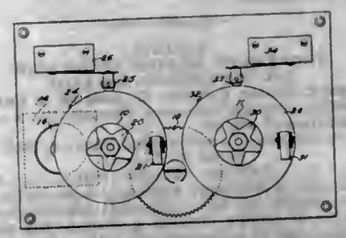
CONTROLLING SYSTEM FOR CONDITION REGULATORS

Walter Leslie Hunt, Philadelphia, Pa., assignor to Automatic Temperature Control Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania

Application September 9, 1943, Serial No. 501,712

14 Claims. (Cl. 236—78)

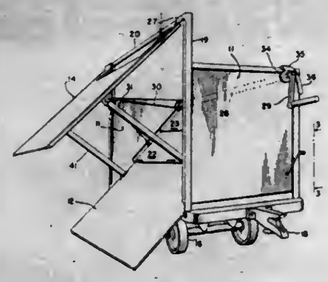
3. In controlling systems, a device subject to a condition, means for varying the supply of condition-affecting-agent to the device, variable means the value of which varies as the condition of the device varies from a predetermined holding condition, a motor for actuating the supply varying means, means for moving the motor proportionately to the change of value of the variable means from its previous value, means for moving the motor in increments comprising a time function of the net deviation of the condition from the predetermined holding condition, said last means comprising a relay, a thermionic tube coupled to said relay and normally holding said relay out, a condenser having an adjustable grid leak and being in the grid circuit of said tube, means for increasing the charge on the condenser as a function of the net increase in deviation of the condition from the predetermined holding condition, so that the relay pulls in means for periodically discharging the condenser and nullifying the output of said tube so that the relay drops out, and means establishing a valve motor driven circuit during such dropping out of the relay.



2,471,873

TIMER

Walter Leslie Hunt, Philadelphia, Pa., assignor to Automatic Temperature Control Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania

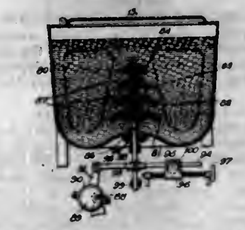


Application December 26, 1944, Serial No. 569,755

5 Claims. (Cl. 161—1)

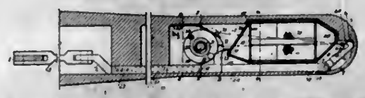
1. A timer comprising a reversible synchronous motor, means for establishing an independent load circuit simultaneously with starting the said motor in one direction of running, means including two switch members for actuating a hold-in relay which is arranged to break the load circuit at the end of the timed interval when both of said switches are actuated simultaneously, means driven by said motor and pre-set for actuating the two switches simultaneously at the end of a timed interval and means responsive to running of the motor in the other direction of running for pre-setting the means driven by the motor for the start of said timed interval.

2,471,874
DUMP CAR
Harry W. Johns, Beverly Hills, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Application August 22, 1945, Serial No. 611,943
5 Claims. (Cl. 298—26)



1. A dump car comprising spaced end walls, spaced front and rear side walls, the front side wall being supported from its upper end for outward swinging, the rear side wall including an upper section supported from its upper end for swinging in the same direction as the front side wall, and a lower section hingedly connected with the lower edge of the upper section, a bottom wall hingedly connected with the lower edge of said lower section, said walls defining a material containing compartment, link means connecting the front side wall and the bottom wall, the link means being of sufficient length to swing the front wall to a position in forwardly divergent relation to the bottom wall when the bottom wall is moved forwardly, and means for swinging said rear wall forwardly so that said rear wall and the bottom wall are brought to positions in a common inclined plane and the front side wall is swung forwardly to a position in generally parallel relation to said plane.

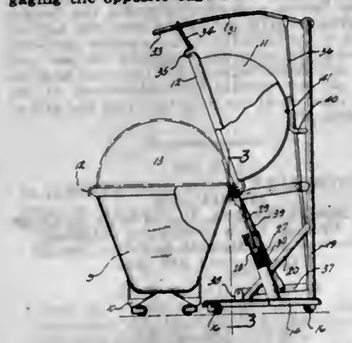
2,471,875
PROCESS OF MAKING STABILIZED JEL-TYPE HYDRATED LIME
Bruce E. Kester, Palatine, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application January 1, 1945, Serial No. 571,021
1 Claim. (Cl. 106—109)



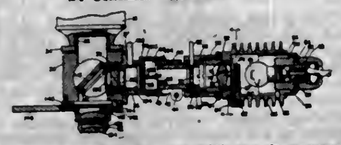
Process of producing a storage-stable hydrated lime product of high immediate plasticity and capable of rapidly forming a substantially non-slumping gel on admixture with water which comprises mixing about 5% of calcium sulfate dihydrate with a dolomitic lime hydrate in which the calcium oxide has been hydrated, pressure-hydrating the resulting mixture under steam pressure to hydrate the magnesium oxide component thereof and to convert the dihydrate into soluble anhydrite; drying the resulting product to a moisture content of between about 0.1% and about 1.0% and carbonating the same with a substance selected from the group consisting of carbon dioxide and soluble carbonates and bicarbonates to an extent to impart thereto a combined carbon dioxide content not exceeding about 5% by weight of the carbonated product.

2,471,876
CLOTHES-WASHING AND CLEANING MACHINE
George Kuhn, Silver Spring, Md., assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Original application October 17, 1936, Serial No. 106,080. Divided and this application May 11, 1942, Serial No. 442,640
2 Claims. (Cl. 68—131)

1. Apparatus for treating articles with fluid comprising a tub, an outwardly flared washing element in said tub reciprocating in the axis of the flare of said element and producing toroidal circulation, power means connected to said element to impart oppositely directed rapid, rectilinear, short strokes thereto, said last named means having provisions for imparting faster strokes in the direction of the outward flare of said element than in the other.



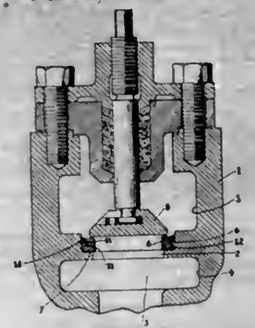
2,471,877
SHOE STITCHING MACHINE
Christy N. Lestakis, Portland, Oreg.
Application July 25, 1946, Serial No. 686,053
5 Claims. (Cl. 112—187)



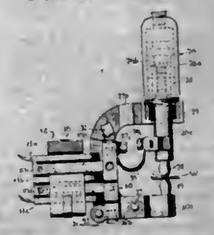
1. In a shoe stitching machine provided with a bobbin carrier, means for transferring a thread loop formed by said machine from one side of the bobbin carrier to the other which includes a reciprocable bar provided with a hook to engage a loop positioned on one side of the bobbin carrier, means for reciprocating the hook bar, a cam bar periodically operable by the hook bar, and means operable by the cam bar to remove a loop from the hook bar hook and to release it on the opposite side of the bobbin carrier.

2,471,878
LID LIFTER AND CARRIER
Albert M. Lewis, Detroit, Mich.
Application June 13, 1947, Serial No. 754,397
4 Claims. (Cl. 214—65.4)

1. A lid lifter and carrier of the class described, comprising: a base; traction members for supporting said base; a supporting member secured to and projecting upwardly from said base; a rocker swingably mounted at one end on said base and swingable upwardly and downwardly at its free end and normally positioned above said base; a pair of spaced apart arms mounted on said supporting member and swingable upwardly and downwardly at their outer ends; a lid engaging plate carried on the outer ends of said arms; a connecting rod for connecting said plate to said rocker; an engaging hook swingably mounted on said supporting member and overlying said base and said plate and swingable downwardly into position for engaging the edge of a lid to be lifted, said plate being adapted for engaging the opposite edge of said lid; a rod connecting said hook and the free end of said rocker for effecting, upon rocking movement of said rocker, simultaneous movement of said hook and said plate; and resilient means for normally retaining said swingably mounted arms in elevated relation and retaining said rocker in upwardly rocked position.



2,471,879
VERTICAL ILLUMINATOR
David D. Lowber, Snyder, and Leslie J. Peters, Buffalo, N. Y., assignors to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application February 8, 1946, Serial No. 646,290
16 Claims. (Cl. 240—2)

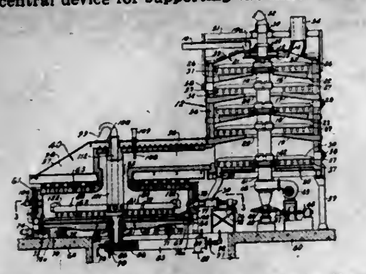


1. An illuminator for use with a microscope of the character described and having an adjustable slide and body tube, said illuminator having a body portion adapted to be detachably carried thereby and adapted to receive an objective lens system detachably secured to said body portion in optical alignment with said body tube, a tubular arm carried by said body portion, said arm comprising a stationary tubular part and a movable tubular part, a lamp housing carried by said movable part and containing a light bulb and condenser lens system therein, an apertured diaphragm carried by said movable tubular part, said light bulb being axially adjustable relative to said housing and condenser lens system, and said housing being axially adjustable relative to said movable tubular part for converging the light from said bulb toward the aperture of said diaphragm, and a reflector in said body portion for directing light from said light bulb through said objective and onto a specimen positioned for observation through said microscope, said movable tubular part being axially adjustable to allow imaging of said diaphragm at the plane of said specimen.

2,471,880
VALVE
Karl MacDonald, Wellsville, N. Y., assignor to Worthington Pump and Machinery Corporation, Harrison, N. J., a corporation of Delaware
Application November 2, 1945, Serial No. 626,256
3 Claims. (Cl. 251—167)

3. A nozzle control valve for steam turbines as claimed in claim 2 wherein the portion of said valve seat adjacent to the bottom surface of said counterbore is of smaller diameter than the diameter of the spaced ribs and is free from engagement with the annular wall of the counterbore.

2,471,881
PORTABLE WELDING DEVICE
Matthew J. Manning and Paul F. Eisen, Detroit, Mich., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 14, 1948, Serial No. 38,603
6 Claims. (Cl. 219—4)



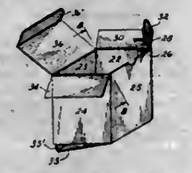
1. A portable welding device comprising in combination, a transformer including a secondary having a base portion and a loop extending transversely therefrom on one side, and a welding unit mounted on said secondary base portion on the side opposite said loop.

2,471,882
MEANS FOR CONVERTING MATERIAL
Warren S. Martin, Massapequa, N. Y.
Application May 7, 1948, Serial No. 667,872
11 Claims. (Cl. 263—26)

1. A calcining furnace comprising a peripheral wall, a rotary hearth having a central discharge port, a low flat roof having a central gas outlet, burners directed inwardly through said wall, stationary radial rabbling arms with longitudinal passages and rabble teeth projecting downwardly

therefrom to feed material to said central discharge port, means for introducing material through said wall to the outer part of said hearth, a central device for supporting the inner ends of

said arms and supplying air to the interior thereof, and means at said wall to support the outer ends of said arms and to supply the air therefrom to the burners.



2,471,883

BOX AND CORNER LOCK THEREFOR

Paul W. Miessler, Lakewood, Ohio, assignor to The Hankins Container Company, Cleveland, Ohio, a corporation of Ohio

Application November 22, 1946, Serial No. 711,626

6 Claims. (Cl. 229—45)

1. A box blank of paperboard or the like including a series of side panel portions in adjoining relation, an overlap flap extending from the free end of one of the outer side panels of said series, corner lock tabs extending laterally from the opposite sides of said overlap flap and having inner edge portions disposed immediately adjacent the junction of said overlap flap and said one of said outer side panels, top and bottom end flaps extending laterally from the opposite sides of the other outer side panel of said series, and corner interlocking tabs extending longitudinally from the outer ends of each of said end flaps.

2,471,884

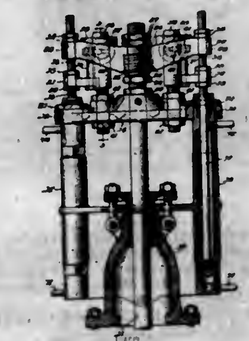
HEATED DENTAL INSTRUMENT TABLE

Edward L. Monnot, Canton, Ohio, assignor to The Weber Dental Manufacturing Company, Canton, Ohio, a corporation of Ohio

Application July 2, 1945, Serial No. 602,695

2 Claims. (Cl. 219—37)

2. In a dental instrument table, an under pan, means fixedly and non-rotatably mounting the under pan, the under pan including a contiuous upturned flange extending etirely around an upwardly and downwardly extending axis, a table top, means mounting the table top on the pan for rotation about the axis, and electric heating means located between the pan and the table top, the pan having a depending center pin having a longitudinal axis coinciding with the axis of rotation of the table top, and the center pin being included in the mounting means for the pan, and means interposed between the table top and the center pin for preventing displacement of the axis of rotation of the table top from the axis of the center pin.



2,471,885

HYDRAULIC VALVE ACTUATING MECHANISM

Alfred Mueller, Berwyn, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois

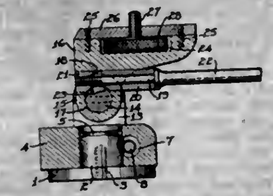
Application April 10, 1944, Serial No. 530,426

5 Claims. (Cl. 137—139)

1. In a valve actuating mechanism, the combination including a closure member and a stem therefore, hydraulic operating means for reciprocating the stem for seating and unseating the closure member, a stem actuating bar cooperating with the said stem and hydraulic operating means, resilient means operable upon seating of the closure member for yieldably resisting unseating movement of the closure member, latch means supported by the said stem actuating bar for automatically locking the closure member in its seated position, and means actuated by unseating movement of the hydraulic operating means for unlocking said latch means to permit unseating movement of the closure member.

2,471,886

CAMERA TRIPOD HEAD



Ralph I. Nielsen, Los Angeles, Calif.

Application July 5, 1946, Serial No. 681,481

3 Claims. (Cl. 248—183)

1. A camera tripod head, comprising: a base member adapted for attachment to a tripod and having an upstanding journal; a lower body member revolubly mounted on said journal; an upper body member; hinge means connecting said upper body member to said lower body member for movement about a horizontal axis, said means including a journal; means defining a passageway extending in offset transverse relation to the axis of each of said journals; a clutch

means for each journal, including a clutch stem extending into each passageway, a clutch sleeve journalled on said stem a clutch nut threaded on said stem, the confronting ends of each nut and

its sleeve being beveled for engagement with their corresponding journal, each of said clutch means adapted to be tightened or loosened by rotation of its stem.

2,471,887

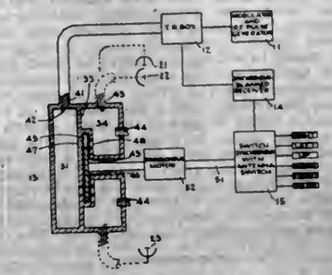
STABILIZED POLYMER

Joseph F. Nelson, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application August 21, 1945, Serial No. 611,909

4 Claims. (Cl. 260—93)

1. A composition of matter comprising in combination a copolymer of isobutylene with a multiolefin having from 4 to 6 carbon atoms per molecule and an indicated molecular weight above about 20,000 together with a polyalkylated monophenol having a methyl substituent in the para position and tertiary butyl substituents in both ortho positions.



2,471,888

RADIO OBJECT LOCATION DEVICE

William H. Newbold, deceased, late of Langhorn, Pa., by Hannah M. Newbold, executrix, Langhorn, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application August 3, 1944, Serial No. 547,899

4 Claims. (Cl. 343—10)

3. In a proximity indicator system; a plurality of fixed antenna structures each having a predetermined space radiation pattern; a plurality of indicators, each individual to one of said antenna structures; a signal generating and reception circuit; a primary cavity resonator connected to said signal generating and reception circuit; a plurality of secondary cavity resonators, each of said secondary cavity resonators being individual to and connected to one of said antenna structures; means for successively coupling said secondary cavity resonators to said primary cavity resonator; and means for simultaneously connecting the associated indicator to said signal generating and reception circuit.

2,471,889

RUST PREVENTIVE COMPOSITIONS

Miriam A. Paliwoda, Bayonne, and Gordon W. Duncan, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application February 24, 1947, Serial No. 730,554

6 Claims. (Cl. 106—14)

3. A rust preventive composition consisting essentially of a major proportion of volatile hydrocarbon having a flash point between 90° and 120° F., a plasticizer, and 5 to 25% of an ester of a polyhydric alcohol selected from the group which consists of pentaerythritol and polypentaerythritol, said ester containing one esterifying radical of a saturated fatty acid having from 12 to 22 carbon atoms and three radicals of saturated carboxylic acid having 1 to 4 carbon atoms.

2,471,890

POLYMERIZATION OF ISOBUTYLENE IN THE PRESENCE OF CONTROLLED AMOUNTS OF PROMOTERS FOR THE REACTION

Frederick A. Palmer, Wooster, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware

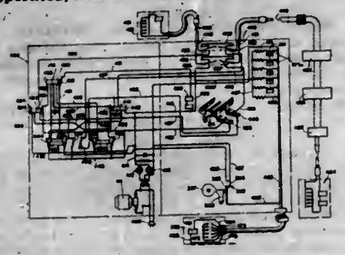
No Drawing. Application June 22, 1946, Serial No. 678,688

6 Claims. (Cl. 260—85.3)

1. A process for producing a polymer which includes the steps of forming a solution of an aluminum halide in an alkyl halide having a concentration in the range between 0.04 and 0.5 gram of aluminum halide per 100 cc. of solution, chilling the solution to a subatmospheric temperature, adding to the chilled solution an amount of a hydrogen halide in the range between 2 and 15 parts per million based on the alkyl halide, and admixing the chilled solution containing hydrogen halide to a moisture free mixture comprising tertiary olefin and alkyl halide chilled to a temperature in the range between —50° and —175° F. in an amount sufficient to polymerize said olefin.

2,471,891

TWO-WAY REGENERATIVE REPEATER



Louis M. Potts, deceased, late of Evanston, Ill., by Martha W. C. Potts, executrix, assignor to Teletype Corporation, Chicago, Ill., a corporation of Delaware

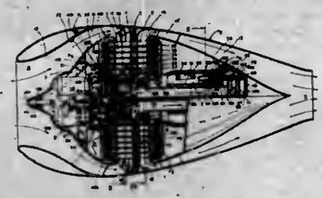
Application September 18, 1944, Serial No. 554,637, now Patent No. 2,403,682, dated July 9, 1946, which is a division of application Serial No. 462,522, October 19, 1942, now Patent No. 2,403,679, dated July 9, 1946. Divided and this application February 28, 1946, Serial No. 650,981

1 Claim. (Cl. 178—71)

In a two-way regenerative repeater, a first line section, a second line section, a signal repeating contact means comprising a single signal receiving magnet and two repeating contacts controlled according to the signals received by said magnet, said contacts invariably operated in unison, one of said contacts invariably associated with one line section and the other of said contacts invariably associated with the other line section, a series of levers, one for each element of a code, said receiving magnet having its armature in op-

erative relation to said levers, means to operate said levers in timed relation to the corresponding elements of a signal received by said magnet, means to modify the motion of said levers according to the position of the armature when the lever is operated, means to operate said contact means

by said levers to transmit a signal corresponding to the signal received by said magnet, and means controlled by signals received in one line section to place a shunt on the contact associated with that line section, whereby only one of said repeating contacts is effective at a time dependent upon the direction of transmission.



2,471,892

REACTIVE PROPULSION POWER PLANT HAVING RADIAL FLOW COMPRESSOR AND TURBINE MEANS

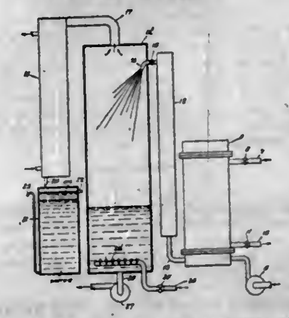
Nathan C. Price, Hollywood, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.

Application February 14, 1944, Serial No. 522,342

21 Claims. (Cl. 60—35.6)

7. In a turbo-compressor apparatus, a plurality of concentrically positioned radially intercommunicating squirrel-cage rotors in surrounding relation to one another, each of said rotors having a plurality of peripherally spaced longitudinally positioned impeller blades terminating in a common annular ring, said impeller blades in adjacent concentric rows having opposite angles of incidence for counter-rotation with respect to one another, and a single bearing means associated with each of said rotor rings for rotationally supporting each rotor for independent rotation.

14. In a gas reaction propulsive unit, a housing having a forward axial opening for the entrance of air and a rearwardly directed outlet nozzle for the discharging of gases in the form of a propulsive jet, a turbo-compressor in said housing, said turbo-compressor comprising a plurality of concentrically positioned radially intercommunicating rotors, each of said rotors having a plurality of peripherally spaced longitudinally positioned impeller elements, and each of said elements having a turbine blade portion and a compressor blade portion with all of the compressor blades of the same length and all of the turbine blades of the same length, forming thereby separate annular compressor and turbine flow channels of substantially uniform width throughout their radial dimensions, a combustion chamber substantially concentrically related to the axis of said rotors, an outer peripheral inlet to the compressor flow channel communicating with said forward inlet opening for flow of air radially inward through the concentric compressor blades in said compressor flow channel, an inwardly directed discharge from said compressor flow channel leading to said combustion chamber, an outwardly directed radial inlet to said turbine flow channel from said combustion chamber for expansive flow of gases radially outward through said turbine flow channel, and an annular passage leading from the periphery of said gas turbine flow channel and communicating with said rearwardly directed outlet nozzle.



2,471,893

TREATMENT OF CITRUS WASTE PRESS WATER

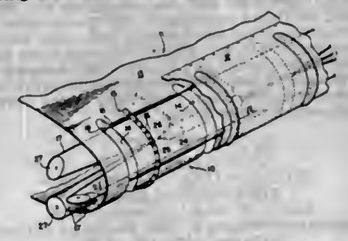
George N. Pulley, Winter Haven, Fla., assignor to Feed Products Laboratories, Inc., Lake Alfred, Fla., a corporation of Florida

Application October 12, 1946, Serial No. 702,994

3 Claims. (Cl. 99—2)

1. The process of separating essential oils and at the same time precipitating scale-forming substances from press water derived from citrus cannery waste, which comprises, heating the press water to a temperature of at least about 215° F. thereby causing scale-forming substances to precipitate therein while at the same time causing the greater part of the essential oil content and a minor portion of the water content to form a vapor phase, flash spraying the thus heated and conditioned press water into a flash tank so as to separate the greater part of the essential oil content thereof along with a minor portion of the water content as flash vapor, condensing the vapors formed on spraying, and separating the essential oils from the condensate.

2,471,894



AIRFOIL ICE REMOVER

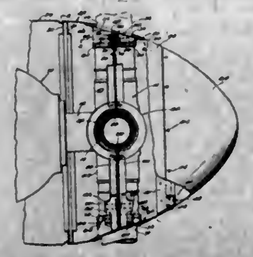
Wilfrid A. Pulver, Sherman Oaks, Calif., assignor to Lockheed Aircraft Corporation, Burbank, Calif.

Application February 3, 1947, Serial No. 725,998

2 Claims. (Cl. 244—134)

1. In combination with an aircraft airfoil such as a wing, ice removing arrangements including a resilient cover overlying the normal surface of the curved leading edge portion of said airfoil, and means for distorting said cover to loosen ice formed thereon, comprising a resilient carrier member adapted to conform to the curve of the leading edge of the covered portion of said airfoil and substantially coextensive with the cover, the resilient carrier member lying in a plane generally perpendicular to, and extending fore and aft with respect to, the airfoil, means for reciprocating said carrier member spanwise of said air-

foil and beneath the cover overlying the same, a series of rollers mounted on said carrier member and adapted to ride on the surface of said airfoil to progressively distort said cover as the carrier member is moved spanwise of the airfoil, the covered portion of said airfoil having a chordwise recess formed therein adapted to receive said carrier member and the rollers mounted therein in the initial or inactive position of said carrier.



2,471,895

SPINNER MOUNTING

Edward W. Radtke, Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware

Application August 10, 1946, Serial No. 689,697

8 Claims. (Cl. 170—159)

1. In an airplane propeller assembly, a hub having radially extended blade shank receiving barrels, blades having their shanks extending into said barrels, extension sleeves secured to the free ends of said barrels, said sleeves having clamp locating mean accurately located with respect to the axis of rotation of the propeller, a spinner shell comprising a forward hollow cone section and a rear section forming an aft extension of said cone, said shell sections having complemental cutouts to receive said blade shanks, and means for detachably connecting said shell sections together and supporting the latter on said sleeves including a pair of clamping members at each blade shank location cooperating with the clamp locating means of said sleeves, one member of each pair being connected to a different shell section.

2,471,896

pH INDICATOR

James W. Ransom, Lansdowne, Pa.

No Drawing. Application July 31, 1946, Serial No. 687,525

7 Claims. (Cl. 23—230)

3. Process which comprises adding a relatively minute amount of the cooked juice of the garden-huckleberry to an aqueous solution and determining the pH of the solution by evaluating the color thereof relative to a predetermined standard.

2,471,897

FLUID MOTOR PACKING

Anton Rappl, Eggertsville, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y.

Application January 13, 1945, Serial No. 572,680

4 Claims. (Cl. 286—26)

1. A fluid motor having a chamber, an end wall of which is formed with an opening, a power transmitting member slidably extending through the wall opening, and a sealing gasket having an elongated body lying in sealing contact with the member and a relatively pliable pressure responsive base flange spreading out over the end wall with its wall opposing underface being dished and its peripheral edge normally seating upon the end wall, such base flange yielding into greater surface contact with the end wall when its underface is acted upon by the pressure differential between the inside and outside pressures.

2,471,898

RECLAMATION OF SELENIUM RECTIFIER CELLS

David W. Rau, Kirkwood, Mo., assignor to Vickers, Incorporated, a corporation of Michigan

No Drawing. Application April 10, 1947, Serial No. 740,719

5 Claims. (Cl. 175—368)

1. A method of treating finished selenium rectifier cells, which comprises dipping the cells in an electrolyte of an organic amine, removing said cells from the electrolyte aging the dipped cells for a period of 12 to 48 hours, and electrically forming the cells.

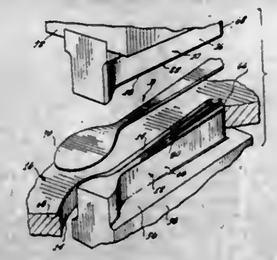
2,471,899

METHOD OF SEPARATING CONSTITUENTS OF ALLOYS BY FRACTIONAL CRYSTALLIZATION

Albert Regner, Prague, Czechoslovakia, assignor to Spolek pro chemickou a hutni vyrobu národní podnik-United Chemical and Metallurgical Works National Corporation, Prague, Czechoslovakia, a Czechoslovak company

No Drawing. Application March 1, 1947, Serial No. 731,872. In Czechoslovakia July 8, 1940

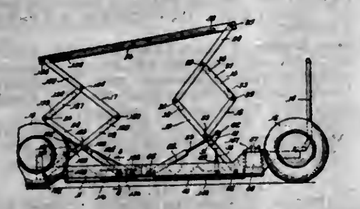
Section 1, Public Law 690, August 8, 1946



Patent expires July 8, 1960

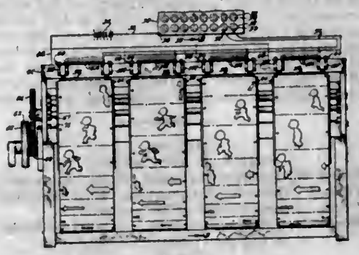
2 Claims. (Cl. 75—63)

1. Process of separating an alloy adapted to be separated by fractional crystallization comprising the steps of preparing a melt of said alloy; then cooling a surface portion of said melt without



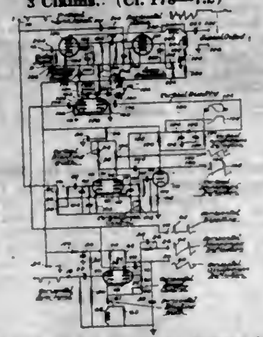
cooling the remainder thereof; and simultaneously therewith keeping said melt in constant movement so as to maintain a substantially uniform temperature and uniform melt composition throughout said remainder of said melt, and to cause an abrupt temperature drop between said remainder of said melt and said cooled surface portion, thus restricting the ensuing crystallization to said cooled surface portion.

2,471,900
METHOD OF PRODUCING FLATWARE
Fred S. Robinson, Yalesville, Conn., assignor to R. Wallace & Sons Manufacturing Company, Wallingford, Conn., a corporation
Application June 5, 1947, Serial No. 752,815
4 Claims. (Cl. 76—105)



1. In the manufacture of articles of flatware such as spoons, forks, butter knives, and spreaders, cake knives, etc., from non-ferrous metal blanks, the method which comprises placing a peripherally shaped blank of variable thickness in a die opening closed at its peripheral side, with the edges of the handle-forming part of the blank lying close to and confined by the adjacent portions, respectively, of the side-closing wall of said opening, and striking said handle-forming part at the opposite sides thereof in said opening between diepunches operable on said part in said opening to shape said part to the desired form and to increase the thickness of the marginal side edges of the handle-forming part of the blank.

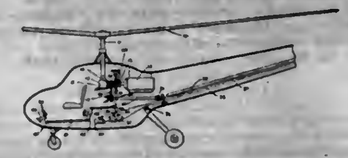
2,471,901
LOAD-LIFTING APPLIANCE
William A. Ross, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a corporation of Illinois
Application April 25, 1945, Serial No. 590,291
3 Claims. (Cl. 254—9)



1. In a load-lifting appliance having a base, a load-carriage, a carriage elevating-and-lowering mechanism between said base and carriage at each the front and the rear of the carriage each including a pair of transversely registered pantograph-linkages hinged to said base and carriage, the novel combination of an arm rigidly outstanding laterally from each of the lowermost of the links of said linkages hinged to the base, a pair of hydraulic cylinders and their piston-rods hinged on said base facing one another and extending forwardly and rearwardly of the base, means rockingly connecting said piston-rods to the corresponding arms of said links, and means to govern fluid under pressure into and from said cylinders to expand and contract said linkages to elevate and lower said carriage, said arms extending upwardly from their links in the lowermost position of the latter.

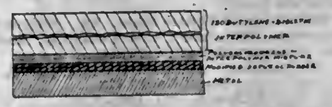
2,471,902
ELECTRICALLY ILLUMINATED ADVERTISING DEVICE
George H. Rufle, Laurelton, N. Y.
Application October 3, 1946, Serial No. 701,044
4 Claims. (Cl. 177—350)

1. A flickerless, illuminated, animated display sign having a display field, said display field comprising a continuous array of separate translucent areas, electric lamp means for separately illuminating each said area, means for preferentially illuminating selected areas of the display field according to a predetermined animation pattern, and including control mechanism comprising a bank of at least two circuit closers, each circuit closer comprising an endless belt of conductive plates, a bank of sensing pins in each circuit closer and arranged in fixed relation to a reciprocating contact plate, each said sensing pin having individual line connections extending to individual lamps in the display field of the electric sign, the corresponding sensing pins of each bank having connections to a single lamp, means for intermittently advancing each belt of plates one plate length between the contact plates and the sensing pins, separate locking means operable by the belt-advancing means to hold a plate in position, means for moving the contact plates and force the so-positioned superjacent belt plates into contact with the banks of sensing pins, masking indicia on each plate defining a completed picture, the said circuit closers respectively carrying sequential image defining masks, and means to progressively actuate plates of the said several circuit closers in predetermined sequence, each successive circuit closer operable to effect circuit closing during the terminal dwell of the immediately preceding circuit closer whereby to effect flickerless animation.



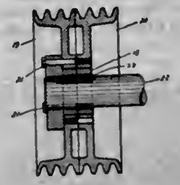
2,471,903
VERTICAL BLANKING CIRCUIT FOR TELEVISION TRANSMITTER SYSTEMS
Otto H. Schade, West Caldwell, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application December 31, 1941, Serial No. 425,083. Divided and this application December 29, 1944, Serial No. 570,369
3 Claims. (Cl. 178—7.2)

3. A television transmitting system including a source of vertical synchronizing impulses, a multi-vibrator including a first and a second electron discharge tube, each including a cathode, a control electrode and an anode, means including separate load impedances for maintaining the anodes of the electron discharge tubes positive with respect to their associated cathodes, a condenser coupling the anode of the first electron discharge tube to the control electrode of the second electron discharge tube, means including a time delay circuit for applying the vertical synchronizing impulses to the control electrode of the first electron discharge tube to generate delayed voltage variations of a predetermined amplitude and duration at the anode of said tube, circuit means to further delay the produced delayed voltage variations, a third electron discharge tube including a cathode, a control electrode and an anode, a load impedance for maintaining the anode of said third electron discharge tube positive with respect to its cathode, means for applying the undelayed vertical synchronizing impulses to the control electrode of the third electron discharge tube to generate voltage variations of a predetermined amplitude and duration at the anode of said tube, means for combining the further delayed voltage variations generated at the anodes of the first and the third electron discharge tube to produce vertical blanking control impulses having a predetermined amplitude and time duration, and an electron storage device connected between the anode of said second electron discharge tube and a point of fixed potential whereby voltage variations of substantially sawtooth wave form may be derived from the anode of said second electron discharge tube.



2,471,904
HELICOPTER ROTOR DRIVE AND CONTROL SYSTEM
Charles M. Seibel, Wichita, Kans.
Application September 11, 1947, Serial No. 773,328
12 Claims. (Cl. 170—135.23)

1. In a helicopter, the combination comprising: A vertical lift rotor; variable means for counteracting the torque created by the powered rotation of said rotor; disconnectible means through which power is transmitted to the rotor;



a pilot's control for the disconnectible means; and means operably connecting said pilot's control to the variable torque counteracting means.

2,471,905
ADHESION OF BUTYL RUBBER TO METAL
Winthrope C. Smith, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application February 1, 1944, Serial No. 520,712
10 Claims. (Cl. 154—130)

2. In a process of adhering isoolefin-diolefin interpolymer to metal, the improvement which comprises coating the metal with an adherent film of modified rubber, adhering to said film a layer in which polychloroprene is mixed with isoolefin-diolefin interpolymer, applying to said layer a layer of isoolefin-diolefin interpolymer, and curing the interpolymer in said layers while curing the polychloroprene mixed with the interpolymer in the first-mentioned layer into a unitary mutually adherent.

2,471,906
PULLEY
Paul A. Smith, Mars, Pa.
Application July 27, 1946, Serial No. 686,699
3 Claims. (Cl. 74—230.3)

3. A power-transmitting unit comprising a pulley having a central opening surrounded by a rib that is provided with holes that extend axially therethrough, a hub fitting within the opening and adapted for connection to a shaft, a flange on the hub engaging an end face of the rib, screws extending through the flange and through the holes in the rib, and means for rigidly connecting the screws to the rib, the said means comprising a second pulley on the inner portion of the hub and having detachable connection with the said screws.

2,471,907

METHOD OF AND MATERIAL FOR INCREASING THE CORROSION RESISTANCE OF FERRIFEROUS METALS

Eugene Snyder, Philadelphia, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware

No Drawing. Application April 1, 1948, Serial No. 18,505
7 Claims. (Cl. 148—6.15)

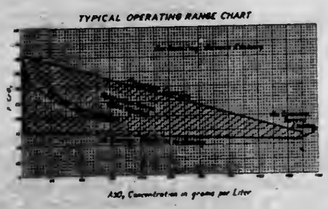
1. In the art of coating ferriferous metal to increase its corrosion resistance the method which includes the step of treating the surface with a bath the essential coating-producing ingredients of which consist of an aqueous solution of phosphate from the class which consists of alkali metals and ammonium, said solution also containing from about 0.0005% to 0.05% by weight of the total treating solution of soluble chlorite calculated as $NaClO_2$ and the pH of said solution being from approximately 4.5 to approximately 6.5.

2,471,908

METHOD OF AND MATERIAL FOR PREPARING SURFACES OF FERRIFEROUS METALS FOR THE RECEPTION OF A SICCATIVE FINISHING COAT

Eugene Snyder, Philadelphia, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware

No Drawing. Application April 8, 1948, Serial No. 19,573
7 Claims. (Cl. 148—6.15)



1. In the art of coating ferriferous metal the method which includes the step of treating the surface with a composition the essential coating-producing ingredients of which consist of an aqueous solution of phosphate from the class which consists of alkali metals and ammonium, said solution also containing a quantity of soluble peroxygen compound sufficient to give an available oxygen per cent by weight of the total treating solution of from about 0.008% to about 0.00016% and the pH of said solution being from approximately 4.5 to 6.

2,471,909

METHOD AND MATERIALS FOR PRODUCING COATED ALUMINUM

Frank Palin Spruance, Jr., Ambler, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware

Application March 9, 1946, Serial No. 653,418
9 Claims. (Cl. 148—6.2)

9. A process for coating aluminum consisting in treating the metal with an acid aqueous solution the essential, active, coating-producing ingredients of which are fluoride ion, dichromate ion, arsenate ion and hydrogen ion, the ions being present in amounts stoichiometrically equivalent to

	Grams per liter
Fluorine	0.9 to 12.5
Chromic acid (CrO_3)	3.75 to 60.0
Arsenate (AsO_4)	3.24 to 462

the ratio of fluoride ion to dichromate, expressed as $F : CrO_3$, being between 0.135 and 0.405; the pH of the solution being between about 1.4 and 2.8, as measured by the lowest value indicated by a glass-electrode pH meter within the first ten minutes of immersion of the electrode in the solution, and heating the treated metal to at least partially dehydrate the coating formed by the solution.

2,471,910

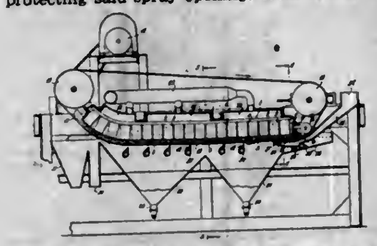
APRON

Ernest N. Stanton, Grosse Ile, Mich.

Application April 23, 1947, Serial No. 743,310
2 Claims. (Cl. 2—52)

2. In a device of the character described, including an apron, a belt secured to said apron, said belt having sufficient length to extend substantially about the body of a person, said belt consisting of an outside section which is secured to said apron and an inside section which is secured to said outside section along the top marginal edge and at spaced intervals positioned at right angles to said top marginal edge, whereby to form a plurality of inverted pockets adapted to accommodate the undulations of a spring wire member.

2,471,911



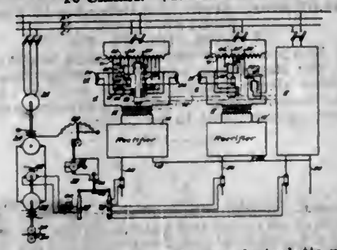
MAGNETIC SEPARATOR

Roswell H. Stearns, Wauwatosa, Wis., assignor to Stearns Magnetic Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin

Application August 30, 1944, Serial No. 551,802
1 Claim. (Cl. 209—225)

A magnetic separator comprising a liquid containing tank, an endless belt having a lower stretch passing through the liquid in said tank, means for driving said belt, feed means at one end of said separator for feeding material to the under side of said belt, a plurality of magnets having rows of pole pieces extending transversely across said belt, said rows of pole pieces being spaced lengthwise of said belt and being of opposite polarity and having portions intermeshing with and spaced from portions of adjacent rows to provide a zone of changing polarity to produce zones of greatest agitation for magnetic material clinging to the under side of said belt, spray means directed towards said belt to produce circulation

of the liquid adjacent the zones of greatest agitation, said spray means including pipes extending transversely across said tank and having upwardly directed spaced spray openings and slanting baffles overhanging said spray openings and protecting said spray openings from falling ma-



terial and serving to spread and direct a thin, substantially uniform sheet of water against the under side of said belt, said belt having a discharge portion at a point beyond said pole pieces, and means for receiving concentrates from the discharge portion of said belt.

2,471,912

CONTROL OF ELECTROLYTIC PROCESSES

Glenn E. Stoltz, Pittsburgh 18, John R. Erbe, Mount Lebanon, and Ralph A. Geiselman, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 8, 1942, Serial No. 468,216
10 Claims. (Cl. 204—211)

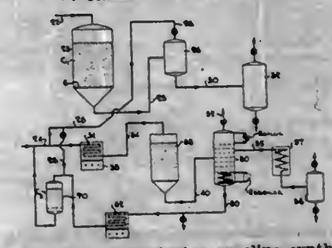
1. In a control system for an electrolytic process, means for supplying variable amounts of current for the process, means for effecting the travel of a length of material through the electrolytic process at different speeds, and means jointly responsive to the current flow in the electrolytic process and the speed of travel of the length of material through the process for so controlling said second-mentioned means as to maintain a predetermined ratio of speed and current.

2,471,913

TREATMENT OF SOLID DILUENT IN HYDROCARBON SYNTHESIS PROCESS

Simpson D. Sumerford, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application February 27, 1947, Serial No. 731,406
3 Claims. (Cl. 260—449.6)



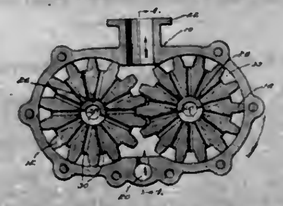
1. In a hydrocarbon synthesis process wherein carbon monoxide and hydrogen react in a synthesis zone in the presence of an iron type catalyst to form hydrocarbon constituents containing more than one carbon atom in the molecule and wherein said iron catalyst disintegrates due to carbon formation resulting in loss of catalyst fluidity, the improvement which comprises using with said fluidized catalyst an inert fluidizable solid siliceous diluent which has previously been treated with an acid.

2,471,914

SYNTHESIZING HYDROCARBONS

Sumner B. Sweetser, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware

Application February 14, 1945, Serial No. 577,822
7 Claims. (Cl. 196—52)

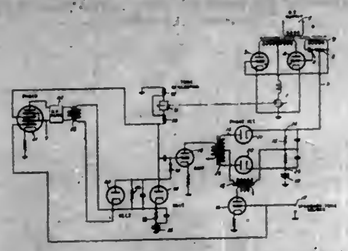


1. A method of producing gasoline synthetically which comprises causing a mixture of carbon monoxide and hydrogen to contact at elevated temperature a suitable powdered synthesis catalyst formed into a dense, fluidized suspension with the synthesis gases in the synthesis zone to form a quantity of hydrocarbons boiling in both the gasoline and gas oil ranges, withdrawing the product from the synthesis zone, fractionating the product to form a naphtha fraction containing all the normally liquid hydrocarbons boiling up to about 400° F. and a gas oil fraction boiling about about 400° F. up to about 860° F., subjecting said naphtha fraction as a whole to aromatization, subjecting said gas oil fraction to a catalytic treatment involving cracking and recovering from the aromatization and the catalytic treatment involving cracking a quantity of gasoline of improved octane rating.

2,471,915

GEAR PUMP

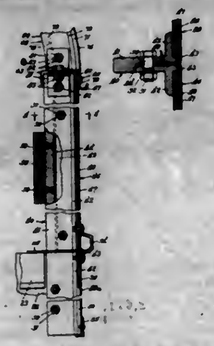
Alfred B. Thacher, West Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware



Application December 24, 1946, Serial No. 718,137
11 Claims. (Cl. 103—2)

2. A pump comprising a casing, a pair of intermeshing gears rotatably mounted therein, a discharge passage for said casing, a main intake passage and supplementary intake passages for

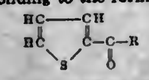
said casing, said supplementary intake passages extending from said main intake passage centrally within said gears and being open as successive angularly spaced radially extending passages within said gears have their outer ends in communication with the intake side of said casing.



2,471,916
MOTOR SPEED CONTROL
Philip E. Veit, Orange, N. J., assignor to Finch Telecommunications, Inc., Passaic, N. J., a corporation of Delaware
Application March 19, 1947, Serial No. 735,752
8 Claims. (Cl. 318—345)

8. In a speed control system for controlling the speed of a motor, a frequency generator connected to said motor and generating a signal frequency in accordance with the speed of said motor, a standard frequency, a pair of diodes, a first amplifier tube, circuit connections including said amplifier tube from said source of standard frequency to the input of said diodes for alternately rendering said diodes conductive, a second amplifier tube, circuit connections including said second amplifier tube from said frequency generator to the plates of said diodes for varying the output of said diodes as they become conductive in accordance with the phase relation between the signal of said frequency generator and said standard frequency, a pair of gaseous discharge tubes, each having a cathode, grid and anode, means including the output circuits of said diodes to the grids of said gaseous discharge tubes for controlling the period of discharge of said tubes, means including circuit connections from the output circuit of said gaseous discharge tubes to the motor whose speed is being controlled for driving said motor, and means for normally biasing said second amplifier tube below cut-off, and circuit connections including means responsive to a speed of said motor for controlling said last mentioned biasing means to place a bias which is not as great as the cut-off in said second amplifier tube when said motor speed approximates normal speed.

2,471,917
TRUCK BODY COMPRISING REMOVABLE PANELS
Perry J. Wilson, New Paltz, N. Y., assignor to Electric Boat Company, Groton, Conn., a corporation of New Jersey
Application August 7, 1946, Serial No. 689,052
5 Claims. (Cl. 296—28)



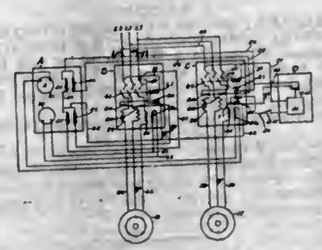
1. In a truck body construction, a floor structure, uprights of substantially T cross section secured to said structure extending upward therefrom respectively comprising a stem having a head at one end and an element projecting beyond said head oppositely to said stem as a continuation of the latter, said uprights respectively having therein a lengthwise slot opening through said element providing at each side of said slot a rib extending lengthwise of and projecting beyond said head, and panels extending between said uprights seating at their side portions on

said heads with their sides in close proximity to said ribs, said panels having lateral projections extending across said ribs provided with flanges extending into and removably secured in said slots.

2,471,918
ELECTRODEPOSITION OF COPPER
Karl S. Willson and David G. Ellis, Cleveland, Ohio, assignors to The Harshaw Chemical Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application December 12, 1946, Serial No. 715,626
3 Claims. (Cl. 204—52)

1. In a process for electrodepositing bright copper, the step which comprises electrolyzing an aqueous alkaline copper cyanide solution and a minor proportion of a soluble acyl thiophene compound corresponding to the formula

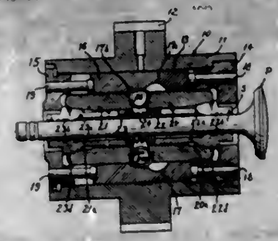
where R represents a radical of the class consisting of alkyl and aryl radicals having not more than six carbon atoms, the copper cyanide concentration being from 30 to 150 grams per liter and the concentration of the acyl thiophene compound being from 0.10 to 3.75 grams per liter.



2,471,919
SIGNALING MAILBOX
Giuseppe Alfisi, Springfield, Mass.
Application February 17, 1948, Serial No. 8,830
4 Claims. (Cl. 206—57)

3. In a mail box an inwardly opening upper hinged door, an outwardly opening lower hinged door, a pivotally mounted receptacle within the box, yieldable means which return the receptacle into its non-receiving position, and circuit closing means on the box in operative relation to said receptacle, a latch within the box, latch releasing means on the lower door, the provision and arrangement being such that opening movement of the upper door causes pivotal movement of the receptacle into engagement with the latch to be held in a mail-receiving position thereby actuating said circuit closing means and opening movement of the lower door causes the latch releasing means to disengage the receptacle for movement into its non-receiving position by said yieldable

means thereby enabling said circuit closing means to open.

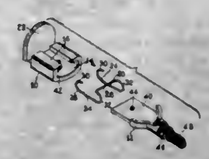


2,471,920
CONTINUOUS PRESS
Raymond T. Anderson, Lakewood, Ohio, assignor, by mesne assignments, to The V. D. Anderson Company, Cleveland, Ohio, a corporation of Ohio
Application November 21, 1945, Serial No. 630,057
3 Claims. (Cl. 318—434)

1. Control means for a motor system which includes a service motor and a feed motor cooperating therewith and provided with a starting and maintaining circuit, comprisng an overload relay in the feed motor circuit, means responsive to said overload relay for opening the feed motor circuit and stopping the feed motor when overloaded, and means rendered effective by thus opening the feed motor circuit and effective upon reduction in load upon the service motor to thereby close the feed motor circuit and restart the feed motor.

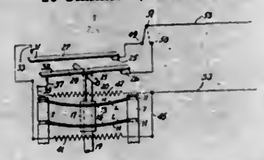
2,471,921
SPRING LOADED COLLET CHUCKING ASSEMBLY
Thomas J. Ashdown, East Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application April 25, 1946, Serial No. 664,897
6 Claims. (Cl. 279—50)

1. A chuck assembly comprising a collet adapted to grip and release an inserted workpiece, a shiftable member arranged to move said collet into gripping position and to release said collet from gripping position, a spring device for shifting said member, and an actuator for loading said spring device to effect shifting of the member, said spring device adapted to absorb excess



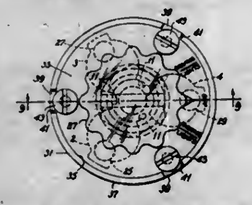
movement imparted thereto by said actuator for preventing damage to said shiftable member.

2,471,922
PRODUCTION OF AROMATIC DERIVATIVES
William N. Axe, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application June 22, 1944, Serial No. 541,663
6 Claims. (Cl. 260—671)



5. A process for the production of a normal aliphatic derivative of an aromatic compound, which comprises reacting an alkenylatable aromatic compound with a normal 1,3-diolefin at a reaction temperature not greater than about 150° F. and under a pressure sufficient to maintain the reactants substantially in liquid phase, with a molal excess of said aromatic compound, in the presence of a catalyst comprising a complex resulting from saturating orthophosphoric acid with boron trifluoride, and recovering from effluents of said reaction a hydrocarbon fraction comprising an alkenyl derivative of said aromatic compound so produced.

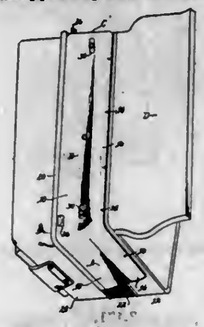
2,471,923
ELECTRIC CONNECTOR WITH SPRING WIRE
Hugh W. Batcheller, Newton Highlands, Mass., assignor to Ark-Les Switch Corporation, Watertown, Mass., a corporation of Massachusetts
Application May 29, 1948, Serial No. 29,970
1 Claim. (Cl. 173—363)



A member of an electric connecter comprising a substantially rigid channel with a metallic bottom and inturned flanges overhanging said bottom, and a U-shaped piece of spring wire mounted on said channel with a portion extending longitudinally under each of said flanges, each said portion being downwardly bowed to be convex toward said bottom and bent up at its ends to engage the ends of the respective flanges whereby to maintain said spring element assembled with said channel.

2,471,924
THERMAL RELAY
John D. Bolesky, Attleboro, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts
Application July 10, 1943, Serial No. 494,173
10 Claims. (Cl. 60—23)

1. A thermal relay comprising an ambient-temperature-compensated thermostatic means embodying two inherently snap-acting thermostatic plates arranged so that snap movement of one opposes snap movement of the other, said plates being coupled for conjoint snap movement, a first electrical heating circuit including a first switch for heating one of said plates to snap both plates from a first position to a second position, a second electrical heating circuit including a second switch for heating the other plate to snap both plates from their second position to their first position, and switch actuating means controlled by said thermostatic means adapted in the first position of said plates to close the first switch and open the second switch, and in the second position of said plates to close the second switch and open the first switch.



2,471,925
THERMAL SWITCH
John D. Bolesky, Attleboro, Mass., assignor to Metals & Controls Corporation, Attleboro, Mass., a corporation of Massachusetts
Application December 23, 1944, Serial No. 569,467
17 Claims. (Cl. 200—113)

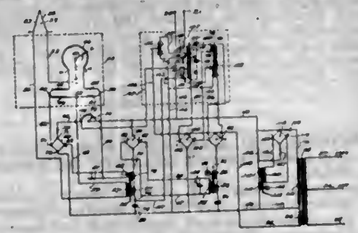
1. A thermostatic element for the protection of a plurality of circuits comprising a plurality of automatically resettable snap-acting thermostatic plates, a rigid mounting, said plates being joined together at said mounting in stress-isolated relation so that stresses in any one plate are substantially independent of stresses in any other plate, whereby any one plate retains its automatic reset characteristic regardless of the condition of any other plate.

2,471,926
SUPPORT AND GUARD FOR ACCORDIONS
William S. Borek, Worcester, Mass.
Application April 9, 1946, Serial No. 660,754
1 Claim. (Cl. 84—376)

An accordion bellows guard comprising a generally U-shaped sheet of rigid material, the sheet extending normal to the general plane of the U and being flat for a distance inwardly from one edge, the flat portion terminating in an offset portion along one leg of the U, the offset portion gradually diminishing toward the other leg of the U and disappearing adjacent said other leg,

the latter being flat across the entire width thereof, and spaced means along the flat portion of the entire guard for fastening the latter to a keyboard box of an accordion with the offset portion overlying the bellows thereof.

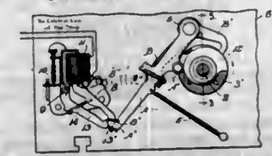
2,471,927
PREPARATION OF METHACRYLONITRILE FROM α-AMINOISOBUTYRALDOXIMES
Newman M. Bortnick, Philadelphia, and Darrel J. Butterbaugh, Abington, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 18, 1947, Serial No. 792,598
6 Claims. (Cl. 260—465.9)



1. The process of preparing methacrylonitrile which comprises heating an α-dialkylaminoisobutyraldoxime at 275° to 425° C. in the presence of a dehydrating catalyst.

2,471,928
PREPARATION OF METHACRYLONITRILE
Newman M. Bortnick and George W. Cannon, Philadelphia, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 18, 1947, Serial No. 792,599
18 Claims. (Cl. 260—465.9)

1. A process for preparing methacrylonitrile which comprises decomposing the dimeric addition product of isobutylene and nitrosyl chloride by treating it at a temperature between 110° and 350° C. with an amine, whereby methacrylonitrile is formed, and separating the methacrylonitrile.

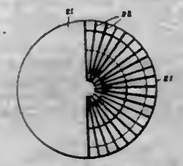


2,471,929
HEATER CONTROLLING CIRCUIT
Victor W. Breitenstein, Chicago, Ill., assignor to Illinois Testing Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application February 11, 1944, Serial No. 521,961
18 Claims. (Cl. 236—78)

6. In a heater controlling circuit, the combination of a thermocouple and a potentiometer for controlling a first stage trigger circuit, with a second stage amplifying circuit for increasing the current output, relay means controlled by said second stage for controlling the on and off heating and cooling periods of a heater, and means for changing the characteristics of energization

of the trigger control circuit so that the heater is turned off at a predetermined lower operating point than the set temperature desired.

2,471,930
SHIP'S LOG TRANSMISSION REGULATOR
Edwin F. Britten, Jr., Short Hills, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a corporation of Delaware
Application February 4, 1944, Serial No. 521,090
3 Claims. (Cl. 73—178)

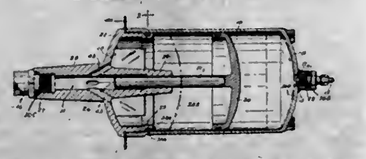


2. In a device of the character described, a drive shaft, a driven shaft, a constantly rotating motor for rotating said drive shaft, a cyclic clutch interposed between the drive and driven shafts, said clutch having a ratchet wheel fast upon the drive shaft and an annular casing fast upon the driven shaft and provided with a spring-urged pawl adapted to engage said ratchet wheel to render the clutch effective, and means for rendering said clutch successively effective and ineffective to rotate the driven shaft intermittently comprising a clutch-detent compound lever one member of which has a spring-urging connection with the stationary framing and the other member of which has a spring-urging connection with the first-named member and engagement with said pawl to render the clutch normally ineffective, a latch engaging the first-named member to maintain it in normal position with said other member engaged with said pawl, and an electromagnet wired to the circuit making and breaking means of the electric log of a marine vessel, said latch including an armature for said magnet and being released upon energization of said magnet to release said pawl and render the clutch effective, said other member having riding engagement with the periphery of said casing throughout the clutch cycle and re-engagement with said pawl at the end of the cycle to render the clutch again ineffective, a cam upon the driven shaft for restoring said detent to normal position during the clutch cycle, and a secondary latch engaging the restored detent to maintain the same in normal position engaged with said pawl to render the clutch ineffective at the end of the cycle irrespective of deenergization of said magnet at such time.

2,471,931
WELDING ELECTRODE FOR HARD FACING
René Castro, Ugine, and André Lebet, Albertville, France, assignors to Societe d'Electro-Chimie, d'Electro-Metallurgie et des Acieries Electriques d'Ugine, Paris, France, a corporation of France
Application August 9, 1945, Serial No. 609,852
In France October 8, 1943
6 Claims. (Cl. 219—8)

1. A supply rod composition comprising an intimate mixture of an oxidised compound of a metal selected from the group consisting of tungsten, molybdenum, tantalum, titanium, vanadium, columbium, hafnium and zirconium, an iron alloy adapted to form a metallic binding medium for the carbide of the selected metal, a proportion of carbon large enough to reduce the oxidised compound and to form a carbide with the reduced metal, and an agglomerating binder adapted to form no residuum when heated to the melting temperature of the metallic binding medium.

2,471,932
MOLDED PULP APPARATUS AND METHOD
Merle P. Chaplin, South Portland, Maine
Continuation of application Serial No. 135,033, April 5, 1937. This application December 23, 1941, Serial No. 424,205
24 Claims. (Cl. 92—54)

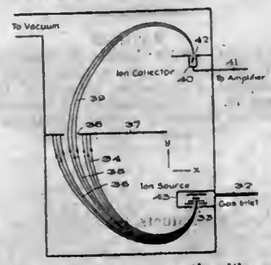


1. A die for forming fibrous pulp articles from a mixture of fibres and water, comprising a perforated moulding portion and an imperforate chamber forming portion, a forming screen clamped between walls of said moulding and forming portions, said chamber forming portion presenting a shoulder of such shape and size as to limit and maintain the thickness of the moulded article at its edge reduced with respect to the thickness of the main wall of the article.

16. The method of producing a molded pulp article which consists in depositing a pulp article on a suitable forming die, thereafter transferring the thus formed article to and between a pair of cooperating pressure dies, one of which is a smooth surfaced imperforate die directly contacting with one surface of the article and the other of which is a smooth surfaced die also directly contacting with the article and having in its smooth article contacting surface narrow vapor escape ducts of a depth greatly exceeding their width and extending in the direction of the

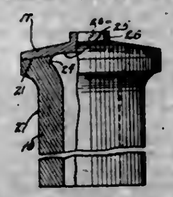
draw of this pressure die forcing said pressure dies against the opposite faces of the article under sufficient power to force portions of the article which are in juxtaposition with said ducts to project into and for a portion only of the depth of the latter and form on said article projecting ribs, and heating at least one of said pressure dies while the article is under compression between them to heat-dry said article at least sufficiently to render the resulting structure permanent.

2,471,933
SEALING DEVICE
Niels A. Christensen, South Euclid, Ohio
Original application May 26, 1943, Serial No. 488,530. Divided and this application April 12, 1945, Serial No. 587,981
1 Claim. (Cl. 285—154)



The combination of a hollow member adapted to contain fluid under pressure, a member attached thereto and stationary therewith, said member having a recess opening outwardly therefrom, a packing element in the recess and comprising a resilient ring normally substantially circular in cross-section, and acting alone in the recess, the depth of the recess being smaller than the normal cross-sectional diameter of the ring, whereby the ring is deformed into an ellipsoidal cross-section, the recess having a width greater than the longest cross-sectional dimension of the deformed ring, whereby the ring may be shifted the recess by fluid pressure in the hollow member, and a coupling member extending through said ring and having a threaded connection with said first-mentioned member.

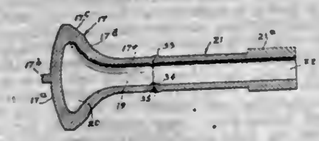
2,471,934
ABRASIVE WHEEL
Joseph Chudner, New York, N. Y.
Application January 24, 1948, Serial No. 4,137
4 Claims. (Cl. 51—194)



1. A wheel composed of a pair of mating sections hingedly connected at their peripheral portions, a fixed arbor and an abutment on one of said sections, a threaded pin fixed on the other one of said sections, and a rotatable and axially movable nut surrounding one end of the arbor for threaded engagement with the pin and also disengagement therefrom for the purpose of causing the closing pivotal movement of the sections toward each other into and securing them in a wheel forming relation by threaded engagement of the nut with the pin while engaged with said abutment or causing the opening pivotal movement of the sections away from each other into a split relation by unthreading and disengagement of the nut from the pin while engaged with said abutment.

2,471,935
METHOD AND APPARATUS FOR SEPARATING CHARGED PARTICLES OF DIFFERENT MASSES
Norman D. Coggeshall, O'Hara Township, Allegheny County, and Morris Muskat, Oakmont, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application March 19, 1945, Serial No. 583,432
26 Claims. (Cl. 250—41.9)

1. A mass spectrometer or the like comprising means for producing a region having a substantially uniformly directed magnetic field whose intensity varies in a manner to impart to a moving charged particle therein an open orbit having spatial periodicity, a source of moving charged particles, a collector of charged particles and a perforated diaphragm, said source and said collector being located in said field at successive points of maximum field strength along a spatially periodic planar open orbit for the desired particles, and said diaphragm being located transverse to the orbit of the charged particles moving between said source and said collector and with its opening positioned on the orbit of the desired particles.

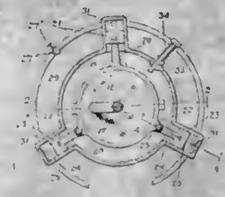


2,471,936
METHOD OF MAKING POPPET VALVES
Archie T. Colwell, Cleveland, Ohio, assignor to Thompson Products, Inc., a corporation of Ohio
Application January 21, 1944, Serial No. 519,140
2 Claims. (Cl. 29—156.7)

1. The method of making hollow poppet valves having cast relatively unforgeable corrosion-resistant head domes and forged stress-resistant

body portions which comprises forming a smooth flat end face on a forged stress resistant hollow metal cylinder, forming a smooth flat mating end face on a relatively unforgeable corrosion resistant solid metal disk, pressing said end faces together for sealing the faces against the atmosphere surrounding the disk and cylinder, impinging a plurality of flame jets around the peripheries of the pressed-together disk and cylinder, moving said jets in axial and radial directions relative to said pressed-together disk and cylinder adjacent the contacting surfaces thereof for heating said surfaces by conduction through the metals radially inward from the peripheries thereof to welding temperatures below the melting points of the metal, continuing application of said pressure during said heating operation to upset the contacting surfaces into concavo-convex cross-sectional relationship and thereby forming a composite integral blank, forging the cylinder portion of the blank to form a valve body having a stem portion and an outwardly flaring tulip portion defining a valve neck, and machining the resulting forged blank into final poppet valve contour to provide a poppet valve with a metal head dome composed of disk metal and metal body portion composed of cylinder metal and said dome being joined to said body portion by an annular weld of greater width than the wall thickness of said valve neck.

2,471,937
METHOD OF MAKING HOLLOW POPPET VALVES
Archie T. Colwell, Cleveland, Ohio, assignor to Thompson Products, Inc., a corporation of Ohio
Application January 24, 1944, Serial No. 519,435
2 Claims. (Cl. 29—156.7)

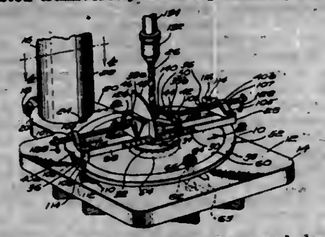


1. The method of producing composite hollow valves having cast hollow head ends and forged hollow stem ends which comprises forming a hollow heat and corrosion resisting alloy casting having a hollow poppet valve head and neck with a cylindrical stem portion extending from the neck and having a flat end face, forging a strong abrasion resisting steel blank to form a hollow cylindrical tube with a thickened end portion and a reduced-diameter stem-defining portion with a flat end face, cleaning the flat end faces of the reduced-diameter stem defining portion of the tube and the stem portion of the casting, axially pressing said end faces together into full contacting relation under pressures from about 300 to 2000 pounds per square inch of contacting surface, impinging flames around the casting and tube on each side of the contacting surfaces for heating said surfaces by conduction to temperatures from about 1000° C. to about 1300° C., continuing the application of pressure on said surfaces during said heating for deforming and pressure welding the surfaces together along an arcuate weld line of greater area than the area of the initial contacting surfaces, machining the resulting blank into final poppet valve shape, and inwardly collapsing the thickened end portion of the tube part of the blank to seal the hollow interior of the valve.

2,471,938
FERROUS SULFATE PRETREATMENT IN EMULSION POLYMERIZATION OF CONJUGATED DIOLEFINS
Willie W. Crouch and James E. Pritchard, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application January 5, 1945, Serial No. 571,540
10 Claims. (Cl. 260—85.5)

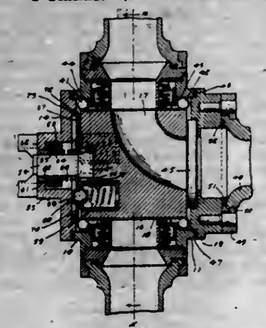
1. A process for the production of a polymer from a polymerizable organic monomeric material comprising a conjugated diolefin, which comprises forming an aqueous emulsion of said monomeric material, admixing with said aqueous emulsion a polymerization activator consisting of ferrous sulfate, in an amount between about 0.01 to about 0.5 part per 100 parts of monomeric material, and maintaining said admixture free from a polymerization catalyst for a pretreatment period of at least about one hour, subsequently adding to said admixture an oxidizing-type polymerization catalyst and effecting a polymerization of said monomer, and subsequently recovering a polymer so produced.

2,471,939
PUMPING MECHANISM
Douglas P. Davis, Burbank, Calif.
Application August 18, 1944, Serial No. 550,050
14 Claims. (Cl. 103—174)



10. A pumping structure comprising a pump including a piston, a disk, a shaft connected with the disk to rotate the same, means for shifting the disk transversely of the shaft between positions concentric with and eccentric to the shaft, and an operative driving connection between the disk and the piston, the connection between the disk and shaft comprising a crank having a pin concentric with the shaft and a pin eccentric with the shaft, the pins passing through the disk.

2,471,940
ALL-PURPOSE WORK HOLDER FOR DRILLS AND THE LIKE
Exsior Dion, Lincoln, R. I.
Application July 8, 1946, Serial No. 681,994
4 Claims. (Cl. 77—63)

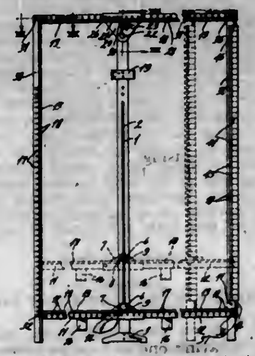


1. A work holder for drills, milling machines and the like having a tool and work holding table means non-rotatably vertically adjustably mounted relative to said tool comprising vise jaw run-way means rotatably mountable on said table means having a scale reading in both directions from the center thereof, one of said means having a circumferential scale thereon and the other of said means having a pointer mark movable relative to the circumferential scale, means to adjustably clamp said run-way means to said table means at different angular positions thereof to hold the run-way means in the desired angular position on said table means, vise jaws radially adjustable on said run-way means, means

to independently radially adjust the position of each vise jaw from the center of said run-way means and retain it in adjusted position abutting the work, a scale reading in both directions from the center thereof mounted transversely on one of said vise jaws, whereby the work may be adjusted transversely and longitudinally relative

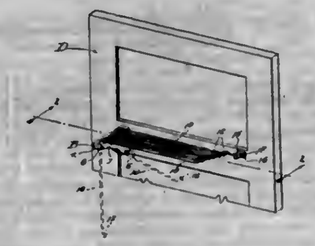
to the center of said run-way means and clamped in adjusted position and a quadrant scale extending transversely vertically adjacent a vise jaw from the rear edge of said run-way means with the vertical edge thereof aligned with the rear edge of said run-way means to mount the work at any desired tilted angle relative to said rear edge of said run-way means.

2,471,941
VALVE AND LINER THEREFOR
George T. Downey, Corry, Pa., assignor to Aero Supply Mfg. Co. Inc., Corry, Pa.
Application May 29, 1944, Serial No. 537,902
3 Claims. (Cl. 251—113)



1. A valve structure comprising a housing having a plurality of ports, a ported plug rotatable in said housing, a cylindrical liner in said housing about said plug and fixed relative to said housing, said liner having openings registering with said ports, and spring-pressed sealing means in said ports bearing against said liner about said openings for sealing said liner relative to said ports, said liner being of such construction that said sealing means will also seal said liner relative to said plug.

2,471,942
METHOD OF RECOVERING VOLATILE MATERIALS
Ernest F. Drew, New York, N. Y.
Application August 23, 1945, Serial No. 612,275
10 Claims. (Cl. 260—412.5)



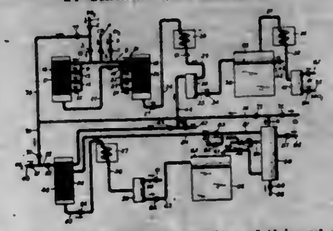
1. A method of treating waste vapors from the hydrolysis of oils and fats which comprises passing said vapors into contact with an aqueous solution of caustic alkali of over 2% to absorb constituents thereof, continuing said contact until a substantial amount of fatty acid has been absorbed, arresting the absorption when the concentration of said caustic alkali has decreased to a point not below about 2% and then recovering said acid from said solution.

2,471,943
CURTAIN STRETCHER
James J. Dvorak, Chicago, Ill.
Application September 21, 1945, Serial No. 617,721
10 Claims. (Cl. 45—24)

1. A collapsible type of curtain stretcher comprising end frame members, leg means engaged thereon for bracing the frame members in position to assist in supporting the curtain stretcher, a self-supporting intermediate supporting unit, upper and lower collapsible frame members pivotally supported on the intermediate unit, means for adjusting and then locking one of said collapsible frame members in extended position on the supporting unit, means for locking the other of said collapsible frame members in extended position on said intermediate supporting unit, clamping means connecting one of said end frame members to the extended upper and lower collapsible frame members, clamping means for clamping the other end frame member in adjusted position on the collapsible upper and lower frame members to form a curtain stretcher frame of a predetermined size, said collapsible upper and lower frame members and the left and right end frame members having openings therein for selectively receiving the clamping means for properly sizing the curtain frame, curtain stretcher pins carried by the left end frame member and the collapsible upper and lower frame members in registering relationship with the openings in said members and all disposed in the same plane when the frame members are assembled, a control rod rotatably supported on the right end frame member, and a plurality of spring controlled frictionally contacting pin carrying keys rotatably supported on the control rod and adapted to be simultaneously moved into an open position to permit the right end frame member to be secured to the collapsible upper and lower frame members, said pin carrying keys adapted to be simultaneously rotated to seat on the front face of the right end member to hold the pins on the keys in curtain stretching position in the same plane as the pins in the remaining frame forming members.

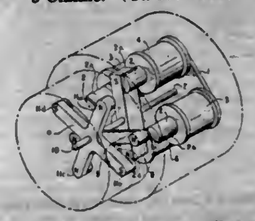
2,471,944
GARMENT HANGER
Herman H. Fernald, Wichita, Kans.
Application April 4, 1947, Serial No. 739,291
2 Claims. (Cl. 211—96)

1. A hanger comprising a bracket body adapted to be secured to a vertical supporting surface and having a top extending horizontally from said surface, said top having a row of spaced openings, a plurality of bars, a second bracket secured to said surface in spaced relation to the bracket body and including an arm extending from said surface a materially shorter distance than the said top of the bracket body, one only of said bars having one end engaged in the opening of the bracket body nearest to the supporting surface and having its other end secured to said arm, the remaining bars each having one end pivoted in one of said openings for swinging movement in a horizontal plane relative to the supporting surface, and means at the other end of each of the said other bars for successively detachably coupling the said other bars together in a group and in spaced parallel relation and for detachably coupling the innermost one of such group with the said one bar.



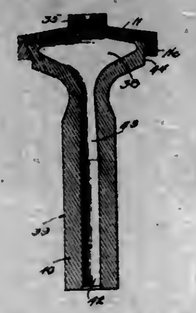
2,471,945
WETTING AGENT
Hans George Figdor, Philadelphia, Pa., assignor to E. F. Houghton and Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application August 15, 1947, Serial No. 768,937
13 Claims. (Cl. 252—352)

1. As a wetting agent a blend of water-soluble surface-active agent and a polyethyleneglycol diester represented by the following formula:



wherein n is a number from 5 to 22 inclusive, R_1 and R_2 are unsubstituted, saturated alkyl groups, the number of carbon atoms in R_1 plus the number of carbon atoms in R_2 being from 12 to 16 inclusive, and the difference between the number of carbon atoms in R_1 and in R_2 being no more than 4, the relative amounts of said water-soluble surface-active agent and diester, based on the combined weight thereof, being between 10% and about 95% of said polyethyleneglycol diester and between about 5% and 90% of said surface-active agent to provide a composition dispersible in water at concentrations less than about 2% and at a temperature of at least about 100° F.

2,471,946
PROCESS FOR MAKING THIONYL CHLORIDE
Edwin F. Fricke, Flushing, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
Application December 10, 1947, Serial No. 790,907
17 Claims. (Cl. 23—203)



6. A process for the production of thionyl chloride which comprises subjecting carbon monoxide, sulfur dioxide and chlorine to successive zones of activated carbon catalysts maintained at increasing temperatures in the range of 160° C. to 220° C. to effect conversion into thionyl chloride, separating thionyl chloride thereby produced from the products of reaction, subjecting the remaining products of reaction together with additional sulfur dioxide to the action of an activated carbon catalyst maintained at a temperature between 280° and 350° C., withdrawing said products of reaction from the latter catalyst zone, and separating thionyl chloride therefrom.

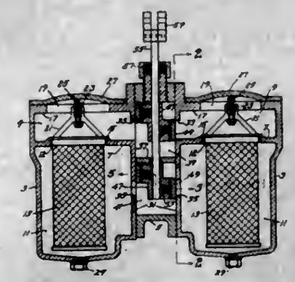
2,471,947
IMPULSE GENERATOR FOR TELEMETERING SYSTEMS
Gabriel M. Giannini, West Los Angeles, Calif., assignor, by mesne assignments, to Howe & Fant, Inc., South Norwalk, Conn., a corporation of Delaware
Application June 4, 1945, Serial No. 597,459
5 Claims. (Cl. 177—380)

1. In an impulse generator, a coil, a permanent magnet member movable between limits in either of two opposite directions to increase the magnetic flux through the coil on movement in one direction and to decrease the flux on opposite movement, a continuously movable driving member, and a magnetic ratchet mechanism comprising a driven magnet connected to the permanent magnet member to move therewith, and a driving magnet connected to the driving member and adapted to move therewith in such manner as to first move one of its poles toward and then past an unlike pole of the driven magnet to move said permanent magnet member in one direction to one of said limits, and then to move one of its poles toward and then past a like pole of the driven magnet to move said permanent magnet member in the opposite direction to the other of said limits.

2,471,948
METHOD OF MAKING POPPET VALVES
Emil F. Gibian, East Cleveland, and Kenneth M. Bartlett, Cleveland, Ohio, assignors to Thompson Products, Inc., a corporation of Ohio
Application January 22, 1944, Serial No. 519,280
2 Claims. (Cl. 29—156.7)

1. The method of making hollow bi-metal poppet valves which comprises pressure-welding together a thick cylindrical billet of stress-resisting metal and a thin billet of corrosion-resisting metal, extruding and piercing the resulting bi-metal blank to form a headed blank having the head portion composed of stress-resisting metal covered with corrosion-resisting metal, controlling the contour of the weld line between the metals during the extruding and piercing operations for maintaining a uniform weld line contour, drilling the pierced portion of the resulting blank up to a level in advance of the weld line to control the thickness of stress-resisting metal in the head portion of the blank, extruding the drilled blank to form an enlongated stem from the stress-resisting metal portion thereof, forming a groove around the periphery of the head of the resulting extruded blank, welding a ring of stress-resistant metal in said groove in intimate bonded relation with both the stress-resisting metal and the corrosion-resisting metal of the valve head, and shaping the resulting blank into final poppet valve contour to provide a valve having a hollow stem and head with the head having a corrosion-resistant metal covering extending over the periphery thereof to provide a seating face.

2,471,949
AROMATIC EARRING OR OTHER ORNAMENT
Benjamin Gilowitz, New York, N. Y.
Application April 14, 1947, Serial No. 741,369
6 Claims. (Cl. 63—14)

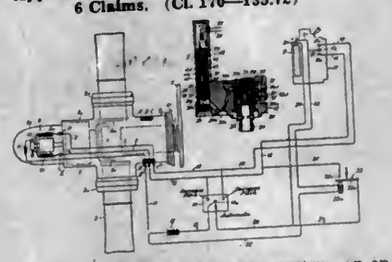


1. An aromatic ornament comprising a perfumery container having an opening, and an artificial flower or similar ornament at the exterior of said container, said ornament having a plurality of wicks extending through said opening and each having a knot within said container, said knots being disposed at the inner end of said opening and preventing withdrawal of said wicks from said opening.

2,471,950
LINK CHAIN
George A. Gotti, New York, Andrew Killian, Elmhurst, and Nicholas Volpicelli, Astoria, N. Y.
Application August 14, 1947, Serial No. 768,690
1 Claim. (Cl. 59—80)

A link chain comprising a plurality of links, each of which is provided with upper and lower extension pieces along the forward edge of the link, the upper extension pieces being in line with the corresponding lower extension pieces, the back edge of each link being provided with a plurality of bars corresponding in position to the position of the extension pieces of the adjoining link, alternate upper extension pieces being relatively long and the corresponding lower extension pieces being relatively short, the remainder of the upper extension pieces being relatively short and their corresponding lower extension pieces being relatively long, each said upper and lower extension pieces of one link being bent to form an acute angle around the corresponding bars of the adjoining link in locking engagement therewith, the outer corners of the free ends of said shorter extension pieces also engaging the end surface of its longer extension pieces to lock said longer extension pieces in place.

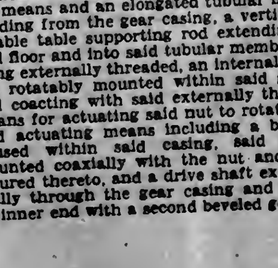
2,471,951
STRAINER
Albert J. Granberg, Oakland, Calif.
Application March 4, 1944, Serial No. 525,057
3 Claims. (Cl. 210—168)



1. A strainer of the duplex type comprising a pair of spaced strainer sections, each section having a planar wall facing the other section and provided with an inlet port and a discharge port; a strainer basket in each section; a valve section intermediate said strainer sections and including a valve chamber in communication with said strainer baskets through said inlet ports and another valve chamber in communication with said strainer baskets through said discharge ports; an inlet connection leading to that valve chamber which is connected with said inlet ports and a discharge connection leading from that valve chamber which is connected with said discharge ports; and a valve assembly in said valve section including a duplex valve element in said valve chamber associated with said inlet ports and having port valving portions in slidable engagement with said planar walls with the port valving portions displaced with respect to each other in the direction of movement of said valve assembly to effect the closing of only one inlet port at a time, a corresponding valve element in said other valve chamber, and means for simultaneously shifting said valve elements.

2,471,952
PROCESS FOR REMOVING COBALT FROM ELECTROLYTES
Dinsmore Laurence Griffith and Mavis Jean Rankin, Flin Flon, Manitoba, Canada, assignors to Hudson Bay Mining and Smelting Co., Limited, Winnipeg, Manitoba, Canada, a corporation of Canada
No Drawing. Application December 26, 1946, Serial No. 718,604
1 Claim. (Cl. 75—109)

In a process for precipitating cobalt from electrolytes used in the electrolytic refining of zinc, the steps which comprise adding antimony to the electrolyte in an amount equal to from four to ten times the weight of the cobalt in the solution, and removing cobalt from the electrolyte.

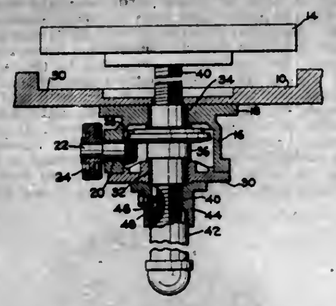


2,471,953
PITCH CONTROLLING SYSTEM FOR PROPELLER BLADES
Jack I. Hamilton, Essex Fells, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application July 7, 1944, Serial No. 543,861
6 Claims. (Cl. 170—135.72)

1. In a variable pitch propeller system, an engine having an oiling system, a propeller hub driven by said engine, propeller blades journaled in said hub, means for changing the pitch of said propeller blades, a governor and an electrical circuit for controlling said pitch-changing means to maintain said engine at substantially constant speed, an auxiliary electrical circuit for operating said pitch changing means to increase propeller pitch, a switch in said governor circuit having a contact member movable in response to substantial decrease in pressure in said engine oiling system to open said electrical circuit and render said governor non-operative, and means responsive to movement of said contact member for closing said auxiliary electrical circuit to actuate said pitch-changing means for increasing the pitch of said propeller blades.

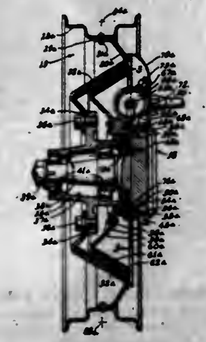
2,471,954
REFLECTING AND FOCUSING APPARATUS WITH PIVOTALLY ADJUSTABLE SPACED APART REFLECTING MEMBERS FOR HEAT AND LIGHT RAYS
Walter James Harvey, Toronto, Ontario, Canada
Application May 27, 1946, Serial No. 672,676
4 Claims. (Cl. 88—25)

1. A ray concentration device comprising, a frame, a plurality of parallelly arranged bars mounted in opposite sides of said frame to rotate on end pivots, brackets members extending downwardly from each of said parallelly arranged bars, a pair of bars arranged in substantially longitudinal alignment and each pivotally connected to the depending brackets of a group of said parallelly arranged bars and extending transversely thereof, links pivotally connected to the adjacent ends of the longitudinally aligned bars connecting said brackets, a block arranged midway between the adjacent ends of said longitudinally aligned bars between and below said grouped parallelly arranged bars and movable upwardly and downwardly and pivotally connected to said links to swing the parallelly arranged bars of each group in unison with the bars of one group



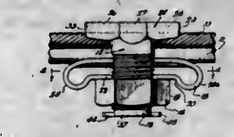
swinging in opposite direction to the bars of another group, upright bars pivotally mounted in groups on each of said parallelly arranged bars and adapted to swing in planes parallel thereto, bars pivotally connecting the lower ends of the groups of upright bars and extending parallel the parallelly arranged and pivoted bars either side of said block, links pivotally connecting the bars of the latter group connecting bars either side of said block with said block to swing the groups of upright bars on their pivots simultaneously with the swinging of the parallelly arranged bars with the upright bars of one group swinging in opposite direction to the upright bars of another group, and reflectors mounted on the upper ends of said upright bars.

2,471,955
BENCH STAND TABLE LIFT
Robert L. Hatch, Orange, Mass., assignor to Rodney Hunt Machine Company, Orange, Mass., a corporation of Massachusetts
Application February 1, 1946, Serial No. 644,614
1 Claim. (Cl. 187—24)



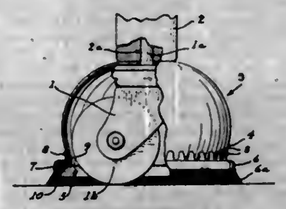
In combination with a floor, a bench stand table lift of the character described comprising a housing secured to and supported from the under side of the floor and including an enlarged upper portion serving as a gear casing for a lift actuating means and an elongated tubular member depending from the gear casing, a vertically reciprocable table supporting rod extending through said floor and into said tubular member, said rod being externally threaded, an internally threaded nut rotatably mounted within said gear casing and coacting with said externally threaded rod, means for actuating said nut to rotate the same, said actuating means including a beveled gear housed within said casing, said gear being mounted coaxially with the nut and externally secured thereto, and a drive shaft extending laterally through the gear casing and provided at its inner end with a second beveled gear meshing

with the first beveled gear, coacting means carried by said housing and said rod comprising a key and a keyway for preventing rotation of said



rod while permitting vertical reciprocation of the rod, and a table carried by the upper end of said rod, the upper surface of the floor being recessed to receive the table flush with the floor.

2,471,956
TORQUE EQUALIZING BRAKING APPARATUS
James W. F. Holl, Los Angeles, Calif.
Application April 2, 1945, Serial No. 586,101
8 Claims. (Cl. 188—2)

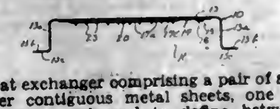


1. In a braking mechanism, the combination of: a supporting structure providing an axis; a first brake member rotatable relative to said supporting structure about said axis; a second brake member adapted to frictionally engage said first brake member, said second brake member being rotatable relative to said supporting structure about said axis, and being movable axially relative to said supporting structure into frictional engagement with said first brake member, whereby said first brake member, when tending to rotate, tends to rotate said second brake member to develop a braking torque therein; actuating means including a non-rotatable body which is movable axially relative to said supporting structure for moving said second brake member axially relative to said supporting structure, said second brake member being rotatably mounted on said body so that none of the braking torque developed in said second brake member is transmitted to said actuating means; and means actuable by said braking member for developing a hydraulic pressure substantially proportional to the braking torque developed in said second brake member.

2,471,957
ELECTRICAL CONNECTOR
David C. Hubbard, Centralia, Mo., assignor to A. B. Chance Company, Centralia, Mo., a corporation of Missouri
Application October 25, 1945, Serial No. 624,497
8 Claims. (Cl. 24—125)

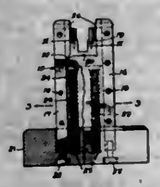
4. In an electrical connector, the combination of a threaded bolt having a head and a shank, the shank being provided with threads for a nut and the shank having a longitudinally extending slot which extends from the free end of the shank into the head of the bolt, the said head being elongated in the direction of the slot and being provided with a partially cylindrical groove on the under side of the head which also forms the base of the slot, a nut adapted to be threaded on the shank of said bolt, and a resilient clamping member comprising a flexible and resilient spring having a clamping portion which extends transversely through said slot in opposition to the groove in said head, the said spring having at the ends of its clamping portion integral, radially, inwardly extending portions for engagement with the nut to place a predetermined tension on the spring when it clamps conductors in said slot, the said spring being formed at its clamping surface with a partially cylindrical, elongated groove for engaging an adjacent wire.

2,471,958
PROTECTIVE DEVICE FOR CASTERS
Velma L. Humphreys, Portland, Oreg.
Application March 5, 1945, Serial No. 581,103
6 Claims. (Cl. 16—18)



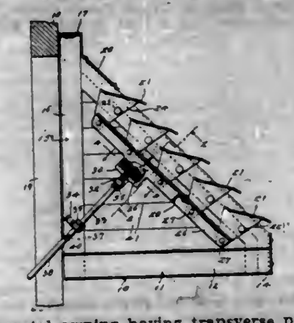
1. In a caster, a relatively rigid casing having a skirt, its marginal edge defining a lower open side for said casing, and adapted to have a caster wheel rotatably mounted therein and positioned to project thru said open side, an annular brush element secured to said skirt, said brush element having bristles projecting to the plane of the under surface of the caster wheel, and means underlying said bristles and tending to hold said bristles outwardly at a substantial diverging angle with respect to a vertical plane.

2,471,959
POLYMERIZATIONS EMPLOYING AZO COMPOUNDS AS CATALYSTS
Madison Hunt, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 15, 1948, Serial No. 2,551
33 Claims. (Cl. 260—89.5)



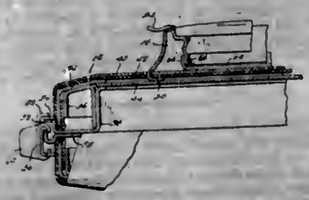
1. In a process for polymerizing ethylenically unsaturated monomers which undergo addition polymerization, the improvement wherein the monomer is polymerized in the presence of a catalytic amount of an organic azo compound containing an acyclic azo, —N=N—, group having bonded to each nitrogen a discrete carbon atom of the class consisting of aliphatic and cycloaliphatic carbon atoms, at least one of said discrete carbon atoms being tertiary and one of the carbon atoms bonded to said tertiary carbon atom having its remaining valences satisfied only by elements of the class consisting of oxygen and nitrogen.

2,471,960
CONDENSER
Bernard C. Johnson, Mundelein, Ill., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan
Application August 14, 1944, Serial No. 549,437
5 Claims. (Cl. 257—36)



A heat exchanger comprising a pair of secured-together contiguous metal sheets, one of said sheets being embossed to define between the sheets a plurality of spaced ducts, said one embossed sheet being sliced between adjacent ducts to provide a set of cuts defining a pair of localized body portions between each duct with each body of the pair having an edge formed by a common line of cut, each localized body portion of the pairs being bent away from each other and from the other sheet to expose both faces of both sheets and to form fins on the heat exchanger, and the other of said sheets being uncut and shaped to provide a space and a support for the heat exchanger.

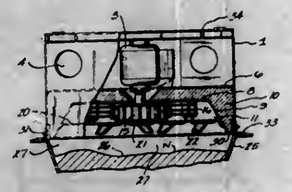
2,471,961
SHOCKPROOF GAUGE MOUNTING
Allan H. Jones, Newark, N. J.
Application May 19, 1944, Serial No. 536,305
2 Claims. (Cl. 33—168)



1. A work gage comprising a frame, a gaging member slidable outwardly and inwardly with respect to the frame, said gaging member being bifurcated and having two pairs of opposed parallel work contact faces consisting of an outer pair and an inner pair, the distance between the outer pair of contact faces being greater than the distance between the inner pair of contact faces, corresponding faces being joined to provide shoulders intervening said pairs, resilient means constantly urging the gaging member outwardly and allowing it to slide inwardly, means limiting the outward sliding movement of the gaging member into a gaging position in which to receive work for a gaging operation, and an abutment on the frame which will be engaged by the work as the gaging member yields under pressure of the work while it is being gaged, thereby preventing the work from damaging the gaging member.

2,471,962
MOVABLE AWNING
Henry G. Jones, Austin, Tex.
Application January 6, 1947, Serial No. 720,430
1 Claim. (Cl. 20—57.5)

In a metal awning having transverse pivoted louvers, an operator for rocking said louvers about the pivots thereof, said operator including a connecting bar, means rockably connecting said bar to each of said louvers, a depending plate on said bar formed with a plurality of adjacent elongated openings disposed at a right angle relative to the length thereof, a toothed gear rotatably carried by said awning, the teeth of said gear engageable in said openings and slidable along the length thereof for rocking said louvers upon rotation of said gear.

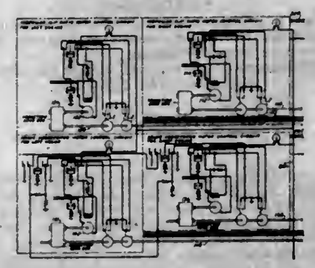


2,471,963
TWO-PART POCKET CASE
Max Kaplan, New York, N. Y.
Application January 6, 1949, Serial No. 66,458
7 Claims. (Cl. 132—83)

1. A pocket case having main and auxiliary portions, the auxiliary portion of said case being somewhat smaller in dimension than the main portion, said main portion comprising a bottom and a main cover, said bottom and main cover each being made of soft flexible imperforate material spread tautly around a rigid frame, and said auxiliary portion comprising an auxiliary

base and cover secured on top of and outside of the main cover, said auxiliary base including a metal dish and a surrounding ring having a generally upright peripheral wall and an inwardly extending flange frictionally engaging said dish, the lower edge of the peripheral wall being in direct contact with said material, said lower edge being projected at intervals to form a plurality of tangs spaced about its periphery, said tangs penetrating the soft material of the cover and being bent flat inside the cover, and said auxiliary cover being hinged on said auxiliary base ring, said auxiliary cover being made of metal.

2,471,964
APPARATUS FOR DRYING AND HEAT-TREATING
Adam J. Kiskalt, Grosse Pointe Farms, Mich.
Application May 9, 1946, Serial No. 668,574
3 Claims. (Cl. 22—87)



3. An apparatus for drying foundry sand mold while in a container comprising, a housing-like body adapted to be placed upon the container over the foundry sand mold, a heat insulating partition extending across the mid portion of the housing, a dividing wall positioned so that it is spaced from the partition and from the surface of the mold to form an upper chamber and a lower chamber, said body member resting upon the container so that the lower chamber is substantially closed to prevent escape of gases from the lower chamber and is not sealed tight so that gases may escape only under pressure, a fan in the upper chamber, an electric motor above the partition for driving the fan, heating means in the upper chamber for heating the gaseous contents moved by the fan, a plurality of adjustable air nozzles in the wall through which the gaseous contents propelled by the fan are discharged into the lower chamber, said nozzles being adjustable to direct the gaseous contents against and into cavities in the mold, a central opening in the dividing wall for the flow of gaseous contents from the lower chamber back to the upper chamber, whereby gaseous contents are circulated and recirculated by the fan in the drying of the mold.

2,471,965
METHOD OF ELECTROLYTICALLY PRODUCING ZINC OF HIGH PURITY
Sherwin Pope Lowe, George William Long, George Henry Kent, and Kenneth William Downes, Flin Flon, Manitoba, Canada, assignors to Hudson Bay Mining and Smelting Co., Limited, Winnipeg, Manitoba, Canada
No Drawing. Application August 1, 1946, Serial No. 687,706
5 Claims. (Cl. 204—119)

1. The method of electrolytically producing zinc of high purity from a zinc sulphate electrolyte containing at least one of the impurities lead, copper, cadmium and iron, which comprises adjusting the pH of the electrolyte to a state of substantial equilibrium neutrality, said neutrality being a pH of 5.1 to 5.5, adding cresylic acid and pine oil to the electrolyte in amounts sufficient to reduce the amount of said impurities and not more than will dissolve in the electrolyte, and passing electric current from an impure zinc anode to a cathode through said electrolyte containing said cresylic acid and pine oil to deposit said zinc of high purity.

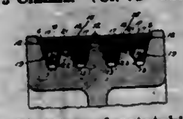
2,471,966
GROUND TRAINER FOR AIRCRAFT PERSONNEL
Joseph J. Lukacs, New Rochelle, and Robert O. Rippere, Massapequa, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 1, 1945, Serial No. 580,324
14 Claims. (Cl. 35—12)

1. In an aircraft trainer wherein the operation of an airplane engine is simulated, a source of current, a control conductor, means for deriving a potential from said source commensurate with the true air speed of the simulated flight, a potentiometer for modifying said potential in accordance with the reciprocal of the amount of pitch of the blades of the propeller driven by the simulated engine, means for deriving a second and oppositely phased potential from said source which varies in accordance with the speed of rotation of the propeller driven by the simulated engine, a balancing potentiometer for modifying said latter potential and for applying it to said conductor, a motor responsive to an unbalanced potential condition on said conductor for adjusting said latter potentiometer until the sum of the potentials applied to said conductor becomes zero, and means operated by said motor for introducing integration factors into other motor control circuit networks in the trainer in accordance with the quantity representing the propeller slip ratio.

2,471,967
PIEZOELECTRIC TYPE SWITCHING RELAY
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 3, 1946, Serial No. 667,071
5 Claims. (Cl. 171—327)

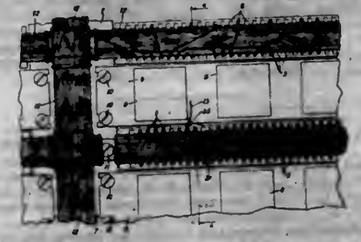
1. In an electrical system, a relay, a plurality of double strip crystal units in said relay, said

units of different lengths, a linkage and an armature cooperatively controlled by said units



through said linkage, so as to amplify the motion of said armature.

2,471,968
INDICATING DEVICE
Jack D. McCullough, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application June 4, 1945, Serial No. 597,469
6 Claims. (Cl. 175—183)

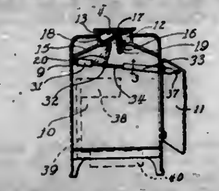


6. An analyser adapted for use with an ignition system comprising primary and secondary transformer windings, a distributor, and conductors leading from the distributor to a primary of engine spark plugs, said analyser comprising a cathode ray oscilloscope including means for developing a cathode ray scanning beam and a pair of deflecting means for deflecting said scanning beam in each of two mutually perpendicular directions relative to an observation target, means for associating the deflecting means with the primary transformer winding to effect the deflection of the scanning beam in one of the two mutually perpendicular directions and to make all spark plugs participate equally therein, and a current transformer associated with the other deflecting means and coupled with the conductor connecting the distributor and a certain spark plug so as to respond by induction to current impulses in the conductor and thereby to initiate the deflection of the scanning beam in the other of the two mutually perpendicular directions for cooperating with the first mentioned associating means in simultaneously presenting indications of performance by all spark plugs and for enabling the identification of the various indications of performance with the various spark plugs.

2,471,969
BELT AND TRANSMISSION
Walter A. Meyer, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application March 29, 1943, Serial No. 480,895
3 Claims. (Cl. 74—229)

1. The combination of rotatable driving and driven sheaves at least one of which has a substantially W-shaped annular groove and a power transmission belt having spaced continuous relatively inclined surfaces for cooperation with the four corresponding relatively inclined surfaces of said annular groove, said belt being of substantially less depth in cross section than said groove, said relatively inclined surfaces of said annular groove and said belt being so spaced that said belt engages said groove laterally throughout the full radial depth of said belt and is free of contact with the radially inmost extremities of said annular groove and the apex of the ridge in said substantially W-shaped annular groove.

2,471,970
WIRING DEVICE
Herman A. Miloche, Teaneck, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 23, 1947, Serial No. 743,446
5 Claims. (Cl. 174—68)

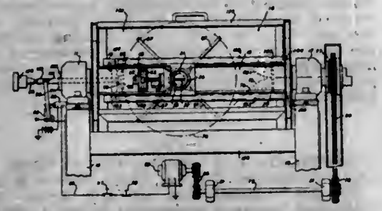


2. A wire distributing device comprising a trough adapted to accommodate wires therein, recessed passageways in the inner surfaces of the side walls of said trough opening outside the outer layers of said wires and continuing as holes through the bottom of said trough, said passageways and holes provided for the accommodation thereby of said wires.

2,471,971
REFRIGERATOR VENTILATOR SYSTEM
Lewis M. Mitchell, Greeley, Colo.; Wilbur A. E. Mitchell, administrator of said Lewis M. Mitchell, deceased, assignor of 46.66% to Wilbur A. E. Mitchell, Greeley, Colo., 26.67% to Paul M. Mitchell, Chicago, Ill., and 26.67% to Gerald L. J. Mitchell, Glen Ellyn, Ill.
Application November 23, 1944, Serial No. 564,882
7 Claims. (Cl. 98—51)

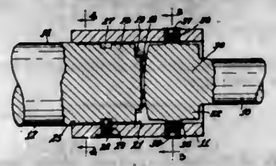
1. In a refrigerating unit, a cooling compartment having an outside main door, a vent opening in a wall of said unit, a trap door pivotally mounted across said vent opening, spring means

for normally holding said trap door in closed position across said vent opening, one-direction connecting means between said outside main door and said trap door operable for opening said trap door when the main door is opened against the



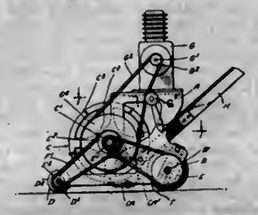
tension of said spring means, and pneumatic door stop means so attached to said trap door as to prevent its being closed by said spring means until the lapse of an interval after the main door is closed.

2,471,972
APPARATUS FOR HEATING AIR
Emmett Nicholson, Dunedin, Fla.
Application November 8, 1946, Serial No. 708,514
4 Claims. (Cl. 219—38)



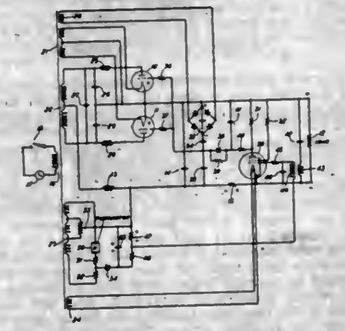
1. An air heater comprising a series of spaced, parallel, vertically disposed metal plates having registering openings formed therein, and an electric heating element comprising an elongated helical coil extending axially through the openings in substantially all of said plates.

2,471,973
TAPE SUPPORTING MEANS FOR STRAND COVERING MACHINES
Axel C. Nystrom, Rutherford, and Walter J. Volckhausen, Teaneck, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 4, 1947, Serial No. 783,874
3 Claims. (Cl. 57—3)



1. A material supplying apparatus for supporting a pad of tape-like material and rotating the material about an axis coincident with the longitudinal centerline of the material pulled from the pad, the apparatus comprising a frame, means to support the frame for rotation about a given axis, power means to rotate the frame, means carried by the frame to rotatably support a pad of tape-like material as the material is withdrawn therefrom and advanced along a path coincident with the axis of the frame, a brake element movable relative to the support for the pad, spring means to force the brake element against the pad to apply a diminishing brake drag to the material comparable to the diminishing size of the pad to create a given tension in the material, and a rod movable relative to the frame concentric therewith for supporting the brake element for rotation with the frame.

2,471,974
WABBLER COUPLING
Joseph M. O'Malley, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a corporation of Massachusetts
Application February 11, 1948, Serial No. 7,860
5 Claims. (Cl. 64—8)



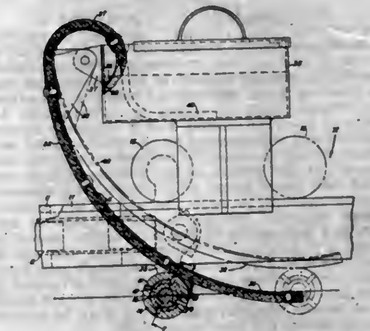
1. A wabbler coupling comprising a rotatable member, a sleeve mounted on the member and projecting beyond the end thereof to provide a socket, the projecting portion of the sleeve having on its inner surface a plurality of longitudinally extending heavy ribs separated by longitudinally extending deep grooves, the sleeve having radial holes therethrough communicating with the grooves, plugs mounted in the holes with their inner ends projecting a short distance into the grooves and equidistance from the axis of the sleeve, and a rotatable spindle having an end portion located within the socket, the said end portion having on its outer surface a plurality of longitudinally extending heavy ribs separated by longitudinally extending deep grooves, the ribs on the spindle intermeshing loosely with the ribs on the sleeve, the spindle ribs having outer surfaces which engage the inner ends of the said plugs to center the end portion of the spindle within the socket.

2,471,975
LAWN MOWER
Hesa H. Packwood, Baton Rouge, La.
Application January 17, 1947, Serial No. 722,500
4 Claims. (Cl. 56—26)

1. A lawnmower comprising a framework, a cutting reel mounted in said framework to rotate about a horizontal axis and provided at its periphery with cutting edges extending longitudinally of the reel, a bed knife mounted in said framework and having a cutting edge in fixed relation to said framework and cooperating with said cutting reel cutting edges to sever vegetation, and rolling ground engaging elements journalled in said framework and including a roller element in front of said reel and parallel to the axis thereof, and mechanism for rotating said roller with a peripheral speed substantially in excess of the speed of the travel of the lawnmower over the ground and in the direction to cause vegetation extending upward from the ground to be bent backward toward the lawnmower bed knife and cutting reel.

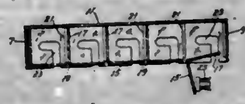
2,471,976
VOLTAGE REGULATION
James A. Potter, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 18, 1946, Serial No. 662,956
6 Claims. (Cl. 175—363)

1. A rectifier for supplying rectified current to a load comprising a space discharge device having an anode, a cathode and a control electrode, a first circuit connecting said anode and said cathode including a source of alternating current and said load, a shunt path across which the output voltage of said rectifier is impressed when rectified current is supplied to said load, a second circuit connecting said control electrode and said cathode comprising a condenser, means for charging said condenser for setting up an exponentially changing voltage in said second circuit for preventing the flow of space current during an initial period while the cathode of said device is being heated to operating temperature and for causing space current to flow through said device to said load subsequent to said initial period, and means effective subsequent to said initial period for causing the charge on said condenser to change for controlling the potential of said control electrode with respect to the potential of said cathode, said means comprising means having a time constant which is low with respect to the time constant of said means for charging said condenser during said initial period.



2,471,977
BED PARTITION
Albert Henry Power, Toronto, Ontario, Canada
Application November 28, 1947, Serial No. 788,495
1 Claim. (Cl. 5—329)

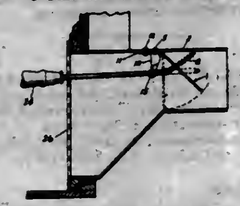
A bed of the class described comprising a bedstead having end members constituting a head and a foot, a centre board extending between said end members, and clamp fasteners for securing said centre board to said end members, said clamp fasteners each including a pair of plates between which an edge portion of the centre board is gripped, one of the plates having an integral



shank extending through an end member aforesaid and threadly engaged by a wing nut, the other plate having a bent end slotted to engage said shank, and a bolt passed through said plates to apply gripping pressure thereon.

2,471,978
APPARATUS FOR OILING PARTS
Duer C. Robson, Baltimore, Md., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 21, 1945, Serial No. 636,403
4 Claims. (Cl. 184—102)

1. In a conveyer including a track and a conveyer element which may be advanced along the track in a predetermined direction, an oiler which comprises an oil tank positioned above the track, an arm pivotally connected to the oil tank with the lower end thereof urged by gravity into the path of the conveyer element, and a wick covering the approach side of the arm and extending into the tank, whereby oil in the tank is conducted by the wick to the conveyer element.

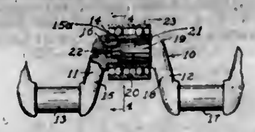


2,471,979
TOOTHBRUSH HOLDER
Guido J. Rozzi and Ernest L. Bonalanza, South San Francisco, Calif.
Application October 20, 1947, Serial No. 780,990
4 Claims. (Cl. 206—15.1)

1. A holder comprising a container having top and bottom walls; a plurality of door-partition units pivotally secured between said top and bottom walls adjacent the front edges thereof, each such unit including a door and a partition at substantially right angles thereto and adapted in the closed position of said door to occupy the position of a partition in said container to form

compartments with similar adjacent partitions; said aforementioned bottom wall having a front edge slot in each such compartment; and means for determining such closed position of a door-partition unit.

2,471,980
DAMPER
John E. Maynard, Detroit, Mich., and Paul O. Collins, Elyria, Ohio
Application May 1, 1945, Serial No. 591,273
9 Claims. (Cl. 98—106)



1. Apparatus for controlling the flow of air in a stackhead or duct including a damper blade having a portion shaped to provide on one side a groove and an embossment in arcuate abutting alignment, each of which is substantially U-shaped in cross section and a similarly shaped groove and embossment on the other side of said blade which are opposite, respectively, to the embossment and groove on the first mentioned side, and said blade being provided with an aperture which extends through the end of the embossment adjacent the groove on one side of said blade, a coil spring having a portion of one of its coils arranged in the depression on one side of said blade and being threaded through said aperture and another portion of its coil arranged in the depression on the opposite side of said blade, and means whereby said spring may be rotated to adjust the position of said blade.

2,471,981
MAGNETIC DISPLAY DEVICE
Le Roy E. Seiders, Bryan, Ohio, assignor, by direct and mesne assignments, of ninety per cent to John R. Hendricks and ten per cent to J. Warren Kinney, Jr., both of Cincinnati, Ohio
Application February 2, 1946, Serial No. 645,105
8 Claims. (Cl. 40—139)

2. A display device comprising a substantially flat horizontal non-magnetic, non-conducting supporting surface, a display panel disposed upon said supporting surface, said panel comprising a piece of non-conducting sheet material having one or more substantially L-shaped armatures secured to its lower edge, each of said armatures including a rear leg to which the sheet material is attached and a bottom leg disposed at an angle thereto sufficient to insure a normal condition of rearward overbalance of the display panel, said rear and bottom legs interconnected by a rounded bearing surface, said armature being rockable about said rounded bearing surface between two normal positions for disposing one or the other of said legs in the plane of said supporting surface for disposing said sheet material in a lowered, inoperative position in the plane of said supporting surface or in an upstanding, attention arresting position at substantial right angles thereto, electromagnetic means disposed beneath said supporting surface and aligned with said armatures, and means for intermittently energizing said electromagnetic means for imparting a cyclic raised and lowered motion to said display panel.

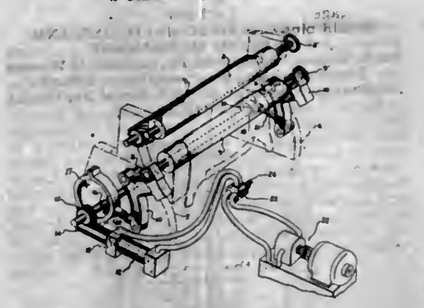
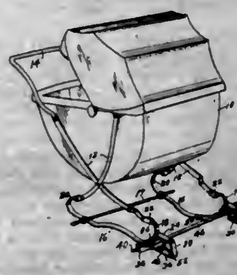
SPLICE FOR CRANKSHAFT BEARINGS
Melvin Shalda, Cuba, Kans.
Application November 4, 1946, Serial No. 707,726
1 Claim. (Cl. 74—597)

A crank shaft wrist pin construction, comprising a crank arm, a stub pin cast integral therewith and having a circular outside cross section, said pin having a free end, a tapered bore formed axially in said pin from the free end thereof, a second crank arm, a pin cast integral with an end of the second arm and tapered for axial insertion into said bore, said bore having a tapered longitudinal spline groove, a tapered spline forming an integral milled part of said tapered pin for engagement in said groove, means for coupling said pins and drawing the tapered pin into the stub pin, each of the crank arms being formed to provide a shoulder face encircling the pin which is integral therewith, and the diameters of the bore and tapered pin being such that when the tapered pin is firmly in the bore of the stub pin the free end of the stub pin will be closely adjacent to the shoulder adjacent to the tapered pin and the tapered end of the tapered pin will be spaced from the inner end of the tapered bore, the said tapered spline groove terminating a substantial distance short of the inner end of the tapered bore and the said tapered spline terminating short of the inner end of the spline groove when the tapered pin is fully inserted into the bore of the stub pin.



2,471,983
HYDRAULIC DRIVE FOR ROTARY GRATES AND THE LIKE
Floyd W. Spahr, Palmyra, N. J., and John S. Haug, Chestnut Hill, Pa., assignors to United Engineers and Constructors, Inc., Philadelphia, Pa., a corporation of Delaware
Application February 1, 1944, Serial No. 520,710
12 Claims. (Cl. 110—35)

5. In a grate actuating mechanism for mechanical gas generators and the like of the type comprising a rotary grate enclosed in a housing the interior of which is in gas communication

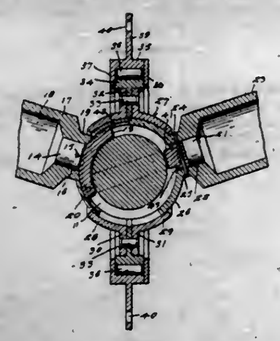


with the interior of the generator fuel bed but which is otherwise substantially gas-tight, said mechanism including a prime mover in the form of a pressure cylinder having a stuffing box at one end, a casing forming a support for said cylinder and secured to said housing over an opening in the latter so as to enclose said opening, said casing embracing the said stuffing box, a piston in the cylinder, and means for admitting a pressure medium to the cylinder to actuate the piston; a piston rod extending through said box and said casing for operative connection with the grate by way of said housing opening, transmission means for operatively connecting the rod with the grate, said transmission means and the adjoining portion of the rod being exposed to the corrosive and dust-laden atmosphere in the interior of the housing, a partition in said casing intermediate the stuffing box and said housing opening and forming within said casing a separate chamber for said box, an opening in said partition for passage therethrough of the piston rod, and a stuffing box on said partition embracing said rod and forming a substantially gas-tight seal segregating said chamber from said atmosphere.

2,471,984
HYDRAULIC DRIVE FOR LEATHERWORKING MACHINES
Ralph J. Stehling, Milwaukee, Wis., assignor to Chas. H. Stehling Company, Milwaukee, Wis., a corporation of Wisconsin
Application March 1, 1948, Serial No. 12,412
2 Claims. (Cl. 69—42)

1. In a leather working machine having spaced side frames and work performing and carrying elements including a roll extending across the machine substantially from side frame to side frame: a lever pivotally mounted on the outside of each side frame; said levers being free to swing about a common axis; means on the levers supporting the roll so that the roll may be swung back and forth by the levers to and from a work performing position; a rock shaft extending across the machine from side frame to side frame and journalled in bearings carried by the side frames which dispose the shaft parallel to the axis of swinging movement of said levers, said shaft having end portions protruding from the side frames; means for translating oscillation of said rock shaft through an arc of substantially 180° into swinging movement of said levers to carry the roll to and from its work performing position, said means comprising a connecting rod attached at one end of each of said levers, an eccentric connection between the other end of each connecting rod and said rock shaft, one of said eccentric connections including an eccentric disc fixed to one protruding end portion of the rock shaft and a strap on the adjacent connecting rod embracing the disc, said eccentric connections travelling substantially between opposite dead center positions upon oscillation of the rock shaft to carry the roll either to or from operative position, and said eccentric having its major weight disposed at one side or the other of a vertical plane passing through the axis of the rock shaft in said dead center positions of the disc whereby the eccentric weight of the disc is utilized to swing the roll toward operative position during the latter portion of travel of the disc toward one dead center position; and means for oscillating said rock shaft through an arc of substantially 180°, including a pinion fixed to one projecting end portion of the rock shaft, a rack meshing with the pinion, and a hydraulic cylinder for reciprocating the rack.

2,471,985
STEERABLE INFANT'S CARRIAGE
William C. Troendle, Gardner, Mass., assignor to Thayer Company, Gardner, Mass., a corporation of Massachusetts
Application April 9, 1946, Serial No. 660,749
1 Claim. (Cl. 280—43)



A carriage of the class described comprising a spring frame, wheels supporting the frame in fixed relation thereto adjacent an end thereof, a pair of brackets rigidly fixed to the frame, a vertical pin in each bracket, a lever on each pin for swinging movement in a horizontal plane, a brace fast to each lever and swingable therewith, each brace closely engaging a horizontal surface of a bracket to rigidify the levers, so that the frame is supported by the levers and brackets, and a steerable wheel rotatably mounted on each lever.

2,471,986
STORAGE OF HYDROFLUORIC ACID
Paul M. Waddill, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
No Drawing. Application March 15, 1946, Serial No. 654,793
5 Claims. (Cl. 260—653.4)
